The functions of reproduction 'early excited the superstitious awe of mankind, which invested the organs and their activities with mysterious powers. Sexual intercourse was widely regarded as producing uncleanness' (A. S. Peake, in *HDB* iv. 827). The period of separation lasted seven days, and the uncleanness was communicated to the bed or seat, contact with either produced uncleanness until the evening, and required the washing of the body and clothes (Lv 15^{13, 2 S 11⁴}). It is worth observing that 'holiness' and 'uncleanness' were regarded as infectious and demanded similar ritual purification, and instances occur in which a condition of sacredness necessitated abstinence from sexual intercourse, as, e.g., prior to the approach of Jahweh at the giving of the Law (Ex 19¹⁵); the holy bread of the sanctuary could be eaten by David's men in 1 S 21⁴ only if they had strictly observed this abstinence; and the same regulation applied to men on active military service, for war was regarded as a sacred act (cf. the expression מִלְחָמָה קִלְקָלָה [Jer 6⁴ 22⁷ 51^{27f.}], from the custom of opening a campaign by sacrifice). The same idea obtains probably in the case of the first year of marriage, when a man is exempted from military service (cf. Lk 14²⁰); and in Uriah's refusal in 2 S 11¹⁸ to obey the king's order. In ordinary cases the uncleanness lasted till the evening (Lv 11. 15^{20f.}), but in menstruation, at the end of seven days from the cessation of the symptoms, in the evening, the candidate for purification performed an ablution both of the person and of the garments, and on the eighth offered two turtle-doves or two young pigeons, one for a sin-offering, the other for a burnt-offering. The same means of purification applied to males with abnormal issues. And so infectious was the condition in such cases that contact with such persons or contact with their clothing or furniture involved uncleanness and necessitated ablution on the day of the infection. In lesser cases of issue, such as *gonorrhoea dormientium* in males, a condition of uncleanness was involved until the evening, and

the ablution of the person and of the defiled garments was necessary.

(b) *In childbirth*.—J. G. Frazer (*GB*², London, 1900, iii. 463) informs us that 'women after childbirth and their offspring are more or less tabooed all the world over.' With regard to purification after childbirth, a difference was made between the birth of a boy and that of a girl; in the case of the latter the period of uncleanness was doubled, as it was commonly held that in this case the symptoms of infection continued much longer. In the case of the birth of a boy the mother is unclean for a week, during which time she would be infectious, and she continues 'in the blood of her purifying' for thirty-three days (during the latter period she would not presumably be infectious). During the whole forty days 'she shall touch no hallowed thing, nor come into the sanctuary.' At the expiration of the forty days she was required to offer a yearling lamb for a burnt-offering, and a young pigeon or turtle-dove for a sin-offering. In the case of poverty she was permitted to substitute a second pigeon or turtle-dove (e.g., Lk 2²⁴, Lv 12⁸).

(c) *Ceremonial uncleanness*.—(1) Caused by contact with death, by contact with carcasses of unclean animals (Lv 11^{24a}) or with any carcass (17¹⁸), by eating a carcass (22⁸), by contact with the dead (Nu 6⁹⁻¹², Ezk 44²⁵). Such contact involved uncleanness till the evening. The eating or the carrying of a carcass involved, besides uncleanness till the evening, the necessity of washing the clothes, and in some cases (Lv 17¹⁵) the washing of the person. In the case of a Nazirite coming in contact with the dead it was necessary to shave the head, and to offer two turtle-doves, for a sin-offering and for a burnt-offering, and a lamb for a trespass-offering.

(2) Caused by contact with one unclean by the dead (Nu 19²², Hag 2¹³), or by contact with one unclean from whatever cause (Lv 5³ 22⁹), or with some thing unclean (22⁶). The purificatory observance in these cases involved the ordinary condition of uncleanness until the evening, the confession of guilt, and the offering of a trespass- and sin-offering (5⁵⁻¹⁰).

(3) Caused by contact with creeping things (22⁸) or by eating creeping things, or with certain animals which were always unclean (11^{26f.}: 'every beast which divideth the hoof, and is not cloven-footed, nor cheweth the cud . . . and whatsoever goeth upon his paws, among all manner of beasts that go on all four'). The purification in these cases was principally that of remaining unclean until the evening.

(4) Caused by leprosy. The full regulations are dealt with in Lv 13 and 14, in regard to the disease in the person, the garments, and the house.

The ceremonial of purification consisted of various elements. (a) After the examination by the priest, two living birds were to be brought, together with a rod of cedar (juniper)-wood, scarlet wool, and hyssop; one bird was to be killed over water from a running stream, and the leper was to be sprinkled seven times with the blood of the bird, signifying the new life imparted to one who was regarded as 'dead,' and the living bird was to be released, a symbol of the removal of the evil. (b) The washing of the clothes, shaving off all the hair, and bathing. It was also necessary to remain outside the house for seven days, and the shaving and ablutions were also repeated. (c) On the 8th day the final offering was made at the 'Tent of Meeting,' and consisted of (i.) a guilt-offering and a consecration of the cleansed leper by the priest placing oil on parts of the body and pouring it on his head. 'This offering was a reparation to God for the loss of service during the time of his seclusion . . . of the blood of the victim (a lamb) and the oil being symbols of atonement and reconsecration (R. A. S. Macalister, in *HDB* iii. 98); (ii.) a second he-lamb as a sin-offering before re-admission into the congregation; (iii.) a ewe-lamb as a burnt-offering and three tenths of an ephah of flour as a meal-offering; special provision was made for the poor by the substitution of doves for the lambs, and a reduction in the quantity of the flour for the meal-offering.

(d) *Uncleanness in religious matters*.—Uncleanness might be caused by idols (Ezk 22⁵), conceived

as whoredom (Hos 5⁸, Ezk 20^{80a}), by necromancers (Lv 19³¹), or by sacrificing children to idols (Ps 106³⁷⁻³⁹). The prohibition rings out clearly in such cases, but it is often disregarded. But what is the purification? Jahweh takes the matter into His own hands. The only purification possible is punitive; such sins need the smelting in the furnace of Jahweh's wrath: 'And ye shall know that I the Lord have poured out my fury upon you' (Ezk 22²⁸). Sacred places were also defiled by Israel through the sacrifice of children (Lv 20⁸, Ezk 23^{38a}), and Jahweh 'defiled' him thereby, and made him desolate to the end that Israel might 'know' Jahweh. Josiah 'defiled' the idolatrous places of worship by destroying them and making them unfit for use (2 K 23²⁶). Death, stoning, excommunication, the opposition of the face of Jahweh, could be the only purification.

(c) *Uncleanness of land or country*.—Again, a land or country is defiled by the sexual impurities of the people, by spiritual whoredom (Lv 18²⁸, Ezk 23¹⁷). Israel is warned repeatedly against this contamination: it was the sin of the nations driven out by Jahweh; Israel had been and will be visited for such, and the very land itself 'vomitheth out her inhabitants.' The antidote is the observance of the divine statutes, the remembrance that Jahweh is their God, and the purifying punishment is the cutting off of the souls from among the elect people, and the raising up of the divine instruments of judgment, the Babylonians, etc. A land may also be defiled by the shedding of innocent blood (Nu 35³⁴). The purifying punishment of the land is the shedding of the blood of the murderer; the land is sacred because Jahweh dwells among His people; there can be no expiation for the land except by the shedding of the murderer's blood. A land may not be defiled by allowing a murderer to hang upon the tree all night; the body shall be buried on the day of execution; the land is sacred because it is the inheritance of the people sacred to Jahweh (Dt 21²⁴). A land was defiled by idolatrous practices (Jer 27, Ezk 36^{17a}); it was a goodly land that Israel had inherited, and the people, priests, and rulers had made it an abomination by idolatry; their way was before men, כְּכֶסֶד וְכֶסֶד; the outpouring of Jahweh's wrath and captivity among the heathen were the punitive, purifying remedies.

2. *Purificatory media*.—We have seen that there are various media of purification, and various acts of ritual to be observed. Speaking of cathartic sacrifices, Robertson Smith says:

'Purifications are performed by the use of any of the physical means that re-establish normal relations with the deity and the congregation of his worshippers—in short, by contact with something that contains and can impart a divine virtue. For ordinary purposes the use of living water may suffice, for, as we know, there is a sacred principle in such water. But the most powerful cleansing media are necessarily derived from the body and blood of sacrosanct victims, and the forms of purification embrace such rites as the sprinkling of sacrificial blood or ashes on the person, anointing with holy unguents, or fumigation with the smoke of incense, which from early times was a favourite accessory to sacrifices. It seems probable, however, that the religious value of incense was originally independent of animal sacrifice, for frankincense was the gum of a very holy species of tree, which was collected with religious precautions. Whether, therefore, the sacred odour was used in unguents or burned like an altar sacrifice, it appears to have owed its virtue, like the gum of the *samora* tree, to the idea that it was the blood of an animate and divine plant' (p. 426 f.).

The principal media of purification would thus be water, blood, ashes, herbs, incense, oil, shaving the hair, seclusion, confession, and punitive destruction.

(a) *Water*.—In regard to water it should be observed that sacred wells, fountains, and streams are often found near sanctuaries in Arabia, Phœnicia, and Syria.

Robertson Smith points out (p. 178) that 'the one general principle which runs through all the varieties of the legends

[about sacred waters], and which also lies at the basis of the ritual, is that the sacred waters are instinct with divine life and energy . . . their main object is to show how the fountain or stream comes to be impregnated, so to speak, with the vital energy of the deity to which it is sacred.' And, again, in regard to the healing power of the sacred spring, he says (p. 188): 'Beyond doubt the first and best gift of the sacred spring to the worshipper was its own life-giving water, and the first object of the religion addressed to it was to encourage its benignant flow. But the life-giving power of the holy stream was by no means confined to the quickening of vegetation. Sacred waters are also healing waters' And once more (p. 184): 'The healing power of sacred water is closely connected with its purifying and consecrating power, for the primary conception of uncleanness is that of a dangerous infection. Washings and purifications play a great part in Semitic ritual, and were performed with living water, which was as such sacred in some degree.'

(b) *Blood*.—For the cathartic nature of blood reference should be made to artt. SACRIFICE. Here we need only quote the words of the Epistle to the Hebrews (9²²): 'Without shedding of blood is no remission.'

(c) *Incense*.—For incense used in purification see above, and Robertson Smith, p. 426 f. Cf. Nu 17^{11a} [EV. 16^{46b}] for its atoning efficacy.

(d) *Confession*.—For instances of confession cf. 1 K 8^{33, 35}, Ps 32⁵, Pr 23¹³, Ezr 10¹, Neh 9⁸, Dn 9⁴, Lv 16²¹ (P) 26^{40a}, Nu 5⁷ (P), Lv 5⁵ (P), Neh 1⁶ 9², Jos 7¹⁹, and especially the ceremony of the scapegoat (q.v.). The idea is both corporate and individual, as these instances will show. For the idea of lamentation cf. Is 15², and Robertson Smith, p. 430 ff.

(e) *Ashes*.—The term אֵשֶׁת is frequently used as a token of humiliation and penitence (Job 42⁸, Is 58⁵, etc.). In Nu 19^{9a} (P) it denotes the mixture composed of the ashes of the red heifer and those of 'cedar wood, hyssop and scarlet,' and used for the preparation of the 'water of separation' (cf. G. B. Gray, *Numbers* [ICC], Edinburgh, 1903, pp. 241-247; for ashes of the red heifer cf. HDB iv. 207 f.).

(f) *Herbs*.—For the use of herbs, especially the hyssop, for the act of sprinkling blood in ceremonies of purification cf. Ex 12²², Lv 14, Nu 19⁹, Ps 51⁷; it is spoken of literally in 1 K 4³⁸. G. E. Post (HDB ii. 442) identifies it with *Organum Maru*, which is eminently adapted for the purpose of sprinkling. He points out that in certain of the ceremonial sprinklings, as in the case of leprosy, there was added to the bunch some cedar-wood, scarlet wool, and a living bird. Gray (p. 251) contends that it was used 'on account of its cleansing properties,' and he adds:

'The scarlet thread was presumably selected for its colour, for the same obscure reason that required the cow to be red; the cedar, perhaps, on account of its soundness and endurance, and its supposed property of imparting these qualities.' He reminds us that Pliny mentions 'numerous medicinal qualities with which cedar and hyssop were credited in the ancient world' (HN xvi. 76).

LITERATURE.—The authorities are cited throughout the article. S. M. COOKE.

PURIFICATION (Hindu).—There is nothing that an orthodox Brāhman, or Brāhmanized castes generally, will shun so much as external defilement. 'The predominating idea in their general conduct, and in their every action in life, is what they call cleanness,' says J. A. Dubois.¹ The rules regarding impurity (*āśauca*) and purification (*suddhi*) occupy, therefore, a conspicuous place in the Sanskrit law-books, and there are many special treatises in Sanskrit on this subject—the *Āśauchanirnaya*, *Suddhitattva*, *Suddhmayāyika*, etc. The horror or superstitious dread inspired by the sight of a corpse becomes particularly manifest in these rules. The impurity of a Brāhman caused by the death of a relative is declared to last in general ten days. Those who have carried out a dead relative and burnt his

¹ *Hindu Manners, Customs, and Ceremonies* 3, p. 179

corpse are required to plunge into water, dressed in their clothes. During the period of impurity they must sleep on the ground and practise other austerities, and must give up all intercourse with other people in order to avoid defiling them. When the impurity is over, they must bathe, sip water, and make gifts to Brāhmins. Even those who have merely come near the smoke of a funeral pyre must bathe. Childbirth is an occasion of impurity in the same way and for the same length of time as death. Menstruating women are considered unclean, and their touch contaminates. They become pure after four days by bathing. A bath is also ordained for a man who touches such a woman, or the carrier of a corpse, or members of the lowest castes, or the corpses of certain animals, or one who has had his hair cut, or has vomited or been purged, etc. If the lower part of the body has been defiled by one of the impure excretions of the body, it is sufficient to cleanse the limb in question with earth and water. In minor cases of pollution, as after spitting or sneezing, one has to sip water. The ancient and popular story of King Nala shows how one neglecting such purification was supposed to be liable to be possessed by a demon. Even before birth men were believed to be tainted with uncleanness, and the various *samskāras*, such as tonsure, investiture with the sacred thread, marriage, etc., were regarded as purificatory ceremonies capable of removing that taint (Manu, ii. 27).

Purity in regard to food was considered even more essential than external purity, and the rules concerning allowed and forbidden food are very numerous (see FOOD [Hindu]). Drinking alcoholic drinks was reckoned as a mortal sin, like killing a Brāhman or incest. Any one offering spirits to a Brāhman was liable to capital punishment, and one offering forbidden food to such had to pay a heavy fine (*Visnu*, xxxv. 1, v. 98 ff.). A Brāhman tasting the food or water of, or eating with, a Śūdra or other person of low caste had to perform a penance, such as the *parāka* (fasting for twelve days) or *sāntapana* (subsisting for one day on the five products of a cow, including her urine and dung, and fasting the next day). Another set of rules concerns the purification of inanimate objects (*dravyasūddhi*). Spirituous drinks and the impure excretions of the body are declared to cause the worst kind of pollution. If an iron vessel has been defiled by them, it should be cleansed by heating it in fire; utensils made of stone or shells should be dug into a pit for seven days; objects made of horn, ivory, or bone should be cleansed by being planed; but wooden or earthenware vessels should be thrown away. In lighter cases of pollution the defiled object should be washed or sprinkled with water, or rubbed with earth or ashes, etc., the general rule being that earth and water should be constantly applied as long as the scent or moisture caused by an unclean substance continues on the defiled object. Specially purifying qualities are attributed to cows, the cow being considered a sacred animal. Thus not only are the five products of a cow (*pañcagavya*) swallowed, but a piece of ground may be cleansed by allowing cows to pass some time on it or by plastering it with cow-dung; stagnant water is pure if a cow has drunk from it; and even drops of water trickling from a cow's horn are said to have an expiatory power. The detailed provisions regarding a man's daily bath, which include the recitation of prayers and other religious ceremonies, also fall under the head of purificatory rules. Bathing in a sacred river is believed to be specially purifying, and the water of the Ganges is considered the purest of all kinds of water.

The Buddhists, Jains, and other religious sects

have each their own code of defilements and purifications. Nor have these ancient notions of purity and impurity died out in modern India. Thus, according to Dubois (in India from 1792 to 1823), the Hindus immediately after a funeral 'hasten to plunge themselves into water . . . even the news of the death of a relative . . . produces the same effect.'¹ The ten days' period of mourning or impurity is still observed, and during all this time the mourners must neither take more than one meal a day, nor shave, nor perform domestic worship, nor use dainties or spices. A sick person is entirely excluded from some religious ceremonies. Married women near the period of confinement are taken into a small room or shed, where they are shut up for a whole month, during which period they must touch neither domestic utensils nor clothes, still less any person. The same rule is observed during the monthly sickness of a woman. The time of seclusion being over, she has to take a bath, or else a large quantity of water is poured over her head and body. If a woman miscarries, the family become impure for ten days. 'A scrupulous Brahmin,' Dubois says, 'would be defiled and obliged to bathe if by accident his feet should touch a bone, a piece of broken glass or earthenware, a rag, a leaf from which any one had eaten, a bit of skin or leather, hair, or any other unclean thing. . . . but any one may sit on the ground without fear of defilement, if the place has been recently rubbed over with cow-dung.'² Here we have a modern instance of the veneration paid to the cow. A mediæval instance of it may be found in al-Bīrūnī, where he speaks of Hindus returned to their homes from Muslim captivity, when, after fasting by way of expiation, they were buried in the dung, stale, and milk of cows for a certain number of days, and given similar dirt to eat afterwards. The fear of personal contact with people of a different caste is gradually dying out in this age of trams and railways, but there are even now depressed castes—e.g., in Kashmir—which are obliged to live outside of the villages, and must make a sign to persons of high caste from a distance so as to avoid meeting them (see PARIAS). Many of the ancient rules regarding food and commensality are still in force, and nothing is so apt to cause loss of caste as a breach of these rules. The rumour that the British Government was conspiring to rob the Sepoys of their caste by greasing the cartridges of the guns with offensive fat was among the causes of the Mutiny of 1857. Earthenware vessels have to be destroyed in case of defilement, whereas metal ones may be purified by washing.³ It is true that Brāhmins and rich Śūdras are gradually abandoning the use of earthenware vessels for cooking. Silk and cloth made of the fibres of certain plants are and were believed to remain always pure. It is for this reason that the ancient Brāhman hermits used to wear clothes made of such material, and that a modern Brāhman doctor, when feeling the pulse of a Śūdra, first wraps up the patient's wrist in a small piece of silk so that he may not be defiled by touching his skin.⁴ The prevailing belief in the sanctity and purifying power of Ganges water is too well known to require illustration.

PURIFICATION (Iranian).—In the less developed religions of the world purification means

¹ *Loc. cit.*

² *ib.* p. 182f.

³ *ib.* p. 181

⁴ *ib.* p. 181f.

the expulsion of the contagion of a ritual pollution. In higher religions it is above all the liberation from an ethical depreciation. Mazdæism combines both conceptions. The annulling of sin is primarily to be obtained by outweighing the evil deeds, evil words, evil thoughts by good deeds, good words, good thoughts (*huskyaotihna, hūkhita, humata*). A penitential formula (*paistita*) was also recited before the *dastūr*.¹ The term *paistita* expresses the balance of merits and sins,² and in later texts seems to be applied to the state of mind of the penitent renouncing the sin, and saying, 'Henceforth I will no more commit the sin.'³ But there is no remission—or, more exactly, neutralizing—of the sin unless by good actions in compensation for the evil inflicted on good creation by the evil act. In the *Vendīdād* these works are enumerated; they consist in building bridges, gifts to the priests, purification of defiled good beings, etc. More often regular penances are provided, in the form of strokes by means of a whip of discipline (*ashtrā, sraoshō-karana*). The rate of strokes is given in several passages of the *Vendīdād*. In later times, as a substitute for the strokes, silver coins were paid by the penitent, and a scale of fines was established.

Often, also, spells had to be recited, expiatory offerings had to be presented, or purifications performed;⁴ and here we have prescriptions connected with the more materialistic conception of purity and purification, as we find it in lower religions, where sin is but one of the many pollutions that may be inflicted upon man and have to be wiped off by means of some ritual process.⁵ Mazdæism gives to purity and purification as much importance as any lower religion, because those conceptions have been made to fit into the dualistic system. Pollutions come from contact with impure beings or are ascribed to demons, exactly as in the beliefs of primitive people, but they are considered at the same time as an achievement of Ahriman, the evil spirit, creator of the evil creation, source of every evil, material or moral. When those defilements are suppressed by means of water, *gōmēz*, and other substances, or by rituals completely similar to those used for that purpose in all magical proceedings, it is inasmuch as these elements are endowed with the purifying power emanating from Ormazd, the producer of good creation. In all this we have to do with aspects of the great struggle between the two principles. The material and the moral aspects of purity are wholly intermingled in Mazdæan conceptions.

The verb *yaozhdā*, 'to purify,' is akin to Lat. *pus* and Skr. *yosh*. It refers to all that is fine, good, or right—all that is as it should be. In the *Gāthās* the word is found only once and means 'to accomplish,' 'to make perfect,' 'to put in good shape.' It is used of the *daēna*, the conscience, the soul of the faithful, while in the *Vendīdād* we find it used of the body and of all kinds of material beings susceptible of being polluted.

Daimesteter⁶ compares this double meaning to that of 'cleanliness' in English, which is a moral as well as a material virtue—'cleanliness is next to godliness'; and he adds with much reason that, for a Zoroastrian, cleanliness is an aspect of godliness, since it is the state of a being belonging to Ahura Mazdāh. In most cases one has to do with pollutions that are real infections or defilements. But they not only soil; they also put one in the power of the evil spirits. Impurity most nearly

resembles the contagion of a disease; it extends by contact and dooms the victim to perdition unless it be redeemed by a purification that gives it back to the realm of Ormazd. The conception of purity comes fairly near to that of health. All that is unhealthy or abnormal in the body is impure: disease, menstruation, childbirth, death of the whole body or of parts of it; and, after all, sin is a kind of disease also—a folly in contrast with wise conduct (*ārmatay*) or the right kind of mind (*Vohu Manah*).

It is therefore not surprising that Mazdæism professes that wise conduct and good teaching purify man's life (*Yaozhdāo masyāō aipi xanthem* [*Ys. xlviii. 5*]).

The worst impurity is that which arises from contact with a corpse. For a Mazdæan, to die was to pass into the power of the *drug* Nasu (*vekš*). Hence it is necessary to minimize the evil produced by this demon by protecting all good beings and substances from its power, and, if contact has taken place, it is urgent that the defiled substance should be freed as soon as possible from the grasp of the *drug*. The first process of purification applied in that case is the *sag-dād*, or the look of a dog, preferably of one with yellow ears and four eyes (*i.e.* with spots near the eyes). This, however, is not sufficient to destroy the impurity inherent in the corpse, and every person and thing that has come in direct or even indirect contact with it must be purified. The contact is greater on soft and wet ground and where decomposition has set in. The corpse is therefore deposited on a flat stone around which the *nasā-sē-lār* traces with a knife three deep circles to prevent the Nasu from infecting the surroundings. The corpse has to be stripped of its soft and liquid parts by the action of vultures or other animals of the evil creation. It is therefore deposited in some remote and dry place far from the cultivated fields or on a *dakhma* till it is completely dried up. Then it is presumed to be no longer infectious. All kinds of purification are prescribed for the people who perform the duties connected with the dressing of the corpse and its transportation. See, further, art. DEATH, etc. (Parsi).

Next to death, the worst impurity is menstrual blood. The *dashtān*, 'woman during her courses,' must be kept indoors in a special room (*Pahl. armēsht-gāh*), where food is handed to her from a distance by means of a stick. The woman after childbirth is treated in the same way, and must be confined during forty days in the *armēsht-gāh*, which greatly increases the mortality among Parsi women.

All that is detached from the body, being dead, is impure. Hence the ceremonies prescribed for cutting the hair or the nails (*Vend.* xvii. 1-9). This is also the reason why the priest wears the *patrdāna*, or piece of gauze, before his mouth when he comes near the sacred fire—lest he should soil it by his breath.

All that has been touched by one of the defiling substances has to be purified, and the greater part of the *Vendīdād* is devoted to the description of the ritual processes securing the purification of all kinds of elements or materials, such as wood (*Vend.* vii. 28), corn (*ib.* 32), water (vi. 26), fire (viii. 73 ff.), earth (vi. 1-24), the house of a dead man (viii. 3) or the road followed by the carriers of the corpse (*ib.* 14, 22), household utensils (vii. 74), clothes (*ib.* 10 ff.), and animals—*e.g.*, the cow that has eaten from a corpse (*ib.* 76 f.). Soft and porous substances require a more complete cleansing than hard and dry ones, and purifications are more elaborate in winter than in summer.

The cleansing substances are the same as are used in all rituals of the same kind, viz. above all, water, and next to it *gaomaiza* (*Pahl. gōmēz*),

⁶ *Zend-Avesta*, ii. p. x.

or urine of cattle. A *riṇvāṇat* quoted in Darmesteter (*Zend-Avesta*, ii. 266) explains that, when Jamshēd (Yima Xshaēta) extracted Tahmuruz from the body of Ahuriman, he had soiled his hands; but, a drop of *gōmēz* having by chance fallen on them, they immediately recovered their fine aspect. Earth is also mentioned at times as a purifying element (*Vend.* vii. 14, 74).

As for fire, it is generally considered to be the purifying element *par excellence*; it has been exalted so high in Zoroastrianism, as the purest offspring of the good spirit, that it cannot be used as a purifier. It must never come in contact with anything impure.

For some specially serious cases of contamination there was provided an extensive ceremony—the *barashnām*, or purification of the nine nights, described in *Vend.* viii. 35-72 and ix. 1-57. The ground had to be prepared by cutting down trees in a dry place. Then holes had to be dug, and furrows drawn. The unclean person had to walk to the holes, recite a prayer, and be sprinkled with water and *gōmēz* on all parts of his body in succession.

ALBERT J. CARNOY.

PURIFICATION (Jain). — 1. **Introductory remarks.**—The Jains of to-day are rightly proud of the old saying that a Jain might be trusted in the zenana of a king; so great, indeed, was their character for purity that it won for them the epithet of *paraghara pavesā*, 'worthy to enter another's house'. There can be little doubt that this splendid reputation was due to the ethical character of their religion, though even to-day the ethical nature of Jainism is insufficiently realized by European scholars, and too little appreciated even by the Jains themselves. It is in accordance with this ethical tradition that sins against purity of any kind are never glossed over, but always treated with the greatest severity. Adultery is accounted one of the most heinous sins, equivalent to taking life (*jīva hamsā*), and the layman or monk who breaks the vow of chastity is held to have broken all his vows. Every sin of impurity, whether it lie in thought, word, or deed, or in causing others to offend against the law of chastity in thought, word, or deed, must be confessed to one's director (*guru*) as soon as possible, and the penance imposed by him performed. The usual penalty for unchastity is for a monk nothing short of expulsion from the order, and he must undergo long fastings before he can hope to obtain reordination. A layman guilty of impurity is held to have slipped back on the ladder of rebirths and fallen below the stage not only of being a Jain but even of being human, and he must observe the strictest fasts with the idea of torturing the body which led him to commit such crimes before he can win back again the birthright which he has forfeited. If the sin be not repented of and confessed, the most hideous torments await the offender in a future rebirth as a hell-being. With regard to women who sin against the law of chastity, a Jain husband can never divorce his wife, but, if she prove unfaithful, he would very probably separate from her, and though, as a rule, the practice of taking a second wife is much looked down on, it would be considered pardonable in such a case, and the woman would look forward with dread to being widowed in her next existence.

The idea of purity differs of course for a monk

and a layman. The monk must observe the most rigorous celibacy, never looking at, thinking of, speaking to, or touching a woman, never even sitting where a woman has sat or stroking a female animal. It is interesting to notice that these laws are enforced in their sacred books not only by every religious sanction present and future, but also by appealing to the natural laziness of the monk, warning him of the burdens and cares of married life.

A layman vows to maintain his wife in all honour and loyalty and to renounce the society of other women. It is customary for a devout layman to observe celibacy before any of the great Jain festivals or fasts, before going on pilgrimage, and for twenty days in every month, and, as he advances in holiness, he at last renounces entirely the society of his wife (*brahmacharya pratimā*).¹ All unnatural sins against purity are punished in this life by heavy penances, or after rebirth by the most hideous tortures.

The Jains are also proud of the purity of their worship, for courtesans are not to be found connected with their temples, nor does their religion permit any *śakti* or *vāma mārga* orgies, and their entire sacred literature contains nothing approaching to the Tantras of the Hindus.

With regard to ritual purity and purifications, the Jains themselves say that they have borrowed their rites from the Hindus and especially from the Brāhmins; so it will be interesting to compare the two systems on this point. A Jain is always most anxious to maintain ceremonial purity, for only when in a state of ritual holiness can he go to temple or monastery, or perform any of his religious duties, such as meditation, adoration, or reading the sacred books; but ceremonial pollution is very difficult to avoid, accruing, as it does, in so many minor ways,² and especially on the occurrence of any birth or death in a family.

2. **Birth impurity (*vraddhi sūtaka*).**—Before the birth of the first child the young mother goes to her own old home, where she must stay for at least a month and a quarter after the child's birth; during all this time she is considered ceremonially impure and 'untouchable,' and her husband is not allowed to see her or to enter the house where she is living.³ The child, when born, is considered impure, and the midwife bathes it with all possible speed, for, if it dies before being thus purified, it might have to be buried somewhere in the compound of the house instead of in the children's cemetery reserved for infants dying when less than eighteen months old, which is situated near the burning ghāt.

There are four distinct stages in the progress of the mother back to ceremonial purity:

(a) *On the tenth day* after the child's birth she bathes in the house and on the very bed on which she gave birth to the child; her forehead is marked with an auspicious mark (*chhindako*) in red powder, and a change is made in her diet. She is not allowed to touch during the whole forty days of her impurity, and the first day after the child's birth she has to observe as a fast; if she rebels very much against this, she may be given a native dish called *rāba* (a gruel made of wheat-flour, ghee, and molasses). Up to the tenth day she is allowed to eat only a favourite Jain dish called *śiro* (the same ingredients as *rāba*, but less liquid), but after the tenth day she may take bread and the curried vegetables which she so keenly relishes, and several different kinds of gruel.

(b) *On the twentieth day* the mother again bathes in the house, and on the same bedstead, which is then washed and put in the sun; and the earthen floor and sometimes the walls of the room are freshly plastered with the usual mixture of clay, cow-dung, and water. An auspicious mark is again put on her forehead (she had not been allowed to do this during the intervening days), and, though she is still 'untouchable,' and must sit apart and eat apart, she may now be allowed to sweep the house, but

¹ See M. Stevenson, *Heart of Jainism*, p. 223.

² *Ib.* p. 258.

³ If, however, he is very anxious to see his first-born, it may be brought outside the house for him to look at after it is twelve days old.

must not go outside (unless the family is so poor that she must help with the work). On this particular day she may again eat *śiro* and, according to some Jains, she may now begin to tell her beads.

(c) *On the thirtieth day*, or on the Thursday nearest to the thirtieth day after the child's birth, the mother bathes in the ordinary bathing-place of the household, whether it be in a room or in the courtyard, and again is decorated with the auspicious mark and given *śiro* to eat; she is now considered less unclean and allowed to go outside the house, though she still must not touch any one or go to the nunnery or temple.

(d) *On the fortieth day*, or on some convenient Sunday, Tuesday, or Thursday nearest the fortieth day, the mother bathes again in the household bathing-place, and is at last considered ceremonially pure; she is now allowed to touch the household water-pots, the family hearth, and the hand-mill, and may cook for her friends. If during these forty days she has used earthen pots, they will be thrown away, but the brass vessels that had been kept apart for her use will be cleansed by fire or ashes, and taken into general use. After bathing, the mother is marked with the *chāndalo* and is given *śiro* or some specially dainty dish to eat, perhaps *kathāsāra* (a dish resembling *śiro*, but not cooked with *ghī*). She then goes to her mother-in-law's house (which is probably her husband's house also), does obeisance at the feet of her mother-in-law, and offers that much-feared lady a present of money, which varies according to her purse. Very often the daughter-in-law gives two rupees if a son has been born to her, and eight annas if it is only a daughter. After this her husband may permit her to return to her own mother's house for a varying period lasting probably six months—this seems the 'correct' thing to do, as it is the Brāhman custom—or he may summon her at any time.

Among most of the Jains the child's father is considered impure for ten days, and for that length of time he is not allowed to go to the temples or perform any religious duties; and all his near relatives that bear his surname are in the same state of ceremonial impurity (though, unlike the Brāhmins, they are allowed to celebrate weddings during that period). The impurity is removed at the end of ten days by simply bathing in the ordinary way. In cases of necessity, however, the father and his relatives may purify themselves by ordinary bathing the day after the child's birth.¹ Though the Jains are anxious that the mother should not die before the purification is complete, yet, if she should not survive, they do not have to perform that pathetically tragic rite of bathing the young mother's dead form one hundred and eight separate times, as the Nāgar Brāhmins do. It is good to know that human nature is stronger than tradition, and the writer's Indian friends have assured her that, if their wives were to die in childbirth, they would now break through every custom and insist on being with them at the last.

3. *Death defilement.*—The defilement which death brings on a household (*mṛtyu sūtakā*) is far heavier than that of a birth. During the time the pollution lasts the Jains, like the Brāhmins, can celebrate no marriage, hear no music, eat no sumptuous meals, and perform no religious duties, and they must wear only white turbans, but, unlike the Brāhmins, they need not shave off their moustaches.

When a Jain is dying, he is placed on the floor, which has been newly plastered with cow-dung and clay (if Hindu influence is strong, the cow-dung will probably have been mixed with water from the river Ganges), and the patient is so arranged that his head is towards the north and his feet towards the south. Great attention is paid to the purification of the dying man's soul, and, with this in view, he is urged, even before he has been placed on the floor, to take certain vows, especially that of religious suicide (*santhi-ro pāṭha*),² in which he promises never to eat or drink again while he lives; he also gives away much in alms for feeding cattle and the poor; and, the moment he dies, his heirs offer further alms in his name. Still with the object of purification, a lamp fed with melted butter is lit close to the man when

he is on the point of death, and is kept constantly burning till the dead body is carried out of the house. The corpse is not usually bathed, but, in the case of a woman dying while her husband is still living, the big toe of her right foot is bathed, and her forehead is smeared with red powder.

Every one in the house is considered unclean; the men of the family go with the corpse to the burning-ground and bathe before returning.¹ The women leave the house to go and bathe in a river or tank after the corpse has been carried out, but they must be careful to return before the men. The period of ceremonial impurity lasts for seven or nine days, and is broken on a Monday, Thursday, or Friday nearest the seventh day, when the men all go to the river and bathe, and then shave for the first time since the death occurred. The women bathe in the house, wash their hair, and change their clothes.² The house has also been impure during the week, and no outsider would drink water in it; but now it is all cleansed and re-plastered with cow-dung. The room in which the person died is re-plastered with special care, and, if Hindu influence is strong, it will be further purified by having cow-urine sprinkled on the floor. All the clothes worn during the seven days have to be washed, the vessels used purified with ashes and water, and the cooking-hearth cleansed with water and cow-dung. The funeral ceremonies end with a feast to all the caste-fellows, whether Vaiṣṇava, Jain, or Svāmi Nārāyaṇa by religion.

4. *Special impurity of women.*—The birth and death *sūtakā* are the two great periods of impurity for a man, but a woman contracts ceremonial pollution more frequently, and is regarded as untouchable for four days in every month. During this time she must sit apart either on a thick cloth or on a hassock made of sacking, and, though she may sleep on a bed, it must not have the mattress spread over it, but only sacking or thick cloth. She must eat apart, and may not touch copper or bronze vessels, though she is allowed to use brass or crockery, but all the vessels that she touches are regarded as impure and have to be cleansed at the end of the four days. She should not go out of the house, if she can possibly avoid doing so, and of course cannot visit temple or nunnery; nor may she perform any of her religious duties, such as meditation or confession, even in the house. During these days she must not cook for the family or touch the hearth or the water-pots. At the end of the fourth day she bathes, changes her clothes, and washes her hair. On the occasion of first attaining puberty, however, the purification ceremonies are more elaborate. The girl, who, though married, is probably still living in her mother's house, bathes after the fourth day and puts on a simple green bodice and red *sārī* (two auspicious colours) that her mother has prepared for her, and then starts out for her mother-in-law's house; but, just before she leaves, her mother puts some molasses in her mouth. Arrived at her destination, she makes her reverence at her mother-in-law's feet and offers her two rupees; and the old lady, if gracious and kindly, presents her daughter-in-law with a more elaborate green bodice fashioned of silk. Then the mother-in-law invites her to a feast of specially nice food, which will include a dish of wheat, treacle, and *ghī* (*lāpasī*). The girl can be summoned any time after this to go and live with her husband in her mother-in-law's house, and the sewing of the trousseau will be hastened, for she must not go till this is completed. Prob-

¹ It is interesting to notice that, though the body may be carried out through the ordinary house-door, there are usually certain city-gates through which a corpse may not be borne.

² Near relatives, even if living in a distant village, are obliged to go and bathe in a stream immediately after hearing of the death.

¹ The mother's own brothers are not considered ceremonially impure, though they may have been in the house where the child was born.

² See Stevenson, p. 221.

ably, despite all the bowing that she has done and will do at her mother-in-law's feet, the last thing that her own mother will whisper in her ear will be the proverb, 'Don't be as bitter as a *nim*-tree, or you will be spat out; but don't be as sweet as sugar, or you will be eaten up [with the work they will put on you].'

5. **Accidental pollution.**—A Jain, however, may also acquire pollution in his ordinary life, and especially through what he eats and drinks. The worst fault that a man can commit is to eat meat, and, if this were done openly and persistently, he would be put out of caste absolutely and never be allowed to eat with his equals again. If, however, it were done accidentally and repented of, the offender would confess it to his director and have to observe very strict fasts before he would be regarded as purified. The rule is the same for drunkenness: even moderate wine-drinking is absolutely prohibited on account of the entry of life by fermentation, though eating opium and smoking tobacco (while not approved of) do not render a man impure.

Pollution is also acquired by touching an out-caste (an untouchable), and, after sitting beside one in a train or brushing against one, Jains purify themselves either by bathing and changing their garments, or, if less particular, by just sprinkling water over their clothes; village Jains are content with simply touching a Muhammadan by way of purification. If an out-caste passed very near their house or accidentally entered a room, Jains would purify it by sprinkling water, and, if he brought them wood, they would sprinkle water on the faggots; in the same way, after walking through an out-caste quarter of the town, they would purify themselves by bathing or by sprinkling. The rule seems to be that a very particular Jain purifies himself by immersion or, rather, affusion, and a less strict one does it just as effectually by aspersion—an interesting parallel to the varying methods of Christian baptism.

Bronze and copper vessels are treated with great respect; if they should, despite every precaution, be defiled, they are put into the fire to be cleansed. Brass vessels can be purified with fire or more simply with ashes, crockery by being washed in warm water; but the writer was shown in one house the glass that a Muhammadan visitor frequently drank from, kept in a special niche in the garden wall. In schools, in the same way, the vessels used by Muhammadans are kept separate from those belonging to Hindu or Jain children.

If the whole of a house be defiled—by a dog bringing a bone into it or a crow dropping some meat in the courtyard—the householder summons a Muhammadan or some meat-eating Hindu, such as a Koli, to take it away and himself purifies the house by sprinkling water and cow-urine where the meat had lain.

Unlike the Hindus, the Jains do not become impure during an eclipse, but, where Vaiṣṇava influence prevails, they throw away their earthen cooking-pots when the eclipse is over and bathe in a river.

Like the Hindus, the Jains perform ceremonial bathing and teeth-cleansing every morning, and until their teeth have been rubbed with the tooth-stick they will not swallow a drop of water.¹ Monks and nuns, once they are professed, may never bathe, lest they should injure the water-*jiva*. Naturally cleanly ascetics, however, evade this by rubbing themselves over with a cloth which has been moistened in warm water. But they must never clean their teeth. Before they are professed, they bathe in the ordinary way, and then their

heads are shaved except one lock of hair which they must themselves pull out. Every year afterwards they have to pull out their hair¹ before the great annual confession—a custom which is believed to be peculiar to the Jains.

The idols in the temples are also bathed every morning, but the most elaborate idol-bathing is that which takes place every twenty-five years at Śrāvana Belgolā (see art. FESTIVALS AND FASTS [Jain]). Before a man can worship in a temple, he must bathe; and, if he wishes to penetrate the inner shrine, he must bathe at the temple and don the special pure clothes provided at the cost of the community and kept in a particular room attached to the temple. In Kāthiāwār the Jains seem to be able to go to England without going through any special purification on their return, but in other places where Vaiṣṇava influence is strong a Jain goes and bathes in a sacred river, such as the Ganges, the Godāvari, or the Narmadā, and, under the pressure of Hindu opinion, he might even sip the fivefold nectar which consists of butter, curds, milk, sugar, and honey. He would also probably have to go on pilgrimage to Palitānā, Gīrnār, or some other sacred place. All this trouble, however, is sometimes avoided by a well-understood and useful fiction—the man simply giving out that he is going on pilgrimage, and then quietly proceeding to Europe, but returning *via* the pilgrim resort.

E.g., a well-known Jain gentleman was travelling in Germany at the outbreak of the war and suffered all sorts of difficulties before he was able to leave for India. He was careful, however, to return to his native place by way of a sacred hill; and it was apparently assumed that he had spent the whole time there, though his hearers must have found it difficult to reconcile the stirring adventures, alarms, and excursions under the Kaiser's tyranny, which he openly recounted to every one he met, with the peaceful happenings incident to a pilgrimage, which ought to have composed his story. Anyhow, no purification was demanded.

LITERATURE.—The information contained in the above article has been derived directly from Jain informants. See also the present writer's *Notes on Modern Jainism*, Oxford, 1910, *The Heart of Jainism*, do. 1915; and *SBE* xxii. [1884] and xlv. [1896].

MARGARET STEVENSON.

PURIFICATION (Japanese).—As cleanliness or purity is the dominating ideal of Shintō, rites and ceremonies of purification make up a considerable portion of the 'way of the gods.' The most important among these are the two ceremonies known as *harai* and *misogi*.

Their origin is said to date from pre-historic times as far back as Izanagi and Izanami, the male and female creators of the land of Toyo-ashi-hara, as Japan was anciently called.

Izanami died and departed to the land of *yomi*, or darkness; her husband followed her and, behold, 'her body was already putrid, maggots swarmed over it . . . and Izanagi, greatly shocked, exclaimed, "What a hideous and polluted land I have come to unawares!" So he speedily ran away.' He threw aside the stick with which he had touched the dead, and his belt, garments, waist-cloth, hat, and bracelet, thus sweeping off everything that had clothed his body. The action was called *harai*, literally the 'sweeping off.' Thereafter he jumped into the sea and cleansed his body with its water. This was termed *misogi*, 'watering' the body, in token of the removal of all impurities. Thus *harai* and *misogi* became integral parts of court ceremony and consequently of Shintō ritual.

There are various kinds of *harai*, named according to their purpose and importance: *yoshino-harai*, *akuno-harai*, *ō-harai*, *kamino-harai*, *nakano-harai*, *shimono-harai*, etc. *Yoshi* means 'good,' and *yoshino-harai* is to secure the good; *aku* means 'evil,' and *akuno-harai* is to avoid evil; *ō* means 'great,' and *ō-harai* is the most important of all; *kami*, *naka*, and *shimo* mean respectively 'upper,' 'middle,' and 'lower,' thus indicating their grade of importance.

The *ō-harai*, or great purification, is a ceremony intended to cleanse from all the evils and pollutions experienced since its last celebration. It is observed twice a year (at the end of June and the

¹ Stevenson, p. 165 f.

¹ Cutch and Mārwar Jains do not, like other Jains, bathe daily as a religious duty.

end of December), when the official in charge, after the proper purification of his own body, offers flax and a sword. The most important part of the ceremony is the reading of the formula known as the *Nakatomi-no-norito*, so called from the fact that in the beginning the family of Nakatomi had charge of the reading. The formula first announces to all whom it may concern the celebration of the ceremony, then enumerates the evils and impurities which have been incurred, and concludes with the statement that these all shall be purged away by the virtue of the rite.

The *ō-harai* was usually performed at the southern gate of the royal palace in Kyoto. Special messengers were sent by the court to all parts of the empire, and the same ceremony was performed in various Shintō temples. Regulations governing the details of the ceremony were formulated from time to time, but these tended not to perpetuate the ceremony but to hasten its decline. For several hundred years previous to the restoration of 1868 the observance of these ceremonies was much neglected by the court; but with the restoration, together with many old forms, they were again brought into more or less prominence.

Special occasions of public calamity, such as the outbreak of pestilence, famine, or destructive fires, also call for the observance of *ō-harai*. Local and individual *harai* are at times observed for various reasons upon a much smaller scale. Individual *harai* has at times been looked upon as a penalty for certain offences, and in A.D. 801 was carried to such an extent that the court issued an ordinance regulating its use.

Saikai, or *monoimi*, is a form of self-purification in preparation for worship. When the worship has been duly performed, the worshippers discontinue the *saikai* by a ceremony of *kai-sai*, dismissing the *sai*. While under *saikai*, certain things are forbidden, such as attending funerals, visiting the sick, sentencing a criminal or putting him to death, playing upon a musical instrument, or taking part in any impure or desecrating act. The length of the observance may vary from one day to a month, according to the importance and nature of the occasion.

The *Yengishiki*, or 'Book of Ceremony,' published during the Yengi era (901-923), has the following regulations concerning those who are to be regarded as polluted by various acts of impurity and who are therefore to be prohibited from taking part in Shintō worship. Pollution from the human dead shall debar for thirty days from the day of the funeral; pollution from human birth for seven days; pollution from animal dead for five days; and from animal birth, not including chickens, for three days. Those who ate the flesh of beasts were impure for three days. Participation in the reburial of the dead rendered one impure for four months or longer. Those who had attended a funeral, visited the sick, or been present at a memorial service were forbidden to enter the royal gate on the same day. Buddhist priests and nuns and those in mourning were forbidden to enter the palace during the *saikai*, and both before and after the chief festivals such as *kinen*, *kanname*, and *niiname*.

Court ladies in pregnancy were obliged to withdraw from the court during the time of *saikai*, as also were those temporarily incapacitated at the time of the ceremony itself. A conflagration rendered those within the house impure for a period of seven days. Complicated regulations, as has been said, were formulated governing all possible cases; but in practice the observance has gradually decreased, so that at present slight attention is paid in general to ceremonies of purification.

Various symbols of purification are still more or less common. People returning from a funeral are not infrequently greeted with salt, that they may be freed from all impurity before entering their homes. Spitting or breathing on them is thought to remove contamination from sights and objects near at hand. Shaking the *gohei*, strips of white paper attached to a rod, is an act of purification, and the *shimenawa*, or straw rope above the entrance gate, is likewise thought to protect the dwelling from impure influences.

TASUKU HARADA.

PURIFICATION (Muslim).—1. The ritual of purification.—The Muhammadan ritual of purification is based primarily on the late Qur'anic passage, v. 9, repeated with slight variations from iv. 46:

(a) 'O believers, when ye come to fulfil the prayer, wash your faces, and your hands as far as the elbows, and rub your heads, and your feet unto the ankles'; (b) 'and if ye be polluted then purify yourselves' (*Jatthaharū*); but iv. 46, 'wash yourselves' (*tahtasilū*); (c) 'but if ye be sick, or upon a journey, or one of you come from the privy or have touched a woman, and ye find no water, then take pure earth and rub your faces and hands therewith.'

With the help of traditions, the variations in the two versions of this law have been harmonized, certain verbal and logical obscurities removed, and the details elaborated into a ritual of practice as follows.

(a) *Wudu'*, or *waḍū*, the minor ablution, of the appendages (not the trunk) of the body.—It is performed regularly before each of the five daily prayers, whether at home or in the mosque; but it may be omitted if the worshipper is sure he has in no way become polluted since the last *wudu'*, as, e.g., when he continues praying from one period without interruption into the next. It is usual also before touching the Qur'an and at the approach of death; and it forms an integral part of the major ablution.

The *wudu'* is performed at a tank (*miḍā'ah*) or reservoir (*ḥanaṭiyah*) provided with spouts; after a declaration (*nīyah*) that the intended act is for purposes of purification, the Muslim, with sleeves tucked above the elbow, performs each of the following acts three times: washing the hands; rinsing the mouth (here the tooth-pick also is used); compressing each nostril with the left fingers and snuffing up water from the right hand, followed by expulsion of the water; washing the face; washing the right arm and permitting the water to run from the palm to the elbow; washing the left arm similarly. Then follow once each: passing the wetted right hand over the upper part of the head, the turban being pushed back with the left; combing the beard with the wetted fingers; inserting the tips of the forefingers into the ears and passing the thumbs around the back of the ears; wiping the neck with the back of the fingers of both hands; washing each foot as high as the ankle and passing the fingers between the toes (Shi'ites, however, conform more literally to the Qur'anic passage by rubbing [*masā*] the feet with the wetted hand instead of washing them; see also *masā*, under *taḥīr*, p. 497²).

(b) *Ghusl*, the major, total ablution of the body.—As based upon the Qur'an, it is demanded in the case of certain physical pollutions, specified by tradition to be those of coition, nocturnal pollution, menses, and childbirth, the period of uncleanness in the last (*nifās*) continuing for forty days according to Sunnite law, for ten according to Shi'ite. As based upon tradition only, and hence called *ghusl masnūn*, it is demanded in the case of conversion to Muhammadanism; before the prayers of Friday and the festivals; after washing a corpse; after blood-letting; after death (performed by the *mughassil*, or washer of the dead). It must be performed in more than a certain minimum of water, which must touch every part, every hair, of the body, and hence takes place usually in the *ḥammām*, with its plunge bath. *Ghusl* includes also the *wudu'*, though the washing of the feet should be deferred by a *nīyah* to the end of the

entire ablution; in the case of the *wudu'* as part of the *ghusl* of a corpse the mouth and nose are stopped with cotton instead of being washed.

(c) *Tayammum*, the minor purification with dust in place of water.—It may be performed when water cannot be secured within two miles or without incurring danger; in case of sickness, open wounds, or fractured bones; because of lack of time for the proper *wudu'* before the prayer on festival-days and at funerals. It consists of the declaration of intention, and of clapping dry dust or sand upon the face and hands.

(d) *Various practices of personal cleanliness*.—Some of them, together with *wudu'* and *ghusl*, are classed under the general term *tahārah*, 'purification,' some of them form part of the regular *wudu'* also, others are practised as occasion demands; in so far as they are not mentioned in the Qur'ān, they are declared to have been sanctioned by the Prophet as *fiṭrah*, lit. 'nature,' the natural religion in which man was created (xxx. 29), interpreted also as 'customs of the [previous] prophets.' These are use of the tooth-pick (*miswāk*)—an insistent practice of Muhammad; cleansing the nose and mouth with water (*istishāq*); clipping the ends of the moustache to prevent them from entering the mouth; clipping the finger-nails; cleaning the finger-joints; depilation of the armpits; shaving of the pubes; abstersion (*istinjā'*) with water or dry earth or a piece of stone after evacuation and urination. Washing the hands before and after meals is also declared sometimes to have been demanded by a *ḥadīth*; and it is quite generally practised. Another enumeration of five usages of *fiṭrah* includes circumcision, which in usage is also regarded as an act of purification, and hence the term *tathīr* (see below) applied to it; it is nowhere mentioned in the Qur'ān, however, nor is it absolutely necessary in the case of an adult converted to Muhammadanism.

(e) *Tathīr*, the purification of objects which have become ritually unclean.—This is based on *ḥadīth* only; like personal purification, it may be performed with dry earth instead of water. One of the most important rules of *tathīr* is that termed technically *mash*, the purification of the inner boots; according to Sunnite law, if they cannot be cleansed of filth by rubbing dry earth upon them, they may still be made ceremonially clean (and worn during prayers) by stroking (*mash*) them with the wetted fingers three times; Shī'ites, however, deny that the boots may be worn at all during prayers. Some of the other numerous details of *tathīr* are the following:

Any spot can be made ritually fitted for prayer by spreading a clean rug or garment upon it, but the ground itself is clean when dry. Handling forbidden animals, such as dogs, pigs, and rats, requires purification of the person and garments. Dishes which have contained wine or the flesh of swine (conditions which may exist when such dishes have belonged to Jews or Christians) must be purified before a Muhammadan may eat from them. A vessel from which a dog has drunk must be washed seven times; a mosque defiled by a dog can be purified with water or earth together with recitations from the Qur'ān; it should be noted, however, that the mere presence of the animal, if dry, does not render unclean, while, on the other hand, if wet, the mere contact of its nose with the clothes requires (so the Shāfi'ites hold) that the clothes be washed seven times, each time in fresh water, and be rubbed once with earth; even Muhammadans less strict hold that body and clothes are defiled by a dog's saliva, and naturally by its micturition; many will not use mattresses made of dogs' hair. Another tradition declares that any considerable amount of fleas' blood defiles a garment. To a certain extent the ordinary washing of clothes is considered an act of purification, since the operation is concluded by pouring clean water upon them and reciting the *shahādah*, or testimony of faith.

The water used for purificatory purposes must itself be pure, i.e. clean. Therefore rain-water is preferred and regarded as specifically recommended in Qur'ān, viii. 11:

'Remember when . . . He sent down upon you rain from

heaven to purify you therewith and remove from you Satan's pollution' (*raḡḡ*; perhaps intended rather in the sense of 'temptation [to desertion and idolatry]').

On the basis of *ḥadīth*, water from other sources may be used; that of the sea, springs, wells, rivers, hail, snow, and ice (but not ice itself), providing colour, smell, and taste give no evidence of pollution; with those restrictions, running water may be used even if a dead body or other unclean thing has fallen into it. The same permission is given in the case of standing water of more than a certain volume; but, if an animal falls into a well, at least 300 bucketfuls of water must be drawn, and the well must not be used for a day, or, if putrefaction of the body has set in, for three days. Earth or sand used for purification must not be damp.

2. *Origin and motive*.—The details of these purificatory practices were derived by Muhammad and the elaborators of his laws from pagan Arab, from Jewish, and from Christian sources. Occasionally a tradition seems to show that the Prophet (or those speaking in his name) was still under the influence of the primitive superstitions which gave rise to the particular practices in question; some traditions show an appreciation of the religious and ethical transmutations of Judaism and Christianity; others a mere toleration of existing customs in so far as they were free or could be freed from idolatrous implications. But to the extent that there was any logical purpose in his eclecticism at all, that purpose seems to have been partly rationalizing and disciplinary, mainly æsthetic. For it would seem that filth in any form was repugnant to Muhammad, particularly to his olfactory sense. This abhorrence of filth and keenness of smell may well have been due in part at least to his early Bedawin apprenticeship, for both are very pronounced in the true Bedawin. At any rate tradition is insistent in ascribing them to Muhammad.

Thus one *ḥadīth* declares that he demanded that any one who had eaten garlic or onions should avoid his presence (a variant reading restricts the prohibition to prayer-time), another tradition, accounting for the institution of the *ghusl* as a regular Friday practice, declares that he ordered it on an occasion when the people had performed their daily labour while wearing blankets and had perspired to such a degree that the odour from their bodies had become disagreeable. Again, he is reported to have said that in paradise all bodily excretions will be carried off as a perspiration with the odour of musk; that only the sensing of an odour or the hearing of a sound must be considered an interruption of the required absorption in prayer, and, still more significant, that, when a man tells a lie, the foulness of its odour drives his guardian angels a mile away.

It is possible, of course, that underneath the selfish æsthetic motive there was a trace of that sublimated anthropomorphic conception which leaves to the deity a gratification in the odour of sacrificial smoke or of incense, and hence might ascribe to God man's own aversion to foul odours. Indeed, there is even a tradition which declares that the sacrificial blood itself reaches Allāh's acceptance before it touches the ground; but, as far as Muhammad himself is concerned, this evidence is nullified by the Qur'ān (xxii. 37):

'Their flesh will never reach to Allāh, nor yet their blood, but your piety will reach him.'

The tradition cited probably represents merely a popular expression of the surviving primitive superstitious conception; still more primitive in conception is the declaration that the nasal purification was instituted for the purpose of driving out the evil spirit which lodges in the nostrils during the night. From the Qur'ān itself the impression is derived that Muhammad's purificatory ordinance was perhaps merely an expression of the feeling which, superstitions origins forgotten, still demands a certain decency and comeliness on the part of the worshipper; for the ordinance in

question follows immediately the rational injunction, 'Come not to prayer while ye are drunk, until ye understand.' The rationalizing tendency of Muhammadanism in the purificatory ordinances is seen also in the limitation of contactual ritual contamination to cases of actual physical transference of perceptible impurity. There is evidence that the strictness of Hebrew legislation in regard to the menstruous woman was shared at least in part by the pagan Arabs (in the earlier Arabic usage the only clear equivalents to the Hebrew *tāmē* and *tāhōr*, 'unclean' and 'clean,' seem to be *tāmith* and *tāhir* as applied to the menstruous and the 'clean' woman); but several traditions show that Muhammad, in accepting the general principle and some particular details from both sources, modified the severity and declared that mere contact with a woman in this condition need not be avoided. Nor does touching a corpse render unclean any one except the person who washes it for burial; still less does mourning in general, or contact with sacred objects. The same tendency to identify ritual uncleanness exactly with physical malodorous uncleanness, with excretions, dampness, and putrefaction, is evidenced in some of the definitions cited above; e.g., a dog's contact defiles only if the animal is wet; earth is clean (and cleanses) if not damp. The tradition declaring that the micturition of a 'clean' animal does not defile is, of course, not of this rationalizing tendency.

3. *Connexion with expiation.*—There are a few isolated indications that purification might by some have been regarded as having expiatory or atoning force—that it washed away guilt. Whether any such idea attaches to a tradition that in paradise the faithful will be distinguished by the marks of purification on hands and forehead is doubtful; the *hadith* that he who performs the *wuḍūʿ* thoroughly will extract all sin from his body, even though it may lurk under his finger-nails, is clear. And such an idea may have been present in the mind of the governor of Kūfah who ordered the pulpit of its mosque to be washed because his predecessor, who had been guilty of immorality and injustice, had occupied it. But such a conception of purification from sin is not found in the Qurʾān, nor has Muslim theology developed it. Even prayer, for which ablution is only a preparation, absolves only from the minor sins (those inherent in human nature and hence more or less unconsciously performed) and not from the major sins (including all crimes, usury, lying, disobedience to parents, and the frequent commission of minor sins); one looks in vain for evidence that the ablution of a convert represented a baptism into new birth, or that circumcision was really regarded as an act of purification. Neither blood nor fire appears as a purificatory medium. Nor does the use of earth as a substitute for water indicate that purification was a symbolic act; for earth or sand was regarded as an actual sanitary hygienic medium; in the case of sickness the avoidance of water was due apparently to an old and still persisting belief that water poisons wounds and, when cold, causes fever; though here again there is a contrary tradition that Muhammad thought his own fever was due to a spark from hell-fire and might be cured with cold water.

4. *Application to food.*—Muhammad's treatment of the subject of animals used as food seems to support the view that he did not place much emphasis on the ritualistic, technical distinction between clean and unclean, for he did not use the terms at all in this connexion. To him permitted foods are merely *ṭayyibah* (lit. 'good,' 'pleasant,' then 'sound,' 'healthful'; ii. 269, v. 6, xxiii 53). Forbidden animals are not specifically mentioned in the Qurʾān (except the swine); later law, how-

ever, characterizes various animals with the legal terms *ḥalāl* ('lawful'); *mubāh* ('permitted'; legally indifferent); *makrūh* ('disliked' or 'abominable'; disapproved, but without penalty for use); *ḥarām* ('forbidden'); the various legal schools differing in the assignment of certain animals to specific classes. Quadrupeds that seize their prey with their teeth are absolutely prohibited; included in this class are the elephant, the weasel, the ass, the mule; according to Ḥanīfite law, also the hyena, the fox (but these are regarded as lawful by the Shāfiʿites), and the horse (held to be indifferent by the Shāfiʿites, while Mālikite law agrees with Ḥanīfite). Birds which seize their prey with their talons, such as ravens and some crows, are also forbidden. According to some interpretations, all aquatic animals except fish are unlawful (though the Mālikites permit them). Included in *makrūh* are pelicans, kites, crocodiles, otters, and insects (except locusts, which are permitted); in *mubāh* are hares, crows that feed on grain, magpies. But all animals used for food (except fish and locusts) must be slaughtered by drawing the knife across the throat in such a manner as to sever windpipe, carotid arteries, and gullet; and at the moment of slaughter (in the case of prey at the moment when the weapon is discharged, or, in hunting with dogs, when the animal is let slip [v. 6]) the words, 'In the name of Allāh, Allāh is most great,' must be recited. And all food is forbidden if slaughtered by an idolater or an apostate from Muhammadanism.

It seems evident from the Qurʾānic passage on which this legislation is based (ii. 167) that Muhammad's own restrictions had as their purpose the avoidance of any participation in idolatrous worship and the insistence upon freshly slaughtered food; in speaking of fish used for food he emphasizes the latter idea:

'He hath subdued the sea that ye might eat therefrom flesh that is fresh' (*ḥarī*; xvi. 14)

He refused to accept all the ritualistic restrictions of the Jews:

'All food was allowed to the children of Israel (except what Jacob forbade himself), ere the Law was sent down' (ii. 86); and (ii. 44): 'I have come to . . . allow you part of that which had been forbidden you.'

In this permission interpretation includes the eating of fish without fins or scales, of the caul and fat of animals, and of camel's flesh; indeed, Muhammad probably intended in general that his followers might eat whatever was customary to them. There is a tradition that on one occasion he refused to eat of roast lizard when it was placed before him; being asked whether it was forbidden as food, he replied: 'No, but, as there are none in my native place, I feel a repugnance against eating thereof.'

5. *Value of the ritual.*—The prescription of ritual practices and distinctions belongs to the later period of Muhammad's life; and it may be concluded that his priestly or legal, as distinct from his prophetic, activity was one of secondary importance to him, adopted, at least in part, because of the demands for definiteness in creed, code, and practice which the mass of believers demands. Moreover, the ritualistic prescriptions provided a certain discipline of unifying value; and they were the more demanded in that his religious system dispensed with priests, and fixed personal responsibility upon each individual.

As a sanitary code which made cleanliness not next to godliness but a part of it (in a tradition: 'Cleanliness . . . is one half of the faith'), the purificatory ritual had a decided value; it has raised the standard of cleanly and healthful living among all classes of observant Muhammadans. Some Bedawīn, it is true, are little observant of

ceremonies; Burton¹ quotes the Bedawin saying: 'We pray not, because we must drink the water of ablution'; nevertheless they show an innate eagerness to bathe at every opportunity. A more serious neglect is frequently noticed in the case of children, who are purposely left uncared for out of fear of the 'evil eye.' But in general those who have lived in the Muhammadan East support the emphatic verdict of Burton and Lane that there is a marked contrast between Muhammadans and non-Muhammadans in this matter of refinement.

6. Its defects.—On the other hand, Muhammadanism by its emphasis on ritual has subjected itself to the danger of making cleanliness not a part but the whole of godliness. In the effort to prevent this the ritual provides that each act of the *wudu'* should be followed by a short prayer making the act at the same time the symbol of some ethical or religious idea.

Thus, after the rinsing of the mouth the prayer is: 'Oh Allāh, assist me in the reading of Thy book, in thanking Thee through worshipping Thee well'; on washing the ears: 'Oh Allāh, make me to be of those who hear what is said and obey what is best.'

As a matter of fact, however, many Muhammadans neglect these intermediate prayers and finish the entire *wudu'* in two or three minutes (despite the exactness of regulation, there is a decided difference in the manner of performance by an educated and that by an uneducated Muhammadan); and, when the prayers are recited by non-Arabic speaking peoples, they may be little better than meaningless.

7. Outward and inward purity.—But these defects are not necessarily to be regarded as of the essence of Islām; they are rather inherent in any system which gives to unthinking masses fixed forms and ceremonies. It might even happen in more advanced circles of thought that the Qur'ān, by making clearer the distinction between forms and faith—e.g., by making of the purification ritual merely a divinely-ordered sanitary ordinance clear of superstitious connotations—might lead to a lofty spiritual conception. But it is the misfortune of any theocratic code which must provide for all the life of man that the distinction between police ordinance and moral precept is easily obscured—that, perhaps contrary to intention, emphasis is misplaced upon the easily comprehended ritual to the neglect of less specific exhortations to moral righteousness. In the Qur'ān, as a matter of fact, the ritual of physical purity is a subject of but few passages; it is not mentioned at all in the definition and summary of true piety found in ii. 172. References to religious, ethical, and moral purity, however, are many, though the exact meaning of the term 'purity' is sometimes difficult to determine. On the whole, 'purity' is a negative term, denoting the absence of what is foreign and obnoxious to the normal, natural, or simple state.

Man was created in purity; though of clay, even the angels bow to him (xv. 30); and 'purity of faith' to Muhammad was merely freedom from idolatrous corruptions and superstitions which had crept into the natural, original faith of Adam. Purity of the heart is demanded under varying forms of expression. As idolatry is uncleanness (*najās*), firm belief in Allāh is purity; thus, in v. 45, 'those whose hearts Allāh does not please to purity' (*yutahhar*) are those who do not believe sincerely and without hypocrisy; in xviii. 2 the Qur'ān itself is 'pure' (*mutahharah*), i.e. freed from falsehood; at least according to tradition (vi. 78, 'none shall touch it [the Qur'ān] except the purified') means 'none shall understand it except those who are pure of heart.' Another word for 'purity,' one normally not used in the ritual sense, appears in ii. 146: 'And we sent you an apostle from among yourselves to read unto you our signs and purify you (*yuzakkikum*) and teach you the Book and wisdom,' in which the purification evidently refers to faith; so also xci. 9, 'Well for him who has purified it [his soul, *zakkāh*]; ill for him who has defiled it.' Or the pure heart (in the religious sense) is the 'sound heart' (*qalb salīm*: xxvi. 89, xxxvii. 82), while hypocrisy is found in those 'in whose

hearts is sickness (*fi qulūbihim maraḍun*), the sincere in heart are those who 'clarify their faith' (*mukhlisīna 'd-dīna* xl. 14); and evil is the 'Sūrah of Sincerity' (*Sūrat 'L-akhlāṡ*). Vaguely the same idea is expressed in *barr*, 'pious' (ii. 41, 172), which in Hebrew is 'pure.'

Purity of purpose is demanded in many passages where no specific term is used; thus ix. 28 is directed against those who out of fear of loss of trade were willing to make concessions to idolaters; lxxiv. 6 inveighs against those who, when they do a kindness, have in their hearts the hope of receiving in return. From the negative side purity of intention is emphasized in the teaching that no sin attaches to one who under compulsion eats forbidden food, provided that he is 'without lust or wilfulness' (ii. 168). And this Qur'ānic insistence upon purity of intention is embodied in the purification ritual itself, which, like every act of devotion, must begin with the *nīyah* ('intention'), the thought or the words, 'I purpose to offer up to God only with a sincere heart'; and it is expressed doctrinally in the statement that 'the fundamentals of Muhammadanism are sincerity of belief (*ṣiḥḥat al-aqāḍ*), truth of intent (*ṣidq al-qaṣḍ*), observance of the lawful limit, and keeping of the covenant' (so stated in the Shāfi'itic exposition of Muhammadanism put in the mouth of the learned slave-girl Tawaddud in the 443rd night of the *Thousand and One Nights*). The Sayyid Amir 'Alī quotes, against those who find in the Qur'ān only physical purity as a prerequisite for prayer, vii. 204:

'And think within thine own self on Allāh, with lowliness and with fear, and without loud spoken words, at even and at morn.'

8. Moral purity.—In the moral (sexual) sense it is difficult to fix a definite value for the term 'purity'; the relativity of the term, as denoting sexual self-restraint within varying limits of indulgence, is expressed in the *Thousand and One Nights* (night 915) in these words:

'As for the lust of reproduction, that which pleaseth Allāh thereof is, that it be of that which is permitted, and that which he dislikes is that which is forbidden.'

As compared with previous conditions, the Qur'ān (see CHASTITY [Muslim], LAW [Muhammadan]) narrowed the legal limits of indulgence; but it left them much wider than the ideal limits set by Christianity, e.g., in that it specifically permitted monogamy and concubinage, and made divorce easy, especially for the male. In so far as this freedom was based only on the Semitic desire for numerous offspring, it does not involve the question of moral purity, though it might perhaps be suggested that Muhammad should by analogy have deduced the doctrine of purity in morality through monogamy from that of the purity of religion through monotheism. But Muhammad in his legislation was mainly an opportunist, a compromiser, satisfied to ameliorate the most evidently vicious social evils to the extent that he could without jeopardizing the success of his main purpose. It is doubtful, indeed, whether monogamy, if desirable, was possible of achievement under the social conditions of the Arabia of his day. And, in general, it is even possible that, by permitting a lower standard of moral purity and making it possible of attainment by those whom his mission reached, he achieved a greater amount of social good than he otherwise would have achieved. At any rate, he raised the standards of moral purity among many primitive peoples which other systems had not before, and have not since, been able to affect seriously or permanently. And, in trying to estimate how far Islām lags behind the more enlightened social systems in this matter, it is again necessary to consider not only standards of monogamy but also to what extent those standards are reached. In the first place, not even

¹ *Pilgrimage*, ii. 110.

a strictly observed monogamous relationship of necessity denotes 'purity' defined as self-restraint in sexual indulgence. Moreover, there are some who doubt whether the amount of indulgence through the lax interpretation of laws of divorce (but more especially through the legal and social toleration of prostitution) is relatively smaller among non-Muhammadan Europeans than among Muhammadans. For polygamy and concubinage, owing to imposed conditions and natural difficulties, are by no means practised by even a majority of Muhammadans; and, while the legalization of the double standard implies a lowering of the general ideal of womanhood, it has meant the saving from absolute moral degradation of a considerable portion of womanhood. For the punishment for transgressing legal bounds is strict; and the seduction of Muslim women is exceedingly rare. Legal restrictions, however, are of no avail in checking those outbursts of sexual violence which accompany the riots of mobs inflamed by racial or religious fanaticism or jealousy, whether in Muslim or in non-Muslim lands, and which are directed against the women of the persecuted race. It is in such crises, perhaps, that the moral shortcomings of Islām stand out prominently, because the Qur'anic permission for cohabitation with female captives (iv. 23, xxxiii. 5, xxxiii. 49), Jewish and Christian, furnishes a ready excuse for reactionary and fanatical Muslim leaders who are willing to make lust serve the purposes of religious hate.

In so far as 'purity' is used not only of actions but also of thought and word, it is again a relative term. In Islām, since matters of sex-relations in themselves are not considered to be impure, the thought or mention of them in literature or conversation is not in itself regarded as evidence of moral depravity. Here also, if the standard of purity be made the amount of sexual stimulation produced, it is doubtful if the natural frankness of Muhammadans is worse in its results than the veiled suggestiveness permitted elsewhere; it is extremely difficult, *e.g.*, to judge what the actual effect of Muhammad's picture of the pleasures of paradise is upon the mind of the Muhammadan.

At all events a high ideal and voluntary practice of moral purity are not impossible even when the law permits (but does not command) extremes of indulgence. The interpretation of Qur'ān (and Scripture) is often more important than the letter; and, while there are not many Muhammadans who have attempted to allegorize away the sensualism of the Prophet's paradise, there are many of high moral standards who have found and emphasized other texts in the Qur'ān (see, *e.g.*, the passages quoted in art. CHASTITY [Muslim]); it may be added that in the popular version of the Shāfi'ite teaching presented by the *Thousand and One Nights* the 'super-structure of Islām' is said to include 'striving against the lusts of the soul and warring them down,' while prayer 'restraineth from lewdness and frowardness'. It is, of course, of more significance that certain Muhammadan teachers find in such passages the highest ideal of purity demanded than that detractors of Muhammadanism deny the possibility of such ideals within the faith; it is hopeful that such a passage, *e.g.*, as xxxii. 17, 'No soul knoweth what joy [or 'satisfaction'; lit. 'coolness'] of the eyes is reserved (for the good) as a reward for their works,' together with the frequent promise of the 'grace of Allāh' (lit. 'additional recompense'), is explained by some to refer to a higher reward reserved for those who are most worthy, namely, the joy of gazing upon God's face and in this spiritual pleasure forgetting the lower, sensual pleasures of paradise. In a similar way Ghazālī taught that there are degrees

of purification: that of the body from pollution and filth, of the actions from wickedness and injustice, of the heart from immoral desires and vicious promptings, of the mind from irreligious ideas and worldly distractions. Graded lessons are taught also in the matter of polygamy; there is nothing in the Qur'ān (as there is nothing in the OT) to inhibit those Muhammadans who are insisting upon higher standards of moral purity through the voluntary relinquishment of polygamy and slavery.

LITERATURE.—*DI*, s.v. 'Purifications' and the other art. there cited, 'Water,' 'Wells,' 'Food,' 'Clean and Unclean Animals,' 'Dogs,' 'Circumcision,' 'Fitiāh'; E. W. Wellhausen, *Reste arabischen Heidentums*, Berlin, 1897, p. 167 f.; G. Sale, *The Koran*, Philadelphia, 1888, 'Preliminary Discourse,' pp. 73-77; J. M. Rodwell's tr. of the Qur'ān is quoted, with slight variations. WILLIAM POPPER.

PURIFICATION (Roman).—1. Early history of the idea.—In the earlier ages of Rome the feeling for purity and the need for purification depended mainly on a yearning after ceremonial exactitude, in order to avert resentment of supernatural beings because of flaws in the forms of service which they required from mortals. The beings whose discontent would be dangerous were very dimly apprehended, sometimes as ghosts, sometimes as *numina*, divine forms hardly recognized with clearness as persons. Anthropomorphic ideas of the supernatural slowly made their way into Rome and came principally from without, through foreign channels. Consciousness that duty towards existences not of this world had been imperfectly performed did produce a sense of defilement, which weighed upon the soul, even when the wrong done was involuntary. At first the foulness arising from conduct, except in extreme cases, was hardly regarded as belonging to the spirit. But the use of the words *purus*, *puritas*, like that of terms cognate in meaning, such as *castus*, *sanctus*, shows a progressive development in the spiritual direction. The notion of impurity accidentally incurred, and independently of the will, tended to pass away from the religion of the educated class, and to retain its force mainly among the rude and the rustic.

Although the apprehension of divinities in the earlier days was but dim, their power to protect the household and the State was real. The strong sense of law which was characteristic of the Roman in all ages led him to conceive the relation between himself and the god or the ghosts in terms of a bilateral contract. If he did his duty by them, they were bound to do their duty by him, and to hold him free from harm. There was in time elaborated a complicated code of divine law (*ius divinum*) parallel to the human law (*ius humanum*). Originally, those who knew and expounded both forms of this law were the same, the college of *pontifices*. It is too much, however, to say, as has often been stated, that the primitive idea of obligation towards divine creatures was entirely non-ethical. The horror inspired by murder, especially of the atrocious kind called *parricidium*, and even by lesser offences, such as wrongful treatment of a client by his patrician patron, placed the offender under a ban, and rendered him accursed (*sacer*) and deprived him of civil rights.

2. Common acts of purification.—The necessity of purification ran through the life of the indi-

vidual. In a sense the new-born babe was impure, and was the subject of various ceremonies. The day on which a child received its name was its *dies lustricus*, 'day of purification' (Macrobius, i. 16: '*dies lustricus quo infantes lustrantur*'). The cleansing operation was probably at first conceived as a protection against spirits which might otherwise be malignant. Lustral rites were also accompaniments of marriage. The farm and the herd had in like manner to be protected by a ritual which Cato the Censor describes (*de Re Rustica*, 141). When a death occurred in a house, a cloud hung over it, which could be dispersed only by elaborate purification. Without it the family would continue to be *funesta*, i.e. at variance with the world of spirits. The *pontifices* evolved elaborate rules to bring this condition to an end (Cicero, *de Leg.* ii. 55: '*finis funestae familiae*'). Until this was accomplished, a branch of cypress was hung at the door, or in poorer houses a bundle of fir twigs, to warn from entering those who were specially bound to purity—in particular, priests and Vestals. A *pontifex* was not permitted to look on a corpse (Tac. *Ann.* i. 62, and many other passages in literature). It may be that the burning of the body on the pyre had a cathartic effect (Rohde, *Psyche*, ii. 101). The period during which the house was *funesta* ended with the curious ceremony called *ossilegium*, which affords a remarkable example of the Roman unwillingness to break entirely with the past. What was called 'the gathering of the bones' was, after the introduction of cremation, practically the collection of the ashes, but one finger-joint remained unburned, in order to do homage to the more ancient custom. All unpurged contact with the dead would bring with it foulness and a liability to misfortune. A Roman poet makes the spirit of a wife who died early say that the torch which graced her marriage must have been lit at a funeral pyre (Propertius, v. iii. 13; cf. Ovid, *Fasti*, ii. 577). The prohibition (general in the Roman empire) against burying within the walls of a city probably had its origin more in the dread of ghosts than in sanitary considerations.

Parallel to the *lustratio* of the house is the periodical purificatory ritual applied to a country district (*pagus*). The *lustratio pagi* consisted in a religious procession right round its boundaries, with sacrifice. There seems to have been in ancient days a similar procession round the walls of a city, called *amburbium*. In historical times special purification of the city (*lustratio urbis*) was carried out when calamity called for it—e.g., after the early disasters in the Second Punic War (Livy, xxii. 20). The object of all such expiations was 'to seek reconciliation with the gods' ('*pacem deum exposcere*,' of frequent occurrence in Livy). A lustral ceremony accompanied the foundation of a colony (Cicero, *de Divin.* i. 102). The *Terminalia*, protective of boundaries, and the *Compitalia*, of streets in the city, were also probably lustral in their origin. Down to a late period the priests called *Luperci* perambulated the boundaries of the earliest Rome, the settlement on the Palatine (Tac. *Ann.* xii. 24). That archaic priesthood, the Arval brotherhood (see ARVAL BROTHERS), was concerned with an annual solemn progress round the limits of the most ancient *Romanus ager*, the territory of the primitive city. The ceremony was called *Ambarvalia*, and it was distinctly piacular. When Roman territory was expanded, no corresponding extension of the lustral rite seems ever to have been made. These roundabout piacular surveys were common elsewhere, inside as well as outside of Italy, and particularly in Greece. The solemn words and prayers of the traditional chant, duly gone through without slip of tongue,

seem to have had a sort of magical effect. Any error in the pronouncement of these forms would involve a need of reparation, just as in the earliest Roman legal system the mispronunciation of the established verbal forms would bring loss of the law-suit. At Iguvium in Umbria there was a solemn lustration of the city, the details of which are contained in the great and very ancient record in the Umbrian dialect, preserved in the *Iguvine Tables*. It may be noted that, from the commonness of these lustral perambulations, the verb *lustrare* acquired its secondary sense of surveying a scene with the eyes.

Other forms of quaint ancient ritual were connected with the piacular conception. The *Salii*, ancient priests of Mars, made a journey at certain times round a number of stations in the city. They also had a 'cleansing of the weapons' (*armilustrum*) and a 'cleansing of the trumpets' (*tubilustrum*), which testify to a primitive notion that the efficiency of the army's weapons required the use of religious as well as secular means. The 'washing' (*lustrum*) with which the census ended was in essence military; for it was connected with the *comitia centuriata*, which is merely the army in civil garb (*exercitus urbanus* [Varro, *de Ling. Lat.* vi. 88]). A *lustratio exercitus* was often performed when the army was in the field, to remove a superstitious dread which sometimes attacked it; at other times it was merely prophylactic. There was also a lustration of the fleet (Livy, xxxvi. 42; Appian, *Bell. Civ.* v. 96). We very seldom find the *lustratio* referred to particular divinities. But Virgil represents the host of Aeneas as offering a piacular ceremony to Jupiter on landing in Italy (*Æn.* iii. 279).

3. Irregular occasions.—In almost all the instances given above the cleansing operation is frequent and ordinary. But often it was occasional and irregular. Religious officers, particularly the *flamen* of Jupiter (*flamen Dialis*), were beset by many tabus, the breach of which would involve expiation. So, when the Arval Brothers took an iron implement into their sacred grove to cut down or trim the trees, atonement had to be made. The erring Vestal, if unpunished, brought calamity on the whole people. Individuals who made unauthorized compacts with the enemy, as the compacts rested on religious sanction, involved the nation, unless the nation, on repudiating the agreements, handed over the authors to the foe—a cheap form of expiation, adopted, e.g., in the case of the officers responsible for the agreement made after the disaster at the Caudine Forks, and in that of Hostilius Mancinus in Spain. On one notable occasion the irregular shedding of blood in political strife at Rome spread a sense of impurity among the people, which the senate thought it well to remove. The murderers of Tiberius Gracchus (a sacrosanct tribune) professed to have secular justification for their crime, but, on the advice of the keepers of the Sibylline books, a sacred embassy was sent to the temple of Ceres at Henna in Sicily, and a choir of twenty-seven maidens sang in procession at Rome (Cicero, *in Verr.* iv. 108; *Obsequens*, 27). The need of purificatory ceremonial was especially felt in times of national disaster, particularly those entailed by war or pestilence. The people's souls were harrowed by extraordinary occurrences, which long experience had shown to be signs of divine wrath. Elaborate regulations were evolved for averting the consequences. The experts of Roman origin were the *pontifices*; but from Etruria came the *haruspices*, and Greek influence established firmly the college of the *decemviri* (later *quindecimviri*), who had charge of the Sibylline oracles. Prodigies or portents of the less serious kind were expiated after consultation

with the *pontifices* or *haruspices*; extraordinary signs led to an examination of the Sibylline books (Livy, xxii. 9: 'tetra prodigia'). But the priests in all these circumstances had no initiative; they had to wait until they were asked by the senate to give an opinion. There was a fixed ritual for making appeasement when a thunderbolt struck the ground or killed a man. The spot became banned. Rain or thunder cut short the meetings for public business in Rome, as in Athens, and in other ancient states. If affairs were carried on in defiance of the sign, guilt would be incurred and a piacular offering would be due. Some ceremonies which have been deemed by scholars to have an expiatory significance can only doubtfully be so regarded. Whether the curious ceremony of driving in the nail in the temple of Minerva every hundred years was purificatory in character is uncertain. But the *ludi sæculares* certainly were, as is abundantly shown in the records of the elaborate celebration by Augustus in 17 B.C. The ceremony was a sort of larger *lustrum*, a great amplification of the censor's performance, which came every five years.

4. *Dies atri et religiosi*.—In Rome certain days in the year were called *atri*, such as the anniversary of the battle of the Allia, and others *religiosi*, on which public business was prohibited and many private affairs would be suspended. Even on a *dies nefestus*, the chief sign of which was that the law-courts were closed, a *prætor* who opened court incurred a piacular offering (Varro, *de Ling. Lat.* vi. 30).

One form of taint from which both private families and the State were careful to keep free, by forms of purification and appeasement, was derived from contact with unsatisfied spirits of the dead, who were conceived as in a sense divine and described as *di parentum*. The month of February was in part devoted to observances of the kind, and derived its name (Ovid, *Fasti*, ii. 19) from *februa*, which in the ancient tongue meant 'expiations' (*piamina*). Another application of *februa* was to the leathern thongs wielded by the *Luperci*, when in February they ran their rounds and freed from sterility the women who sought to be smitten by their blows. From the 13th to the 21st day of February was a time of ceremonial gloom. These were the *dies parentales*, and the ritual of offerings to the dead was *parentatio*. All temples were closed, all marriages forbidden, and the magistrates divested themselves of the purple-bordered robe (*prætecta*) and other marks of office. Family ceremonies called *parentalia* also took place on anniversaries of the birthdays or death-days of deceased members. In the imperial period there were in May or June two days of flower-offerings for the spirits—a 'day of the rose' (*dies rosæ*) and a 'day of the violet' (*dies violæ*). Of these there is frequent mention in inscriptions. The 21st of February was called *Feralia*, when appeasement was an affair of State. The following day was one of joyful family feasts, and bore the name of *Caristia* or *Cara Cognatio*. The characteristics of the three days in May when the ritual called *Lemuria* was performed resembled those of the gloomy *dies parentales* in February. It has been supposed that the wild festival of the *Saturnalia*, held in December, was originally directed to keeping the ghosts aloof. The theory is very doubtful; even if it is sound, the Romans early lost all memory of the origin of this revelry. Other ancient practices have been held by eminent scholars to have a purificatory character. Specially may be mentioned the custom of passing prisoners of war under the yoke, which is best known from the story of the disaster to the Roman arms at the Caudine Forks. So, too, with the passage of the

triumphing general under the *porta triumphalis*, and with the *sororium tigillum* which figures in the tale of Horatius. All these ceremonies have been believed to be modes of purging away the stain of bloodshed. The present writer is not convinced of the correctness of this explanation.

5. Means for assuring purity.—The signs of purity and the means of purification were very various. The service of the gods often required abstinence, especially from sexual indulgence. Priests were of course under stricter rules than ordinary worshippers. The innocence of young boys and maidens was welcome to divine beings who had to be propitiated. Those who took part in worship as singers or in other ways were called *camilli* or *camillæ*; from this usage Virgil's Camilla takes her name. Only such children as had living parents were permitted to serve, and these were designated as *patrimi et matrimi*. The Vestals were in touch with purificatory rites. The sacrificial offerings on such occasions were of many different kinds. In great public expiations the sacrifice of a pig, a sheep, and a bull (*suovetaurilia*) was common. The pig was offered in private as well as public expiations. Water, fire, and incense (*suffimenta*) had lustral power. Bodily impurity, and also the defilement of a bad dream, could be removed by running water (Ovid, *Fasti*, ii. 35 ff., 623 ff.; Persius, *Sat.* ii. 15). Many herbs were believed to exert a purifying influence. The laurel originally worn by the triumphing general, and later by the emperors, has often been believed to have been a means of cleansing the stain of blood shed in war; and the *verbenæ*, which the *fetiales* carried with them, has been supposed to be of lustral efficacy. These beliefs are very questionable (see the present writer, in *JRS* ii. [1912] 45 ff.). Myrtle was in customary use in connexion with the dead and also in the marriage ceremony, and it is possible that *lustratio* was the cause. The willow (*agnus castus*) was supposed to have purifying power, because its name was in popular etymology connected with *ἀγρός*.

6. Ethical aspects of purification.—In the belief of the rustic Italian personal purity was needed to give full effect to many operations. The birth of bees was supposed to be non-sexual; therefore the bee-keeper, when dealing with his bees, must be 'pride castus ab rebus venereis' (Columella, ix. 14. 3). Especially did the efficacy of medicinal herbs depend on the purity of the persons who gathered or applied them. To assure this, a boy or maiden might be employed (Pliny, *HN* xxii. 27, xxiii. 130, xxvi. 93, and many passages in medical writers).

Purification was not merely ceremonial or mechanical. That an ethical element entered into it, even in very early days, is indisputably shown by the fact that some taints were inexpiable. All those to which the vague penalty 'Sacer esto' was attached were of this kind (Ovid, *Fasti*, ii. 35, is in error). There were some offenders with whom the gods would make no peace (Cicero, *de Leg.* i. 40, ii. 22). In literature from the late Republic onward a strong distinction is constantly drawn between material and spiritual purity. It is true, however, that the yearning after a clean heart which in Greece afforded an opportunity to quack purveyors of *kathartika* was not natural to the ancient Italic peoples. Faith in the old forms was gradually lost. The calamities of the Second Punic War spread among the people a conviction that a stain lay on the nation and could be washed away only by extraordinary expiations; but the much greater horrors of the Social War, followed by the long series of civil wars which ended with the triumph of Augustus, produced no such consequences. Although there was a feeling that the Romans were steeped in guilt—a feeling to which

much in Augustan literature testifies—there was no popular response to the restoration of archaic ceremonial which Augustus promoted. There was a desire for other and more effectual modes of cleansing. Josephus remarked in the early imperial age that, while old ritual was dying, new rites were sought after which were characterized by 'all manner of purifications' (*c. Apionem*, ii. 35: καθάρσεις παντοδαπὰς). The new tendency was towards purity of a more intimate and inward character, which would bring men closer to the divine. Hence the great invasion of Eastern cults; those of Isis, the Magna Mater, and Mithras especially made a strong appeal to the Western world. Purification by sprinkling with the blood of victims in the ceremony called *taurobolium* affected worshippers profoundly. They testified to a conviction that they were 'born anew for ever' (so repeatedly in inscriptions). Christian writers considered that the devil inspired this belief, out of spite for the purification effected by the blood of Christ (*Firmicus Maternus*, xxvii. 8). The Pythagorean and Neo-Platonic philosophies did much to spread among educated classes in the West an idea of spiritual purity which powerfully assisted the Christian propaganda.

LITERATURE.—J. G. Frazer, *ŒB*, London, 1911-14, contains a rich store of material for the study of purificatory rites in all ages; G. Wissowa, *Religion und Kultus der Römer*, Munich, 1912, and J. Marquardt, *Römische Staatsverwaltung*, Leipzig, 1874-78, iii., contain abundant references to authorities. The separate art in Pauly-Wissowa and in Daremberg-Saglio are often important. In W. Warde Fowler, *The Roman Festivals*, London, 1899, and *The Religious Experience of the Roman People*, do. 1911, all matters connected with Roman illustration are admirably handled. Many sidelights are thrown on the subject by E. Rohde, *Psyche*, 2 vols., Freiburg, 1898. Two recent works of interest are E. Fehrle, *Die kultische Keuschheit im Alterthum*, Giessen, 1910, and S. Eitrem, *Roman Festivals, Expiatory and Purificatory*, Christiania, 1913-17.

J. S. REID.

PURIFICATION (Teutonic).—The religion of the Teutonic peoples, as it is presented to us by our sources, was not a religion of fear. To a very considerable extent those peoples appear to have ignored the possibility that supernatural powers might exist who were hostile to mankind, and accordingly they aimed at securing the assistance of their friendly anthropomorphic gods by the positive method of sacrifice rather than by the negative process of avoiding ceremonial impurity and the resulting defencelessness against supernatural dangers. We must remember, however, that our sources paint the picture of Teutonic religion either from the point of view of the missionary, whose attention is focused on the more active forms of heathenism, or, in the case of the Icelandic sagas, from the angle of vision of the upper classes. The practices of the modern rural populations of Teutonic countries must suggest to us that the conceptions of tabu and of ceremonial purity¹ were by no means so foreign to Teutonic religion as we are inclined to believe. An examination of the older evidence in the light of modern customs will not yield very much, but the results will not be entirely negligible.

1. Birth.—In the life of the primitive individual purificatory ceremonies cluster round birth, puberty, marriage, and death. The sprinkling of water on a newly-born infant, which the sagas state to have been customary in Iceland in pre-Christian times, is clearly a purificatory ceremony, and there is no reason to suppose that it is merely a late imitation of the Christian rite of baptism. The ceremony was performed by the father; and, until it was done, the infant enjoyed no rights as a human being, for the father could refuse to have it reared.²

¹ See art. PURIFICATION (Introductory).

² See art. ABANDONMENT AND EXPOSURE; R. Oleasby and G. Vigfusson, *Icelandic-English Dictionary*, Oxford, 1874, s.v. 'Ausa.'

2. Puberty.—Of the ceremonies performed at the period of puberty we know nothing, and we must assume that they played a negligible part in the life of the individual. They seem, however, to have existed, for we are told that an Icelandic chieftain, Thord gellir, was taken to the cross-knolls held sacred by his family, at the time when he was 'introduced into manhood.'¹ It appears that the ceremony was connected with ancestor-worship, for it was the belief of this family that they 'died into' the knolls.

3. Marriage.—For marriage ceremonies we are referred almost entirely to more modern accounts, beginning with that of the Swedish archbishop Olaus Magnus, of the 16th cent., who describes the bridal hot-air bath, taken in the communal bath-house, to which the bride and her female friends walk in procession, preceded by men carrying jars of ale or wine, bread, sugar, and spices. On their return the party wear wreaths.²

A number of other Scandinavian customs, but recently extinct, show that the people have clung obstinately to the idea that by marriage they incur a kind of ceremonial impurity which lays them open to supernatural dangers. A device clearly intended to avert those dangers is that of introducing another make-believe couple to act, as it were, as scapegoats. This pair, fantastically dressed, one of them a man got up as a woman, make their appearance in various parts of Sweden during the wedding festivities, are received with much honour, have a collection made for them, and finally are driven from the house. Sometimes it is only the bridegroom who has a 'double.' In some parts of Sweden the bridegroom is driven by a grotesquely disguised 'coachman,' who sits in front of him on the sledge; and in Västmanland a kind of mock bridegroom, who was expected to amuse the company, used to be thrown into the nearest stream on the third day of the feast. In Württemberg there was no substitute for the bridegroom in this part of the ceremony, and he was obliged to choose between 'wine and water.' If he chose wine, he had to treat the company; if water, he was ducked.³

In other parts of Sweden the youngest bridesmaid walked round the table at which the guests were seated, 'in order to remove all evil.'⁴ In Norway the bride was regarded as specially open to the attacks of ethonic deities, who had to be frightened off by the hallooing and pistol-shooting of the wedding-party.⁵ Possibly the custom mentioned by Olaus Magnus,⁶ of celebrating weddings on small islets, has its roots in a similar fear. Both in Norway and in Sweden weddings were usually celebrated at midsummer, when the powers of darkness were weakest.

In both ancient and modern wedding customs the wedding ale seems to have had a prophylactic or purificatory value. A Norwegian bishop of the 12th cent. has to assure his flock that a wedding is legal even though celebrated with whey; and the belief in the special virtues of wedding ale seems to survive in a superstition current in some parts of Sweden, that it is unlucky to call the banns 'on an empty cask,' i.e. before the wedding ale is brewed.⁷ In Sweden it was customary for the bride and bridegroom to drain a beaker before entering their house on their return from church.

The bowls used for the purpose were often apparently the property of the commune.¹ In Dalecarlia a large tree was brought into the house and 'slaughtered' by having branches lopped off it, and the company drank the 'ox-blood'—coffee and brandy.² In some parts of Sweden the 'wedding tree' was flung into a stream or pond at the end of the festivities.

4. Death.—In the more primitive communities purificatory ceremonies are regarded as especially necessary in the case of association with death. This idea is not actually expressed in our sources, but the customs of destroying, burning, or burying a dead man's personal property, of sending the corpse out to sea in a ship, etc., may have their *raison d'être* in some such conception. The custom of *sati*, which appears to have been at least occasionally practised, is probably connected with the fear of pollution from a dead man's personal belongings. Some traces of this fear can be found in the Norwegian custom of solemnly burning the straw of a dead man's bed. The old town-law of Bergen, while prohibiting all other bonfires, specially exempts such fires, kindled in the streets. In recent Norwegian custom the sledge on which a coffin was conveyed to the churchyard was left to rot or used as firewood by the poor.³

Ancient Teutonic religion offers but few traces of this feeling of pollution on contact with death in general. But from ecclesiastical prohibitions of unseemly laughter, songs, dances, story-telling, and mask-wearing at the memorial feasts for the dead we can guess that in the Germany of Charlemagne such observances aimed at averting the dangers of association with the dead. In Scandinavia this feast seems to have been more orderly and its original significance more obscured.

But the necessity for purification was still keenly felt in regard to persons who had been of an evil disposition during life. An Icelandic saga tells us that, when the wicked Thorolf bægifot dies in his chair, his son breaks a gap in the house wall and has him carried through it, so that the ghost may not find the way back.⁴ In spite of this precaution, the ghost 'walked' until the corpse was burned and the ashes were blown out to sea. We do not hear of any actual purificatory rites performed in houses subject to ghosts, for the account in *Eyrbýggja Saga* of the legal proceedings resorted to was probably intended by its author as farce rather than history. Here the ghosts are summoned in turn, and an adverse verdict is given against each. This saga, however, gives an example of the belief that the properties of the dead are dangerous: as long as the bed-hangings of Thorgunna were unburned, the household was a prey to every kind of misfortune. We may assume that here, as elsewhere, dead persons who had not received the proper rites were regarded as a danger to the community; for, according to Icelandic law, a man who killed another became an outlaw if he failed to cover up the body with stones or earth. In this connexion we may mention the wide-spread belief which makes it obligatory on every passer-by to add a stone to the cairn raised over some person who had died a violent death. This custom was observed until last century in some parts of Sweden.⁵

5. Harvest.—The various purificatory observances connected with harvest or other seasons of the year can be traced only in modern custom and can be best studied in Frazer's *Golden Bough*. An exception is the need-fire (*q.v.*), which is first mentioned as early as 742.⁶ It seems to have been

the most characteristic example of purificatory rites to be found in Teutonic custom. Leaping over the fire, usually on Midsummer Eve, was believed to avert disease, and the cattle were driven through the flames with the same intention. A similar purificatory rite, vouched for only in modern Sweden, is the custom of grinding down the edges of flint axes—'Thor's hammers,' as they are called in Sweden—and mixing them with the fodder for the cattle.

6. The scapegoat.—The scapegoat idea, in which the conception of the purification of the community finds its most characteristic expression, is perhaps not formally recognized in Teutonic religion. Akin to it is the expulsion or death of guilty members of the community, which can be traced in Tacitus's account of the driving out of an unfaithful wife¹ and in the clause of the Old Frisian law which enjoins the mutilation and drowning of a sanctuary breaker.² A similar conception probably inspired the slaying of a king in time of famine, of which Swedish tradition records two examples.

7. Festivals and idols.—In the ceremonial of religious festivals purificatory rites play only a small part. The sprinkling of the blood of the sacrificial victim upon the assembled worshippers, which appears to have been an integral part of Scandinavian festivals, may possibly have had a purificatory intention. The purification of the deity herself, reported by Tacitus in his account of the goddess Nerthus, is frequently held to have been nothing more than a rain-charm. Once a year, says Tacitus, the goddess Nerthus emerged from her retirement in a sacred grove, and was driven round the country with her priest, amid general rejoicings, after which the chariot and the goddess herself were laved in a sacred lake.³ From what we know of deities of fertility in general, and in especial of the Scandinavian god Frey and his human spouse, we are justified in considering the possibility that the immersion of the goddess was of the nature of a bridal bath. It is worth noting that a little wooden figure of a bishop which used to stand in the church at Eidsborg in S. Norway, and which the peasants called Nikuls, used to be carried down to the lake below the church every midsummer and solemnly washed. The sweat which appeared on the wood after this ceremony was believed to heal all diseases.⁴ Similar idols, without the ecclesiastical connexions, are known to have been in the possession of Norwegian families far into the 18th cent., and to have had ale offered to them at Christmas. One of them is said to have been washed every Saturday. The direct descent of these figures from heathen idols seems to be proved by the fact that one of them is said to have been regularly rubbed with fat as late as the 19th century.⁵ According to a late saga, this treatment was accorded to a wooden image of the god Balder.⁶ It is possible that this ceremonial rubbing of idols with fat was intended to avert some dangers from the idol.

Such traces of purificatory rites as we find among the Teutonic peoples seem to have been fragmentary survivals of an attitude to religion more primitive and more mystical than we find among the upper classes in the last days of heathendom. The lack of insistence on ceremonial purity is probably connected with the absence of any highly specialized priesthood, resulting in what we must regard as an enlightened

freedom from formalism, shown also in the contempt of the upper classes for magical practices. On the other hand, it may be pointed out that regard for ceremonial purity may develop into the conception of ethical righteousness, a conception to which the heathen Teutonic mind can hardly be said to have attained.¹

LITERATURE.—See the works cited throughout.

B. S. PHILLPOTTS.

PURIM.—'Purim' is the name given to a festival in the Jewish Church, celebrated for two days, on the 14th and 15th of the month of Adar, the last month of the Jewish lunar calendar. The supposed origin of the festival, which is of a distinctly popular character, marked by merry-making, feasting, masquerading, and exchange of gifts, is given in the book of Esther, forming part of the OT canon. According to this book, the festival marks the miraculous deliverance of the Jews resident in Persia from the destructive designs of Haman, the grand vizier of King Ahasuerus, i.e. Xerxes (485–465 B.C.), who had planned a general massacre of the Jews for the 13th of Adar in the 12th year of the king's reign, corresponding to the year 473 B.C. Through the intervention of Esther, a Jewess whose beauty led her to the king's *harem*, where she rose to the rank of queen, the plan was frustrated. Haman and his sons were condemned to the gallows, while Mordecai, the uncle of Esther, was raised from his humble station to become the second in the extensive kingdom of the Persian king. Instead of being slaughtered, the Jews were permitted to slay those who attacked them on the day set aside for the massacre, which they did with great vigour; and in commemoration of the deliverance a two days' festival was instituted. The only religious feature of the festival, however, is the reading of the book of Esther in the synagogue at the evening service for the two days in question. The otherwise purely secular observance itself points to a non-Jewish origin for the festival.

It is now universally recognized by scholars that the book of Esther is a pure romance to which a quasi-historical setting is given. From the silence of Ben Sira, the author of Ecclesiasticus (c. 180 B.C.), who does not mention Esther in his enumeration of the sacred writings known to him, the conclusion is justified that its composition cannot be placed before the middle of the 2nd cent. B.C., and was perhaps as late as 100 B.C. Apart from the fact that there is nothing to warrant the belief that in the days of Xerxes there was any persecution of the Jews in Persia, or, in fact, that there was even an extensive Jewish settlement in that country, and apart from the inherent improbability of the story itself, the chronological discrepancy in making Mordecai one of those carried into captivity by Nebuchadnezzar in 597 B.C. and yet still living 125 years later suffices to show that we are dealing with pure fiction. It so happens also that we know from Herodotus (ix. 109, 112) that the queen of Xerxes at the very time when Esther was supposed to occupy this distinction was Amestris, the daughter of a Persian general.

If, then, the book of Esther is pure romance in a quasi-historical setting but without any historical basis, it follows that the origin of the festival as given in this book is equally fictitious, and we are thrown back upon investigations independent of the festal legend to solve the problem involved. The author of the book of Esther, by his evident desire to connect the name 'Purim' with a non-Hebrew word *pûr*, supposed to mean 'lot' (37⁹²⁴ 23), recognizes the name as foreign. In view of the Persian setting of the festal legend, suggesting that the author of the book of Esther was a Persian Jew, one naturally thinks of a Persian origin for

the festival, and, if there were a Persian word *pûr* meaning 'lot,' the necessary proof would have been furnished that the author of the festal legend at least had in mind the adaptation of a Persian festival to the Jewish festival cycle. No such Persian word as *pûr* exists, however, and all attempts to find in it some adaptation of a Persian term (see L. B. Paton, *Commentary on the Book of Esther*, pp. 84–86, for various conjectures and suppositions, all, however, rejected by Paton and properly so) have failed. On the other hand, the possibility that the author of the book of Esther, in connecting the name 'Purim' with *pûr*, had in mind a Babylonian term must be admitted, especially as a word *pûru* exists with various meanings, among which those of 'lot' and 'term of office' are possible, though not certain (see H. Zimmern's discussion in *KAT*³, p. 518; P. Haupt, 'Purim,' in *BASS* vi. ii. [1906] 20; and art. *CALENDAR* [Babylonian], vol. iii. p. 77). The names of the two chief personages in the festal legend, Mordecai and Esther, carry us distinctly to Babylonian soil; for Mordecai is clearly identical with the Babylonian deity Marduk, the head of the pantheon after the rise of his patron city, Babylon, to be the capital of the united districts of the Euphrates valley, while Esther is quite as unmistakably the Babylonian goddess, Ishtar, the chief female deity and as such directly associated with Marduk. Even rabbinical exegesis connected Esther with the planet Venus (Istahar=Ishtar [Talmud Bab. *Meḡillāh*, 13a]), with which Ishtar was identified by the Babylonians. According to P. Jensen, who first called attention to this double identification, Mordecai=Marduk, and Esther=Ishtar, the two other names, Haman and Vashti (the queen whom Esther displaces) are Elamitic deities, Humman (or Humbar) and Mashti, skilfully disguised or connoted ('Elamitische Eigennamen,' in *WZKM* vi. [1892] 47 ff., 209 ff.). These two identifications, however, are less certain; and to go a step farther and assume that the story of the book of Esther rests upon a Babylonian myth, relating a conflict between Marduk and Ishtar, the gods of spring and light, against hostile powers symbolizing winter and darkness, and therefore identified with 'foreign' deities or as modifications of Kingu and Tiamât, who in the main Semitic-Babylonian version of creation are the personifications of primeval chaos and discord, who must be overcome by Marduk, the establisher of order in the universe—to do this is to enter the province of pure conjecture. Until some fortunate chance reveals to us the story of such a conflict with all four names unmistakably introduced, we must content ourselves with the definite proof that at the foundation of the book of Esther, or at all events as an element in it, we have some Babylonian tale of the gods in which Marduk and Ishtar play the chief rôles, and that this tale was transformed in such a manner by the Jewish author of the book of Esther as to make it the basis for an elaborate festal legend to justify the adoption of a 'foreign' festival into the Jewish calendar. The character of this festival is unmistakable. Its occurrence in the middle of the last month of the winter season and just before the beginning of the spring, the natural beginning of the year, points to its being the beginning of the celebration of the conquest of the winter by the youthful sun-god of the spring—as Marduk is regarded in various Babylonian myths. The rejoicing and merry-making of Purim fit in with such a spring festival, while the fast added at a much later date for the 12th of Adar—it cannot be traced farther back than the 9th century—is the precursor to the festival which afterwards takes on a sombre hue as a preparation for the feasting to follow. As Haupt aptly puts

¹ See art. *ETHICS* (Teutonic).

it (p. 1), 'shroving was preceded by shriving.' That the Babylonians began the year in the spring follows, apart from other evidence, from the order of the months adopted by the Jews, which begin with Nisan, the time of the spring equinox; and we know that the Babylonian New Year festival known as Zagmuk, and celebrated during the first eleven days of Nisan, became primarily the festival of Marduk and his consort in the days of the united Babylonian Empire (see CALENDAR [Babylonian]). The circumstance that in the 2nd book of Maccabees (15³⁰) the Purim festival is designated as *Μαρδοχαίου ἡμέρα*, i.e. 'Marduk (or Mordecai) day,' is a significant testimony to the association of Purim with the Babylonian New Year period, bound up with the Marduk cult. The middle of the month preceding the 1st of Nisan would thus mark the preparation for the period of rejoicing at the approaching triumph of the god of spring, Marduk, over the hostile and destructive forces of the winter and rainy season. The Jews in Babylonia and Persia, subject to the influences of their environment, would naturally be led to take part in a merry-making season, just as at the present time Jews in Europe and America participate in Christmas festivities and in New Year's exchange of felicitations, despite the fact that the old mid-winter festival has been given a Christian interpretation and that the Jews still observe a religious 'New Year' in autumn (*Rōsh Hashshānāh*, 'beginning of the year') on the first of Tishri, the seventh month, pointing to an older calendar, in which the year began in autumn.

Corresponding to the festal legend set forth in the 1st book of Maccabees for the celebration of the Roman Saturnalia or mid-winter festival at the time of the winter solstice (adopted by the Jews under Græco-Roman influence and converted into a Jewish festival by association with the victory of Judas Maccabæus and his army over the Greek forces), the romantic tale in the book of Esther was composed to provide a justification for the participation of the Jews in the general rejoicing indulged in in Babylonia and in lands where Babylonian influences prevailed, at or near the beginning of the vernal equinox. The one link missing in the chain of evidence connecting Purim with the period of merry-making in honour of Marduk and Ishtar is evidence of a celebration in Babylonia or Persia in the middle of Adar—just before the New Year's season proper two weeks later. Until such evidence is forthcoming, the view here set forth lacks definite confirmation. It may well be, however, that with the coming of the Persians into Babylonia in the second half of the 6th cent. B.C. a Persian New Year's festival celebrated at the period of the vernal equinox, and fixed for a time somewhat preceding the date selected in the Babylonian calendar for the Zagmuk, became the current New Year's season of rejoicing. The natural tendency would be to bring this Persian New Year into close affiliation with the Babylonian festival. Purim would thus represent the result of such a combination of Persian and Babylonian customs and festival rites. To this day the New Year's season is a time of rejoicing and festivity in Persia. The New Year's day, known as Nauroz, is fixed for the first day after the sun has crossed the vernal equinox, and is therefore a movable feast, like the Christian Easter, likewise an old New Year's festival. The festivities incident to the Nauroz last a week. It is to be noted, also, that in the Jewish calendar the tendency is to fix festivals connected with the transition of one season to the other either in the middle of the month (e.g., the spring festival Pesah and the harvest festival Sukkōth on the 15th day of Nisan and Tishri respectively) or at the beginning

of the month, as, e.g., the Rōsh Hashshānāh. The 15th of Adar would thus be fixed as corresponding to an average date for the vernal equinox. Finally, we find evidence that in the 2nd cent. B.C. the Jews of Palestine also celebrated the 13th of Adar as a festival and that, under the same tendency to give to popular rejoicings, when adopted from foreign sources, a Jewish setting, this festival was associated with the victory of Judas Maccabæus over the Syrian general Nicanor of Adasa in the year 161 B.C., and in consequence became known as 'Nicanor's Day' (1 Mac 7³⁰⁻³¹; Jos. Ant. XII. x. 5 [409]; see FESTIVALS AND FASTS [Hebrew], vol. v. p. 866^a). The book of Maccabæus thus furnishes the festal legend for two holy days adopted by the Jews: (1) the Saturnalia, or mid-winter festival, at the time of the winter solstice, celebrated for a week, which became the Jewish Hanukka, in commemoration of the supposed restoration of the Temple at Jerusalem to Jewish worship after the victories of Judas Maccabæus; and (2) the spring festival in the middle of Adar, adopted under Babylonian-Persian influences and associated by the festal legend with a specific occurrence in the so-called wars of the Maccabees.

Nicanor's Day and Purim thus represent the same festival. To the one a Jewish aspect was given by making it a commemoration of a victory gained over the enemy at a critical period in Jewish history, while for the same festival adopted under Babylonian-Persian influences a festal legend was composed which transformed a Babylonian myth, celebrating the deeds of Marduk and Ishtar, into a Jewish romance. It may be also that the Jews of Persia suffered some annoyance from hostile officials, and that a liberation through the dismissal of an offensive vizier suggested some of the incidents in the festal legend, which, in accord with the tendency of legendary compositions, would give to a comparatively insignificant episode an exaggerated importance. All this, however, is purely conjectural, and it must be frankly admitted that there is no evidence for any persecution of the Jews under any of the Persian rulers, who, on the contrary, appear to have been at all times favourably disposed towards them. The main thesis in connexion with Purim, that it is a foreign festival, a precursor of the Babylonian New Year's festival or the Persian New Year adopted by the Hebrews, is not affected even if we assume some historical occurrence to be a factor in the composition of the romance, which was written to give a Jewish setting to a celebration that had become popular among the Jews of Rome and Babylonia and had spread to other countries where Jews had settled. The sad experiences of the Jews, encountering hostility and frequent persecutions in the Diaspora, tended to increase the popularity of Purim. The story in the book of Esther became typical of the sufferings of the Jews in many lands. There were Hamans everywhere who tried to work injury to the Jews, and the celebration of Purim helped to maintain their trust during the dark days in the ultimate deliverance from the dangers and difficulties besetting them. The merry-making at Purim also afforded an outlet for pent-up feelings, and furnished a much-needed relief from the serious life led during the greater part of the year.

All the festivals of the Jews except Purim take on a sombre hue, even those which, like the Passover and the Festival of Booths, were in their origin distinctly joyous occasions. The somewhat cruel and vicious spirit of the book of Esther, reciting with evident satisfaction how the Jews avenged themselves on their enemies by slaughtering thousands of them (9¹⁻¹⁰), was overlooked in the abandonment to joy that marked the two days of Purim.

Masquerading and games became one of the features of the popular rejoicing. Presents were exchanged and drinking was enjoined almost as an obligation. Sober and serious-minded persons gave themselves over to the joy of Purim, and it was regarded as quite proper to put oneself in such a condition at Purim time that one could not distinguish between 'Cursed be Haman' and 'Blessed be Mordecai' (Talmud Bab. *M'gillah*, 7b), though naturally a playful allusion of this kind must not be forced beyond the point of showing that, as far back as Talmudic days, Purim was regarded primarily as a time of jollification, devoid of any genuinely religious character. The exceptionally secular nature of the festival is also shown by the express permission of the rabbis (*M'gillah*, 18a) that the roll of the book of Esther may be read in any language in the synagogue, while otherwise, as a matter of course, only Hebrew was to be used in the service. Even the synagogue service in connexion with Purim acquired some of the boisterous character of the festival; for at the mention of Haman and his sons the congregation stamped with their feet or made a noise with rattles or by knocking two sticks on which the name of Haman was written against one another until the name was erased. Such customs are to be regarded as popular survivals of endeavours to drive away evil demons by noises or by some form of sympathetic magic. They are closely bound up with the popular view that at transition periods—and such the New Year's festival is—the evil spirits were particularly malevolent, lying in wait for victims. Masquerading is also to be viewed under this aspect as a means of disguising oneself from the evil spirits or of deceiving them. Another interesting trace of the original character of Purim as a New Year's festival is to be seen in the persistency with which the idea of its being connected with 'drawing of lots' clings to it, for, whatever the etymological origin of the word *pūr*, there is no reason to question the correctness of the tradition as set forth in the book of Esther which connects it with 'casting lots.' At the New Year's period, according to the Babylonian view, the gods sit in the council chamber of fate and decide the lot or portion of individuals in the year to come; and from the Babylonians this view passed to the Jews, for whom the ten days of the New Year's month are days of probation, corresponding to the ten or eleven days of the Babylonian Zagmuk period. On the 10th day, the Day of Atonement, the fate of the individual is definitely inscribed in the book of fate and sealed. The exchange of presents on Purim also rests ultimately on an association of ideas between 'lot' and 'portion' as something set aside for some one. The term used for 'presents' (*manôth*) in the book of Esther (9^{19, 23}) in connexion with the description of the custom is precisely the word which means 'portions,' while *pūr* is specifically explained in a gloss (9²⁴) as *ha-gōrāl*, i.e. the common term for 'lot.'

MORRIS JASTROW, Jr.

PURITANISM.—1. Definition and application of the term.—The widely divergent estimates of Puritanism still current unite in recognizing its significance as a formative factor in the life and character of the English people. Probably no other religious movement has left so deep an impress on the history of England. Some of the Puritan positions have been embodied once for all in the constitutional development and Church life of the country; others of their contentions may yet be realized. In a modified form, the Puritan

ideal of a Church at once national and self-governing may be the subject of a modern revival. But whether or no the ecclesiastical programme of Puritanism has a future, reverence for the very letter of the Puritan tradition lingers in many minds, while its inner force is by no means spent.

It would conduce to clearness in historical studies if the term 'Puritanism' could be confined strictly to the movement for further reform of the Church of England whose history falls within the century from the Act of Uniformity of 1559 to the Act of Uniformity of 1662. The Puritan party consisted of all those who believed in the maintenance of one National Church in England, and who desired that Church to be reformed after the model of Geneva. According to Thomas Fuller¹ (*Ch. Hist. of Britain*, London, 1655, bk. ix. § 66 f.), 'the odious name of puritans' was first applied in 1564 to those who resisted the attempt of the bishops in that year to enforce uniformity in ritual and in the use of vestments. A passage in John Bunyan's *Life and Death of Mr. Badman* (written in 1680)—'The man was a godly old Puritan, for so the godly were called in time past'—suggests that the term began to fall out of use as a distinct party label after the overthrow of Puritanism at the Restoration. It is confusing to extend the use of the term either backwards, as S. R. Maitland does (*The Reformation in England*, ed. London, 1906), to include early reformers of the time of Henry VIII., Edward VI., and Mary, or forwards, to cover later dissent. The kinship of Puritanism with earlier elements in the English Reformation is as obvious as is the indebtedness to it of the Free Churches. But Puritanism stood primarily for an ecclesiastical ideal which was not definitely adopted by any distinct body of Englishmen before the time of the Elizabethan settlement, and which was not accepted by the Nonconformist churches of later times. Puritanism is most simply defined as the movement for Church reform whose first great leader was Thomas Cartwright and whose last was Richard Baxter.

A wider application of the term 'Puritan' to all who attempted a greater sobriety of life than was customary in Elizabethan England became familiar in the 17th cent., if not earlier. Richard Baxter says that his father was dubbed a Puritan by his neighbours because he disliked the village custom of dancing round the May-pole on Sundays, and preferred to pass his time at home, reading the Bible and the Prayer-Book:

'For my Father never scrupled Common-Prayer or Ceremonies, nor spake against Bishops, nor ever so much as prayed but by a Book or Form, being not ever acquainted with any that did otherwise: But only for reading Scripture when the rest were Dancing on the Lord's Day, and for praying (by a Form out of the end of the Common-Prayer Book) in his House, and for reproving Drunkards and Swearers, and for talking sometimes a few words of Scripture and the Life to come, he was reviled commonly by the Name of Puritan, Precisian, and Hypocrite.'²

The wider aspect of Puritanism revealed in this application of the term cannot be ignored in any account of the subject, because the effort after a sober godly life which drew down this reproach was part of the whole religious movement of which Puritanism in the strict sense was the narrower ecclesiastical expression. It is worth noting incidentally that the name 'Puritan,' like the words 'Christian' and 'Quaker,' was a term of insult which became a title of honour.

2. Puritans as a party in Church and State.—(a) *The Prayer-Book controversy.*—When Elizabeth came to the throne in 1558, the hopes of reformers ran high. It was certain that she would reverse the religious policy of her predecessor. The burn-

¹ J. Stow's still earlier application of the term to some Anabaptists is rightly rejected as erroneous. See *OED*, s.v. 'Puritan.'

² *Reliquiae Baxterianae*, London, 1698, p. 3.

ing of heretics would cease, and subservency to the pope would be ended. Though the number of convinced Protestants was not large, the country as a whole was prepared for a considerable change. In some sense England would become a Protestant power. But how far was the queen prepared to go? It was thought that she would at least re-establish the standard of reform set up by Edward VI.; it was hoped in some quarters that she would go much farther. For, while many were content with the measure of advance embodied in the Prayer-Book of 1552 (and indeed the martyrdom of some of the authors of the Prayer-Book had consecrated it in the eyes of its users), others who had been in exile on the Continent had come under the spell of Geneva, and desired a more thorough reform along the lines laid down by Calvin. The Protestant world had not stood still since the days of Edward VI., and it seemed absurd to be content with something obviously limited and faulty like the work of Crammer. The position of many of the leaders like John Jewel, Edwin Sandys, and Edmund Grindal, who were among the first of the Elizabethan bishops, was that they would gladly go back to the system set up in the time of Edward VI. as a starting-point, but that they hoped to be allowed to make it the basis of a further development. The convenience of adopting the English Prayer-Book of 1552 was manifest. It obviated the necessity of thinking out at short notice forms of service and of government for the Elizabethan Church, and it gave a sense of continuity in the work of the Reformation in England. There was therefore no surprise or regret when the Act of Uniformity re-imposed the use of the second Prayer-Book of Edward VI.

The Act of Uniformity was preceded by the Act of Supremacy, which made Elizabeth chief governor of the Church of Christ in England. Her authority she was to exercise in the first instance through an ecclesiastical commission until a regular administration by duly appointed bishops should be possible. These two Acts ensured lay control of the Church, abolished papal authority and the Mass, and restored the English liturgy. So far, so good; but what was to be the next step?

When the revised Prayer-Book was issued, it contained one or two features which occasioned disquiet among the more radical reformers. The clause in the Litany praying for deliverance from 'the tyranny of the Bishop of Rome and all his detestable enormities' had vanished. The sentences appointed for the use of the priest in delivering the elements at communion included those from the Prayer-Book of 1549 which were capable of being interpreted to imply the doctrine of transubstantiation. Moreover, into the Prayer-Book was inserted, apparently at the last moment and without the knowledge of Parliament, an additional rubric directing that¹ 'the minister at the time of communion and at all other times in his ministrations, shall use such ornaments in the church as were in use by authority of Parliament in the second year of the reign of King Edward VI.' In accordance with this rubric, ministers in the communion service were to put on 'a white Albe plain, with a vestment or Cope'—the garments used in the celebration of the Mass.

This was the starting-point of a renewed vestitarian controversy. To the dismay of the reformers, the queen was determined that her clergy should wear a distinctive dress in ordinary life, and should continue to use the vestments of the unreformed Church. When Archbishop Parker, under pressure from the queen, determined in 1566

resolutely to enforce uniformity in the use of vestments, the formation of a distinct Puritan party was inevitable. Some ministers resigned their cures rather than wear the prescribed dress. Small groups of parishioners in London went so far as to set up separatist meetings. The majority of men with Puritan sympathies remained in the Church, but began to entertain a doubt as to the bishops' hopes of further reform, and to subject the Elizabethan settlement to a more searching criticism.

(b) *Protests against popish abuses.*—The broader Puritan position was championed by Thomas Cartwright, Lady Margaret professor of divinity at Cambridge, who in lectures on the Acts denounced the government of the Church of England as unscriptural and illegitimate. The hierarchy, he held, was as clearly popish and anti-Christian as the vestments. Cartwright was deprived of his professorial chair in 1570, but his views found expression in two 'Admonitions' presented to Parliament in 1572. The first, written by John Field and Thomas Wilcox, is a singularly effective and vigorous statement of the Puritan programme of ecclesiastical reform.

The authors begin by laying down the essentials of the Puritan standpoint, which consist in 'abandoning all popish remnants both in ceremonies and regiment,' and 'also in bringing in and placing in Gods church those things only, which the Lord himself in his word commandeth.' The Puritans stood for making the breach with Rome as complete as possible, and the approach to the NT Church as close as possible. The writers of the Admonition then proceed to survey the condition of the Church in England in the light of the requirements of a true Christian Church, which are 'preaching of the worde purely, ministring of the sacraments sincerely, and ecclesiastical discipline which consisteth in admonition and correction of faults severlie.' With regard to the ministry, the Puritans maintained the clergy to be quite inefficient. Large numbers of the clergy were mere 'Vicars of Bray,' who had accepted every change in religion from Henry VIII's time onward. Many were unlearned and incapable of teaching. They were men without any call to the ministry, and the method of their ordination and appointment was irregular and unchristian. Men who could preach were discouraged, by being made subject to a special licence, and by being bound down 'to a prescript order of service.' The ordinary ministry was starved, in order to maintain an expensive hierarchy, while the abuses of pluralism deprived godly ministers of opportunities, compelled congregations to go without preachers, and were yet inevitable because the incomes of many livings did not suffice to keep the incumbent. The contrast between the Elizabethan ministry and the primitive evangelists and pastors was glaring. 'Then, as God gave utterance they preached the word onely: now they read homilies. . . . Then feeding the flocke diligently: now teaching quarterly. Then preaching in season and out of season: now once in a month is thought sufficient, if twice, it is judged a worke of supererogation.' For a thorough reformation, it was necessary to 'displace those ignorant and unable ministers already placed, and in their rowmes appoint such as both can, and will by Gods assistance feed the flock.'

Passing from preaching to the sacraments, the Puritans objected to many details in the communion service, which they regarded as popish and out of harmony with primitive Christianity. Beyond their criticism of details, they complained of private communions and baptisms. This private use of the sacraments ignored their essential character as acts of Church-fellowship, and in effect 'tied the necessitie of salvation to the sacraments.' An even worse abuse was the readiness with which men were admitted to the Lord's Supper and indeed obliged by law to partake of it. 'They [the early Christians] took it with conscience. We with custome. They shut men by reason of their sinnes, from the Lordes Supper. We thrust them in their sinne to the Lordes Supper.' One of the most urgent reforms is 'that papists nor other, neither constrainedly nor customably, communicate in the misteries of salvation.'

In dealing in the third place with ecclesiastical discipline, the authors of the Admonition claimed that 'the whole regiment of the church' is to be committed to 'Ministers, Seniors, and Deacons.' The existing hierarchy is to be removed. In particular the exercise of discipline must no longer be left in the hands of one man—the monarchical bishop acting through chancellors, archdeacons, proctors, and what not. There was a sad confusion, they felt, between ecclesiastical and civil jurisdictions, both in procedure and in penalties. The use of excommunication should be more sparing and more solemn.

This outline of necessary reforms was supplemented by 'A View of Popish Abuses yet remaining in the Englishe Church,' whose presence prevented the Puritan clergy from subscribing an article to the effect that the Prayer-Book contained nothing repugnant to the Word of God.

¹ See T. M. Lindsay, *Hist. of the Reformation*, Edinburgh, 1907, ii. 405 f.; and H. Gee, *The Elizabethan Prayer-book and Ornaments*, London, 1902.

The chief Puritan criticisms of detail may be summarized as follows:

(1) The Prayer-Book stands for a reading ministry as contrasted with a preaching ministry. (2) It enjoins the use of homilies which have not yet appeared, and which consequently cannot be approved. Those homilies, too, are to discourage preaching—the main work of the minister. (3) It provides for the keeping of saints' days—contrary to the Fourth Commandment. (4) The order of the communion insists on the communicants kneeling instead of sitting when they receive the elements. The book, moreover, retains the term 'priest' in this connexion, and allows private communion. (5) The sacrament of baptism is divorced from teaching, and may be administered in private even by women. Public baptism is also 'full of childlike and superstitious toys,' as in suggesting that God has sanctified water to wash away sins. Other 'toys' are the impossible promise made by godparents, the interrogatories uselessly addressed to infants, and the use of the sign of the cross. (6) In the marriage service the Puritans objected to the wedding-ring, and to the phrase 'with my body I thee worship,' whereby a man 'makes an idol of his wife.' Other superstitious customs are associated with the ceremony. (7) Confirmation is bestowed on those 'that lacke both discretion and faith,' and is wrongly confined to bishops. (8) The burial service maintains prayer for the dead, and is associated with many undesirable customs. (9) The order of service for the churching of women 'smelleth of Jewishe purification.' The Holy Scriptures are profaned as in the use of Ps 121, the Benedictus, Nunc Dimittis, and Magnificat, which are quite unsuited to the condition of those who constantly use them. (10) 'In all their order of service there is no edification . . . but confusion.' The standing up for the Gospel, and not for the Old Testament, shows that they 'are ignorant that the scriptures came from one spirit.' The bowing and scraping at the name of Jesus is equally unjustifiable. (11) Their Pontifical is simply popish. 'As the names of Archbishops, Archdeacons, Lord bishops, Chancellors, etc., are drawne out of the Popes shop together with their offices. So the government which they use, by the life of the Pope which is the Canon law is Antichristian and devilishe, and contrarye to the scriptures.' (12) The titles of honour assumed by the great ecclesiastics are against the Word of God, as is also the practice of joining civil with ecclesiastical offices. (13) The remaining criticisms concern the exercise of discipline and the appointment of ministers. The bishops' authority spoils the pastor of his normal power of discipline. Ministers are made at random by the bishops, and the men ordained rashly have to seek for livings by dishonourable means. The cathedral churches maintain an idle and useless ministry at the cost of an effective parochial ministry. The whole system of patronage is wrong and encourages self-seeking among the clergy. The bishops' courts and methods of discipline, their licences, dispensations and excommunications, are also unscriptural; for their administration is secular in temper, and is far removed from the brotherly reproof and admonition which should prevail among Christians. (14) As an after-thought, they add a protest against what they hold to be the blasphemous use of the sentence 'Receive ye the Holy Ghost' in the ordination service.¹

(c) *Puritan position defined.*—The foregoing analysis will suffice to bring out the negative aspect of Elizabethan Puritanism, as revealed in this series of objections to the Prayer-Book. A more attractive positive statement of the Puritan view may be found in Walter Travers, *Ecclesiastice Discipline . . . Explicatio* (La Rochelle, 1574, Eng. tr. by Cartwright, n.p., 1574). Travers had certain peculiarities of his own, but his book is broadly representative.

Travers begins by emphasizing the importance of good discipline, i.e. sound government, to all human societies. The Church, like the State, cannot continue in health without discipline. He then urges that the discipline essential for the Church must be discovered from the Word of God. If God prescribed laws for the Jews—laws to which they were not allowed to add and from which they might not subtract—it follows that He will have laid down a platform of government for the Church of Christ. If the civil ruler may determine the constitution of the Church at his or her pleasure, what becomes of the sovereignty of Christ over His own subjects? If Christ is lawgiver and king, He cannot have left the ministry and government of His Church indeterminate. There is, moreover, a clear system to be discerned in the NT—a system which must derive from Christ Himself and may not be changed. And the adoption of this system is essential to the work of reformation. For doctrine and discipline go together. The Church of England has reformed the former, but retained the latter in its old popish character. Such a half-hearted reform cannot last.

What, then, is the nature of the ecclesiastical discipline laid down in the NT? Before we discuss the particular offices of Christ's Church, we may note one general characteristic. No function is lawful in the Church apart from vocation. The

office and the mode of appointment to it must be of Divine ordering. A true vocation requires that a man be called to some certain place or church (i.e., he must not be ordained a deacon or a priest in general, but must be ordained to serve a particular community). A further requirement of a true vocation is that those called be faithful in the discharge of their office. There are two parts in vocation, viz. election and ordination. In election the elders should lead the congregation, but the assent of the congregation is necessary. It is essential that the men elected be fitted for the office for which they are chosen. This points to the necessity of careful examination of those who are to bear office, and the qualifications that they are to possess may be learnt from the Pastoral Epistles. Ordination consists of public prayer together with the laying on of hands. The latter feature of the ceremony belongs of right to the whole eldership.

Turning to the particular offices, we find two kinds of ordinary official, viz. bishops and deacons. The bishops and presbyters, or elders (for they are one and the same in the NT), are appointed to look after particular churches. They are of two kinds, doctors and pastors. Ability to teach and to pray is the chief qualification of the former; the latter's duty is to speak the word of exhortation needed on particular occasions and to administer the sacraments. The deacons, according to Travers, are also of two kinds, the first being treasurers and almoners, and the second overseers or elders responsible for the discipline of the individual members of the church. The diaconate of the NT has nothing in common with deacons' orders in the Church of England. For the latter is but a step towards the priesthood, while the former is a distinct and permanent office. These are the only offices required or, indeed, permitted in the Christian Church. It is true, the NT mentions other offices, such as apostles, prophets, and evangelists; but these were extraordinary functions either peculiar to the first age of the Church or only revived in special circumstances of reform and advance, and consequently out of place in settled churches. The ordinary officers are bishops and deacons.

Travers proceeds to develop another point to which the Puritans attached great importance. The higher government of the Church belongs, not to particular officials, but to a compound office, i.e. not to individuals set over and above ordinary ministers, but to synods of the ministers themselves. The eldership or assembly gathered from the three chief orders—i.e. pastors, doctors, and overseers, or elders—exercises the highest authority. These synods are responsible for elections and depositions of Church officers. They are also responsible for discipline, alike in giving admonitions and in suspending members from communion or in pronouncing complete excommunication. The essential point is the corporate character of authority in the Church, and the corollary which the Puritans drew was to the effect that the monarchical episcopate is contrary to the spirit of early Christianity and to the letter of such passages as Mk 10^{42f} and Mt 23¹².

(d) *The break with Anglicanism.*—The First Admonition to Parliament and the tract by Travers afford an excellent survey of the Puritan case regarding the liturgy and government of the Church of England. The whole field was covered in the long and embittered controversy that followed between Cartwright and Whitgift, in which both writers displayed great learning, much animosity, and an inadequate sense of proportion. But their works were overshadowed by Hooker's *Ecclesiastical Polity*, perhaps the noblest piece of controversial literature in the English language. It is not possible to trace the development of the controversy in detail. The Puritans failed to secure any part of their programme in the time of Elizabeth. Indeed, the administration of the bishops, especially under the leadership of Whitgift, rendered their position more and more difficult. No relief was given to their consciences in respect of the details to which they objected in the liturgy. They were expected, not only to conform, but also to profess themselves satisfied that the details in question were not repugnant to the Word of God. The queen was mainly responsible for this severe repression of Puritanism, and those who sympathized more or less with the Puritans were unwilling to disturb the closing years of her reign by opposing her. Hooker's searching analysis of the Puritan presuppositions and his finely tempered defence of the Prayer-Book also served to raise a barrier of moderate opinion against the advance of Puritanism. The movement as a whole became more restrained and more modest. The Millenary Petition, presented to James I. in 1603, contains no sweeping programme of reform. The demand for a complete change of Church govern-

¹ The First Admonition may be read *in extenso* in *Puritan Manifestoes*, ed. W. H. Frere and C. E. Douglas for the Ch. Hist. Soc., London, 1907, pp. 8-55.

ment is abandoned. On the whole side of the Puritan case embodied in Travers the petition is silent. Instead, the desires of the petitioners are grouped under four heads:

The first reproduces the following details from among the changes urged in the First Admonition: 'In the church service, that the cross in baptism, interrogatories ministered to infants, (and) confirmation, as superfluous, may be taken away. Baptism not to be ministered by women, and so explained. The cap and surplice not urged. That examination may go before the communion. That it be ministered with a sermon. That divers terms of priests and absolution and some other used, with the ring in marriage, and other such like in the book may be corrected. The longness of service abridged. Church songs and music moderated to better edification. That the Lord's day be not profaned: the rest upon holidays not so strictly urged. That there be an uniformity of doctrine prescribed. No popish opinion to be any more taught or defended' no ministers charged to teach their people to bow at the name of Jesus. That the canonical scriptures only be read in the church. In the second place, the petition urges the importance of a preaching and resident ministry. Thirdly, they protest against the abuses of pluralities and inapropriations of tithes. Under the fourth head they ask that enormities of discipline and excommunication may be redressed. They particularly desire that excommunication may not be issued by laymen, nor employed for trivial offences. They criticize the fines and the fees, and the delays in ecclesiastical courts. The oath *ex officio*, whereby men are forced to accuse themselves, should be more sparingly used.'

In the Hampton Court Conference the Puritan representatives went somewhat farther. The uniformity of doctrine which they desired was to be found in the famous Lambeth Articles of 1595, which embodied the most rigid form of Calvinism. They desired corresponding changes in the other articles. Their plea for the association of ordinary ministers with the bishops in discipline drew from the king the famous and fatal aphorism, 'No bishop, no king.' Some minor concessions were made to the Puritans as a result of the conference, but, broadly speaking, their position was not eased. If the bulk of their more moderate demands had been conceded, or if some latitude in the use of ceremonies had been permitted, the danger of schism might have been averted. As it was, the Puritans became the party of constitutional reform, attacking alike the abuses of the royal prerogative and the claims of the monarchical episcopate. Under Laud the tide of feeling against episcopal rule steadily rose. 'Sion's plea against prelacy' commanded an ever more respectful hearing. In the Long Parliament the movement for ecclesiastical reform was no longer directed towards modifying episcopal control or securing detailed changes in the Prayer-Book; the hierarchy was to be destroyed root and branch, the Prayer-Book displaced by the Directory for Public Worship. That, however, is not the final phase of the Puritan ecclesiastical ideal. At the Savoy Conference in 1661 they put forward somewhat sweeping pleas for a reformed liturgy, and expressed their willingness to accept Archbishop Usher's scheme of a constitutional episcopate—a scheme under which the bishops governed with the assistance of representative church councils. The Puritans were out-manœuvred at this conference. They were asked to state their full demands, and they did so, in good faith; and then the boldness of their demands was used as a justification for refusing all concessions. They would have been content with less than they asked; as it was, they got nothing but expulsion, and thus regretfully

they turned their backs on the National Church and on their ideal of such a Church, and set themselves to create their own religious organization. Puritanism as a definite movement for the reform of the Church of England was ended.

3. The influence of Puritanism as a tendency on religious and social life.—How far were the Puritans right in their ecclesiastical aims? Did they form a correct estimate of the needs and possibilities of the English Reformation? Were their criticisms of the Elizabethan settlement justified in detail and in principle? Any answer to these questions involves the introduction of the personal equation, but some answer must be attempted nevertheless.

(a) *Elizabeth's ecclesiastical policy*.—The assumption that the queen gauged the temper and wishes of the country with singular sagacity is part of the persistent legend of Good Queen Bess. Elizabeth is supposed to have given the National Church exactly the form that the mass of the people desired. In suppressing the Puritans she was restraining short-sighted extremists who would have broken the national unity, and given to the Church of England a rigid constitution which would have offended the Englishman's love of compromise. This view is frequently taken for granted, but it is really open to question. It would be truer to say that the country was prepared to accept almost any Church that Elizabeth liked to set up, provided it was more or less definitely Protestant, than to say that Elizabeth gave the country precisely the Church that it instinctively desired. No doubt the people generally would have revolted against any attempt to establish the Genevan model in England, but there is equally no doubt that, if Elizabeth had cared to go farther than she did in the Puritan direction, she would have had the approval and support of the majority of her first group of bishops and of many of her leading statesmen and favourites, including Burleigh and Leicester. Very little encouragement would have sufficed to make the clergy predominantly Puritan. As it was, a considerable and influential section of the clergy sympathized with the Puritan position. A majority in Parliament could have been found at almost any time to advocate and sanction further reforms.¹ There is no reason to suppose that in the matter of religion Elizabeth possessed any special genius for interpreting the mind of her subjects. The rank and file, like their leaders, would put up with almost anything from the queen, because the maintenance of her throne was essential to the national safety and independence. But, had she insisted on a more Calvinistic reform, the change would certainly have been accepted as readily as the actual settlement, and in all probability a more fully reformed Church would have evoked greater enthusiasm.

The limits which Elizabeth set to reform in England cannot be regarded as an inspired expression of the national mind in religion either then or since. It is possible to claim for Elizabeth's ecclesiastical policy that it was determined by a diplomatic skill to which Puritans were strangers. The retention of the ornaments may have been intended, as Lindsay suggests,² to give a Lutheran character to the Church of England and to secure for it from the emperor and the pope the toleration extended to Lutheranism by the Peace of Augsburg. The ornaments rubric and the other little changes in the second Prayer-Book of Edward VI. also conveyed to the pope and to Philip II. of Spain the suggestion that England might return to the Catholic fold at any moment and at short notice. No doubt such an impression was intended, and

¹ G. W. Prothero, *Statutes and Political Documents (1558-1625)*, Oxford, 1898, p. 414.

² This was the device which had enabled Whitgift to detect and repress Puritan clergy. In virtue of their office, ministers had been compelled by Whitgift in 1584 to answer certain questions and subscribe certain articles—thus becoming their own accusers. Cartwright's claim to have been a champion of religious liberty has been questioned (see F. Paget, *An Introduction to the Fifth Book of Hooker's Treatise*, Oxford, 1907, p. 41), but at least his refusal to take the oath '*ex officio mero*' must be counted unto him for righteousness. It is remarkable that the reference to this detested and arbitrary procedure in the Millenary Petition should be so restrained in character.

¹ Cf. Prothero, p. xxxii.

² *ii.* 408.

one cannot but admire the skill with which Elizabeth used her ecclesiastical settlement to minimize the dangers which she had to face in her foreign policy. But the element of statesmanship counted for less than the element of personal caprice. Diplomatic reasons justified a cautious beginning—they did not suggest an absolute halt—in the work of reform. After the pope had excommunicated her, and still more after the failure of the Armada, reasons of State counselled a stiffening of England's Protestantism rather than the reverse. If statesmanship had been the determining factor, Elizabeth might have held back the Puritans at first; she would almost certainly have encouraged them later. She did not do so, because she was a Tudor and liked her own way. She meant to have the Church reformed according to her taste, and the Puritans were not to her liking.

One reason for the queen's personal animosity to the Puritans was her indifference to religious truth. She was consequently at variance with the Puritans on the question of a preaching ministry. The queen did not greatly care whether the people were instructed in the faith or not. To the Puritans it seemed all-important that a reasoned statement of the Protestant position should be popularized. If it was desirable that the country should become Protestant at all, then undoubtedly the Puritans were right in desiring an intelligent conversion and a learned preaching ministry. On this issue Elizabeth was obscurantist; the Puritans were standing for enlightenment and education, however narrow the views may have been which they would have propounded ostensibly for popular acceptance, and in effect for popular discussion.¹ Elizabeth, in attempting to starve thought and stifle discussion, was a sheer reactionary, and one of the most short-sighted measures on which she insisted was the suppression of the prophesyings—a measure against which Archbishop Grindal vigorously protested, to his eternal honour. There is no reason to doubt that the Puritan demand for a preaching ministry could have been very largely realized, had the queen wished it. There can be no question that the maintenance of an educated ministry would have been in the best interests alike of Church and of State. Even the instruments and defenders of the queen's policy admitted that. The main obstacles to the creation of such a ministry were the avarice and prejudice of the queen.

In some particulars the Puritan leaders certainly showed a truer appreciation of the religious needs of England than did the queen. Events soon proved that they saw farther than their fellow-reformers, when they urged that reformed doctrine would not co-exist for long with unreformed discipline and worship. The apologists of the Elizabethan settlement pointed to the pure standard of reformed theology enshrined in the articles. Further reform of the liturgy or of Church government they held to be superfluous. The Puritans declared that the unreformed liturgy would undermine the reformed doctrine, and they were clearly justified in holding this view. If the Church of England was intended to be unmistakably Protestant, as the rulers of it claimed, then the Elizabethan settlement was a fatal compromise, as the critics of it urged.

(b) *The Puritan polity.*—The details of the Puritan criticism of the Prayer-Book need not detain us. Some of the weightiest charges given in the First Admonition apply not so much to the book itself as to misuse of it and to the association of superstitious customs with its rites and ceremonies. Some of the Puritan criticisms seem now

unimaginative if not captious (*e.g.*, their objection to the ring in marriage or to the use of the Magnificat in public worship). Others seem obvious, and have been more or less recognized. Thus, their demand for a revised lectionary was valid for other reasons besides the reverence for Scripture which dictated it. The protests against the strict observance of saints' days and the lax observance of the Sabbath were also necessary, though both may have been pushed too far. The 'longsomeness of matins' is likely to be taken into account in any future liturgical reform. But, in general, such reform, when it comes, will probably not owe much to Puritan criticism.

It is more important to notice that Puritan ministers might have been accorded the liberty to omit or vary unessential details, not only with great relief to their consciences, but also with advantage to their congregations. The denial of liberty of conscience to the Puritan clergy in things indifferent is not excused either by the probability that such concessions would not have contented them or by the fact that, as a party, they were as much possessed by the craving for outward uniformity as the queen and the bishops.

With respect to the ministry and government of the Church of England, the Puritans were clearly right in pleading for a better educated, a better paid, and a more carefully appointed ministry. They had good grounds for protesting against the abuses of pluralism and patronage. The system and methods of ecclesiastical discipline lay open to the charges which the Puritans made against them. By 1662 all England agreed with them as to the necessity of separating civil and ecclesiastical offices, and Laud has had no successor in the position that he secured in the councils of State. The impression that Hooker completely disposed of the Puritan case owes not a little to the neglect of the incomplete posthumous books of the *Ecclesiastical Polity*—vi., vii., and viii. When he came to grips with the Puritan criticisms of the actual working of episcopacy, Hooker was obliged to make large concessions to his opponents, and, where he would not make concessions, he did not find it easy to maintain his defence. There was, indeed, no answer to some of the main criticisms which the Puritans passed on the state of the ministry, and the only kind of reply possible was to deprecate haste in reform and to urge that the bishops were doing their best—the real obstacles being the intransigence of the queen and the vested interests of some highly placed laymen.

The platform of Church government which the Puritans drew from the Scriptures, and the appeal to the Scriptures on which it was based, raise further points of interest. As interpreters of the NT, Puritan scholars were not at fault in contrasting the diocesan episcopate with the NT bishops who were in charge of particular churches and were the same as presbyters. It was fair to insist upon the difference between the primitive diaconate—a distinct office alongside of the eldership—and the later use of the diaconate as a mere stage in the evolution of the presbyter or priest. The element of corporate action and responsibility, alike in the choice of officials and in the maintenance of discipline, undoubtedly existed in NT times, and was rightly emphasized by the Puritans. In restricting membership to communicants, and in making strict examination before communion the instrument of discipline, the Puritans were also keeping close to the early Church. It is disputed whether they were correct, as a matter of scholarship, in claiming presbyterial ordination as the normal primitive practice, and it is doubtful whether their division of NT Church offices into extraordinary and ordinary can be legitimately

¹ See Douglas Campbell, *The Puritan in Holland, England, and America*, London, 1892, i. 468.

maintained. But the point on which their position has been most effectively challenged is the assumption that there must be laid down in the NT a final form of Church government, to be rigidly enforced at all times and in all places. The Puritans took great pains to prove that 'God must have delivered in Scripture a complete particular immutable form of church polity.' Otherwise, they said, the Christians would be worse off than the Jews, and God would be negligent if He did not provide for the least detail of Church order. Hooker is never happier than when undermining this *a priori* dogmatism, in which the Puritans so frequently indulged:

'In matters which concern the actions of God, the most dutiful way on our part is to search what God hath done, and with meekness to admire that, rather than to dispute what he in congruity of reason ought to do. The ways which he hath whereby to do all things for the greatest good of his Church are more in number than we can search, other in nature than that we should presume to determine which of many should be the fittest for him to choose, till such time as we see he hath chosen of many some one; which one we then may boldly conclude to be the fittest, because he hath taken it before the rest. When we do otherwise, surely we exceed our bounds; who and where we are we forget; and therefore needful it is that our pride in such cases be controlled, and our disputes beaten back with those demands of the blessed Apostle, "How unsearchable are his judgments, and his ways past finding out! Who hath known the mind of the Lord, or who was his counsellor?"'

It would now be generally conceded that the government of the Church to-day cannot helpfully be made to reproduce exactly the features of the NT polity, even if we knew more accurately than we do the character of that polity. It is probable that no uniform system existed in the early Church, and Church institutions have necessarily been developed and adapted to changing conditions. The Puritan hypothesis of a divinely ordained and unalterable form of Church government is not tenable. Yet their appeal to the primitive Church was not fruitless, and is still a necessary safeguard against the easy assumption that, in the development of Church order, whatever is right. Growth in Church organization is inevitable and desirable, but not every development is suited to the genius of Christianity, and none can escape criticism in virtue of its mere existence. When we refuse to follow the Puritans in denying the legitimacy of development in the realm of Church life, we have still to consider whether they were not justified in condemning particular developments as alien from the temper revealed in the arrangements adopted by the primitive Church. When the Puritans criticized the monarchical episcopate, as involving a social distinction and a secular greatness incongruous with the Christian ministry, and as exercising an arbitrary authority unsuited to the Christian brotherhood, they were occupying ground from which it was very difficult to dislodge them. The difficulty is at once apparent in Hooker's ineffective discussion of the phrase, 'it shall not be so among you' (Mt 20²⁶).¹ In origin and in character the institution of diocesan episcopacy was not specifically Christian. Moreover, the representative and democratic element in early Church order cannot be dismissed as accidental. There was and there is something vital to the expression of Christianity in the presence of just that element. And, above all, the Puritans rendered a service at once to Christianity and to liberty, when they in effect set limits to the authority of the sovereign in ecclesiastical matters. At the heart of their position was the belief that the Church has a constitution of her own, which she is to determine for herself, and which is not to be shaped to suit the diplomacy of States or the caprice of princes. This challenge to the royal prerogative roused the resentment of Elizabeth. It also turned the Puritans, almost

against their intentions, into the champions of constitutional government and political liberty.

(c) *Influence on English life and character.*—After the failure of their ecclesiastical hopes and their loss of political power the Puritans did not cease to influence England. The movement left its mark, for good and ill, on popular religion and, indeed, on every department of national life. In attempting to characterize the broad effects of Puritanism on English life and character, we may begin with its appeal to the Scriptures.

'Puritanism carried the genius of the Scriptures into the very heart and soul of England.'²

As is apparent from the contemptuous protest of the First Admonition against showing special reverence for the Gospel lessons, the Puritans were more impressed with the unity of the Bible than with the difference between Law and Gospel. They recognized development, but they tended to attribute an equal authority to all books of the Bible as coming from the one Spirit. They sent men to the Bible as the Word of God, and bade them seek there comfort and guidance for every occasion. They championed the view that the Bible was the people's book, and their appeal to Scripture did in effect guarantee the religious independence of humble folk. Unlearned men could read the book and appropriate its treasures for themselves. The Puritans were sometimes shocked at the results of the Bible study which they advocated, but they could not undo the consequences of their own principles. The setting up of the Scriptures as the authority in religion favoured liberty of thinking and developed personal religion. The concentration of attention on the Bible had a remarkable educative effect on many minds. Unconsciously men like Bunyan acquired literary taste and power, because their reading was confined almost exclusively to one really great book. Dowden claims that by this means certain popular sympathies were fostered in literature:

'A homely strength, a genial warmth, a respect for man as man, a breadth of human interest, a humour that is not supercilious, a pity which is not condescending'³

It is difficult to overestimate the gains, intellectual and spiritual, derived from assigning this premier position to the Bible.

There is, no doubt, a considerable discount on the services of Puritanism in this regard. In demanding direct Scripture warrant, not only for creed and Church order, but also for every act of daily life, the Puritans were in danger of depreciating ordinary reason, as Hooker declared, and they were also in danger of troubling tender consciences. Whatsoever is not of faith is sin, they urged, and whatsoever is not grounded on the Word of God is not of faith. Hooker's second book brings out admirably the dangerous exaggeration to which Puritan reverence for the Scriptures committed them:

'Admit this [that it was the drift scope and purpose of Almighty God in Holy Scripture to comprise all things which man may practise] and what shall the Scripture be but a snare and a torment to weak consciences, filling them with infinite perplexities, scrupulosities, doubts insoluble and extreme despairs?'⁴

Another result of this admission was to set man wrestling the Scriptures in order to get from them the guidance and assurance that were not on the surface. It also enhanced the temptation to fill up the lacunae of the NT by moral precepts and civil laws derived from the OT: the uncompromising attitude of the Puritans towards popery was duly defended by the directions to the Children of Israel to destroy the Canaanites utterly; Sabbatarianism, intolerance, and the belief in the death

penalty for witches were strengthened by this appeal to the OT; the wide acceptance in Puritan circles of the theory that heathen virtues are splendid vices may also be traced to the same root. If the English are essentially an OT people, the Puritans are largely responsible for it.

(d) *Puritan theology and ethics.*—Puritan theology was simply Calvinism, ultimately worn thin. It is not necessary to describe the system, and it is not possible here to trace its development in detail. It petrified into a series of dogmas, known as the five points of Calvinism, which dealt with election and reprobation, the limited scope of the atonement, total depravity, irresistible grace, and final perseverance. Since the English people ceased to be familiar with these doctrines, they have ceased to possess a definite theology, and their thoughts on ultimate questions have become chaotic and vague. The main principles affirmed in Puritan teaching were the sovereignty and righteousness of God and the sinfulness and all-pervading character of sin. The emphasis on original sin and total depravity made mortification of sin one of the central duties of the Christian life, and this lent to Puritan devotion and Puritan sainthood a somewhat sombre and gloomy character. The devout Puritan was very different from earlier Franciscans or later Methodist saints like Billy Bray. The Puritan did not normally attain to the sense of being at home with God, which may be found in the Franciscan and in some sections of the Evangelical movements. On the other hand, he had a strong sense of responsibility, and the religion which he embraced had an individualizing influence.

'The unvarying central element in Puritanism was the belief that the relation between the invisible spirit of man and the invisible God was immediate rather than mediate.'¹

The true Puritan stood ever in the great Taskmaster's eye. He learned to fear God and found that he had nothing else to fear.

This stern creed was not without its consolations. Once convinced of the supremacy of God, men and women could face terrible things, confident that even these things would be overruled for righteousness. Mark Rutherford says with reference to this side of the subject:

'Confess ignorance and the folly of insurrection, and there is a chance that even the irremediable will be somewhat mitigated. Poor I—yes; but it is genuine; and this at least must be said for Puritanism, that of all the theologies and philosophies it is the most honest in its recognition of the facts; the most real, if we penetrate to the heart of it, in the remedy which it offers.'²

It was a creed which enabled men to face disappointment and disaster without despair.

Submission to God's will expressed itself in self-control. Indeed, Puritan emphasis on God's sovereignty and man's depravity necessitated a stern and repressive moral discipline. As the advantages of his training in a Puritan home, Mark Rutherford mentions two things: (1) an abhorrence of lying, and (2) the conviction that unchastity is a sin and not a venial weakness. Those were elementary features of Puritan morality. With regard to the first, the Puritan tradition tended to err through literal-mindedness. It became prosaic and distrusted works of imagination, alike poetry and romance, though the latter was more especially apt to be banned. But this insistence on literal truthfulness has probably not been without its effect in developing the scientific temper. The second point constitutes perhaps the greatest service rendered by Puritanism to social life. It was and remains the head and front of the Puritans' offending in the eyes of many who resent the restriction of natural pleasures. Yet even what may seem the over-

scrupulousness of Puritanism on this subject is not without its value.

'To Puritanism we owe the characteristic which, in some other countries, is expressed by the term English prudery, the accusation implied being part of the general charge of hypocrisy. It is said by observers among ourselves that the prudish habit of mind is dying out, and that is looked upon as a satisfactory thing, as a sign of healthy emancipation. If by prude be meant a secretly vicious person who affects an excessive decorum, by all means let the prude disappear, even at the cost of some shamelessness. If, on the other hand, a prude is one who, living a decent life, cultivates, either by bent or principle, a somewhat extreme delicacy of thought and speech with regard to elementary facts of human nature, then I say that this is most emphatically a fault in the right direction, and I have no desire to see its prevalence diminish.'³

Beyond any doubt Puritanism made possible and common a sound home-life in England, so far as its influence on sexual morality is concerned.

Its effects on the relations of parent and child were not altogether admirable. The doctrine of original sin led to an utter distrust of child nature. Even Bunyan bids parents remember that children are cursed creatures. The wills of children, being evil, were to be broken, and children were to be taught to keep their distance. Home discipline was to be strict, and the rod was not to be spared. The relative justification for this attitude is sometimes overlooked by those who criticize Puritan home training and education. Thus Samuel Butler, in *The Way of all Flesh* (London, 1903), looks back with regret to 'the spacious days of Queen Elizabeth.' Then the relations between parents and children seem on the whole to have been more kindly.

'The fathers and the sons are for the most part friends in Shakespeare, nor does the evil appear to have reached its full abomination till a long course of Puritanism had familiarized men's minds with Jewish ideals as those which we should endeavour to reproduce in our everyday life.'⁴

As a matter of fact, in the days of Elizabeth the friendship of father and son often meant the initiation of boys into vice in very tender years. The advantages of sowing wild oats were firmly believed in. Children who would now be at a kindergarten were sometimes familiarized with drinking and swearing, while youth was encouraged to see life. The pages of Ascham's *Scholemaster* afford a sufficient revelation of the moral laxness and parental irresponsibility against which Puritanism reacted, and no one who knows that side of Elizabethan social life would wish to return to it. The main defect of Puritanism in this connexion was its depreciation of childhood; its chief merit was its insistence on a sense of duty—on the need of making a serious use of life. It has yet to be shown that the belief in original sin, which E. G. A. Holmes⁵ regards as the root of all evil in education, and which did in fact involve a distrust of child nature,⁶ can really be abandoned without losing an element of truth and hardness which made for strength of character and purity of life.

(e) *Influence on education and industry.*—In the matter of education the Puritans had to provide for themselves after 1662, and they made no small contribution to educational progress. As a reforming party they sat loose to the mediæval and classical traditions to which the universities and grammar schools were still wedded. They were readier for changes both in method and in curriculum. It was in Puritan circles that Comenius attracted attention and sympathy in England. The Long Parliament seems seriously to have considered entrusting to him the task of reforming national education. The dissenting academies of

² P. 21 f.

³ See *What is and what might be*, London, 1911, *passim*.

⁴ The general tendency to distrust natural feeling may be illustrated further from the records of Evangelicalism—e.g., the story of Augustus Hare's upbringing by his aunt, Maria Hare, or the tragedy of Henry Martyn's love-story.

⁵ Dowden, p. 11.

⁶ *The Revolution in Tanner's Lane*, London, 1887, p. 127.

the 18th cent. compared favourably with the older universities alike in expense, morals, and intellectual keenness. It was in these academies that the teaching of modern subjects was begun.¹ The Puritans are being blamed nowadays for having been too exclusively intellectual, and it is true that 18th cent. deism and rationalism may be regarded as the children of Puritanism. But this strong intellectual tendency was really a virtue, in spite of its limitations. In the States it was the Puritan colonists who cared for education. The colonists of Virginia took no such interest in the subject, as witness the sentence of W. Berkeley, governor of Virginia in 1671:

'I thank God there are no free schools or printing, and I hope we shall not have them these hundred years.'²

After all, the sermon itself, on which the Puritans set such a high value, is an appeal to the reason of the common man, and is an instrument of education. It assumes that religion must capture the head as well as stir the feelings. And so far the Puritan appeal to reason made for a higher intellectual life and activity. The independence of character which Puritanism fostered also helped to produce pioneers in educational reform.

The moral discipline enforced by Puritanism had a considerable reaction upon industry. The Christian life was regarded as essentially an ordered life. The passions were to be under rational control. Puritanism cut men off from wasteful expenditure and worldly pleasure. Forms of indulgence which dissipated both wealth and energy were sternly denounced and repressed. Time and talents were not to be wasted. On the contrary, the Christian's first duty was to make the most of his powers and possessions in whatever might be his calling. Idleness was a sure sign that one's standing in grace was doubtful. No one should be unemployed; even the man of leisure should find some occupation which would be of service to the common weal. Puritan pressure in these directions certainly tended to develop the spirit of enterprise and industry characteristic of modern capitalism. Both by inculcating frugality and by strengthening home ties, Puritanism encouraged thrift and the accumulation of capital. Moreover, by insisting on a careful use of time and on self-control, it helped to form those regular habits on which the conduct of modern industry depends. The business virtues, viz. honesty, punctuality, and steady application to work, were reinforced by the ethic of Puritanism. Once again, the emphasis on personal responsibility which was characteristic of the movement served to make men bring an independent judgment to bear on their business problems, and so increased the power of individual initiative. After 1662 the influence of Puritanism was thrown still more clearly on the side of economic freedom. For the Puritans, having lost power, naturally distrusted State control, while they were in any case convinced opponents of State absolutism. Their first concern was toleration, and they became the champions of the movement for limiting State interference in every direction.³

(f) *Puritanism and art.*—The relations of Puritanism to art and literature are not easy to define. The movement has been wrongly held responsible for the general degradation in taste, especially in architecture, which took place in the 18th century. Much vandalism has been attri-

buted to Puritans in which they only shared or did not share at all.¹ It is of course clear that Puritanism tended to dissociate itself from certain forms of art, particularly the dramatic art and the stage, which it treated as hopelessly corrupt, and whose moral recovery it, consequently tended to retard. It is also of the essence of Puritanism that it depreciated the outward. Calvinism has been called 'the ugliest of all religions.'² Its symbolism is of the plainest. Dependence on the outward is discouraged. The central emphasis on God's righteousness still further contributed to a neglect and a distrust of the merely beautiful. The Puritan was intensely preoccupied with moral issues, and, as a result of the Puritan tradition, many have neglected and stunted the artistic sides of their nature. And yet this very concentration on the moral life and on the supremacy of God's righteousness has not been without its vivifying influence on art and literature. The deepening of the inner life due to Puritanism was bound to find expression.

'Puritanism in itself is ill-fitted to produce a great art. Yet the inward life of the soul may be intense and the more intense because it does not readily distribute itself through appointed forms; and absorbing thoughts and passions cannot fail in some way to discover or to create that outward vehicle through which alone they can secure a complete self-realisation.'³

Nor is the self-discipline of the Puritan unfavourable to art.

'For the maintenance of high passion the habit of moral restraint is in the long run more favourable than the habit of moral relaxation.'⁴

And it may be urged that, in the last resort, art reaches its highest achievements precisely through the practice of moral renunciation, i.e. through the Puritan acknowledgment of the supremacy of God's righteousness.

'No man does real justice to beauty till he feel the moral beauty of resisting beauty—upon due occasion. There is something incomplete in artistic taste till it see, with so great an artist as Plato, the beauty of Puritanism.'⁵

4. *Summary.*—To sum up, the Puritans stood for an ecclesiastical ideal, the chief importance of which lay in asserting that the Church must not be made the tool of the State. In thus maintaining the independence of the Church, and also the necessity of a democratic element in Church government, the Puritans promoted constitutional liberty and very powerfully influenced British ideals of government. These ideals they carried with them into the colonies which they founded in America, where their conception of Church and of State found freer expression. Through the United States Puritanism has perhaps exerted an even greater influence on the Anglo-Saxon world than it has through its effects on British character. By means of a definite if narrow theology Puritanism has shaped the thinking of generations of Englishmen on the great themes of religion. By its insistence on strict self-discipline it has inculcated 'a steady and almost stolid dutifulness,' which has expressed itself largely in industry and in industrial progress, but which is apparent in all professions and careers in the men and women who have come under the influence of the Puritan tradition. If Puritanism has favoured the growth of democracy, it has also developed those qualities of self-control and of devotion to duty without which no democracy can be preserved from corruption. In temper and outlook Puritanism has shown some of the defects associated with the somewhat parallel Jewish movement known as Pharisaism. The Puritans leaned too much to the OT. Their belief in

original sin led to a too sweeping depreciation of human nature and to harsh, unsympathetic judgments on opponents. Their religion tended to lack gladness, and their 'cardinal error lay in a narrow conception of God as the God of righteousness alone, and not as also the God of joy and beauty and intellectual light.'¹ But no movement of religious thought could fail to ennoble human life and to possess permanent worth which, like Puritanism, was inspired with the conception of the chief end of man as being to glorify God and enjoy Him for ever.

H. G. WOOD.

PURITY.—A fine passage from the works of the Cambridge Platonist Henry More (1614-87) will give a good idea of the wide meaning which the gospel attaches to the word 'purity':

'By purity I understand a due moderation and rule over all the joys and pleasures of the flesh, bearing so strict an hand and having so watchful an eye over their subtle enticements and allurements and so firm and loyal affection to that idea of celestial beauty set up in our minds, that neither the pains of the body nor the pleasures of the animal life shall ever work us below our spiritual happiness and all the compatible enjoyments of that life that is truly Divine; and in this conspicuously is contained whatever either moral temperance or fortitude can pretend to.'²

To this large conception of the meaning of purity corresponds the view of Augustine that the purity of heart mentioned in Mt 5⁸ means single-heartedness or simplicity:

'Hoc est mundum cor quod est simplex cor.'³ 'Ille est vere castus qui Deum attendit, et ad ipsum solum se tenet.'⁴

It thus appears that 'purity,' like 'temperance' and 'sobriety,' has, properly speaking, a wider sense than is usually connected with the word. It connotes the singleness or simplicity of a nature which finds the perfect satisfaction of its desires in God. The opposite of purity is uncontrolled or misdirected desire; and the characteristic reward of purity is the vision which is man's true life: 'Vita hominis visio Dei.'⁵

The origin and usage of the word are sufficiently dealt with in *HDB*, s.v. It will suffice to recall the obvious fact that the idea of purity, like that of holiness, gradually passed over from the material and ceremonial sphere into the range of ethical ideas; the notion of outward consecration or dedication to the service of the Deity gave way in

process of time to that of inward sanctity. In this process the teaching of the Hebrew prophets played a conspicuous part.¹ The culminating point is perhaps marked in our Lord's teaching recorded in Mk 7¹⁴⁻²³ (Mt 15¹⁰⁻²⁰). Christ's saying about the thing that 'defileth a man' in fact distinguishes between two spheres, the physical and the spiritual, which men had hitherto tended to confuse. Henceforth, as Christians were led to perceive, "pollution" (τὸ κοινῶσαι) in the sense contemplated by the Scribes can be predicated only of that which affects man's moral nature.² It is interesting to trace anticipations of this principle in ancient writers—e.g., Cicero:

'Caste jubet lex adire ad deos, animo videlicet, in quo sunt omnia' nec tollit castimoniam corporis; sed hoc oportet intelligi, cum multum animus corpori praestet, observeturque, ut casta corpora adhibeantur, multo esse in animis id servandum magis. Nam incestum vel aspersione aquae vel dierum numero tollitur; animi labe nec diuturnitate evanescere nec amibius ullis elui potest.'³

As in the case of other virtues which re-appear in Christian ethics, the idea of purity directly depends upon the Christian conception of God as a Being to whom 'all hearts are open and all desires known.'⁴

1. Purity in the narrow sense of freedom from sensual pollution was a virtue which, before the coming of Christ into the world, held at best a precarious position. Israel cannot be said to have been very far above the general level of the ancient world in this respect. Where polygamy is not condemned, no very high standard of purity can be expected, and grave lapses from chastity in OT times were of frequent occurrence. These were often closely connected with Israel's inveterate tendency to idolatry, and in fact the prophets usually describe the apostasy of the nation as 'adultery' (Hos 2, Jer 3, Ezk 16, etc.). As regards the Gentile world, heathen moralists could inculcate purity only by appealing to self-regarding and prudential motives. They had no resources for taming or restraining the force of human passion. Purity was a virtue of which men despaired. St. Paul in his sombre picture of heathen degradation regards the Gentiles as actually given over to an abandoned mind (Ro 1²⁴⁻²⁸, Eph 4¹⁹ 5¹¹). Religion itself was corrupted at the source; the current mythology was a chief factor in the general demoralization. The better elements in the ancient religion passed over into the mysteries (g.v.), which at least appealed to the sense of moral defilement, though they could not appease it. These bore their own imperfect witness to the truth that purity of life was needed for acceptable approach to God.

Now, Christianity dealt with the evil which was too strong for the heathen world by re-emphasizing, with sanctions peculiar to itself, the Stoic doctrine of the sanctity of the human body. Seneca had spoken of God as 'near us, with us, within us,' 'lodging in the human body.'⁵ Epictetus had said:

'Thou bearest God about with thee, within thyself; and thou dost not realize that thou art outraging Him with thy impure thoughts and thine unclean deeds. . . . God Himself being present within thee and overlooking and overhearing all,' etc.⁶ St Paul points to the body as the actual 'temple' of the Holy Spirit (1 Co 6¹⁹); the bodies which are misused in sin are 'the members of Christ' (1 Co 6¹⁶). The sin of uncleanness does despite to the indwelling presence of the Spirit; it outrages that nature which the Son of God made His own and hallowed by contact with His deity; henceforth

John Smith, *Select Discourses*, London, 1660, p. 432: 'Every particular good is a blossom of the First Goodness, every created excellency is a beam descending from the Father of lights; and, should we separate all these particularities from God, all affection spent upon them would be unchaste and their embraces adulterous. We should love all things in God, and God in all things, because He is all in all, the beginning and original of being, the perfect idea of their goodness and the end of their motion.'

⁶ Diss. ii. viii. 11 f., quoted in Lightfoot, p. 214 f.

the body is 'for the Lord, and the Lord for the body' (1 Co 6¹³). We find an echo of this language in Tertullian's passionate assertion of the sanctity and dignity of the material which the Son of God has condescended to assume and to hallow.

'God forbid that He should abandon to everlasting destruction the labour of His own hands, the object of His care, the receptacle of His own Spirit, the queen of His creation, the heir of His liberality, the priestess of His religion, the soldier of His testimony, the sister of His Christ.'¹

Christian purity is in fact sanctioned by motives peculiar to the religion of the Crucified. It forms a part of that self-control (*ἐγκράτεια*) which is the most characteristic element in Christian morality, and which was 'primarily identified with sexual purity, and then extended to include renunciation of the world and mortification of the flesh.'² Purity is the spirit which strives to bring every bodily impulse, every affection, every passion, every faculty—thought, imagination, memory—into subjection to Christ. But it is important to remember that purity implies not mere abstinence from illicit pleasure but the positive dominion of the Holy Spirit in man. The way to purity lies through the practice of self-control in all things great and small (1 Co 9²⁵). This is pointed out more at length elsewhere (see art. TEMPERANCE).

There are certain safeguards of purity which may be mentioned here.

(a) Of *religious faith* something has already been said. The gospel supplied a new and powerful motive to purity in teaching the sanctity of the body, hallowed by the Incarnation and redeemed by the Passion of the Son of God. That which He had worn as a vesture, exalted to the throne of heaven and made the temple of the Spirit, could no longer be employed as an instrument of sin (Ro 6¹¹⁻¹³).

The prominence of this doctrine in the NT is a proof of 'the intense desire which religion has to protect the founts of life against whatever might destroy, waste, or pollute them.' Christianity 'erects a sacred fence round the most dangerous places in our life.' It does not despise the body, but labours to preserve and increase vitality. With this motive, it visits with its sternest censure any assertions of the individual's right "to do what he will with his own" body.³

Further, if purity implies the right direction of desire, the gospel brought to bear upon the force of passion 'the expulsive power of a new affection' in so far as it inspired and developed the love of God and of man for God's sake.

(b) Christ's law of *mortification* has an obvious bearing on the process of self-purification. 'If thine eye offend thee, pluck it out.' Mortification implies something more than mere self-restraint, the habit of which in other matters is so essential a condition of victory over fleshly sin. It implies the cutting off of even innocent pleasures that are found perilous to purity. It implies the use of what Jeremy Taylor⁴ calls 'some rudenesses' towards the body (cf. 1 Co 9²⁷, ὑπωπιάζω, δουλαγωγῶ)—spare diet, occasional fasting, habitual abstinence, and other wholesome austerities; it means also continual watchfulness against the beginnings and least occasions of evil.

(c) *Occupation* is also a valuable and necessary safeguard. While sloth and ease are the frequent forerunners of impurity, any kind of employment which leaves few vacant spaces of time is of great benefit.

(d) Of the power of *prayer* and of the recollection of the Divine presence it is needless to speak. Without them purity in its perfectness is impossible. One particular remedy may, however, be mentioned, namely, recollection of the sympathy of Christ with the tempted. He has felt the full pressure

of temptation, yet without sin (He 4¹⁵), and one great aid to purity is the thought of His example, of the travail which He underwent in order to be made in all things like unto His brethren, and of the cross on which He endured the open shame which is the appropriate penalty of secret sin (He 12²).

(e) Finally, we must bear in mind that the desire which occasions the sin of impurity finds its appropriate hallowing in marriage.

'Honourable marriage hath a natural efficacy, besides a virtue by divine blessing, to cure the inconveniences which otherwise might afflict persons temperate and sober.'⁵

2. Purity in the larger sense is virtually equivalent to 'simplicity' or 'single-mindedness.'

'It carries on to the whole of our nature that watchful reserve and restraint which it imposes upon the body.'⁶

Purity means the integrity of a will dedicated to God in perfect simplicity of purpose; it implies not the sacrifice of innocent desires, but the consecration of them; not the effort to acquire a single virtue, such as chastity or purity in the narrower sense, but the striving after goodness in the widest sense. Purity of intention consists in seeking to please God in all things and to make His glory the object of every act and word. The pure heart is that which is continually seeking God, passing through all things onwards and upwards to God, embracing one only object of life, and holding fast to a single purpose amid the bewildering multiplicity of calls and duties, claims and responsibilities, which make life difficult and complex. The pure heart is undivided, undistracted, unsophisticated. It imparts to character that 'moral unity' which Christ in a supreme degree exhibits, the unity which springs from devotion to a single end—the love and service of God.

And the reward of this purity is vision, insight, illumination (Mt 5⁸). 'Cor purum penetrat caelum et infernum.'⁷ Aquinas connects the beatitude 'Beati mundo corde,' etc., with the Holy Spirit's gift of 'understanding.' The reward of purity is a certain freedom from intellectual illusion and error; by purity of heart, 'etsi non videamus de Deo quid est, videmus tamen quid non est.'⁸ The perfect vision which shall satisfy not only the intellect but every element in man's complex nature is the consummation of a process that begins in this life—the cleansing of the heart and conscience from all lower aims than the service of God. Purity, in fact, in its completeness is the effect on the character of true faith in God (Ac 15⁹), the faith that works by love (Gal 5⁶). So Bernard makes it to consist in two things which are both different aspects of love: 'in quaerenda gloria Dei et utilitate proximi.'⁹ For purity is, as we have already noticed, not mere abstinence, not the mere cleansing of the heart from wrong or inordinate desires, but desire or love directed aright, and finding in God and His service the one true and satisfying end of human life. The pure heart seeks not God's gifts merely, but Himself. It thinks of Him as the only adequate response to the deepest yearnings of human nature. It believes that what He is, rather than what He gives, is the true life of man.

'Ille non aliquid ex his quae condidit; sed se ipsum tibi dat ad fructum, se ipsum omnium conditorem.'⁶

PURUṢA.—*Puruṣa* signifies in Sanskrit 'man,' then 'the living principle in men and in other beings,' and finally 'the supreme Spirit,' both the supreme personal God of theism and the impersonal world-soul in a pantheistic sense.

As early as the Rigveda (x. 90) there is found a hymn, which reappears with several variations in later Vedic texts, wherein the *puruṣa* is described as the primeval Being, as the personification and starting-point of the whole universe. The heavens, the atmosphere, and the earth proceed forth from the *puruṣa*, also the sun and moon, gods, men, and animals. From the head, the arms, the legs, and the feet of the *puruṣa* respectively are derived (according to vv. 11, 12) the four castes of men, which are here mentioned for the first time in Indian literature. Since in this hymn, though only in mythological fashion, the thought of man's identity with the universe is expressed, we may see in it an anticipation of the main teaching of the Upanisads and the Vedānta (*qq.v.*), that is, of the doctrine of the essential identity of the inner man, the soul, with Brahman, or the soul of the universe.

In the philosophical systems of India the word *puruṣa* is used in the same sense as the more common *ātman* to denote the souls of living beings; and this is done independently of the particular meaning attached to the word, whether, as in the Vedānta, the individual souls are conceived as one with the indivisible soul of the universe or, as in the Sāṅkhya, Yoga, Vaiśeṣika, Nyāya (*qq.v.*), as existing in infinite numbers.

R. GARBE.

PUSEY.—Edward Bouverie Pusey (1800–82), scholar and divine and leader of the Oxford Movement (*q.v.*) in the Church of England, later known as the Catholic Revival, was regius professor of Hebrew in the University of Oxford from 1828 to his death. This crown appointment, combining with it a canonry of Christ Church, gave him a central and independent position, from which he was able, by books, sermons, and individual personal dealings, to give a unity of character and aim to the Movement, both in its earlier and to a great extent also in its later phases.

1. His place in English life.—Pusey was by birth an English gentleman 'of the old school' (cf. the anecdote in Liddon's *Life of Edward Bouverie Pusey*, i. 186), and it may be said that some of the best influences of his time had combined in the formation of his mind and character. He was one of the first English theologians to study German, and in two long visits to Berlin, Bonn, and Göttingen in 1825–27 he worked under Freytag, Ewald, Tholuck, Schleiermacher, and Eichhorn, and came to know what scholarship meant to them.

¹ From Eichhorn Pusey learnt the vastness of the world of modern learning and the standard of work which was necessary in order to explore it. When in later years he would say, "A German professor would think nothing of doing so and so," he meant Eichhorn (Liddon, i. 74).

Pusey was a fellow of Oriel at the time when this common-room was the intellectual centre of Oxford, and until his wife's death in 1839 he mixed freely in all the varied life of the university. Even in the deep seclusion from ordinary society which he inflicted upon himself after that date he was in touch through his family with the life of the English upper classes, and such sermons as that entitled 'Why did Dives lose his Soul?' (preached in All Saints', Margaret Street, on Ash Wednesday, 1865), or 'Our Pharisaism' (delivered in St. Paul's, Knightsbridge, on Ash Wednesday,

1868), show his unerring insight into their spiritual needs. This is an important element in Pusey's life, which has not always been sufficiently recognized. In social life no less than in scholarship he was a man whom none could patronize or despise, and he knew how to speak to Victorian society about its vulgarity and worldliness with a searching directness which could not be evaded or ignored (cf. his rebuke to a lady in *Spiritual Letters of Edward Bouverie Pusey*, London, 1898, p. 77, and to the heads of houses in Oxford for their luxury [Liddon, ii. 110]). Students of 19th cent. manners would find a great deal of material in his sermons. In Liddon's *Life*, i. 51, there is a charming account of Lady Emily Herbert, who was married to his brother Philip in 1822, and of her relations with Pusey, which helps to put this side of his life into true perspective.

2. His part in the Oxford Movement.—In the Church revival which began in 1833 the acknowledged leaders were Pusey, Keble, and Newman, and Pusey's special part in the work may best be understood by comparing his mind and temperament with those of his two friends. Imagine, then, a young man, interested in religion, but inclined to scepticism, coming into contact with the three leaders of the Movement in its early days, and starting some controversial subject, such as the difficulty of believing that there can be only one true Church. Keble, we can imagine, jealous for the truth of God, and looking at the matter from a high mystical plane, would make some shrewd and unanswerable remark in very simple language, which would silence and perhaps somewhat abash the questioner, even if it did not altogether convince him. Newman would instantly throw his mind sympathetically into the problem, and work it out speculatively, as if trying to arrive at the truth about it for himself. Pusey, on the other hand, would concentrate his attention on the questioner, would study his character, and begin to try to convince him of the truth. He had, that is to say, pre-eminently the mind of a pastor, and had no taste or capacity for speculation. Thus in a religious movement his would not be the mind to originate the ideas, or even to give them striking expression. His work would be to translate them into action and to press them upon men's attention. Pusey's eminence lies in his immense strength of character and of conviction. To this he added very great learning, and the power of bringing it to bear upon the matter in hand in that cumulative and somewhat uncritical manner which was more controversially effective in those days than it would be in ours.

² Pusey, said R. W. Church, commenting on the significance of his adhesion to the original Tract writers, 'knew the meaning of real learning. In controversy it was his sledge-hammer and battle-mace, and he had the strong and sinewy hand to use it with effect' (quoted in Liddon, i. 353).

The most striking contemporary appreciation of his personality and influence is in an essay by J. B. Mozley about the sermon which he preached on 'The entire Absolution of the Penitent,' at the close of his two years' suspension (1st Feb. 1846).¹

The religious principles and ideas which it was Pusey's work to press home in this way into the unresponsive soil of Victorian England were not anything which he had acquired as the result of a sudden conversion; nor had they been adopted in any way as a working hypothesis to be tested by their success; they were part and parcel of his whole self, acquired by tradition in childhood, and confirmed by all the experiences and studies of early manhood. He never had any temptation to doubt, and was always in the mental position of a teacher. If the truth which he thus held so con-

¹ Liddon, iii. 59, and J. B. Mozley, *Essays, Historical and Theological*, 2. 1, London, 1884.

fidently were attacked, his nature would rise up to defend it with all the ardour of a crusader, and he would be ready to face all reverses and difficulties with the uncompromising courage of an early Christian martyr. Church's judgment about him was that he was 'a man after all to rank with religious leaders of high mark in all ages'.¹ His temperament was thus essentially that of the ecclesiastic, and he was mercilessly severe to anything that seemed to him like a dilettante attitude towards religion, but genuine unbelief he was quite able to understand and to meet sympathetically. While still an undergraduate, he had tried unsuccessfully to win an old school friend from atheism, and this experience left a deep and very important mark upon him (Liddon, i. 46). It is true, indeed, of all the early Tractarians that they felt themselves to be striving not for the triumph of one particular form of Christianity, but for the maintenance of genuine religion as a whole. In this they were far in advance of their time, and it is one reason perhaps for the strong prejudice which they had to overcome. Soldiers are not popular in countries which think themselves secure (cf. the striking speech made by Lord Salisbury after Pusey's death [Liddon, iv. 391 f.]). This may have been also in part a cause of that simplicity in Pusey's outlook which made him, as a Roman Catholic writer says, unable ever 'to calculate the effect of his arguments on any who differed from him'.² With this directness and intensity of character he combined an equally strong capacity for affection. The controversies and work of the Tractarians must never be thought of apart from that *ἐκτενὴς ἀγάπη* (1 P 4⁸) which bound them to each other, and the refined family life which was the permanent background of all their activities. The movement had indeed its centre in a university, but there was none of that easy tolerance or that cold-blooded aloofness from the real world in its leaders which make religious people rightly suspicious of the word 'academic.'

3. *Theological position.*—The foregoing considerations are necessary for a right understanding of Pusey's theology. The Tractarians were practical religious reformers, and the moral struggle against unbelief was always before them. They were never sitting, as it were, calmly in the study, as historians or critics or compilers of dogmatic systems. They were not, like the Scholastics, the products of a settled ecclesiastical world, nor, like the modern Biblical scholar, did they stand aside from the problems of practical religious endeavour. Their theological work was all called out by the needs of a religious revival and by the combat with teachers whom they felt to be hindering it.

Pusey's lasting contribution to the religious thought of his time is the conception of Christianity as being necessarily a single whole. This was the natural result of the apologetic preoccupation noticed above. God is one, and Jesus Christ is one, and the Word of God through Jesus Christ is one. So also must be the life of the Church and the faith of the Church. These are almost commonplace assumptions with Christians nowadays, but they are to a very great extent the legacy of the Tractarians and the result of the conflict of the Tractarians with the leading tendencies of their time. A recent Broad Church writer, V. F. Storr, charges Pusey and the other Tractarian leaders with having had a narrow outlook on their time, with being out of sympathy with its aims, and lacking insight into its fresh problems.

¹ For them, theology was not the science of the living God who was fulfilling Himself in many ways, but rather the formal study of the defined beliefs of the Christian Church at a certain

period of its existence: a period which they assumed was to be the norm and pattern for all time. The object of their endeavour was, confessedly, not to construct a new theology, but to recover an old one' (*The Development of English Theology in the Nineteenth Century, 1800-1860*, London, 1913, p. 257).

To write like this is to be blind to the whole moral aim and achievement of the Oxford Movement on its theological side. It is like blaming pioneers among brushwood for not raising crops as quickly as their neighbours on the prairie. Pusey and his friends found the ground occupied by the two formidable obstacles of Bible-worship and rationalism, and they had not only to expose their logical weaknesses, but also to overcome the obstinate self-satisfaction with which they were rooted in men's minds. Pusey's careful study of the way in which Christian thought in Germany was being dissolved by rationalism made him keen to observe its symptoms elsewhere, and in his first big work, the tract on baptism,⁴ he pointed out in masterly fashion that the evangelical appeal to the Bible suffered from precisely the same logical inconsistencies.

By rationalism he meant, says his biographer, 'that attitude of mind which allows Reason to limit the possibilities of Revelation, instead of confining itself to its legitimate work of testing its evidence and understanding its moral weight' (Liddon, iv. 4).

And in his first public controversy, in 1836—the protest against the appointment of R. D. Hampden as regius professor of divinity—Pusey defined the principle of rationalism, against which they were fighting, thus:

'The assumption that uncontrolled human reason in its present degraded form is the primary interpreter of God's Word, without any regard to those rules or principles of interpretation which have guided the judgments of Christ's Holy Catholic Church in all ages of its history and under every variety of its warfare' (*ib.* i. 373).

That the evangelicals were logically not different from the rationalists he showed from their rejection of the plain sacramental teaching of Holy Scripture on the subject of baptism (*ib.* i. ch. xv.) because it does not fit in with their preconceived notions of 'spiritual' or 'gospel' truth.

'A great deal of the Bible,' he declared, 'is thus nowadays read with what, if men examined it, they would find to be the very spirit of unbelief' (*Scriptural Views of Holy Baptism*, p. 150).

He argued that the evangelicals, in that they rejected the sacramental view of baptism, while accepting the doctrine of the Incarnation, 'although the one doctrine is declared in Holy Scripture as explicitly, as incidentally and as variously' as the other, were applying a rationalistic 'solvent' to the totality of Bible truth. This eclectic method of dealing with the Bible was justified in evangelical circles on the ground that they were fixing their attention upon the 'kernel' of the gospel. Pusey meets this contention in a finely indignant passage, which might be quoted as a motto for the whole Tractarian teaching:

'I would by the way,' he says, 'protest against such illustrations, whereby men, too commonly, embolden themselves to call any portion of God's institution for our salvation "husk" or "shell" or the like; let it seem to us never so external, it can in no stage of the Christian course be dispensed with, which these similitudes would imply. Rather if we use any image, we might better speak of the whole Gospel as an elixir of immortality, whereof some ingredients may be more powerful than the rest, but the efficacy of the whole depends upon the attestation of the several portions; and we, who formed neither our own souls, nor this cure for them, dare not speak slightly of the necessity of any portion' (*ib.* p. 5, quoted from *Tracts for the Times*, London, 1842, vol. ii. pt. ii.).

4. *The appeal to antiquity.*—Pusey's primary contention, in other words, was that Christian truth must be treated as a whole, and that it must be approached, like any other subject-matter, with a scientific submission to fact and in a historical spirit, instead of with arbitrary assumptions. However much men may differ from him as to the application of these principles, they should at any

⁴ *Scriptural Views of Holy Baptism*, Oxford, 1835 (containing nos. 67, 68, and 69 of the *Tracts for the Times*).

rate give him credit for having in this way cleared the ground for the intelligent modern study of theology.

Every one in that day looked on the Bible as the source of religious truth, and for the most part he did not need to go behind that. Pusey's contention merely was that the Bible must be studied in its proper historical context of the early undivided Church. If it were objected to him by Evangelicals that by this deference to the Fathers he was thereby setting up an authority other than that of Holy Scripture, he would answer:

'The contrast in point of authority is not between Holy Scripture and the Fathers, but between the Fathers and us; not between the book interpreted and the interpreters, but between one class of interpreters and another; between ancient Catholic truth and modern private opinions, not between the Word of God and the word of man, but between varying modes of understanding the Word of God' (Liddon, i. 418).

This appeal to antiquity was not with Pusey, it should be noticed, something that could be applied in a mechanical way. It was an appeal to the whole mind of an age 'which had deeper and truer thoughts, an altogether deeper way of viewing things than moderns' (*ib.* i. 410), and the early Christian writers are of permanent value not as supplying an infallible authority in matters of either faith or practice, but as being a great reservoir of true Christianity, in which those who would understand Holy Scripture for themselves should first be steeped. This standard is, of course, very difficult to apply to individual questions at any particular moment, and is perhaps difficult to defend in the face of a hard unsympathetic logic, whether from Roman Catholics or from sceptics, but Pusey believed that it represents a truly spiritual and theologically satisfactory conception of the authority of the Church, within which all that is true both in Romanism and in Protestantism is seen to be embraced. The effect of this line of thought upon an able young man who had been brought up as a Methodist may be seen in Gregory's autobiography,¹ and a clear sketch of the practical conclusions to which it led is given in a letter of Pusey's in 1840 answering the question, 'What is Puseyism?' (Liddon, ii. 140). For an account of the 'Library of the Fathers,' edited by Pusey and his friends, in order to make the chief Patristic writings available for English readers, see *ib.* i. ch. xviii.

5. Attitude towards science and criticism.—Within the limits of space available in a work like the present it has seemed better to draw out these broader aspects of Pusey's teaching than to go into the detailed controversies which accompanied the application of his principles to the life of the Church of England. A list of the main controversies is given for reference below.

The Oxford Movement proper was previous to the theological difficulties connected with evolution and other scientific hypotheses, and Pusey was the only one of its leaders who lived on into that new period. He describes the change that had taken place in thought in an interesting letter to his old pupil J. B. Mozley when he returned to Oxford in 1871 as regius professor of divinity (*ib.* iv. 221). Pusey was always a good friend to the teaching of natural science when he felt it was not being used to undermine religion, and he was much more alive to its importance than many of the 'liberal' theologians of his time. In 1855 the final vote of £30,000 for the construction of the museum at Oxford would have been lost if he and his friends had not supported it (*ib.* iv. 332). One of his last sermons bore the characteristically cumbersome title *Un-science, not Science, adverse to Faith* (London, 1878), and is described by his bio-

grapher with good reason 'as a permanent and most valuable contribution to the right understanding of the relations between Religion and Science' (Liddon, iv. 335; cf. p. 80). In regard to the science of Biblical criticism Pusey, it is well known, withdrew his first book, *The Theology of Germany*, from circulation (*ib.* i. 175) and never relaxed from an attitude of inflexible conservatism. It should be noted, however, that this was due not to any obscurantist aversion to free inquiry, but, like everything else in his life, to his pre-occupation with practical religion and to his convictions about the truth and unity of the Christian Revelation. The new views, he felt, were in large measure the products of an intellectual atmosphere in which the truth of the Incarnation was ignored or denied, and the writers tended to be 'totally insensible to the religious import' of the literature with which they were dealing (*ib.* i. 73, iv. 65, 74). His 'Fabian tactics' in regard to their work have probably contributed much more than would often be acknowledged towards the creation of the far more satisfactory atmosphere in which English theologians are able to work to-day.

6. Practical interest in church work.—Pusey's work has left a considerable mark upon the institutions and methods of the Anglican Church, no less than upon her theology. Of these the revival of the 'religious life' is the most remarkable. His desire for sisterhoods sprang perhaps originally from his sense of the spiritual needs of the great cities and of the lack of outlet for the religious energies of unmarried women rather than from any deliberate intention to re-establish monasticism, but his Patristic studies (Liddon, iii. 2) had made him feel that the life of virgin self-consecration was an essential feature of the Catholic tradition, and so the two motives were closely combined. He had made it a subject of prayer for some years, and this seemed to find its first answer in the strong desire of his eldest daughter Lucy, who died in 1844 at the age of 15, to devote herself to a single life and to work for the poor. He wrote from her deathbed to Newman:

'I ventured to give her in charge to pray for us all in the presence of her Redeemer, and, if it might be, for those institutions to which she had herself hoped to belong' (*ib.* ii. 380).

Marian Hughes, who died in 1913 as mother of the Convent of the Holy Trinity in Oxford, dedicated herself to the 'religious life' as early as 1841 (*ib.* iii. 10), and the first community for women was founded on 26th March 1845. Its superior, Miss Langston, was later one of the nurses taken by Florence Nightingale to the Crimea (Maria Trench, *Story of Dr. Pusey's Life*, London, 1900, p. 279). R. M. Benson, the founder of the first revived community for men in 1866, was also one of Pusey's intimate friends (*Letters of Richard Meux Benson*, Oxford, 1916, pp. 6, 206, 328).¹

Pusey's overwhelming sense of the failure of the Church to minister to the great cities showed itself also in relation to the ordinary parochial system. At the time when he was composing the tract on baptism in 1835 he wrote an article on the need for new churches in London which gave the stimulus to Bishop Blomfield's Metropolitan Churches Fund.² He and his wife gave up their carriage, and started to live much more simply in order that he might subscribe to the fund. In 1845 he founded anonymously the Church of St. Saviour's, Leeds, which was consecrated in the same month as Newman seceded, and the course of nineteen sermons which were preached during the octave of the consecration was the first of those 'parochial

missions' which have now become an ordinary feature of English church work.¹ In connexion with this absorbing interest in the spiritual welfare of the great cities may be mentioned the personal help that Pusey gave in Bethnal Green during the outbreak of cholera in 1866.²

The personal reminiscences recorded by those with whom he worked there give a pleasant and vivid impression of his personality.

'I served on the Committee of the hospital with Dr. Pusey,' wrote a clergyman, 'and very often I met him at the bedside of the patients—simple, tender-hearted, and full of sympathy. If the word "sweet" had not become somewhat canting—I should say there was something inexpressibly sweet in the smile and quiet laughter which so brightened his face when he was pleased and hopeful' (Liddon, iv. 148). This smile of Pusey's, it may be noted, was appreciated also by one who was far from being his admirer in other ways. 'Jenny Lind,' wrote Dean Stanley in 1848, 'has been in Oxford for three days. When unannounced she is perfectly lovely, and her smile is, with the exception of Dr. Pusey's, the most heavenly I ever beheld' (Letters of J. B. Mozley, London, 1885, p. 196, cf. also Liddon, iii. 108).

Pusey's influence upon individuals was very great. From 1838 onwards he heard confessions from persons in every rank of life (Russell, p. 78), and, though strongly opposed to any idea of making private confession compulsory, he used frequently to urge its practical necessity in the case of certain sins.³ His adaptations of Roman Catholic books of devotion, such as Scupoli's *Spiritual Combat*,⁴ though much criticized at the time,⁵ have greatly enriched the spiritual life of Anglicans, and helped to break down a great deal of the prejudice which is due to ignorance against the Roman Church. In 1856 he held a devotional conference of clergy for a week in his house, and was one of the pioneers in beginning systematic 'retreats' (g.v.).⁶ In this connexion also should be mentioned his commentary on *The Minor Prophets* (Oxford, 1877), and his little volume of *Private Prayers* (London, 1883), which shows the simplicity and fervour of his own devotional life. No undertaking for which he was responsible was nearer to his heart than the 'Companions of the Love of Jesus, engaged in Perpetual Intercession for the Conversion of Sinners,' and the volume of *Eleven Addresses* (Oxford, 1868) given in a retreat for this guild would suggest why a place has been sometimes claimed for him among the English saints.⁷

7. Pusey's principal controversies.—

- 1841-46. Jerusalem bishopric—the relation of the Church of England to Lutheranism.
- 1843. . His sermon on the Eucharist condemned.
- 1845. . Letter to the *English Churchman* on Newman's secession.
- 1846. . The condemned doctrine of the Eucharist reasserted and not challenged—'the power of the keys'.
- 1847. . The Gorham judgment—the doctrine of baptism.
- 1854. . The Denison case—the doctrine of the Holy Eucharist.
- 1860. . *Essays and Reviews*.
- 1865-70. Reunion with the Roman Church.
- 1870. . Use of the Athanasian Creed.
- 1871. . The Purgatory case—ritual questions (see also Liddon, iv. ch. viii). For Pusey's attitude towards changes in religious ceremonial cf. also ib. ii. 142, iv. 210, 369.

PYRRHONISM.—See SCEPTICS.

PYTHAGORAS AND PYTHAGOREANISM.—1. Pythagoras.—Pythagoras was regarded as more than human by the members of the society which he founded, and all differences between them were supposed to be settled by the formula *αὐτὸς ἐφα, ipse dixit*. On the other hand, he had left no written statement of his doctrine, and little more than a century after his death the most divergent accounts of it were already current. We find some Pythagoreans denying that the practice of abstinence formed any part at all of the master's teaching, while others gave it the first place. This divergence seems to have arisen from the ambiguous character of the society, which was from the first at once a religious order and a scientific school. We shall see grounds for thinking that the two things were one in the mind of Pythagoras himself, but the scientific side of his doctrine inevitably attracted some, while others clung to his religious beliefs and practices. By the 4th cent. B.C. the divergence had become so great that it is hard to find anything in common between the two sects except their reverence for the name of Pythagoras. As is natural, we have no direct testimony from the Pythagorists of the strict observance, though the denials of the more enlightened members of the society would sufficiently prove their existence. Fortunately, however, they were a favourite subject of ridicule with the 4th cent. comic poets, and we still have a considerable number of fragments in which they are made fun of for their squalid and penurious ways. It is perfectly plain that they did, as a matter of fact, abstain not only from meat but from fish, and that they wore a peculiar costume and went barefooted. They also looked for a privileged position in the next world, and regarded their present life as a sojourn in a strange land (*ἀνοήματα*). For the rest, they are said to have been lousy and dirty, which is the impression that ascetics are apt to make on men of the world.

This is a matter of such importance for the history of Greek religion that it may be well to give translations of a few fragments. The originals will be most readily found in A. W. Pickard-Cambridge, *Select Fragments of the Greek Comic Poets* (Oxford, 1900), to which references are added. Aristophanes, in his *Pythagorists*, says: 'In heaven's name, do you think the men of former days that turned Pythagorists were so squalid because they hadn't a thing, that they enjoyed wearing coarse cloaks? Not a bit of it, in my opinion. It was from necessity, seeing they hadn't a thing, that they invented a fine pretext for economy, and established canons useful to the poor. Why, serve up to them fish or meat, and if they don't eat it up toes and all, I'm ready to be hanged ten times' (Pickard-Cambridge, p. 69). And again: 'He said he had descended to the dwelling-place of those below and had beheld each class of them, and that the Pythagorists had a great advantage over all the dead. He said that Pluto would eat with them alone because of their piety'—'The god is not particular, then, if he likes to keep company with such dirty fellows' . . . 'And they eat vegetables and wash them down with water, and none of our young men would put up with their lice and their old cloaks and their avoidance of baths' (*ib.* p. 70). In the *Tarentines* of Alexis, the following dialogue occurred: 'The Pythagorists, as we are told, neither eat fish nor anything else with life in it (*ψυχὴν*), and they alone drink no wine.'—'Epicharmides eats dogs, though, and he is one of the Pythagoreans'—'Yes, but he kills them first; for then they no longer have life in them'—'They live on Pythagorisms and subtle words and chiselled thoughts (*φροντιστές*), and their daily fare is this. A fresh loaf for each and a cup of water, that's all.'—'Why, that is prison fare!' (*ib.* p. 86). Other extracts will be found in Diels, *Vorsokratiker*, Berlin, 1912, i. 373. It will be observed that the comic poets of the 4th cent. speak of the Pythagorists very much as Aristophanes speaks of Socrates. The reference of Aristophanes to the Descent into Hades (*κατάβασις εἰς Ἅδου*) is of special importance for the reconstruction of the system. The passage about the *ἀνοήματα* will be referred to later in another connexion.

On the other side, we have the statements of Aristoxenus of Tarentum, who had been personally acquainted with the leading Pythagoreans of the beginning of the 4th cent. B.C., and who had been

a disciple of the Pythagorean Xenophilus before he joined the school of Aristotle. He affirmed that Pythagoras only enjoined abstinence from the flesh of the ploughing ox and the ram; and, with respect to the mysterious tabu on beans, he said that, as a matter of fact, they were the favourite vegetable of Pythagoras, who valued their laxative properties. He also said that Pythagoras had a weakness for the flesh of young porkers and tender kids. In a similar spirit, though without the characteristic exaggeration of Aristoxenus, Dicaearchus of Messene, another disciple of Aristotle, who maintained even against his master the superiority of the active to the contemplative life, endeavoured to represent Pythagoras as a legislator and statesman.¹ No doubt it is this divergence that accounts for the almost total silence of our earliest authorities about Pythagoras himself. Plato was very deeply interested in Pythagorean doctrine, and it is a very remarkable fact that the name of Pythagoras occurs once only in his writings,² and all that we are told in that passage is that he won his followers' affection in an unusual degree (*διαφερόντως ἡγαπήθη*) by teaching them a 'way of life.'

'Even at the present day,' adds Socrates, 'their successors are conspicuous by their manner of life, to which they give the name of Pythagorean.'

So far as it goes, this is evidence that, at the supposed date of the conversation reported in the *Republic*, some time before the close of the 5th cent., the 'Pythagorean life' was known at Athens and regarded as an original part of the system. Even the scientific Pythagoreans are mentioned only once in Plato by that name, in the passage where Socrates is made to say that the Pythagoreans (*Πυθαγόρειοι*) regard music and astronomy as sister sciences.³ On the other hand, Plato has a great deal to say about the views of people whom we know from other sources to have been Pythagoreans; the strange thing is that, for all Plato tells us, we should only have been able to guess this even of such leading men as Philolaus and Eudoxus. Generally he introduces Pythagorean philosophical views anonymously as those of 'ingenious persons' (*κομφοί τινες*), or the like, and he does not even say that Timæus the Locrian, into whose mouth he has placed an unmistakably Pythagorean cosmology, was a member of the society. We are left to infer it from the fact that he comes from Italy. This reticence must surely be deliberate, and Aristotle imitates his master's caution. The name of Pythagoras occurs only twice in the genuine Aristotelian writings that have come down to us. In one passage⁴ we are told that Alcmaeon was a young man in the old age of Pythagoras, which is a useful piece of information; the other⁵ is a mere quotation from Alcidas to the effect that 'the men of Italy honoured Pythagoras.' When Aristotle has to discuss definite Pythagorean theories, he uses studiously vague phrases like 'the men of Italy who are called Pythagoreans.' By great good fortune, however, he also wrote a special treatise on the Pythagoreans, which is lost, but is quoted by later writers. These quotations are invaluable; for they are evidence that the miraculous legend of Pythagoras was not, as might have been supposed, the invention of a far later age, but was known at Athens in the 4th century. It may be assumed that Aristotle heard it from some of the Pythagorists of whom the contemporary comic poets made fun. Pythagoreanism was not at all congenial to him, and he probably wished to represent Pythagoras as a charlatan.

⁵ *Rhet.* B. 25, 1398^b 14.

The intention of Aristotle seems to be shown by his statement that Pythagoras busied himself with the theory of numbers, but that 'he did not break with the miracle-mongering of Pherecydes' (*τῆς Φερεκύδου θαυμασιότητος οὐκ ἀπέστη*).¹ At a later date Apollonius of Tyana (q. v.) and Iamblichus were delighted to be able to quote Aristotle's authority for the miracles of Pythagoras, and in this way that philosopher unwittingly became one of the founders of Neo-Pythagoreanism—a thing which was enough to make him turn in his grave.

The earliest reference to Pythagoras is a practically contemporary one. Xenophanes, like Pythagoras himself, was one of the Ionian *émigrés* who found a home in the West 'when the Mede appeared'; and some verses from an elegy of his are quoted by Diogenes Laertius,² in which we are told of Pythagoras that he once heard a dog howling and appealed to its master not to beat it as he recognized the voice of a departed friend. It is true that Pythagoras is not named in the verses themselves, but Diogenes, or rather the writer from whom he is excerpting, is more than usually precise in his method of citation; for he says that they occurred in the elegy of which the first line is a verse which he quotes. It is clear, then, that he had the whole elegy before him, and he can hardly have been mistaken when he said it referred to Pythagoras. If that is so, we have contemporary evidence of the fact that Pythagoras taught the doctrine of transmigration or rebirth (*μετεμψυχή*). The verses are satirical, as we should expect from Xenophanes, and the next reference to Pythagoras is hostile too. Heraclitus said of Pythagoras³ that he had carried scientific inquiry (*ιστορίη*) farther than any one, that he claimed its results as a wisdom of his own, and turned them into an art of mischief (*κακοεργία*). Later still, though within a century of the time of Pythagoras, Herodotus⁴ speaks of him as 'not the weakest sophist (i.e. scientific man) of the Hellenes,' and says he had been told by the Greeks of the Hellespont that the legendary Scythian Salmoxis had been a slave of Pythagoras, son of Mnesarchus, at Samos, and had learnt from him the strange doctrine of immortality. Herodotus does not believe this, for he is of opinion that Salmoxis lived many years before Pythagoras; but the story is evidence that Pythagoras was well known in the 5th cent. both as a man of science and as a preacher of immortality, and that is what we want to know.

The Life of Pythagoras by Diogenes Laertius is a farrago of Alexandrian erudition and speculation, while those by Porphyry and Iamblichus are subsequent to the romantic reconstruction of the story by Apollonius of Tyana. They all contain, however, a good deal of material derived from Aristoxenus and Dicaearchus, which may embody genuine tradition in such statements as have no connexion with the particular views regarding Pythagoras which they were anxious to propagate. The historical setting came mainly from Timæus of Tauromenium in Sicily, who was anything but a trustworthy historian, but who had special means of access to original sources for the history of the West. The facts that we can really be said to know may be very briefly stated. Pythagoras, son of Mnesarchus, was a Samian, and the period of his activity fell in the second half of the 6th century B.C. According to Aristoxenus, he emigrated from Samos because he would not submit to the tyranny of Polycrates, which seems probable enough, though we do not require any special explanation for the emigration of Ionians to the west at this date. He found a new home at Croton, a powerful Achaian colony in the Gulf of Tarentum, famous for its healthy climate and the number of Olympic victors it produced. Here he established his society, which was at once a religi-

³ viii. 36.

⁴ iv. 95.

ous order and a school of science. It soon acquired a dominant position in Croton and the other Achaian states of these parts, and this naturally called forth a strong opposition, which was led by Cylon, a wealthy noble. It seems certain that Ephorus and Timæus connected the outbreak of opposition to Pythagoras with the war between Croton and Sybaris, which ended with the destruction of the latter in 510 B.C. In any case, Timæus said that Pythagoras lived at Croton for twenty years, and then emigrated to Metapontum, where he died. He also said that the Metapontines consecrated his house as a temple; and Cicero tells us¹ that, when he visited Metapontum, he refused to go to the house where he was to stay till he had seen the place where Pythagoras died. The opposition of the partisans of Cylon to the Pythagorists was carried on after their founder's death, and ended in a regular massacre, from which very few of them escaped. Polybius tells us² that the days when they set fire to the lodges (*συνέδρια*) of the Pythagoreans were followed by a period of disturbance in Magna Graecia, 'as was natural, seeing that the leading men of every state had so unexpectedly perished,' and the Greek cities of S. Italy were filled with bloodshed, civil war, and confusion of every kind, till at last they got the assistance of the Achaeans in the Peloponnese, whose colonists they were, in restoring tranquillity. No date is given anywhere for this persecution, but Aristoxenus said that only two of the Pythagoreans in Croton escaped, Lysis and Archipus—for whom Plutarch³ substitutes Lysis and Philolaus. We know that Lysis was the teacher of Epaminondas at Thebes, and, as Epaminondas cannot have been born much before 420 B.C., Lysis must have been still living in 400 B.C. We must assume, then, that the great persecution took place somewhere about the middle of the 5th century. On the other hand, it must have been before the establishment of a Panhellenic colony by Peicles near the deserted site of Sybaris (444 B.C.), or we should have heard of these troubles in that connexion. It is evident from Plutarch that the Pythagoreans played a very important part at Thebes, and that it was now one of the chief seats of the society. We know from Plato's *Phaedo*⁴ that Philolaus was resident there some time during the last twenty years of the 5th cent., and also⁵ that Echeerates and others, whom we know from Aristoxenus to have been Pythagoreans, were settled at Phlius near Sicyon. Some time before the death of Socrates, however, it must have become safe for the Pythagoreans to show themselves in S. Italy again, for we gather that Philolaus had already left Thebes by that time, and we know that he settled at Tarentum, henceforth the chief seat of the society, where it is represented in the next generation by the distinguished mathematician, statesman, and general, Archytas, the friend of Plato. The Pythagoreans of Tarentum were the centre of the opposition to Dionysius I. of Syracuse, and it was at their request that Plato undertook the education of his successor, Dionysius II. The story of Damon and Phintias, which Aristoxenus said he was told by Dionysius himself when in exile, belongs to this period.

The uncertainty of the chronology is a great difficulty. The dates usually given for Pythagoras himself were obtained by the usual process of synchronizing his fortieth year (his *ἀκμὴ* or *φλοῦρα*) with the most important event of his middle life. This was taken to be his emigration to Italy; and, on the basis of the statement of Aristoxenus referred to above, that was dated by the era of Policrates (532 B.C.). It is also clear that some estimates were based on the dates of the previous incarnations

of Pythagoras as Aithalides and Euphorbus.¹ If we could be quite sure that Timæus and Ephorus were right in connecting Pythagoras with the war between Sybaris and Croton (511 B.C.), that would be a fixed point, though we cannot tell how old he may have been at the time. The residence of the leading Pythagoreans at Thebes towards the end of the 5th cent. is also a fact, and it is not going too far to suggest that the brilliant career of Epaminondas and the brief supremacy of Thebes in Greece may be traced to their inspiration. At any rate Aristotle² quotes from Alcidas the remark that, as soon as the 'philosophers' became the leaders of the Thebans, the city prospered. Plutarch, who knew his Boeotian history and who made use of Boeotian writers, in his dialogue *de Genio Socratis* describes the conversation that took place among the conspirators on the winter night of 379 B.C., when Pelopidas freed Thebes by seizing the Cadmea. He tells us that the conspirators had met in the house of Simmias, the Pythagorean disciple of Socrates whom we know from the *Phaedo*, and that, while they were talking, Epaminondas, who disapproved of their project, introduced a Pythagorean from Italy, Theanor of Croton, who had come to pour libations on the tomb of Lysis, whose spirit had appeared to the brethren and told them of his death. He relates how, after the massacre at Metapontum, from which only Lysis and Philolaus escaped, it was unknown where Lysis was, till Gorgias of Leontini reported having met him at Thebes. The Pythagoreans in Italy wished to send for Lysis or to recover his remains if he were dead, but were prevented by the civil wars and tyrannies prevailing at the time. Theanor did not, however, intend to disturb his body now; for he had heard a voice while he watched by the tomb bidding him leave it where it was, and he saw that Epaminondas had given Lysis a proper Pythagorean burial down to the most secret details. No doubt this may be a romance, but it implies a very definite historical background in the mind of Plutarch, and he knew what he was talking about.

Pythagoras was an Ionian, and it is absurd to make him the champion of the 'Dorian aristocratic ideal,' as most German writers since A. Boeckh and O. Müller have done. To begin with, what they mean by the 'Dorian ideal' is really a fancy picture of the Spartan and Cretan ideal invented by Athenian conservatives of the 5th cent. and popularized by Athenian philosophers. Corinth and Syracuse were as purely Dorian as Sparta, and probably more so, and they will not fit into this picture. The source of the impression that there is something Dorian about Pythagorism is simply that the few fragments of genuine Pythagorean writing that survive belong to the generation when the Dorian Tarentum was the chief seat of the school, and were naturally composed, not indeed in the local dialect of that city, but in the 'common Doric' which was the literary language of Sicily and S. Italy at the time. The very numerous forgeries of Pythagorean writings naturally followed this model, and so there has come to be a sort of Doric veneer on the surface of Pythagorism. But Croton, Metapontum, and the other original seats of the society were not Dorian, but Achaian, and there was no love lost between Dorians and Achaeans, especially in Italy. Herodotus tells us³ that the Sybarites accused the Crotoniates of getting the better of them by Dorian help—a suggestion which the Crotoniates repudiated with indignation. Besides, if a Crotoniate at this date had anything important to say, he would have written in Ionic (as Alcmaeon of Croton, who was a young man in the old age of Pythagoras, appears to have done); for Ionic was the recognized dialect for serious works, and even the Dorians used it. The literary use of Doric, except for farces and satires, dates only from the reaction against Athens caused by the Peloponnesian War. Grote protested long ago against the annexation of Croton to the Dorians by Boeckh, and his protest has at last been listened to in Germany by Eduard Meyer.⁴

Nor is there any evidence that the Pythagorists espoused the cause of the aristocracy. They were a religious association, and we are told a good deal about the severe tests applied by Pythagoras to aspirants to the novitiate, but there is no hint that birth or wealth was essential. The character-

istic of such associations in Greece and elsewhere is just that any one is admitted to membership who is able and willing to fulfil their requirements, whatever his condition may be. The prominent part played in the society by women from the very first depends on this. It is probably true that Pythagoras dissuaded the Crotoniates from giving up the refugees from Sybaris, but that was surely because they were suppliants, and not because they were aristocrats, if indeed they were, of which there is no evidence. Aristoxenus said expressly that Cylon, the leader of the opposition to Pythagoras, was a man distinguished by birth, position, and wealth, not a popular leader, as modern writers assert. Moreover, when the Pythagoreans did return to Italy, they settled at Tarentum, which was an extremely democratic state, and it is hard to see anything else that could have recommended a Dorian city to them. It is true that Archytas was at the head of the Tarentine government for years, but he owed his position to popular election. Lastly, though Empedocles (*q.v.*) may not have been a member of the Pythagorean society, he was certainly an enthusiastic admirer of Pythagoras, and seems to have taken him as his model; and Empedocles was the leader of the democratic party in another Dorian state, Agrigentum.

It is no doubt possible that there is some truth in the statement of some authorities that the family of Pythagoras was descended from a certain Hippasus, who left Phlius rather than submit to the conquering Dorians. The exiles settled first at Lemnos, from which island they were afterwards expelled by the Athenians, when the family of Pythagoras settled at Samos. Pausanias¹ heard this account of the matter at Phlius itself, and it is noteworthy that Echechrates and other Pythagoreans settled at Phlius in later days, and that the name Hippasus is well known as that of a Pythagorean who revealed the secrets of the society. That makes no difference, however, to the Ionism of Pythagoras, for the exiles from Phlius belonged to the original population who were settled in the Aegean before the Achaeans came, and whom we must identify with the Arcadians on the one hand and the Ionians on the other. If the family of Pythagoras preserved the memory of these things, he would be less than ever inclined to sympathize with 'Dorian ideals'. Nor were the Achaeans Dorians. It may be that they spoke a very similar dialect, though we have not sufficient remains of it to be sure, but that can be sufficiently accounted for if we suppose that they both adopted the language of the original population before the not very remote date when the Ionians took to saying *Elis* instead of *Valis*, for instance. The retention of the old pronunciation by backward communities is normal. The whole question has been needlessly complicated by the unwarranted assumption that the Arcado-Cypriote dialect is Achaean, whereas it is most closely akin to the dialect of Homer. It has actually been said that Pythagoras changed his name from Pythagoras in order to signify his adhesion to the 'Dorian ideal'.¹ Of course the form is due to the fact that we generally read of him in Attic writers who use the Attic form, and there is no reason to suppose that he ever called himself anything else but Πυθαγόρας, as he was still called by Democritus.

2. Pythagorean religion.—In the light of modern anthropology, the Pythagorean religion has become a good deal easier to understand than it was. We can see that, so far as the leading ideas on which it was based are concerned, it might have arisen anywhere; for those ideas are primitive and world-wide. The first of them is that the soul can leave the body temporarily or permanently and take up its abode in another body. The second is the kinship of men and beasts, which makes it possible for the same soul to inhabit the bodies of either. The third is the necessity of observing certain abstinences or tabus. To make a religion out of these ideas, it only requires a great teacher to give them an ethical character which they do not inherently possess, and that is why we find so many resemblances in Pythagorism to systems which can have no historical connexion with it. Some of these had already struck people in the 5th century. Herodotus² notes the agreement of the Pythagorean rule to bury the dead in linen with

¹ Il. 13. 1. This explains why Aristoxenus called Pythagoras a 'Tyrrenian'. In the 4th cent. B.C. the 'Pelagians' whom Miltiades expelled from Lemnos were called 'Tyrrenians.'

² Il. 81.

the Egyptian practice of excluding wool from temples, and he hints¹ that not only this, but the belief in immortality and transmigration, came from Egypt. The rule about linen is simply, of course, a consequence of the tabu on wool as an animal product, and may arise independently in many places; and Herodotus was wrong in supposing that the Egyptians believed in transmigration. It was probably an impression that he gathered from the semi-animal figures on the monuments. As the geographical horizon became wider, Pythagoras was sent farther and farther afield for his religious instruction—to the Chaldeans and the Druids and other peoples. In modern times his system has been derived from China, and even now there are those who think it came from India. Now there are certainly some striking resemblances between Pythagorism and Buddhism, though the differences are more striking still. That can be explained quite naturally, however, when we remember that the Hindus, like the Greeks, had a bent for philosophy, and that the operation of philosophical speculation on the same basis of primitive belief would naturally yield somewhat similar results. The question of Egyptian influence is on rather a different footing; for it is historically possible, and, if we remember the close connexion between Polycrates of Samos and Amasis of Egypt, it will seem quite likely that Pythagoras visited Egypt. If we could find any real trace of Egyptian influence, we should not hesitate in admitting it. It is strange, however, that Herodotus does not say that Pythagoras had ever been in Egypt, and that the first statement that he had occurs in a work which expressly disclaims any historical character, the *Busiris* of Isocrates, and in a passage obviously based on the somewhat obscure remark of Herodotus. We must remember, too, that what Pythagoras might have learnt in Egypt at that date would have been the confused and artificial theology of the Saïte period, and we can find no trace of that. We shall see that the religion of Pythagoras, like everything else about him, has a definitely Ionian character, and that the doctrine of rebirth or transmigration was known in the Aegean before his time.

The word 'metempsychosis,' by which this doctrine is generally known, has only very late authority, and is based on a confusion of ideas; for it would mean that the same body was inhabited successively by different souls. The correct term would have been μετασώμασις, which is actually used by Plotinus and the Christian apologists. The proper expression is undoubtedly παλιγγενεσία, or rebirth.

The first point to notice is the intimate association of Pythagorism with the cult of Apollo at Delos. We know from the Homeric *Hymn* that the Apollonia (*q.v.*) at Delos had become a meeting-place for all Ionians long before the time of Pythagoras, though their official chief deity was the Minyan god Poseidon Helikonios, who presided over the Panionion at Mycale. Now, as L. R. Farnell has rightly insisted, Apollo Lykeios, the wolf-god (who has nothing to do with the sun in classical Greek literature) comes from the north, and his connexion with Lycia, which may have been called after him, is secondary, and due to Achaean colonization in those parts. Everything points to his having been a god of the northerners who took the place of the old Aegean rulers in the 14th century B.C. There is nothing strange in his having been adopted by the Ionians. When great sanctuaries like that at Delos are established, the seats of the gods become fixed, even though the people to whom they originally belonged have disappeared or been absorbed, as the Achaeans were by the Ionians of the Aegean. In much the same way, those Achaeans who were able to maintain their separate nationality after the Dorian conquest of

¹ Il. 123.

the Peloponnese, when they expelled the Ionians from the southern shore of the Corinthian Gulf, took over the worship of Poseidon Helikonios which they found there. The most interesting trace of the northern origin of Apollo is the bringing of the offerings of the Hyperboreans to Delos every year by one or more ancient routes, and Apollo himself was supposed to revisit the Hyperboreans annually. Now Aristotle wrote in his work on the Pythagoreans that the citizens of Croton gave the name of Apollo Hyperboreus to Pythagoras.

For the Hyperboreans and their offerings see Farnell, *OGS* iv. 99 ff. They are found in the legend of Delphi too. The story told to Herodotus at Delos was as follows: 'The holy things wrapped in wheat straw were carried from the Hyperboreans to the Scythians, and were passed on by them from people to people till they reached the Adriatic. Thence they were sent southwards and were received by the men of Dodona, who were the first of the Hellenes to receive them. From Dodona they came down to the Malian Gulf and crossed to Euboea, whence they were passed on from town to town till they reached Carystus, and from Carystus they were conveyed by the Carystians to Tenos, without touching at Andros, and the Tenians handed them on to Delos.'¹ Pausanias² mentions another route by way of Sinope which has puzzled scholars. If it should prove to be the case that the Hittites spoke an Indo-European tongue of the same type as the Italo-Celtic, the meaning of this will be clear enough, and, in view of that, which seems to be more than a possibility, the Achaean character of Apollo becomes important. Now, in discussing another Hyperborean institution, the Olympian crown of wild olive, Pausanias gives us the following information: 'Olen the Lycian, in his Hymn to Achaia, was the first to affirm that there are men who dwell beyond the North Wind, for in that hymn he says that Achaia came to Delos from the Hyperboreans. Afterwards Melanopus of Cyme composed an ode on Opis and Hecaege, in which he said they too had come to the Hyperboreans before Achaia did so.' It does not matter for our purpose here whether Olen is a historical person or not, for it is at least clear that these statements were made in Delian hymns. It may be noted further that the Homeric *Hymn* represents Apollo as ruling over many places which were not Ionian at a later date, but which formed part of the Achaean land in the heroic age. This may possibly help to explain the similarities between Pythagorism and Druidism which made such an impression on the Greeks and Romans of a later date. W. Ridgeway⁴ holds (the present writer believes rightly) that the Achaeans were Celts, and it seems plain that the Druids (*q.v.*) did teach the doctrine of transmigration.⁵ We do not know how sophisticated these Druids (who used the Greek alphabet) may have been, but there is after all a fairly general agreement that a new view of the soul reached the Greeks from the north (see art. Soul [Greek]), and there are certain elements in the Delian legend which seem definitely Celtic, such as the singing swans so beautifully described by Aristophanes.⁶ Now these, as every one knows, occur in Plato's account of the death of Socrates,⁷ where Socrates is made to say he is a fellow-servant of Apollo's swans.

If we follow up the clue suggested by the identification of Pythagoras with Apollo Hyperboreus, we shall find many confirmations of the hypothesis that Delos was the source of his inspiration. In the first place, his very name suggests some family connexion with the worship of Apollo; for the most obvious etymology of it is that it means an envoy to the sister sanctuary at Pytho (cf. the *πυλαγόρα* who were sent to the Amphictyonic Council). We note further that the Hyperboreans are represented as vegetarians, and that the oldest altar of Delos, that of Apollo the Father (*γενέτωρ*), was reserved for fireless oblations of vegetable offerings like the firstfruits of the Hyperboreans. We read in Diogenes Laertius⁸ that Pythagoras worshipped at this altar only, and, though this may not be genuine tradition, it is probable enough that, in his preaching of abstinence from animal flesh (*ἀποχή ἐμψύχων*), he should have appealed to this ancient worship of his people. Moreover, purification (*κάθαρσις*) was one of the leading ideas in Pythagorism, and it certainly was a prominent feature of the cult of Apollo. There are, indeed, reasons for thinking that it was not an original

feature of this cult, but there is no doubt that, by the time of Pythagoras, Apollo was regarded as the cathartic god *par excellence*.

Further, there are indistinct memories of earlier missionaries of Apollo than Pythagoras. Herodotus tells us¹ of Abaris the Hyperborean, a holy man who travelled from country to country with a golden arrow in his hand. He tasted neither food nor drink, and averted plagues and earthquakes by his spells. Pindar said this was in the days of Croesus, only a generation before his own birth. Herodotus also speaks² of Aristaeus of Proconnesus, who, when 'rapt by Phœbus' (*φοῖβος λαμπρὸς γενόμενος*), visited the northern peoples. His soul could leave his body, and he was seen in far distant places. Like Pythagoras, he found his way to the Achaean colony of Metapontum, and told the men of that city that to them alone in Italy had Apollo come. There was a statue of him beside that of Apollo in the market-place there. To the same circle belongs Hermotimus of Clazomenae, who could leave his body for years at a time, and bring back prophecies of the future, till once his enemies burned his body in the absence of his soul and he was seen no more. It is plain that Pythagoras was not without predecessors, and that he had no need to visit remote regions to learn the view of the soul on which his doctrine was based.

On the cathartic element in the religion of Apollo see *OGS* iv. 295 ff. Purification (*κάθαρσις*) came to be so closely associated with Apollo that Socrates, in Plato's *Cratylus*,³ proposes to derive his name from *ἀπολύων* or *ἀπολούων*, or both.

But we can go further than this; for we can show that Pythagoras had Ionian predecessors in his cosmogony as well as in his doctrine of the soul. There are traces of cosmogonical theory even in Homer,⁴ and it is plain that Hesiod did not invent the cosmogonical figures at the beginning of his *Theogony*; for he introduces Chaos and Eros without a word of explanation, and there is no indication of the parts they played in the creation of the world. As Gomperz⁵ very justly observed, 'Hesiod's system is a mere husk of thought which must once have been filled with life.' Moreover, his doctrine⁶ that the men of the Golden Age have become 'holy spirits' (*δαίμονες ἄγροι*) who watch over mortal men goes far beyond primitive belief, though we can hardly suppose that Hesiod invented that either. Such doctrines are obviously the fruit of what we must call theological speculation, and that raises a great difficulty. It is generally evaded by attributing all such speculations to the Orphics, and there is no doubt that they held cosmogonical doctrines and entertained beliefs about the soul of the very type that we are now considering. On the other hand, there is no evidence that the Orphic communities existed at so early a date as we should have to assume if we are to account for the facts in this way. Moreover, so far as we can see, Orphism was the religion of humble people, and we know of no great Orphic teachers whom we can credit with the origination of such daring speculations. It seems as if Orphism, when it did arise, was rather a parallel phenomenon to Pythagorism than its source. It must be remembered that the Orphic god is Dionysus, not Apollo, and the worship of Dionysus is of much more recent date than that of Apollo. It certainly became tinged with mysticism like that of Apollo, and to some extent that of Demeter at Eleusis, but the problem of the origin of this mysticism remains, and it is not easy to rest content with the view that it is Thracian. The belief in ecstasy may well have been so, but that does not take us very

³ *Il.* xiv.

far; for what we have to account for is the existence of cosmogonical speculation and an elaborate doctrine of the soul, which presents many common features in all the religious movements of the time, so far as we know anything about them.

The obvious affinities of *Iliad* xiv. and *Odyssey* xi. with Orphic doctrine have led some scholars to suppose that they are later additions to the Homeric poems, but they would have to be so late that the theory loses all plausibility. The view that Hesiod is the originator of Greek cosmogonical speculation, which we all held in the 19th cent., is shown by a close examination of the *Theogony* to be wrong. Hesiod is certainly repeating those things at secondhand. It is of great significance that Dionysus is not any more important for Hesiod than he is for Homer. It is mentioned in passing that he is the son of Zeus and Semele, but there is no hint that he is an important god. That seems fatal to the view that there are Orphic elements in Hesiod.

Since the close of the 19th cent. it has been possible to look at these things in another light, though it is not easy to adjust our vision to the new perspective. We know now that there was a highly developed civilization in the Aegean dating from the Neolithic Age, and excavations at Menidi and Miletus have shown that it passed by gradual transition into the early Ionic civilization. There is not the slightest ground for regarding the semi-barbarous invaders from the north as the main stock of the Greek people, i.e. the people to whom we owe Greek civilization and everything that makes Greece of value to us to-day. Every day brings fresh confirmation of the view that the Achaeans or Hellenes, or whatever they called themselves, adopted the language and civilization of the conquered Aegean people and were ultimately absorbed by them. Now we can have no difficulty in supposing that the people who created the Aegean civilization were capable of theological speculation. Nor is there any need to suppose that they were dependent on Egypt or Babylon in any way for this. The Aegean civilization is as old as that of Babylon or Egypt, and in many ways superior to either of them. The Achaeans and Hellenes did not bring civilization to the Aegean, but in some ways set it back. What they did bring was apparently the Olympian gods and the war-chariot and the chivalrous ideal as we find it in the poems of Homer. In that way, no doubt, the incursion of the northerners introduced a new and valuable element into the life of the Aegean, but for most things they were dependent on the higher civilization of the people whom they had conquered. The coming of the Achaeans marks the beginning of the Greek Middle Ages, but there was a long antiquity behind that.

It is most unfortunate that we cannot discuss Pythagoras adequately without constant reference to ethnological problems, but that is forced on us by the treatment of the subject in most recent works. It is necessary at this point to say that it seems impossible, in view of recent discoveries, to maintain the view that the Greek language reached the Aegean from the north. Its affinities are closest with the languages of Iran and India, and not with those of the Italo-Celtic type. This appears clearly from its system of declension and conjugation. The Greek, Sanskrit, and Avestan verbs are inflected on identical principles, and in particular they alone possess the augment, save for some survivals in Armenian—an exception that proves the rule and gives us a hint of the route by which Indo-European speech may have reached the Aegean. It is the fact that the oldest datable traces of Indo-European speech are to be found in Asia Minor, and this is so whether the new view of the Hittites proves to be sound or not. Hittite, if it has been correctly interpreted, is a language of the Italo-Celtic type, and has no special affinities with Greek. The distinction between *centum* and *satem* languages, of which so much has been made, is a trifle one, since the sibilization of *k* is a secondary phenomenon which may occur anywhere and at any time. The Romance languages have become *satem* languages in historical times. Now, if these views are sound—and every fresh piece of evidence seems to confirm them—there is no difficulty at all in supposing that an older form of Greek was spoken in the Aegean in the Bronze Age, and that it was adopted from the original population by the Achaeans and Dorians from the north, who must originally have spoken a form of Celtic. Of course they would introduce a number of their own words, notably *θεός*, which is inexplicable as a native Greek formation. The continuity of early Aegean and Ionic speculation, which is being assumed in this article, has, there-

fore, nothing startling about it. In this respect, at least, Ridgeway saw how the land lay when there was much less evidence than there is now.

If this view is correct, we can easily understand how there came to be 'theologians,' as Aristotle calls them,¹ in Ionia long before the time of Pythagoras. We still have a priceless fragment of one of the latest of these, Pherecydes of Syros, an island close to Delos (see art. COSMOGONY AND COSMOLOGY [Greek]). It is the oldest piece of Greek prose in existence, and was already known in part from Clement of Alexandria, while the beginning and some of the continuation of it have been recovered from an Egyptian papyrus published by Grenfell and Hunt. This introduces us to speculations which are most easily understood if we suppose them to be old Aegean in character, such as that of the cloak (*φάρος*), embroidered with 'Land and Ogenos and the homes of Ogenos,' which Zas (Zeus) gave to Chthonie (Earth) at their 'holy marriage,' and which was spread over a 'winged oak' (*ὀρόπτερος ὄψος*). For us the important point is that our earliest authorities, including Aristoxenus, who was not anxious to emphasize the mystical side of Pythagoras, agree in representing him as the disciple of Pherecydes. Aristotle too, as we have seen, spoke of his attachment to the miracle-working (*τελεμαχία*) of Pherecydes. This means at least that Pythagoras was acquainted with a speculative cosmogony, and probably with a doctrine of the soul's immortality rather less primitive in character than any we can attribute to Aristaeus or Abaris. At any rate the discovery of an actual fragment of Pherecydes in Egypt makes it much more likely than it seemed before that later ages had some real knowledge of his doctrine, and that Cicero may have had good authority for his statement that he taught the immortality of the soul.

The fragments of Pherecydes will be found in Diels, *Vorsokratiker*², vol. ii. p. 202 ff. The present writer cannot believe that Pherecydes was influenced by Anaximander, as Diels supposes. The 'winged oak' points to Arcadia or Dodona rather than Miletus. Nor can it have any connexion with Babylon, where there never were any oaks. The scholiast on Apollonius Rhodius, i. 645, quotes Pherecydes for the statement that Aithalides, the herald of the Argonauts, received from Hermes the boon that his soul should be at one time in Hades and at another on earth, and from Apollonius himself we learn that he had also the gift of remembering his former lives. If we can trust this, it is very important; for Hermes is an Arcadian (and therefore pre-Achaean) god, and the Argonauts are Minyans. Now Aithalides was regarded as a previous incarnation of Pythagoras, Euphorbus being the next. The statement of Cicero² is that Pherecydes was the first to teach the immortality of the soul, which only means that he was the first extant writer to do so. The immediate source of the statement is probably Posidonius.

There is no reason, then, for supposing that the doctrine of rebirth or transmigration was the original contribution of Pythagoras to religion, and the same may be said of his detailed prescriptions as to the avoidance of certain acts and the observance of certain abstinences. There can, in fact, be no doubt that most of the Pythagorean precepts are tabus of a thoroughly primitive type, and many of them can be matched among savage peoples to-day. Later writers, of course, interpret these *ἀκροσμάτα*, as they are called, as symbols or allegories of moral truth; but that view will not easily be accepted now, in view of our increased knowledge of such things. It is natural to suppose that, to many of the followers of Pythagoras, these precepts were the most important of his teachings, and that there was a rift between the higher and the lower Pythagorism from the first. That is only human nature, and it seems to be the explanation of much that we are told about the hierarchical organization of the society. It is very significant that one of the names given to the lower grade is *ἀκρομαρικοί*, which can hardly mean

¹ *Met.* A. 6. 1071^b 28, the first occurrence of this fateful word.

² *Tusc.* i. 16 (38).

anything else than those who made the precepts, or *ἀκούσματα*, the principal thing. The distinction between Pythagoreans and Pythagorists has no doubt a similar origin. It is probable that modern scholars are right in holding these distinctions to be of late date, but the difference between those who were capable of assimilating only the external side of the religion and those who could reach its inner meaning must have been present from the first, and, as we have seen, it soon became so accentuated that it split the society in two. The same consideration throws light upon what we are told of the obligation of secrecy imposed on the members of the society. As usually stated, that is clearly an attempt to explain how certain doctrines were apparently unknown to the mass of the members, and so far it is unhistorical. Pythagorean doctrines were apparently quite well known, and influenced outsiders from an early date. At the same time, it is quite credible that novices were bound to silence for a period. That is too common everywhere to excite surprise, and the words which are used to describe this obligation, *ἐξεμβλία* and *ἐξεργησάνην*, suggest this rather than the *disciplina arcani*. Now these words are distinctly Ionic in character, and that is a good reason for believing that they have come down from the early days of the society.

The following may be quoted as specimens of the *ἀκούσματα*: 'Not to pick up what has fallen,' 'Not to break bread,' 'Not to stir the fire with an (iron) sword,' 'Not to eat from a whole loaf,' 'Not to let swallows share one's roof,' 'Not to look in a mirror beside a light.' There can be no doubt how precepts of this kind are to be classified, and we cannot take seriously the later explanations such as that 'Not to stir the fire with a sword' only means that we should not further provoke an angry man.¹

But all this, however largely it bulked in his teaching, was only a part, and not the most important part, of the contribution of Pythagoras to religion. There must have been something to account for the striking difference between the development of the Orphic and Pythagorean sects. The former seems to have become utterly corrupt in a very few generations; and in a conversation supposed to take place well before the close of the 5th cent. Plato makes Adimantus condemn the Orphic religion as a mere traffic in pardons and indulgences.² We know that there were Pythagorists at Athens in the 4th cent., but nothing of the kind is suggested of them; they are only laughed at for their abstinence and their devotion to the simple life. On the other hand, there were at the same date a number of eminent scientific men, calling themselves Pythagoreans, who paid no respect to these external observances, and even tried to explain them away. Now the one great difference that we can discern between the Orphics and the Pythagoreans is just this—that the Pythagoreans all agreed in tracing everything to the inspiration of a great individual, while we do not hear of any great Orphic teacher at all. Those whose names have come down to us, like Onomacritus, are known chiefly because they were suspected of literary frauds. We may reasonably infer from this that the higher side of Pythagorean religion came from the founder himself.

It is not possible, of course, to prove conclusively what this higher doctrine was, but an examination of our earliest evidence will afford us some positive indications. In the *Phaedo*³ Plato makes Socrates express surprise that Cebes and Simmias have not been taught by Philolaus the true reason why it is unlawful for a man to take his own life. The first reason, which he says is a 'high doctrine' and not easy to understand, is that our souls are bound in the prison-house (*φρουρά*) of the body, and we have no right to try to escape till God gives the signal. There is a further doctrine, which Socrates accepts,

that we are the chattels (*κτήματα*) of the gods, and they watch over us. There can be no doubt that Plato means us to understand all this to be Pythagorean; for Philolaus was the most distinguished Pythagorean teacher at the time of which he is speaking. We are also told that he did not give any clear account of this doctrine, which was therefore presumably one which he had inherited from his predecessors. Now it will be seen that it has a distinctly ethical tendency, such as we do not find in anything that we know of Orphism. The imprisonment of the soul in the body has a disciplinary character, and the gods or God (the two forms of expression are used quite indiscriminately) have imposed it on us for the good of our souls, so that it is our duty to submit. So much we may fairly infer from this passage, which is really our oldest and best authority.

If we may also regard the famous description of the true philosopher in the *Theaetetus*⁴ as inspired by Pythagorean teaching, we may go a step further and attribute to Pythagoras the doctrine that the end of man is to become like God (*δμοῖσις τῷ θεῷ*). We are not able to prove this indeed, but it is so far confirmed by the fact that Aristoxenus makes the 'following of God' (*τὸ ἀκολουθεῖν τῷ θεῷ*) the keynote of the Pythagorean system as expounded by him; and an unknown writer excerpted by Stobaeus⁵ gives 'Follow God' (*ἔπου θεῷ*) as a Pythagorean precept, and calls attention to the agreement of Plato with it. It is obvious that this is on a different level from 'Do not stir the fire with iron' and the rest of the *ἀκούσματα*, and it appears to furnish a clue to the real meaning of Pythagoras. It gives Pythagorism something more than the mainly negative attitude to life of Buddhism, and distinguishes it from Orphism, which emphasizes 'release' (*λύσις*) above everything else. To the Orphic the body was the tomb of the soul (*σῶμα σῆμα*), and what we call life was death; and that is a very different thing from regarding the body as a house of correction. There is, in fact, no evidence that the idea of a final release from the 'wheel of birth' played any part in Pythagorism. That is admitted by Rohde, who attributes it to the defectiveness of our information. Pythagorism without a final release, he says, would be like Buddhism without a *nirvāṇa*.⁶ The present writer would suggest that, imperfect as our information may be, it would be extraordinary that it should afford no evidence of this doctrine, if it had ever existed. We have the excellent authority of Aristotle for saying that the Pythagoreans divided rational living things into gods and men and 'such as Pythagoras,'⁷ and so it would seem that the fully purified soul becomes incarnate in a philosopher and religious teacher who seeks to raise others to his level. So far as we can judge from the *Phaedo*, its final destiny is not any sort of *nirvāṇa*, but 'to dwell with the gods.' It is an interesting point that the purified soul remembers its previous incarnations. It is said that Pythagoras remembered that his last incarnation had been as Euphorbus the Dardanian, who, by Apollo's help, wounded Patroclus (*Il.* xvi. 804 ff.). It is not necessary either to disbelieve this or to attribute it to imposture. Men were very exalted in those days, and it is perfectly possible that Pythagoras was in dead earnest when he saw the shield of Euphorbus dedicated by Menelaus at Argos, and recognized it as that which he had borne in Apollo's service in a former life. We may gather from this the further information

that there was an interval of several generations between each rebirth, which, if we regard the myths which Plato puts into the mouth of Socrates as Pythagorean, were spent in purgatory, the very name of which has a definitely Pythagorean sound.

For the doctrine of the body as the tomb of the soul see Plato, *Cratylus*, 400 C, where we are told that the body is called *σῶμα*, i.e. *σῆμα*, 'on the ground that the soul is buried in the present life.' Socrates goes on, however, to give it as his own opinion that the Orphics (οἱ ἀμφὶ Ὀρφέα) really called the body *σῶμα*, because the soul is now paying the penalty for 'those things for which it pays the penalty,' and that it has a covering (περιβολός) in the likeness of a prison (δεσμωτηρίου εἰκόνα) 'so that it may be kept safe' (ἵνα σώζηται) till it has paid in full all that it owes. The word *σῶμα* is on this view derived not from *σῆμα* but from *σώζω*. This looks very like an attempt to explain the Orphic doctrine in terms of the Pythagorean.

3. Pythagorean science.—This is not the place for a full discussion of Pythagorean science, but it is necessary for our purpose to establish its Ionian character—which will prove that it goes back to Pythagoras himself—and it is desirable that it should be shown, if possible, in what, if any, relation it stood to Pythagorean religion. The subject is difficult because, while the religion of Pythagoras underwent no important development, as far as we know, Pythagorean science was extremely progressive. That, again, is because, while the leading Pythagoreans took their religion for granted or neglected it altogether, they were obliged to defend their scientific teaching against criticism of all kinds, and of course it became greatly modified in the process. In particular, we see that it was necessary to account for the 'four elements' of Empedocles, which had become the foundation of medical science, and above all to take up a definite attitude towards Zeno's very serious criticism of the Pythagorean view of space and the unit. We are safe in referring theories which show a preoccupation with problems of this kind to a later generation of the school. On the other hand, Parmenides, who describes himself as a youth in his poems, must have written not very long after the death of Pythagoras, and there is clear evidence that he had been a Pythagorean. The cosmology which he expounds in the second part of his poem, and which he tells us has no truth in it, cannot well be anything else than Pythagorean, and, considering the time at which he wrote, it must be practically the doctrine of Pythagoras himself. Unfortunately we have only fragments, though they are instructive enough, and show pretty clearly which parts of the Pythagorean cosmology may be regarded as original. In view of the relation of Pythagoras to Pherecydes, it is not surprising that his expositions should have taken the form of a cosmogony, and we even gather from a chance remark of Plato¹ that it contained stories about the gods such as were usual in cosmogonies. The cosmogonic Eros is mentioned in a fragment that survives. It is clear, however, that the leading ideas of the system came from quite another source than Pherecydes. In the first half of the 6th cent. B.C. science, as we understand the word, had arisen for the first time in the world's history at Miletus on the mainland not far from Samos. Thales, Anaximander, and Anaximenes had been busy with the question of the stuff of which the world is made, and this had been defined as a limitless something (*ἄπειρον*), ultimately held to be air, which at that time was supposed to be a vapour and identified with steam and mist. Water and earth and other solid substances were explained as condensed air, while fire was air still further rarefied. In this limitless mass there were innumerable worlds, each with its earth, sun, moon, and stars, and these arose and passed away like bubbles in the limitless mass of vapour. Moreover, Anaximander, the second of

the Milesians, had put forth a daring theory of the earth and the heavenly bodies, which was rejected by his successor Anaximenes, but evidently left its mark on the mind of Pythagoras. According to this, the earth hung free in space in the centre of the world, and it kept its place because there was no reason why it should fall in one direction rather than another. On the other hand, Anaximander was not able to shake himself free from the idea that we are living on a disk, and he was thus led to picture the earth as cylindrical, with another disk antipodal to ours. He further explained the sun, moon, and stars by supposing that they were rings of fire enclosed in air, with the fire escaping at a single orifice where we see the luminary. This was the earliest form taken by the notion of a planetary orbit. The school of Miletus had also formulated some very elementary geometrical propositions about triangles which gave them the means of calculating the distance of inaccessible objects, such as ships at sea. The influence of all this is clearly marked on the system of Pythagoras, though it is evident that he went far beyond his teachers. He was the real founder of arithmetic and geometry, and he may fairly be credited with a large part of the first six books of Euclid. The proposition about the square on the hypotenuse still bears his name, though we happen to know that the proof of it given in Euclid, i. 47, is not the Pythagorean one. It is probable that the original proof was of a more arithmetical character, and was connected with a very old piece of traditional knowledge, namely, that a triangle of which the sides are as 3, 4, 5 has always a right angle, and $3^2 + 4^2 = 5^2$. This proposition solved the problem of the duplication of the square, but it also brought up the difficulty of incommensurability, since the side and the diagonal of a square have no common measure. For that reason a number of problems which we should deal with algebraically are treated geometrically in Euclid, ii., which is in substance Pythagorean. It is also certain that Pythagoras is to be credited with the discovery of the spherical shape of the earth, which was a commonplace of Italian science in the 5th cent., though the Ionians refused to accept it, and even Anaxagoras and Democritus maintained that the earth was flat. This was closely connected with the explanation of lunar eclipses, which may also be confidently ascribed to Pythagoras, though it was not known in Eastern Hellas till a later date. To judge from the poem of Parmenides, Pythagoras also retained the theory of planetary rings, and indeed there is no evidence that spheres were substituted for rings before Eudoxus. Like Anaximenes, he regarded the stuff of which things are made as air (i.e. mist or darkness), and he must have said that the world inhales this from without; for Xenophanes already ridiculed the idea. What differentiates him completely from all his predecessors, however, is that he paid more attention to the form or limit of things than to the limitless something of which they were made. Later Pythagoreanism identified this with abstract space, but there is reason to believe that this is a more recent development. It is the fact that Pythagoras introduced the idea of the limit (*πέρας*) as the correlative of the Milesian limitless (*ἄπειρον*) that gives him his place in the history of science and affords a clue to his apparently strange doctrine that things are numbers. According to this, the limitless once limited gives us the point, twice limited the line, thrice limited the plane, and four times limited the solid; and all things are made of such geometrical solid figures in various arrangements. It will be seen that the weakness of this view is that the point is identified with unity,

¹ *Symp.* 195 C.

instead of with zero, as it should be, and this is where Zeno's criticisms proved fatal. The definition of the point as 'unity having position' enabled Pythagoras to treat geometry as a form of arithmetic up to a certain point; but Zeno showed the difficulties of this, and the later Pythagoreans had to abandon the doctrine that things *are* numbers and to substitute the statement that things *are like* numbers. Nevertheless it was a magnificently daring conception of reality and, but for the necessary imperfections of its first statement, it is substantially the same as that of Descartes.

For all this the reader is referred to Burnet's *Early Greek Philosophy*², chs. I, II, and VII, with the modifications contained in his *Greek Philosophy*, pt. I, *Thales to Plato* (London, 1914), chs. II and V. As a proof of the remarkable scientific insight of the Pythagoreans, it should be mentioned here that the successors of Pythagoras (though not, so far as we can judge, Pythagoras himself) held that the earth and the other heavenly bodies revolved round a central luminary. This was not, indeed, identified with the sun, which was supposed to be a planet like the earth, but it was a very great step to regard the earth as a spherical planet.

Pythagoras carried his theory a step further by his great discovery that the intervals of the scale recognized in his day—the fourth, the fifth, and the octave—could be expressed by simple numerical ratios. This discovery was no doubt based on measurements of the length of the string which corresponded to these intervals, and it suggested a solution of another Milesian problem. The Milesian system had been dominated by the idea of the 'opposites,' especially hot and cold, wet and dry, which appeared to be at war with one another, and Anaximander had spoken of the observance of a due measure between these as 'justice' (*δίκη*). This Pythagoras thought he could explain from his great acoustic discovery. If high and low pitch can be brought together in a perfect attunement (*ἀρμονία*), it was natural to suppose that all other opposites could be similarly treated and that all stable reality would prove to be a 'blend' (*κράσις*) of opposites in proportions which could be numerically expressed. There were certain 'means' (*μεσότητες*) between each pair of them, of which the arithmetical mean (corresponding to the octave) is only one. It is the same idea of combination in fixed proportions that Dalton introduced into chemistry. Pythagoras thought it was the key of the world, and perhaps it is. He applied it among other things to the problem of the relative distances of sun, moon, and stars, which he expressed in terms of the intervals of the scale. That ideas of this kind need not be altogether futile is shown by the fact that Bode's law of the planetary distances, which is based on a similar conception, has been of use in giving a direction to astronomical research, though it has not been empirically verified, and that Mendeléeff's periodic law has actually led to the discovery of new elements. The meaning of the statement of Socrates in Plato's *Republic*,¹ that the Pythagoreans made music and astronomy sister sciences, will now be plain.

It was in medicine that the other great application of this principle was made, chiefly, it would appear, by Alcmaeon of Croton. Health was regarded as the proper tuning (*ἀρμονία*) of the body, so that the right proportions between hot and cold, moist and dry, were preserved. Disease was just the disproportionate expansion of one of them. Alcmaeon expressed this further by comparing health to the reign of equal laws (*ισονομία*), and disease to monarchy. This is the original sense of the doctrine of the 'temperaments' which played so great a part in the history of medicine; for *temperamentum* or *temperatura* is but a translation of the Pythagorean term *κράσις*.

¹ vii. 580 D.

So far we have been dealing with those 'anticipations of nature' to which after all science owes its most striking advances, but at this point the religious teacher and mystic comes into contact with the man of science. If the sun, moon, and stars really correspond to the fourth, the fifth, and the octave, they must give forth sounds like the tuned strings of the lyre. If we do not hear these notes, that is because our souls are out of tune and do not vibrate in unison with them. This is the theory generally known by the misleading name of the 'harmony of the spheres'—an expression which is meaningless as applied to astronomy before Eudoxus. It has had a great history and inspired not only Shakespeare and Milton, but even Kepler; and it seems to give definite meaning to the precept 'Follow God.' It explains at once the remark of Aristoxenus that the Pythagoreans used medicine to purge the body and music to purge the soul. Alcmaeon of Croton said the soul was immortal 'because it was like to things immortal,' and it had this likeness in virtue of its being always in motion; 'for all divine things, the moon, the sun, the stars and the whole heavens are in continuous motion.'¹ He also said that the reason men die is that 'they are not able to attach the beginning to the end,'² as the heavenly bodies do in their revolutions. We find the same doctrine of the circles of the heavens and the circles of the soul in Plato's *Timæus*, which is in the main a statement of the later Pythagorean doctrine, and we may infer that the saying quoted by Socrates in the *Phædo*, that 'philosophy is the highest music,' is Pythagorean too. If that is so, we have found the connecting link between Pythagorean religion and Pythagorean science. The highest purification (*κάθαρσις*) of all was just science, and especially mathematical science.

In the *Ode on the Nativity* Milton of course introduces the 'crystal spheres,' and in other respects gives us a later form of the doctrine. Shakespeare's statement of it is put into the mouth of Lorenzo in the fifth act of the *Merchant of Venice*. In the *Book of Homage to Shakespeare* (London, 1916) the present writer has tried to throw some light on the channels through which a knowledge of Pythagorean doctrine may have reached the England of Shakespeare's youth.

The doctrine was capable, however, of being applied in a way that Pythagoras can never have intended, and this was the chief cause of the breakdown of Pythagorism as a religion. It was only a step to say that the soul was itself an attunement (*ἀρμονία*) of the body, and that was fatal to the doctrine of its immortality. We are told distinctly in the *Phædo* that this tenet was maintained both by the Pythagoreans of Thebes and by those of Philus at the end of the 5th cent., and Aristoxenus continued to maintain it even after he had become a member of the school of Aristotle. This may account for the vagueness of Philolaus on such subjects as reported by Cebes and Simmias, and it is noteworthy that Plato represents Socrates as refuting the theory on his dying day. It seems clear that the preoccupation of the Pythagoreans with medicine had led them to regard the soul more and more as a function of the body, and it has recently been ascertained that Philolaus wrote on medicine and played a considerable part in the development of that science. That was the end of the Pythagorist religion among the more enlightened members of the order, though the old practices and beliefs were continued underground, as it were, by other followers of Pythagoras, who handed them on to the Neo-Pythagoreans and the Neo-Platonists (q.v.), who revived them by bringing them into touch with the Platonic tradition. In fact Plato was the true successor of Pythagoras, whose doctrine was represented in a one-sided way by

¹ Aristotle, *de Anima*, A. 2. 405^a 29.

² Arist. *Probl.* 916^a 33.

both sects of his nominal followers. In this way scientific Pythagoreanism became merged in the Academy (*q.v.*), while religious Pythagorism had a good deal to do with the rise of Cynicism (*q.v.*).

4. **Pythagorean ethics.**—It would, of course, be an anachronism to speak of a Pythagorean system of ethics. The constitution of such a system was the work of the schools of Athens and, with the exception of some indications of ethical theory in the fragments of Democritus (*q.v.*), of them alone. On the other hand, it is necessary to insist that the ethics of Socrates, Plato, and Aristotle were based on a Pythagorean foundation, and are not fully intelligible unless we bear this in mind. It may be added that Democritus too was a pupil of the Pythagoreans and wrote a book entitled *Pythagoras*.

Being a religious community, the Pythagoreans had of course a rule of life, and it has recently been urged with great plausibility that certain hexameter verses, which are quoted at a fairly early date, and which may have been derived from the work of Timæus of Tauromenium, are actual fragments of this rule. The *Golden Verses* are spurious, of course, but they may well have been modelled on an older original. In particular, it seems certain that the members of the society had to make an examination of conscience morning and evening. They had to go over the events of the day that was past and ask themselves, 'In what have I transgressed, what have I done that I ought not to have done, and what have I left undone that I ought to have done?' It is obvious that a rule of this kind would be favourable to the rise of speculation on ethical subjects.

For the probability that there was a rule such as that described see A. Delatte, in *Revue de Philologie*, xxiv. [1910] 175 ff. Delatte has been misled by some of his German authorities when he says that the original dialect of Pythagoreanism was Doric and that the original form of the doctrine was that things are like numbers, but he makes out a good case for the thesis that verses like *πῆ παρέβην; τί δ' ἔφεα; τί μοι δὲόν οὐκ ἐρέεσθῃ;* are really as old as the 5th cent., and formed part of a 'rule' in hexameter verse. Five verses (including the above) are quoted in Porphyry's *Life of Pythagoras* (40 Nauck) and give a description of the Pythagorean examination of conscience.

Now, we find that the ethical theories of Plato and Aristotle everywhere take for granted a classification of human lives into wisdom-loving, honour-loving, and gain-loving; and this is closely bound up with what is usually called the doctrine of the tripartite soul as expounded in Plato's *Republic*. It seems very difficult to doubt that it is Pythagorean, and, as a matter of fact, Posidonius¹ said that he had found the doctrine of the tripartite soul in the writings of the successors of Pythagoras. The story was that Pythagoras himself had used the word *φιλόσοφος* for the first time in a conversation with Leon, tyrant of Phlius or Sicyon, and it is everywhere implied in Plato that it was perfectly familiar to Socrates and his circle. 'Is not Euenus a philosopher?', asks Socrates in the *Phaedo*,² and the answer comes at once, 'I think so.' It seems to mean a man who holds a certain doctrine about the soul, and to have a much more specialized sense than the corresponding verb, as it is used in Herodotus. Life, Pythagoras is said to have told Leon, is like a gathering (*πανάγηρις*) such as that which comes together for the Olympic Games. There are three classes of visitors. The lowest are those who come to buy or sell, and next above them are those who come to compete; the best class, however, are those who come to look on (*θεωρεῖν*). If this is really the teaching of Pythagoras himself, we can see at once that it is the foundation of all subsequent Greek ethics, and in particular of the doctrine of the primacy of the theoretic life (lit. 'the life of the spectator'), which was held by

Plato, with important reservations as to the duty of philosophers to take their turn in descending into the cave from which they had escaped (*καταβατέον ἐν μέλει*), and by Aristotle with no reservations at all.

The importance of Pythagoreanism in connexion with the rise of Greek ethical theory has been too much neglected, as is well shown by J. L. Stocks in his paper, 'Plato and the Tripartite Soul,' published in *Mind*, no. 94, new ser., xxiv. [1915] 200 ff. Important evidence of the Pythagorean origin of these ideas is furnished by a fragment of the *Tarentines* of Alexis,³ where some one, presumably one of the Pythagoreans who are the subject of the comedy, says: 'No man of sense could bear a grudge against us with reason, seeing that we do no wrong to our neighbours. Dost thou not know that what is called living is but a name, a euphemism for our human lot? For myself I cannot tell whether any one will say that I judge rightly or wrongly, but the view I take on reflexion is this, that all human affairs are wholly insensate, and that we that are living have as our portion merely a sojourn in a strange land (*ἀποδημία*), like men released for a gathering (*πανάγηρις*) from death and darkness to this passing of time and to this light that we behold. The moral drawn from these considerations is that we should eat, drink, and be merry, which is not exactly Pythagorean, but the point may well have been the inconsistency between the doctrine and the practical inferences from it. That has always been a favourite subject of comedy. The verses are quoted here only to show that the idea of the *πανάγηρις* (Vanity Fair) and the *ἀποδημία* are Pythagorean.

This, then, seems to be the source of the view of life which is common, *e.g.*, to Plato's *Phaedo* and bk. x. of Aristotle's *Ethics*, but there is a further side of their ethical doctrine which is derived from Pythagorean science rather than Pythagorean religion—the doctrine that goodness is the health of the soul, and that the soul's health is determined by a mean. This is generally associated with the name of Aristotle, but Aristotle got it in the main from Plato's *Philebus*, and Plato distinctly gives us to understand that it is of Pythagorean origin.⁴ In this connexion it is very significant that Socrates is the chief speaker in the *Philebus*, though it is one of Plato's latest dialogues and he had for a long time given up his early custom of making Socrates the central figure. Already in the *Phaedo* he makes Socrates use the doctrine that goodness is an attunement (*ἁρμονία*) of the soul, to refute the theory that the soul is an attunement of the body. That would land us with an attunement of an attunement, which is absurd. Socrates evidently expects the Pythagoreans to accept this explanation of goodness as an attunement at once, and that is just the meaning of the doctrine of the mean as we find it in Aristotle's *Ethics*. There is a fragment of Archytas in which he speaks of *πλεονεξία* and *ισότης* very much as Socrates is made to do in the *Gorgias*,⁵ though it breaks off just before it comes to the point, if it ever did. But, after all, it is not a far cry from what Alcmaeon says about the health of the body to the doctrine of the mean as determining the health of the soul, and it may be that this step was already taken in the Pythagorean society. In any case it is based on Pythagorean ideas, and was implicit in the teaching of Pythagoras from the first.

It is certain that Pythagoras is entitled to be called the father of science, and it becomes more and more clear that all European religion and ethics, so far as they do not originate in Palestine, can also be traced back to him. There is still a great deal of work to be done, however, before we can grasp his historical character firmly. Most recent advances in our knowledge of the subject have been due to discoveries in other fields which have thrown a quite unexpected light on Pythagoras. What is now required is a thorough examination of all the forged Pythagorean documents of later days in the light of this new knowledge. Undoubtedly they are forgeries, and there is no chance of their being rehabilitated as genuine documents. At the same time, it is clear that

they are the work of men who knew a good deal more about Pythagoreanism than we do, and they would have had no chance of passing off their productions as genuine if they had not been careful to give them an air of verisimilitude. It is not enough to condemn them because they contain ideas and use terminology which we are accustomed to regard as Platonic or Aristotelian; for nothing is more certain than that Pythagoreanism is the basis of Athenian philosophy, and some even of Aristotle's terminology is demonstrably of Pythagorean origin. That, so far as can be seen, is the direction which research may most profitably take at present.

LITERATURE.—The older works on Pythagoras and his school are antiquated, and the time has not yet come for a new synthesis. A. E. Chaignet, *Pythagore et la philosophie pytha-*

goricienne, 2 vols., Paris, 1873, was an attempt to apply reasonable principles of criticism to the subject, but it was premature. An intelligible historical view of the subject was first made possible by Erwin Rohde's *Die Quellen des Iamblichus in seiner Biographie des Pythagoras*, *Rheinisches Museum*, xxvi. [1871] 554 ff., xxvii. [1872] 23 ff. These made clear for the first time the position of Aristoxenus and Dicearchus. The same writer's *Psyché*, Tübingen, 1910, throws much light on the subject too. The interpretation of Pythagoreanism as a system has been possible only since the publication of Paul Tannery's *Pour l'hist. de la science hellène*, Paris, 1887. Among the works which may be said to have issued from the school of Tannery, G. Milhaud, *Leçons sur les origines de la science grecque*, Paris, 1893, and *Les Philosophes-Géomètres de la Grèce*, do. 1900, deserve particular mention and may be specially recommended to those who desire a lucid exposition of the mathematical side of the doctrine. The histories of philosophy (E. Zeller, T. Gomperz, etc.) generally give a fair view of the state of the question at the time of their publication, though it must be said that German writers, to their own great loss, have done scant justice to the admirable work produced in France.

JOHN BURNET.

Q

QĀDIĀNĪ.—Qādiānī was the name originally given to the followers of Mirzā Ghulām Aḥmad of Qādiān, Gurdaspur District, Panjāb, in order to distinguish them from orthodox Muslims. In 1900 they were, at their own request, entered in the Government census lists as Ahmadiya Muslims, and they have since been called by that name. Mirzā Ghulām Aḥmad (1839–1908) was a man of some learning and unusual powers of leadership. In 1889 he announced that he possessed the right to receive *bai'at* ('homage') from his followers. Two years later he declared himself to be the 'promised Messiah' of Jews, Christians, and Muslims, and the Mahdī expected by Muslims at the last day. In asserting that he fulfilled in himself the prophecies relating to both the Messiah and the Mahdī, he controverted the usual Muhammadan belief that the two will be distinct personalities with different missions. He said that he had come 'in the spirit and power' of Jesus and of Muhammad, and he later declared that he was greater than Jesus, since he was the Messiah of Muhammad, as Jesus was of Moses. Shortly before his death he announced that he was likewise the final incarnation (*avatāra*) of Viṣṇu, whom Hindus had been expecting; and since his death his followers have added the further claim that he was 'the latter-day reformer of Parsis' and 'the Buddha of the East.'

The proofs by which he sought to establish his claims were declared to lie in revelations and miracles, the latter chiefly taking the form of prophecies of the death or discomfiture of his enemies among orthodox Muslims, Christians, and members of the Ārya Samāj. After the sinister fulfilment of one of these prophecies, in the death under suspicious circumstances of a prominent leader in the Ārya Samāj, the Mirzā was compelled by order of the Deputy Commissioner of Gurdaspur District, dated 24th Feb. 1899, to refrain from further predictions involving the death or disgrace of another. One of the so-called miracles, which served to prepare the way for the announcement of the Mirzā's Messianic office, was the alleged discovery, through a divine revelation, of the existence of the tomb of Jesus Christ in Srinagar, Kashmir. Jesus was said to have been taken down from the cross in a swoon and healed by the miraculous 'ointment of Jesus' (*marham-i-Isa*). He then set out on a mission to 'the lost sheep of the house of Israel' in Central Asia and Kashmir, finally dying, at the age of 120, in Kashmir, where his tomb in time became confused with that of a

local saint named Yus Asaf. No serious evidence has been brought forward in proof of this novel theory, on which the whole claim of Mirzā Ghulām Aḥmad and his followers admittedly rests.

Regarding his claim to be the expected Mahdī, the Mirzā was constrained perhaps by political considerations to make known a revelation alleging that the Mahdī was not to be 'a man of blood,' as had been universally supposed, but was rather to lead Islām to triumph by means of a *peaceful* holy war (*jihād*). In this connexion he made much of his loyalty to the British Government. In further substantiation of his manifold claims he pointed to the corrupt condition of modern society and of the character of the accepted priests and teachers in every religion, which called for a great reformer and prophet, like himself, to bring to all hearts a new and quickening certitude in things religious. He drew a sharp line of demarcation between his followers and orthodox Muslims by enjoining all true Ahmadis to refrain from following orthodox *imāms* in their prayers, attending non-Ahmadi funeral services, and giving the hands of their daughters to non-Ahmadi husbands, though their sons might marry non-Ahmadi girls. He also turned his face resolutely against all political controversy, and denounced as mischievous the activities of the All-India Moslem League and the Muhammadan Educational Conference.

The movement has grown steadily since its inception in 1889. In 1896 it claimed 313 members. In the 1901 Government census 1113 males were returned for the Panjāb, 931 for the United Provinces, and 11,087 for the Bombay Presidency (obviously an inaccuracy). In 1904 the Mirzā claimed 'more than 200,000 followers,' and before his death he estimated the total number of his followers at 500,000. Against this manifest exaggeration must be placed the returns of the census for the Panjāb in 1911, viz. 18,695 Ahmadis. Probably 60,000 would be a liberal estimate of the total strength of the movement throughout India to-day. There are also a few scattered followers in other countries.

Before his death in 1908 Mirzā Ghulām Aḥmad appointed his close friend and early disciple, Ḥakīm Nūr al-Dīn, as his successor, the 'first *khalīfah*,' of the movement. Under the direction of the *khalīfah* the work was to be carried on by a board called the Ṣadr-Anjuman-i-Ahmadiya. During the ensuing six years, before Nūr al-Dīn's death in 1914, a schism developed within the sect. One party, led by Khwājah Kamāl al-Dīn, a

prominent barrister, began to take part in political controversy, and in its religious literature showed a leaning towards the rationalism of Sir Syed Ahmad Khān, the founder of the Muhammadan Anglo-Oriental College at Aligarh. The other party tended to magnify the supernatural claims and unique position of Mirzā Ghulām Ahmad, and continued to emphasize the evils of present-day Islām and its priests. In short, the former wing sought to bridge the chasm separating the sect from Islām generally, whereas the latter stressed the points of difference as fundamental. When Nūr al-Dīn died, the split widened. The son of the Mirzā, Hazrat Mahmūd Ahmad, now hailed as 'the promised son of the promised Messiah,' was hastily elected the second *khalīfat ul-Masīh* by a group of his adherents at Qādiān. The rationalistic party forthwith seceded, and founded a new society in Lahore called the Anjuman-i-isha'at-i-Islām, whose interests were vested in a group of men rather than primarily in a single individual. Two of the members of this group, Khwājah Kamāl al-Dīn and Maulvi Sadr al-Dīn, are the founders of a Muslim mission at Woking, England, through the instrumentality of which some scores of English people, including one peer, Lord Headley, have announced that they have become Muslims. A monthly paper in English, *The Islamic Review and Muslim India*, is published at Woking, and it is worthy of note that no trace of Ahmadiya influence is to be found in it, save perhaps in the evident anti-Christian animus.

The Qādiān party continues to publish *The Review of Religions* in English, and several vernacular papers, conducts a successful high school, and carries on considerable missionary work. It can truly claim to embody the real spirit and tradition of the founder and his original followers.

J. N. Farquhar thus succinctly sums up the position and importance of Mirzā Ghulām Ahmad's teachings in relation to similar movements in India to-day:

'Apart from these personal claims, his teaching is an attempt to find, amidst the irresistible inrush of Western education and Christian thought, a middle path between impossible orthodoxy and the extreme rationalism of Sir Syed Ahmad Khan' (*Modern Religious Movements in India*, p. 140).

Recent events indicate that the middle path was destined to end speedily in cross-roads.

H. A. WALTER.

QARO.—Joseph ben Ephraim Qaro, a famous codifier of Rabbinical Judaism, was born in Spain in 1488, and died at Safed, Palestine, in 1575. On the expulsion of the Jews from Spain in 1492, which sent many scholars to other lands and diffused Rabbinical culture more widely, his parents went with him to European Turkey, settling first in Nicopolis. Here he received thorough instruction in the Talmud from his father, who was eminently qualified to be his teacher. Later he lived in Adrianople, Salonica, and Constantinople—successive steps in his long-cherished journey to Palestine, which he reached about 1535, Safed becoming his place of residence.

It was an age of mystical tendencies in Judaism, which is so inherently opposed to such influences from the earliest times. Owing undoubtedly to long periods of persecution, which reached its climax in Spain, an added stimulus was given to Kabbalistic dreamers, whose fantasies took firm

hold on many susceptible minds which had lost judgment and balance under the burden of exile and wretchedness. Turkey, which opened its dominions to the oppressed, and where large and fairly prosperous communities could be found, attracted all types of Jews, the visionaries in goodly number. Safed in particular proved a seat of mystics, and Qaro's early fantasies were revived and strengthened by the new environment. He had met some years before Solomon Molcho, who strove to play the part of a Messiah and suffered death at the stake in 1532, and he gave full vent to his mystical ideas which, long cherished, were clamouring for expression. He was so far overwrought as to invoke a familiar—even in his Nicopolis days—and for fifty years he kept a diary which recorded his discussions with this imaginary genius. The book of visions, called *Maggid Mesharim*, whether actually written by him or merely ascribed to him by a zealous disciple, as occurs not rarely in literary history, makes him a double personality—a mystic as well as a codifier. Happily, and as one evidence that the diary or collection of desultory notes is not entirely genuine, the comprehensive works upon which his fame is really based show no mystical influence. Whatever his reverence for the *Zohār* as authority, for the Kabbalistic dreamer of dreams, he gave undisputed first place to the Talmud, with his logical mind, and was impelled by the needs of the times to popularize and strengthen its hold on the life and thought of Judaism. He was not the first intellectual whose imagination was to prove an incentive, not an opiate.

Qaro's fame depends chiefly on his two digests of Rabbinical law. He wrote these in an age of dispersion when in the Jews' new settlements, which were never wholly secure, the fundamental law and authority of Judaism were imperilled as much by the violent and arbitrary changes in environment as by the half-knowledge of leaders and the almost total ignorance of the people. Considering these conditions, one can understand how his passion for saving from destruction the traditional creed and customs worked upon a susceptible nature and fostered fantastic reveries, as well as lofty ambitions. If he could not be a Messiah in the popular sense, he could save his people none the less by inculcating the authority and permanence of the law.

As early as 1522 in Adrianople, he began the first of his great works, *Beth Yosef*, 'House of Joseph,' which, completed in 1542 at Safed and published in 1550-59, raised him to the front rank of Talmudists of his own age or earlier. This work, while a commentary on Jacob ben Asher's *Arba'ah Turim*, 'Four Orders,' whose method he closely followed, is more than a digest of the authorities cited therein. It gives a careful critical view of many Rabbinical opinions not quoted by his predecessor. Hence it furnishes an unsurpassed wealth of material. The range of reading displayed, in both Talmudic and post-Talmudic literature, together with the critical sagacity in the study and comparison of authorities, leaving little uninvestigated, gives a monumental character to the work. A sturdy independence is exhibited in the discussions, although the standard authorities, al-Fasi, Maimonides, and Asher ben Jehiel, are accepted. Qaro's aim throughout was partly to familiarize the Rabbi with the duties that devolved upon his high office as leader in Israel, and partly to explain to the student clearly and methodically how laws are developed from the Talmud through later Rabbinical literature. It was not merely to answer the Epicurean, but to stimulate to study and research, and to gain for practical life an intelligible,

harmonious system which would maintain the old faith for all time.

Not wholly satisfied with *Beth Yosef*, in later years he wrote his second great code, *Shulhan Arukh*, 'Prepared Table' (1565; according to Steinschneider,¹ 1555). It is possible that he underestimated its value and character, for in the introduction he speaks of having prepared it for young students, thus stamping it as elementary. He preferred the other digest in his decisions—it was for experts, for Rabbis deep in the law. Yet the *Shulhan Arukh* has rapidly outdistanced the earlier code as authority. Despite continuous controversy—in fact largely by reason of the attacks made upon it—it has become the Rabbinical code which defines Judaism to our own day in the lives and opinions of the great majority of Jews throughout the world. For almost a hundred years the contest waged—it was a bloodless battle of the books, however—the chief opposition being on the part of Talmudists who were Ashkenazim, of German stock, as contrasted with the Sephardim, or Spanish, to whom Qaro was naturally acceptable. It is the opinion of L. Ginzberg² that the Ashkenazim regarded the work as an unquestioned authority only after Isserles, who adduces still later views, had subjected it to criticism and extensive supplements. After the period of censure came the age of admiration, with a host of commentators that made it a household word in the 17th cent. and to our age. Its authority was firmly established, with here and there an eminent Rabbi, with a bent to individualism, who refused to recognize its guidance as binding.

Since the development of Reform Judaism and the rise of modernism in various lands there have been countless attacks on Qaro and his code. On the whole, most of these have been rather unjust; for he is not responsible for laws, opinions, and customs that have existed in Israel from grey antiquity. His function was to photograph Jewish tradition, to record and interpret it according to the authorities, so as to weld still more firmly past, present, and future. His office was not that of an apologist, but that of a codifier. Graetz³ claims that Qaro erred in citing all opinions, however transient and trifling, and made his work a store-house of views which do not always reflect credit on Judaism and have really furnished biting texts, if perverted, for the anti-Semite. There is undoubted force in this contention, but Qaro's candour and fullness are not to be underrated. He had nothing to conceal or to extenuate. It must also be stated in his vindication that he lays no claim to absolute authority, asserts no doctrine of infallibility. Far from forging an iron bond, he rescued Jewish thought from stagnation and promoted the conflict of opinion, eminently healthful for a creed that claims to be intelligent.

The work consists of four parts, called *Orak Hayyim*, 'Path of Life,' *Yoreh De'ah*, 'Teacher of Knowledge,' *Hoshen ha Mishpat*, 'Breastplate of Judgment,' and *Eben ha Ezer*, 'Stone of Help.' The first deals mainly with prayer, the blessings, Sabbath and holy days, and their prescribed observances. The second concerns itself with food and its preparation, and the slaughtering of animals for food, Jew and non-Jew in their relations to each other, duties to parents and charity, religious customs connected with agriculture, and the rites of mourning—a rather extended and diversified list of contents. The third part treats of marriage and divorce from the civil and religious points of view. The fourth and concluding section

discusses legal proceedings, laws as to business, and the relation of man to man in an everyday working world. All life in its variety and complexity was thus considered as part of the concern of religion. In the dark ages that were upon the Jew as the 17th and 18th centuries arrived the work preserved him from disintegration. Whether its influence was to be as salutary, with the spreading of civil and religious liberty among the nations and the gradual passing away of the Ghetto and its necessarily narrowed life, if not vision, cannot be so summarily answered. All depends upon the point of view.

Qaro's life in Safed was much influenced for a time by R. Jacob Berab, one of his most learned associates in that place. The recognized head of its Jewish community about 1535, he was the centre of a number of disciples and was called 'teacher' by Qaro. In 1538 he attempted to restore the rite of ordination, with no less an object in view than the re-establishment of the Sanhedrin in Palestine as seat of the highest authority in Israel. Qaro was elated by the idea and became one of the four disciples to be ordained without delay. Unfortunately Berab died two years later and the grandiose scheme failed to be realized. Qaro, with all his ardent leanings towards the Messianic rôle, sensibly preferred his work as teacher and author. He lived until 1575, and had the satisfaction of seeing his fame and authority more and more generally acknowledged, while hundreds of students, some of high distinction, thronged his lecture-hall to hear his opinions and interpretations.

In addition to his two codes Qaro published in his life-time *Kesef Mishneh*, 'Double Money' (Venice, 1574-75). After his death appeared *Bedek ha Bayith*, 'Repairing of the House,' supplements and corrections to his *Beth Yosef* (Salonica, 1605); *Kelale ha Talmud*, 'Principles of the Talmud' (do 1598); *Avkat Rokel*, 'Powder of the Merchant, Decisions' (do 1791); *Maggid Mesharim*, 'Who preaches Righteousness' (Lublin, 1646, with supplements, Venice, 1654). Some fragments in the Bodleian, a few sermons in the collection *Oz Zaddikim*, 'The Strength of the Righteous' (Salonica, 1799), and a number of commentaries on the Mishnah and on Rashi's and Nahmanides' Pentateuch commentaries, which seem to have disappeared, complete the list.

QUAKERISM.—See FRIENDS, SOCIETY OF.

QUEEN OF HEAVEN. — This expression occurs in the AV of Jeremiah (7¹⁶⁻²⁰ 44¹⁵⁻³⁰) and seems to be the natural rendering of the Hebrew when vocalized *malakat hassamayim*, and is strongly supported by the versions. But the view that the expression should imply the same idea as the often mentioned 'host of heaven' apparently suggested a different derivation, from *melchet* in the sense of 'work' or 'cult,' and led to a different vocalization which influenced other versions.

The ritual as ascribed to the worshippers of the Queen of Heaven by the prophet Jeremiah lays emphasis on the offering of 'cakes.' The Jewish women made these cakes with much ceremony; the boys of the family gathered firewood, the adult males kindled the fire, and the women kneaded the dough. The offering was made 'by fire' accompanied by libations. Jeremiah alleges this to have been a common cult in the cities of Judah and the streets of Jerusalem. It may not be wise to insist too strongly on the details, as the prophet's indignation may have led him to caricature to some extent, but this and the name are all that we have by which to identify the cult.

¹ *Catalogus Librorum Hebraeorum in Bibliotheca Bodleiana*, Berlin, 1852-60, col. 1480.

² *JB* iii. 584.

³ *Hist. of the Jews*, iv. 652.

The cakes, *kawwanim*, which the LXX transcribes and the Vulgate renders *placenta*, are not without parallel in Greek cults. But it is precarious to argue as to their form or significance from such parallels. The name is literally the same as the Babylonian *kammūn*, denoting the cakes or biscuits used in the cult of Ishtar. Whether the reference to fire in the word *kutter* demands burning of the cakes in the act of offering or refers to the process of their manufacture is not easily decided; but it can hardly mean to burn incense as an accompaniment of the offering.

The difficulty felt in identifying this expression as a name of Ishtar is largely due to the fact that, while Ishtar is frequently called *belit samē* or *sarrat samē*, 'lady or queen of heaven,' *malkat samē* has not yet been found as her epithet. That *malkatu* is an equivalent of *sarratu* cannot be denied, but the question remains open whether we have in this worship a mere transfer of a Babylonian cult of Venus or a local variation of the same. The Tammuz worship which Ezekiel mentions (8¹⁴) makes it likely that we have to do with a Venus cult here. On the other hand, a connexion of *meleket* with the configuration of the sky would agree with the astral theory. The form is difficult to account for as a Hebrew word, but would be correct as a transliteration of the Babylonian; only this supposed Babylonian prototype is not yet authenticated. Still the cakes are very suggestive.

There is nothing to suggest an identification of the Queen of Heaven with the moon, which is a male deity in the Semitic world.

QUICHES.—See MAYANS, POPOL VUH.

QUIETISM.—Quietism may be defined as the exaggeration and perversion of the mystical doctrine of interior quiet. Viewed as a tendency, it is co-extensive with the history of mysticism (*q.v.*), and it might successfully be argued that some early and mediaeval mystics were more definitely 'Quietistic' than most of the members of the post-Reformation group known as Quietist. Viewed as a specific movement, Quietism swept over the religious life of Europe in the latter part of the 17th and the early part of the 18th cent., gaining sway in many countries and taking deep root within both Catholicism and Protestantism.

I. DOCTRINES.—1. Passivity.—On the surface it is not easy to distinguish between the Quietist doctrine of passivity and the 'orthodox' mystical doctrine of quiet, and we find so competent an authority as Heppé asserting that the teaching of Molinos was substantially identical with that of St. Teresa;¹ but it might with more justice be asserted that the characteristic doctrines of Molinos are traceable, not to his appropriation of St. Teresa's doctrine of the orison of quiet, but to his deflexions from it.

(a) St. Teresa.—For St. Teresa, as for the mediaeval mystics, the state of quiet is that 'busy rest' in which the soul abandons all superficial activity in order that it may engage in the deeper activity of opening itself to God. It contains of necessity a passive element, for the soul that would hold the Divine Word as a shell holds the ocean must be self-empty and set a watch upon its undisciplined impulses even when they urge it towards the divine. But such 'wise passiveness' does not exclude the active aspect of 'stretching' towards God. Its stillness—to use the fine simile

of D. A. Baker,¹ the Benedictine mystic—is the stillness of the soaring eagle, which cleaves its way through the blue with motionless wings. It is 'the rest [that] springs . . . from an unusually large amount of actualized energy,' the rest that 'is produced by Action "unperceived because so fleet," so near, so all fulfilling.'² Moreover, such mystic quiet is not an end, but a means—not a goal, but 'like the repose of a traveller who, within sight of the goal, stops to take breath and then continues with new strength upon his way.'³

(b) Molinos.—When we turn from St. Teresa to Molinos, we find that, while the latter, in his *Guída Spirituale*, says much about interior quiet that is in complete accord with the conceptions of classic mysticism, the main trend and ultimate teaching of the book is Quietistic; i.e., the quiet for which he contends is in the last resort the negative, impassive, sterile state which Ruysbroeck⁴ castigated so severely in its earlier manifestations. In common with most mystical writers, Molinos distinguishes between meditation, in which the reason is active and the mind occupied with definite aspects of Christian faith and life, and contemplation, which may be defined as an absorbed, loving intuition of divine things, a direct spiritual apprehension of God and adhesion to Him.

To quote St. Thomas Aquinas,⁵ as epitomized by Luis de la Puente, contemplation is 'a simple view of eternal truth without variety of reasoning, penetrating it by the light of heaven with great affections of admiration and love at which ordinarily no man arrives but by much exercise of meditation and discourse (i.e., reasoning, or analysis and synthesis).'⁶

But, while the great mystics insist that pure contemplation is of necessity incomplete and intermittent and that, while discursive reasoning is suspended, the intellect (higher reason) is present and active,⁷ Molinos demands a Stoic ataraxy in which intellect as well as feeling is uncompromisingly renounced:

'Inner Solitude consists . . . in a perfect abnegation of all purpose, desire, thought and will. . . . For if the Soul does not detach herself from her own appetite and desire, from her own will, from spiritual gifts and from repose, even in spiritual things, she never can attain to this high felicity. . . .⁸ Undecieve thyself, and believe that if thy Soul is to be wholly united to God, she must lose her self and renounce life, feeling, knowledge and power; whether living or not living, dying or not dying, suffering or not suffering; without thought, or reflection. . . .⁹ Their lives [i.e. the lives of true contemplatives] are so detached, that although they continually receive many supernatural Graces, yet they are not changed nor affected thereby, being just as if they had not received them, keeping always in the inmost of their Hearts a great lowliness and self-contempt dwelling humbly in the abyss of their own unworthiness and vileness. In the same way they are always quiet, serene and even-minded in Graces and in extraordinary favours as also in the most rigorous and bitter torments. No news causes them to rejoice, no event saddens them. Consider nothing, desire nothing, will nothing, endeavour after nothing, and then in everything thy Soul will have reposed in quiet and enjoyment.'¹⁰

(c) Madame Guyon.—In the writings of Madame Guyon the same tendency is traceable, though in a logically undeveloped form. The highly emotional character of her work and its loose and inconsistent use of language make it difficult to determine the precise extent of her Quietistic convictions. While emphasizing the active element in the orison of quiet,¹¹ her writings abound in passages which can be construed only in an explicitly Quietistic sense.

⁷ When, e.g., St. Teresa uses the expression 'the silence of the understanding,' she refers to the cessation of what she calls 'the eliciting from one subject many thoughts or reflections' (*Life of St. Teresa*, tr. David Lewis, London, 1870, ch. xiii. p. 32).

⁸ *Guída Spirituale*, III. xii. 119, 128.

⁹ *Id.* III. vii. 71.

¹⁰ *Le Moyen court*, ch. xxi.

¹¹ *Guída Spirituale*, III. I. 8.

¹ H. Heppé, *Gesch. der quietistischen Mystik*, p. 21. W. R. Inge takes the same view (*Christian Mysticism*, London, 1899, p. 251).

'My prayer from this moment was without forms, ideas and images (i.e. of any definite thoughts). . . . All distinctions were lost to give room for more expansion without motives or reasons for loving. That sovereign of the powers—the will—swallowed up the two others and took from them every distinct object to unite them the better in it.'¹ 'The killing pain which one feels when one loses the definite consciousness of the Divine Presence shows that one has not yet become perfectly *indifferent* and that one is still tied to *gifts* of God.'² 'I had no more a will to submit; it had, as it were, disappeared, or rather passed into another Will. It seemed to me that this powerful and strong One did all that pleased Him, and I no more found that soul which He formerly conducted by His crook and staff with an extreme love. He appeared to me alone and as if the soul had given place to Him or rather had passed into Him, henceforth to become only one same thing with Him.'³

This losing of the soul in transcending the state in which it is shepherded by the divine love marks the extreme of Quietistic theory, and, while Madame Guyon's language cannot be pressed too far, its general tendency is unmistakable.

(d) *Fénelon*.—In Fénelon Quietism found its apologist. His *Maxims of the Saints* was written with the express purpose of defending Quietism against the popular charges of 'idle basking in the Divine Presence' and of immoral apathy. It is all the more significant that, in the very act of seeking to distinguish between true mysticism and Quietism, he moves in that atmosphere of negation and abstraction which is the logical presupposition of Quietism in its most extreme and exaggerated form.

'Pure contemplation,' he says, 'is negative, being occupied with no sensible image, no distinct and nameable idea; it stops only at the purely intellectual and abstract idea of Being.'⁴

'That he makes this idea include as distinct objects all the attributes of God, the Trinity, the humanity of Christ, and all His mysteries is only one instance of the contradictions which make his work of comparatively little value as an authoritative contribution to the literature of Quietism.

2. The one act.—In close logical connexion with the Quietistic conception of passivity as a negative and abstract state is the doctrine that the soul's surrender to God is made once for all in an act not to be repeated. Molinos is emphatic in his assertion that the soul that has once made the great surrender to God 'by means of the act of pure Faith' remains in an indefectible state of union with God.

He contends that the soul 'may persevere in prayer though the imagination be carried about with various and involuntary thoughts.'⁵ For, according to Quietist doctrine, 'Faith and Intention are sufficient, and these always continue . . . nay, the more simple is that remembrance, without words or thoughts, the more is it pure, spiritual, internal and worthy of God. So that so long as thou retractest not that Faith and Intention of being resigned, thou walkest always in Faith and Resignation, and consequently in Prayer, and in virtual and acquired Contemplation, although thou perceive it not and remember it not, neither makest new acts and reflections.'⁶

3. Pure or disinterested love.—The doctrine of a continuous and 'habitual' state (as distinct from occasional aspirations, which Roman Catholic theology has always counted among the highest 'exercises of the soul) of loving God purely (i.e. *secundum Se*, without hope of reward or dread of punishment or any regard to even His most spiritual gifts) attained special prominence through the famous controversy upon the subject between Bossuet and Fénelon. Bossuet's point of view is summed up in his extraordinary assertion:

'Pure love is opposed to the essence of love, which always desires the enjoyment of its object, as well as to the nature of man, who necessarily desires happiness.'

Against this view Fénelon urges that a selfish or mercenary love is obviously a contradiction in terms. This is, of course, the normal Christian

view, but Fénelon passes beyond it to an explicitly Quietistic interpretation.

He declares that 'a man's self is his own greatest cross. . . . Uncompromising renunciation of this wretched self—that is the true crucifying of the flesh.'¹ He goes so far as to say that 'all generosity, all natural affection, is only self-love of a more subtle, delusive . . . and diabolical quality. One must wholly die to all friendship.'²

Love, he contends, loves no particular thing or object and asks for no return, even in kind. His definition of sanctification, as a state of holy indifference and utter non-desire, applies equally to his conception of disinterested love. And, while he seeks to guard against the Quietist error by insisting with St. Paul that hope, as well as love, must abide, his whole teaching implies an indifference to salvation which robs the term 'hope' of every true meaning. Conceived with greater mental stability and expressed with more caution, his position is ultimately very much the same as that of Madame Guyon when she declares that the soul must become dead to all desire, even to its desires for spiritual gifts and graces and for salvation itself, and that it must learn to love God and prove its love by the utmost self-sacrifice and devotion, without being concerned whether He cares or responds.³ The whole trend of his teaching is towards a Stoical or Buddhist conception of self-renunciation and non-desire which logically excludes love of any kind, whether 'pure' or interested.

4. Summary.—The Quietistic doctrine of passive contemplation, of which the doctrines of the one act and of disinterested love are corollaries, is based upon the Neo-Platonic *via negativa*, which from Dionysius onwards took an Asiatic rather than a Greek form, representing 'a sense of the divine transcendence run riot.'

Molinos appeals to Dionysius in teaching that 'we know God more perfectly by negatives than by affirmatives. We think more loftily of God by knowing that He is incomprehensible than by conceiving Him under any image.'⁴

But, while the roots of 17th cent. Quietism are struck deep in metaphysical soil, it must be borne in mind that the controlling motive of post-Reformation mysticism in general and of Quietism in particular was not metaphysical, but theological. Seventeenth century Quietism is the mystical expression of the doctrine of the total depravity and helplessness of human nature, which Protestant theology and the counter-Reformation had sharpened to a despairing conviction of 'the utter miserabilism of the "creature."'⁵ Fénelon expresses this conviction in characteristic fashion:

'As the sacristan at the end of the service snuffs out the altar candles one after another, so must grace put out our natural life; and as his extinguisher, ill applied, leaves behind it a guttering spark that melts the wax, so will it be with us if one single spark of natural life remains.'⁶

It is abundantly clear that such a sentiment is derived from Augustine rather than from Dionysius, to whom any counsel to abhor the self that is God's temple was entirely foreign. Moreover, while the 'nothingness' of Dionysius refers to that 'divine dark' in which the soul perceives and apprehends the ineffable, the nothingness of Molinos is a nothingness of the soul itself, and amounts to annihilation of all that is capable of union with God in any real sense. None the less we may see in Quietism the negative method, stimulated to its 'dying spasm'⁷ by Reformation influences. Its exaltation of an empty consciousness—an experience without differentiations in which distinction of actions vanishes⁸ and the soul can neither will nor not will—paralyzes morality.

It resolves religion at its highest into an experience in which the soul is translated to a region 'beyond good and evil,' and so cuts the nerve of morality, which always implies a clear vision of the distinction between good and evil and a definite choice in which the whole personality is active. In its consistently logical form Quietism makes communion between man and God an impossibility by annulling the distinction between them, ultimately reducing God to a vague and empty abstraction, and dehumanizing man. Its radical acosmism 'conceives the Good outside of humanity and removes conduct to a sphere of fictitious interests where the will cannot act.'¹ Although Christian Quietists have always to a greater or less extent formulated their doctrines in terms of Jesus Christ and His gospel, Quietism *per se* is fundamentally opposed to incarnational religion. On the practical and devotional side, it resolves itself into pure fanaticism, i.e. 'the fanaticism of expecting from God a grace which He never gives.'² Its determining motive—the desire to cleanse religion from selfishness and to emphasize an inwardness which seeks the Giver above even His most precious and purely spiritual gifts—is a valid one. While the antithesis between gift and giver as applied to God is largely false, and rests upon a conception of 'grace' which externalizes it into something 'given' by God and separable from His self-giving, Quietism represents a genuine and still much-needed protest against a theology which debases grace to a form of magic and imports the crassest self-interest into the soul's commerce with God.

II. *HISTORY*.—The term 'Quietist' was first used in the 14th cent., when its Greek form, *Hesychastai*, was applied to a certain community of monks on Mount Athos who, *inter alia*, indulged in trance-experiences not unlike those of the Indian Yogi. Quietistic teaching was first popularized by the Beghards and the Brethren of the Free Spirit (*q.v.*). Condemned by the Council of Vienna in 1311 and sorely persecuted, these mystical groups persisted for more than a century and familiarized the common people with Quietistic conceptions of religion. Eckhart was included in the ecclesiastical disapproval of Quietism, Pope John XXII. condemning his views on interior quiet in 1329; and the castigations of Quietism in the writings of Ruysbroeck and Tauler show how wide-spread the doctrine was and how disastrous in its extreme and debased forms. It must be borne in mind, however, that the primary motive of the official opposition to Quietism was ecclesiastical rather than religious. The Church authorities recognized its anti-institutional character, and no expedient was deemed too cruel or too mean, provided it bade fair to secure the extinction of Quietist sects.

But, while large tracts of pre-Reformation and counter-Reformation mysticism admit of a Quietistic interpretation, it needed the impulse of a mighty religious movement to develop the implications of what were, after all, only latent or sporadic tendencies. Such an impulse was provided by the new religious spirit, the new demand for inwardness, which found expression in the Reformation (*q.v.*). The 17th cent. Quietists were, for the most part, devoted Roman Catholics and derived their immediate inspiration and authority from the great mystics of the counter-Reformation, one of whom at least, St. John of the Cross, was more radically anti-institutional than Molinos himself. Yet they were essentially a fruit of the

Protestant spirit—a fact which Rome was swift to discern.

While by common consent Quietism, in the strictest sense of the term, is taken to begin with Molinos, the first half of the 17th cent. already exhibits individuals and groups representing strongly Quietistic convictions. Prominent among such were the Spanish mystic, Juan Falconi (1596-1638), who attracted a large following, and whose *Alfabeto et Lettera* prepared the way for the *Guida Spirituale*; Marie de l'Incarnation (1599-1672), an Ursuline of Tours, afterwards of Quebec, whom Bossuet called 'the St. Teresa of our times and of the New World';¹ the saintly layman, Jean de Bernières Lovigny (1602-59), Treasurer of France and greatly admired by Fénelon; the influential writer, Desmarets de Saint-Sorlin, first Chancellor of the Académie Française (1595-1676); the profound but often fanciful secular priest, Henri Marie Boudon (1624-1702); the gifted ascetical writer, Jean-Joseph Surin (1600-65), formally approved by Bossuet; and many others. The Pelagiani (a society called after its founder, Giacomo Filippo di Santa Pelagia, a layman of Milan) were largely a recrudescence of the 16th cent. group of the Alombrados or Illuminati, which had been crushed out by the Inquisition for holding that one could dispense with the ordinances and ignore the requirements of the Church. That there was a vigorous Quietistic movement in France at least twenty years before the term 'Quietist' was first applied to the followers of Molinos in 1681 is shown by Nicole's rare book, *Les Imaginaires et les visionnaires*—an attack on the 'new heresies,' published as early as 1667.

When, in 1675, Miguel de Molinos published his *Guida Spirituale*, Juan Falconi's *Alfabeto et Lettera* had prepared thousands of earnest souls in Spain, Italy, and France to welcome the new doctrine. Born in Saragossa in 1640, Molinos took the degree of Doctor of Theology at Coimbra and migrated to Rome in 1669 or 1670. His piety, learning, and sympathetic personality soon made him one of the most sought-after spiritual directors and a noted figure in Roman society. Among his friends were many of the cardinals, including Cardinal Benedict Odescalchi, afterwards Pope Innocent XI., who sanctioned his position as the most esteemed confessor in Rome by giving him lodgings in the Vatican. Cardinal D'Estree, the representative of Louis XIV., also approved of him in those days, and, when his *Guida Spirituale* appeared, it bore the approbation of various distinguished ecclesiastics, among them four inquisitors. Priests advised their penitents to discard formal prayers and devotions for the simple method of Molinos; societies for the study of this method were formed everywhere, and within six years the *Guida Spirituale* had passed through twenty editions in Italian, Spanish, French, and Latin. But soon the Jesuits realized that a method of prayer which deprecated Masses and formal devotions was contrary to the interests of the Church. Father Paul Segneri, one of their ablest and most popular preachers, was selected to confute Molinos. He did so in a small book entitled *Concordia tra la Fatica e la Quiete nell' Oratione* ('The Harmony between Effort and Quiet in Prayer'), which was published five years after the *Guida Spirituale*. But so firmly was Molinos entrenched in popular favour that Segneri, hitherto the idol of the people, was overwhelmed with scorn and denunciation, and there is reason to believe that even his life was in danger. A commission was convened in 1682 to inquire into the writings of Segneri and Molinos, as well as into a book entitled *La Contemplazione Mystica Acquistata*,

¹ *Etats d'oraison*, bk. xix. 8.

written by the saintly Cardinal Petrucci, a loyal friend of Molinos. As a result Segneri's book was condemned, Petrucci was made Bishop of Jesi, and the teaching of Molinos was triumphantly vindicated. The Jesuits, however, were determined to gain the victory, and, seeing that the Vatican protected Molinos, they appealed to Caesar in the shape of King Louis XIV. Through his confessor, Père La Chaise, they roused the apprehensions of the king, and induced him to bring pressure to bear upon the pope. Innocent XI. was induced to refer the matter once more to the Inquisition, and this decided the fate of Quietism within the Roman Church. Molinos and Petrucci were summoned before the Inquisition in 1685, and the former was cast into prison; but it was not until two years after, when the popular indignation against his imprisonment had spent itself, that the Jesuits determined to strike. In 1687 about 200 persons, including many members of the aristocracy and some priests, were arrested and imprisoned. A commission of inquiry regarding Quietism in monastic houses resulted in the discovery that many monks and nuns had exchanged the prescribed devotions of the Church for the 'Prayer of Quiet.' A panic was created among the orthodox. Molinos was formally charged, on the ground of 68 propositions, extracted partly from his writings, partly from the declarations of his followers, with grave errors in doctrine and serious offences against decency and morality. He was also stated to have himself confessed having committed improper acts, and the populace that had once idolized him now clamoured for his execution. In the end it was announced that he had confessed his sins and was willing to abjure his heresies, in consideration of which he had been sentenced to life-long imprisonment. The recantation took place with all the pomp of ecclesiastical procedure. Nothing more is known of the fate of Molinos except that he died in prison in 1697. His books and papers were burnt; persons known to have been attached to him or in sympathy with his teaching were hunted down throughout Spain and Italy; and all writings of a Quietistic character were rigorously suppressed. Among those who fell victims to this relentless persecution was the blind mystic of Marseilles, François Malaval, whose *La Pratique de la vie vraie: théologie mystique* was first published in 1670.

In France the drama of Quietism played itself out in an atmosphere of political intrigue and personal animosity. Its central figure was Madame Guyon. Born at Montargis in 1648, Jeanne-Marie Bouvier de la Motte Guyon showed an early bent towards mysticism and asceticism, and as a child desired to enter the Order of the Visitation. Her parents had other plans for her, however, and in 1662 she was married to Jacques Guyon, Seigneur de Chesney, a wealthy man, twenty-two years her senior. It was, as might have been expected, an exceedingly unhappy marriage, sorely aggravated by the petty tyranny of a malignant mother-in-law, and the highly-strung girl turned more passionately than ever to the spiritual world. She had no difficulty in finding guides and helpers in her search for the inward way to God, since the France of her day abounded in souls of a genuinely mystical type; and, at the age of twenty, the words of an obscure young Franciscan to whom she turned in her need and who bade her seek God within her own heart finally started her on her spiritual pilgrimage. Her mystical experience was exceptionally sharply defined, falling into three distinct stages. The first was marked by an almost overwhelming influx of the Divine Presence, 'without word, thought or image,' which awoke in her soul a fierce joy of possession. This was

succeeded by a period of dryness and dereliction, during which outward troubles as well as inward trials increased. Her father, husband, and daughter died in quick succession; her son turned against her; small-pox destroyed her beauty, and was followed by one disease after another. But suddenly, in 1680, her 'obscure night of the soul' gave place to a 'unitive' state, in which she recovered all the joy that she had lost, and experienced in addition a sense of infinite freedom—a new 'God-me' taking the place of the old 'self-me.' This state was entered upon under the influence of a Barnabite monk, Francis La Combe, superior of the Barnabite Order at Thonon, who proved to be her evil genius. A man of quite mediocre mentality, deficient in moral sense, and of an unstable, neurotic temperament, he yet succeeded in exercising a hypnotic influence upon her. It was during the La Combe period that her two most original books were written—*Les Torrents spirituels*, composed largely in a state of automatism, and *Le Moyen court et très facile de faire oraison*—books which are characterized by profound spiritual insight, but which none the less exhibit some of the fatal weaknesses and extravagances of Quietistic piety. Her consciousness of an apostolic mission to found an 'interior' Church and inaugurate a world-wide spiritual reformation also dates from this period. Taking the form of a sense of spiritual 'fecundity' or 'maternity' involving much suffering ('I can bring forth children only on the cross'), it was accompanied by certain unpleasant hysterical and neurotic symptoms which brought constant ridicule and persecution upon her.

In 1681 it seemed as if she had found her vocation as the head of the newly-founded community of Les Nouvelles Catholiques at Gex—an institution for the training of the daughters of Protestants and other converts to the Catholic faith. But the work proved uncongenial, and it was not long before she abandoned it, taking refuge with the Ursulines of Thonon. From 1681 to 1688 her fortunes were closely intertwined with those of La Combe, who, in the autumn of 1687, accompanied her to Paris, only to be arrested on his arrival by order of the archbishop as an alleged follower of the ill-starred Molinos. Madame Guyon herself was arrested in the following January, but was released after eight months, thanks to the influence of Madame de Maintenon, who was profoundly impressed by her piety. As the *protégée* of Madame de Maintenon, she soon became a prominent figure in the inner spiritual circle of the court of Louis XIV. It was at this time that she first met Fénelon.

François de Salignac de la Mothe Fénelon was at that time a rising young ecclesiastic with a growing reputation as a director of consciences whose spiritual genius, religious fervour, and magnetic personality attracted the *belles âmes* of Paris. He was superior of the society of Les Nouvelles Catholiques, in which capacity he wrote his manual *De l'Éducation des filles* (Paris, 1687), and had been on a six months' mission to the Protestants of Poitou, which he conducted with characteristic tolerance. In Madame Guyon he saw not merely a woman of commanding gifts, but also a saint, and his championship of her cause was wholehearted and generous. She, on her part, recognized in him the spiritual 'child' of her dreams, and the extraordinary correspondence which passed between them bears witness to what Rufus M. Jones describes as 'a subtle conquest,'¹ designated by Madame Guyon herself as 'spiritual filiation,' and abounding on her side in neurotic features. Fénelon was the cool and cautious partner in this intense relationship. His pastoral instinct and

¹ *Harvard Theological Review*, x, 41.

sound sense warned him against a spiritual condition which took its own impulses for divine movings, and he never allowed himself to forfeit reason or judgment in his admiration of Madame Guyon's spiritual genius.

In 1689 Fénelon was appointed tutor to the young duke of Bugundy, for whom he subsequently wrote *Les Aventures de Télémaque* (Paris, 1699). His success as an educator of princes brought him into high favour at court, and in 1695 he was made archbishop of Cambrai. Meanwhile, in 1693-94, the storm which had been gathering round Madame Guyon broke, and involved Fénelon in a bitter and ignoble conflict which ultimately drove him into exile. Madame Guyon's doctrines had penetrated to Madame de Maintenon's school at Saint Cyr, and this roused the suspicions of Bossuet.¹ He subjected her to a stringent examination, extending over six months and ending in her imprisonment as a heretic. Fénelon never saw her again, and he might easily have extricated himself from a very difficult and perilous position had he consented to join in signing her condemnation. This he refused to do—a refusal which lost him his many influential friends, including Madame de Maintenon.

There ensued the stormy controversy between Bossuet and Fénelon which stirred all France. In his *États d'oraison* Bossuet had condemned 'pure' faith (*i.e.* faith without content), disinterested love, and the prayer of quiet. Fénelon replied by publishing his famous *Explication des maximes des saints sur la vie intérieure*, in which he restated Madame Guyon's fundamental convictions in a more sober and cautious way. The book, which, in spite of its dry, guarded, and not always lucid manner, teaches Quietistic mysticism in an extreme and extravagant form, created intense excitement, and divided France into two opposing camps. Bossuet attacked its author with a personal animosity which amounted to persecution, and the court ranged itself on his side. Although Fénelon had the support of the Jesuits and the secret approval of the king's confessor, the clergy sided solidly with Bossuet, and in the end Fénelon was ordered to leave Versailles and banished to Cambrai. He appealed to Rome and, after long hesitation, the mild and cautious Pope Innocent VIII., impelled by urgent pressure on the part of the king and Bossuet, condemned as erroneous certain propositions extracted from the *Maximes*. Fénelon spent the remaining eighteen years of his life quietly in his diocese, devoting himself to the welfare of priests and people alike, and dying at the age of sixty-three, greatly beloved and lamented.

Madame Guyon suffered successive terms of imprisonment, and, after being liberated from her last prison in the Bastille in 1703, passed her remaining years in quiet seclusion at Blois, where she died in 1717.

Among the minor prophets of Quietism Antoinette Bourignon (1616-80) occupies a distinctive place. Born at Lille, she was, like Madame Guyon, a precocious child with an abnormally developed religious instinct. As a girl she wished to become a Carmelite, but was soon disillusioned regarding cloistral religion and set herself to find a better way of retirement from the world. When, in 1636, her father tried to force her into marriage, she escaped from home in male disguise. After some curious adventures she was brought back, but finally fled to Mons, where she placed herself under the protection of the archbishop, and under his patronage made a short-lived attempt to establish

¹ La Combe, whose mind had gradually given way under imprisonment, had confessed to improper relations with Madame Guyon, but the very careful investigations made by Bossuet and his fellow-inquisitors could show no ground for questioning her moral integrity.

an ascetic community on primitive lines. On the death of her father she brought a successful lawsuit against her step-mother, securing his entire property for herself. About this time she fell in with a decidedly questionable admirer of mystical religion, Jean de Saint Saulieu, who induced her to found an orphan home for girls, which she subsequently placed under Augustinian rule. The experiment came to an abrupt end in 1662, when she was accused of gross cruelty to her young charges and had to take flight. Her enforced wanderings took her to Mechlin, where she found her first 'spiritual child,' Christian de Cort, superior of the Oratorians. By this time she had developed her system (if such it can be called), which embodied the characteristic features of extreme Quietism in a fantastically exaggerated form. As in the case of Madame Guyon, 'spiritual maternity' occupied a central place in her consciousness. She was 'the woman clothed with the sun,' 'the bride of the Holy Ghost,' God's chosen vessel who would restore 'the Gospel spirit' to the world, 'the virgin who would bear many sons' and found a communistic, priestless brotherhood.

In 1662 she went with de Cort to Amsterdam, where she spent a period of happy intercourse with the many heretics who had made that city their Cave of Adullam. An attempt, inspired by de Cort, to found a community house for her spiritual children on the island of Nordstrand in the North Frisian Sea, and the long series of difficulties and complications to which it gave birth, occupied the rest of her stormy life. The mad scheme involved de Cort in financial difficulties from which only a premature death—in prison—released him, and embittered her remaining years. Her capricious, overbearing, stingy disposition and her entire impracticability involved her in endless legal proceedings, and finally forced her to flee once more. A few years later a printing-press which she had set up at Husum brought her into conflict with the authorities and revived the flame of persecution. For a time it seemed as if she had found a refuge with another of her spiritual sons, the eccentric Colonel La Coste. But a miserable quarrel led to his formally accusing her of sorcery in 1679, and once more she had to flee to escape arrest. She remained in hiding until her death in the following year. Her voluminous writings, which she professed to have 'received' inwardly by inspiration, abound in fantastic and neurotic elements, yet she exercised a remarkable influence over minds finer than her own, among them Comenius and Jean de Labadie. Indeed, her extraordinary influence extended to almost every land and continued long after her death. In Scotland especially she had so many followers among the clergy that from 1711 until recently 'Bourignonism' was included in the list of heresies which candidates for ordination in the Church of Scotland were required formally to forswear.

Among those who represented the practical and devotional aspect of Quietism as it appealed to the unlearned, Nicolas Herman of Lorraine (Brother Lawrence) is the classic example. Born about 1610, he was first a soldier, then a gentleman's servant, and finally a lay brother in a Carmelite monastery, where he was charged with the humble duties of the kitchen. His *Practice of the Presence of God*, as set forth in his letters, which is to-day among the best-known devotional books, expounds the central doctrines of Quietism with a winsome simplicity and a rare degree of practical wisdom. His *Maxims* give further instruction to those who would realize the presence of God along the same homely and wise lines. He died in 1691.

LITERATURE.—I. GENERAL.—The standard work is H. Heppe, *Gesch. der quietistischen Mystik in der katholischen Kirche*,

Berlin, 1875 (the most valuable and authoritative study on the subject, containing the text of many important and now lost documents); J. B. E. HERMAN.

QUR'ĀN (Koran, Alkoran, etc.).—i. Names.—The names of this, the sacred book of the Muslims, are reckoned at fifty-five, of which the most familiar and the most frequently used in the book itself, *al-Qur'ān*, seems to mean 'The Lesson,' being the abstract noun of the verb *qaraa*, 'to read,' 'to recite,' occasionally employed in the original sense.

E.g., lxxv. 17: 'Verily upon us is the collecting and the reading (*qur'ān*) thereof; and when we read it, follow thou the reading (*qur'ān*) thereof'; xxvii. 85: 'He who enjoined on thee the reading'; x. 62: 'Thou dost not recite any reading thereof,' where the word *qur'ān* is used as the verbal noun of the synonymous verb *talā*, 'to read.'

The word is normal in formation (cf. *kufran*, *ghufraan*, *ruḥan*), and is not borrowed from any other language, though it may be an imitation of the Hebrew *miqrā*, applied by the Jews to the Bible, of which the Arabic analogue *magra* is occasionally used for 'reading.'¹ Other etymologies are collected by Suyūṭī (see below), but they are fanciful, though it is worthy of note that a grammarian of eminence pronounced the word *quran* as though the root were *qrn*, 'to associate'; and his interpretation 'collection' is at least suggested by lxxv. 17 (cited above). The word is not used by Muslims except of their sacred book, but Jews and Christians sometimes employ it as a designation of their Bible. Almost as familiar is the name *Mushaf*, which is said to have been invented by the Khalifah Abu Bakr, and is evidently the Ethiopic for 'book.' The word *kutāb* (Arabic for 'book') is often used as a name of the Qur'ān in the work itself and in the principles of jurisprudence, but ordinarily requires some eulogistic epithet (e.g., 'the perspicuous book'). Both this word and *Qur'ān* can be used of separate texts as well as of the whole. The name *Mufaṣṣal* is applied to the last seventh of the Qur'ān, but, as it repeatedly described itself as a book 'whose texts are distinct' (*fussilat*), there seems no reason why it should not be applied to the whole work;² and indeed there are various opinions as to the portion of which this name may be used.³ The etymology of the name *Furqan* in xvii. 107, 'A Qur'ān, which we have divided up (*faragṇāhu*) that thou mightest recite it unto the people leisurely,' is probably correct, this name being more properly applied to a book supposed to have been revealed to Moses and Aaron, Hebrew *parāgim*, i.e. 'sections'; but this particular form is Syriac and means 'deliverance'—a sense which it sometimes has in the Qur'ān. The Hebrew *Mishnah* (Aram. *Mathnatha*) seems to underlie the name *Mathānī*, said to be the plural of *muthnāt*, which appears to be used of the whole Qur'ān in xxxix. 24, whereas in xv. 87 the Deity states that He has given the Prophet seven *mathānī* and the mighty Qur'ān. The interpretations of this passage are very numerous and divergent, as may be seen from Lane, p. 300. Other names are descriptive or eulogistic—e.g., 'The Guidance,' 'The Wise Record,' 'The Revelation.'

The chapters of the Qur'ān are called by the enigmatic name *sūrah*, plural *suwar*, of which no satisfactory account has as yet been given. It is sometimes explained from the Hebrew *sōrāh* (Is 28²⁵), 'row,' 'order,' used in the Jewish oral tradition for a row or rank of men,⁴ but this seems to violate a sound-law. It is said to be used for a row of bricks in a wall, in which case it is clearly derived from *sūr* (Heb. *shūr*), 'wall,' and its transference to the region of literature might be analogous to that of 'column.' In the Qur'ān it evi-

¹ E.g., by Sakhāwī, *Tibṛ Masbūḥ*, Cairo, 1896, p. 217.

² As by Tabari, *History*, Leyden, 1893, i. 3007.

³ Collected by E. W. Lane, *Arabic-English Lexicon*, London, 1863-83, p. 2407.

⁴ See J. Levv, *Neuhebräisches . . . Wörterbuch*, Leipzig, 1876-80.

dently means 'homily,' 'discourse,' and is usually construed with the verb 'to send down.' Thus xxiv. styles itself 'a *sūrah* which we have sent down and ratified and wherein we have sent down clear signs.' Probably both sense and form are adequately accounted for by identification with the Syriac *sbharta*, 'preaching,' 'gospel,' 'message,' as in the title of Mark 'the Holy Gospel, preaching (*sbharta*) of Mark,' etc. The separate texts are called *āyah* (plural *āy* or *āyāt*), often used for 'sign' or 'miracle,' and clearly identical with the Hebrew *ōth*, 'sign,' 'letter,' 'miracle.' Its sense 'letter' is perhaps retained in the opening verses of certain *sūrahs*, where after a series of letters of the alphabet there follow the words, 'Those are the signs of the perspicuous book,' etc.

2. Contents.—Owing to the miscellaneous character of the work, which professes to contain 'a detailed account of everything' (xii. 111), the rapidity of its transitions, and its interminable repetitions, an analysis of its contents cannot easily be made. Those who furnished the chapters with names called them after the first words or letters, after some striking word or phrase occurring within the homily, or after some subject which occupied a prominent place in it. A certain amount of variety still exists in the naming of particular *sūrahs*, and in earlier times there seems to have been yet more. In the case of *sūrah* xii., which is called after Joseph, very nearly the whole homily is occupied with the story of the patriarch; but the second *sūrah*, which is of 286 verses, is called after 'the Cow,' described in four verses (63-66); while *sūrah* xxvi., of 228 verses, is called after 'the Poets,' with whom only three verses at the end deal; *sūrah* xvii. is called 'Asra' after a word occurring in the first verse, *sūrah* xxiv. 'Light' after verse 35. When a *sūrah* is called after a particular person, it must not be inferred that the homily deals exclusively with that person, or even gives his history more fully than it is given elsewhere.

The contents are mainly warnings, remonstrances, and assertions of or arguments in favour of certain doctrines, the narrative portions being for the purpose of enforcing morals. These narratives are for the most part of events in the remote past; but allusions to contemporary history and to the Prophet's own experiences are frequent, their purpose being to warn or to apologize. The two final *sūrahs*, each of a few words only, are incantations; cxi. is an imprecation on a contemporary foe, and lxxx., lxxxiii., and civ. are similar in purport, though the enemy is not named. The warnings being mainly of future punishment, the book abounds in realistic descriptions of both the pains of hell and the delights of paradise.

Legislation occupies a very small place in the work; hence its claim to give a 'detailed account of everything' occasions trouble even when 'everything' is restricted to the region of law.¹ Collections of commandments are indeed to be found in various places—e.g., vi. 152f.—and precepts on various subjects are scattered throughout the work, the most detailed being probably those connected with inheritance in iv. 12-16, to which verse 175 is a supplement, and those in xxiv. 2-9 dealing with adultery and accusations of it. Enactments on various subjects are also to be found in *sūrah* ii. The character of the Qur'anic legislation resembles rescripts (*fatāwā*)—i.e. answers to special questions—rather than a code; and that the collection contains contradictory rulings on the same subjects is admitted by jurists, though this is variously explained. Where narratives occur in a series, there is at times an attempt

at maintaining chronological order, but at other times it is neglected.

The narratives most frequently recounted are those connected with Noah, Abraham, Lot, Moses, and the otherwise unknown prophets Hūd, Ṣāliḥ, and Shu'aib. The story of Adam is told in ii. vii., and xx., that of the nativity of Christ in iii. and xix.; numerous stories are told only once—e.g., that of Tālūt (a combination of Gideon and Saul) in ii., that of the Queen of Saba and King Solomon in xxvii., that of the Seven Sleepers in xviii., which also contains a fresh story about Moses and one about Dhul-Qarnain, thought to be Alexander the Great. Of the OT prophets the Qur'an knows Elijah and Jonah; it also contains some information about David and Job. Of Arabian history it knows the name Tubba' (xliv. 1.); the ruin of the Sabæan empire (xxxiv.); the persecutions of the Christians in the Jewish state of S. Arabia (lxxxv.), if the last passage is correctly interpreted; and the Abyssinian attack on Meccah (cv.), if the interpretation be correct and the attack historical. Of contemporary history outside Arabia, it notices the Persian invasion of the Nearer East.

Where the same story is repeated, the various versions at times contain fresh details; thus *sūrah* xl., 'the Believer,' is called after a believing subject of Pharaoh who delivers a monotheistic homily, but does not figure elsewhere; and in xi. 46 there is an account of a disobedient son of Noah who perishes in the Flood, and who also is not mentioned elsewhere in connexion with the patriarch. Though the story of Moses is often told, his adventures in Midian are recounted only in *sūrah* xxviii. These repeated versions, then, to some extent supplement one another, though they cannot always be harmonized.

The tendency of the author is to prefer the apocryphal accounts to the plainer narratives in the canonical Scriptures, whence Solomon is represented as understanding the language of the lower animals and having at his disposal the forces of the *jinn*; the mountain is said to have been raised over the heads of the Israelites, and Jesus to have made birds of clay and animated them.

Descriptions of the phenomena of nature are not uncommon, though usually exceedingly brief; their purpose is of course not scientific, but the demonstration of monotheism.

A certain amount of the matter is introspective, taking (as usual) the form of personal addresses by the Deity to the Prophet. The consolatory *sūrahs* (xciv. and xciii.) are striking specimens of this class; lxxiii. and lxxiv., which contain exhortations to the Prophet, are similar; lxxii. describes a personal experience which the Prophet is told to repeat; it is how certain of the *jinn*, hearing the Qur'an recited, were converted. Three *sūrahs* deal with his domestic affairs, which of course were of importance to the whole community, and in one of these (xxxiii.) his wives are apostrophized. The only names of contemporaries mentioned in the book are those of his adopted son, Zaid, and his unbelieving uncle, Abu Lahab. Allusions to others occur, but reliance has to be placed on the tradition for their identification.

Owing to the intensity of the Prophet's loves and hates and other emotions, and the frequency with which the expression of these takes the form of a revelation, the Qur'an might in many parts be described as the author's diary or commonplace-book; it records doubts felt by himself as to the reality of his mission and its likelihood of success, critical situations at different times in his career, what he said when they occurred, and hard blows which he received and gave. It thus constitutes the most important set of materials for

¹ See Ghazālī, *Mustaḥṣā*, Cairo, 1324, ii. 256.

his biography, its utility being somewhat impaired by the absolute want of chronological arrangement, which has to be conjecturally restored chiefly on the basis of the later official biography, which is itself largely based on the Qur'an.

3. Sources.—That the material of the Qur'an is in the main identical with that of 'the Former Leaves,' i.e. the Jewish and Christian Scriptures, is admitted in the work itself; these 'Leaves,' more accurately described as 'the Leaves of Moses and Abraham who was faithful,' are quoted in liii. 37-55 for a variety of matters.

The first, 'that no burdened soul shall bear the burdens of another and that there is nothing accounted to a man save what he has wrought,' comes from Ezk 18²⁰: verse 45, 'and that he causeth to die and maketh alive' is from 18²⁸, which is followed by a clause cited with fair accuracy in verse 49 as 'He enricheth and causeth to possess.' Further, verses 53 and 54 refer to Genesis, where the destruction of the 'people of Noah' and of the 'overturned cities' is described. Verse 50, 'that He is the Lord of Sirius,' may be identified with Job 9⁸, the name of the star being altered for the rhyme.

The narratives of the destruction of the tribes 'Ad and Thamūd, also quoted from these 'Leaves,' are certainly not to be found in the Christian Scriptures; but this is not a serious inaccuracy. 'The Law' (*Taurāt*) is quoted in verse 49 for the rule, 'soul for soul, and eye for eye, and nose for nose, and ear for ear and tooth for tooth'; the reference is to Ex 21²³, where, however, 'hand' and 'foot' are found instead of 'nose' and 'ear.' The Psalms (*Zubūr*) are quoted in xxi. 105:

'We have written in the Psalms after the Record: My pious servants shall inherit the earth.'

The reference is to Ps 37²⁹, but the phrase, 'after the Record,' is most obscure. The Mishnāh of *Sanhedrin*, iv. 5, is cited in v. 35:

'On account of this we have written for the Children of Israel that whosoever slays a soul save for a soul or for mischief in the land, it is as though he had slain all mankind; and whosoever saves one, it is as though he had saved all mankind.'

The exceptions are not found in the text of the Mishnāh, but otherwise the citation is accurate. A somewhat vaguer reference to the Law and the Gospel is in lxviii. 29:

'That is their likeness in the Law and their likeness in the Gospel: like the seed which putteth forth its stalk, then strengtheneth it and it groweth stout, and riseth upon its stem, rejoicing the husbandman.'

The reference to the Gospel appears to be to Mk 4²⁸⁻²⁹; perhaps that to the Law is to Ps 72¹⁸.

These are probably the only actual quotations; reproduction of matter or of phrases occurring in the OT, the NT, the Talmud, or the NT Apocrypha is found throughout the Qur'an, and this is at times sufficiently close to render the term 'quotation' not inappropriate.

Noticeable cases are vii. 39: 'Nor shall they enter Paradise until the camel passeth through the eye of the needle' (Mt 19²⁴); xxi. 104: 'The day whereon we shall roll up the heaven as the scribe (?) rolleth up the book' (Is 34⁴); xxviii. 76: 'We gave him [Corah] treasures of which the keys would weigh down a company of strong men' (B. *Pesahim*, 119a: 'The keys of the treasures of Corah were a burden for three hundred white mules'); xxxi. 26: 'If all the trees that are upon the earth were to become pens, and if God should after that swell the sea into seven seas [of ink], His words would not be exhausted' (Midrash *Rabbāh*, Ca 12: 'If all the seas were ink, and the thickets pens, the heavens and the earth scrolls, and all mankind scribes, they would not suffice to write the Law').

From these quotations and borrowings it would not be permissible to infer that the author of the Qur'an had direct access to the Bible, Apocrypha, and Talmud; still less would it be permissible to infer from their inaccuracies that he had no such access; for the limits to inaccuracy in quotation cannot be fixed, and even in our own time, when numerous appliances make the verification of quotations exceedingly easy, we find experts in Homer confusing Andromache with Penelope, etc., and Biblical experts confusing Joseph with Daniel, etc. When verification was a cumbrous process, the standard of accuracy was far lower. Now, the Qur'an exhibits intimate acquaintance with

the books of Genesis and Exodus, out of which it reproduces numerous chapters—sometimes, it is true, mixed up with Midrashic matter; and this reproduction is often accompanied with serious inaccuracy, as when Moses is said to be sent to Pharaoh, Haman, and Qarun (Corah). In both matters its method resembles that of the NT, where, e.g., Stephen confuses Abraham with Jacob (Ac 7¹⁶), and Paul uses Midrash as though it were Scripture (1 Co 10⁴), though doubtless it differs in degree. The latter practice seems to come from the constant association of certain comments with the text, and has its parallel in professedly scientific works of our own time, where, e.g., the statements of the Homeric poems are mixed up with inferences drawn from them by later authors. The most natural conclusion would be that the Prophet had at some time studied those two books (Genesis and Exodus) with the aids current among the Jews, and had afterwards reproduced his information without verifying his references. His acquaintance with other parts of the OT is much slighter, yet he displays some with the books of Judges, Samuel, and Kings. In these cases, too, Midrash is mixed up with Biblical matter, and the attempt to reproduce the story of the scene between David and Nathan (xxxviii. 20-23) suggests that he had known the story at one time, but had afterwards forgotten its context and many important details.

Of the NT he clearly knows far less, the only personages belonging to it whose names he mentions being Zacharias, Yahyā (John the Baptist), Maryam (the Virgin), Isā (Jesus), and the angel Gabriel. Maryam is the daughter of 'Imrān (Amram), and the sister of Hārūn (Aaron). His 'Gospel of the Nativity' (in *sūrah* iii. and xix.) is similar to what is found in the *Protevangelium Jacobi Minoris*, but contains certain details drawn from other sources; one of these, that the Virgin supported herself on a palm-tree during her throes, is clearly traceable to the Greek myth of Leto. The employment of the title 'Word' (*Kalimah*) for Christ must go back to the Fourth Gospel.

The difficulty of assuming that the Biblical matter of the Qur'an was got at first hand from books lies in the fact that there is no evidence of any parts of the Bible having been translated into Arabic before Islām—even the tradition that Khadijah's relative Waraqah translated a Gospel is obscure, and may mean merely that he copied it—and none of the Prophet having studied any language but his own, coupled with the circumstance that both the proper names and the names of religious technicalities in the Qur'an belong to some four different languages. Thus *Jahannum* (Gehenna) is Hebrew, *Nūh* (Noah) Syriac, *Al'yās* (Elias) and *Yūnus* (Jonas) Greek, *Shaiṭān* (Satan) Ethiopic. Of the form used for Jesus no satisfactory explanation has as yet been given. The assertions made by the Meccans, viz. that the Prophet had gone to school (vi. 105), that he had assistants (xxv. 5), or one foreign teacher (xvi. 103), and that his helpers dictated to him morning and night, though probably containing some truth, fail to account for all the facts.

A curious Hebraism is to be found in the name for Christians, *Anṣār*, explained (with reference to the apostles, whose name in the Qur'an is Ethiopic) as 'Helpers of God'; this is evidently the Hebrew *Nos'rim*, 'Nazarenes,' which, however, might be rendered 'protectors'; the Arabic sense 'helpers' is very close. The name for 'the Law,' *Taurāt*, is also Hebrew; probably it should have been pronounced (as it is written) *Torah*. That for the Gospel, *Inṣīl*, is near, but not quite identical with, the Ethiopic *Wangel*; that for the Psalms, *Zubūr*, appears to be derived by popular etymology from

the Syriac *Mazmūrē*. Names which seem to be Biblical but cannot be identified with certainty are those of the prophets Idris, Dhul-Kifl, and Dhul-Nūn. The subject from which *sūrah* v., said to be the latest, derives its name, 'the Table,' appears to exhibit a strange conflation of different matter; the apostles (v. 112) ask 'Isā to pray that a table be sent down to them from heaven, and he, after rebuking them, prays that it may be sent down 'to be a festival to the first and to the last of us'; and the prayer is answered. The basis of this appears to be the phrase 'the table of the Lord,' in 1 Co 10²¹; but there seems also to be an allusion to Christ's feeding of the multitude and to the vision of Peter (Ac 10⁹⁻¹⁶). The extent to which the Prophet's memory and imagination, or the peculiarities of his informants, gave rise to these and similar statements will never be accurately determined. Had we not the *Protevangelium*, we might have attributed to him the confusion between Samuel and the Virgin Mary which appears in *sūrah* iii. Certain lost works appear to have contained matter which resembles what is found in the Qur'an; e.g., the *Περὶ τοῦ τῶν Ἀποστόλων*, excerpted by Photius, had the statement that not Christ but another had been crucified, which is near the Qur'anic doctrine (iv. 156), in which the Jews are charged with falsely asserting that they had killed Christ, whereas this had happened only in semblance.

Of matter that is not Biblical but is obtained from Christians, the story of the Seven Sleepers (q.v.) and probably that of Dhul-Qarnain are examples; that of the adventures of Moses with a person called by the Muslims al-Khiḍr is said to have a similar origin. Of acquaintance with any foreign literature other than that belonging to these communities there appears to be no certain trace, though there are references to the Magians, whose literature is known, and the Sābians, who are still a puzzle. When we read, 'The whole doctrine of the Qur'an concerning Iblis and the genii, or Satans of the Qur'an, has been borrowed for the most part from the Magi of Persia,'¹ it is hard to see how this can be proved. For the data of the Qur'anic story are Biblical; that Adam was created from earth is known from Gn 2⁷, and that the 'ministers' are of flaming fire is known from Ps 104⁴; that the words, 'Let all the angels of God worship him' (Ps 96⁷ LXX), were said on Adam's entry into the world is known to the author of the Epistle to the Hebrews (16). The doctrine that fire is more honourable than earth, whence Satan's refusal to carry out this order is intelligible, and made the ground of it, is an Aristotelian commonplace. What we have then is a Midrash worked up in Qur'anic style, precisely as the story of Abraham and his father's idols (xxi. 52-71) is worked up from the material preserved in *Genesis Rabbāh*, 38.

That there was no native literature in the possession of the Arabs to whom the Qur'an addresses itself is stated so frequently and emphatically that we are compelled to believe it.

Passages of this type are xlv. 8: 'Bring me a book before this or a monument of knowledge, if ye speak true'; lxviii. 37: 'Have ye a book wherein ye study?'; xxxiv. 43: 'We have not given them any books to study nor sent them any one to warn them before thee'; xxxv. 38: 'Have ye given them [i.e. the pagan deities] a book, wherein they have proofs?'; xxxii. 2: 'That thou mayest warn people to whom no warner came before'; xxxvii. 156: 'Have ye any clear authority? Then bring your book, if ye speak true'; li. 41: 'Are they in possession of secrets and do they write?'; lxi. 2: 'He it is who hath sent among the illiterates a messenger of themselves to read unto them His signs.'

Clearly, then, the Prophet had not, like the Christian missionaries among the pagan Greeks, to overthrow the authority of books which served to maintain an older system; nothing could be

cited against his assertions but immemorial practice. Although the language of the Qur'an must represent in the main that which was current in Meccah when it was composed, and to the creation of that idiom many persons must have contributed, it is improbable that the Prophet had in the language of his country any literary model to which he was indebted for either form or matter. He does, indeed, know of the existence of poets, who 'roam in every valley and say what they do not do' (xxvi. 225), and was himself charged with being a *jinn*-ridden poet, though he asserts that God had not taught him poetry; but it is evident, both from what the Qur'an says on the subject of these persons and from what it puts into the mouth of the Prophet's adversaries, that they were not writers of authority who aspired to become national classics.

According to Tabari,¹ certain Arabs in the Prophet's time possessed the book of Luḡman, some of whose sayings are reported in *sūrah* xxxi. In the later literature he figures as a writer of fables and is often quoted for maxims; yet it is doubtful whether anything was known about him except from the passage in the Qur'an. The story of Thamūd and their prophet Ṣālih is located in N. Arabia, and the name of the tribe is attested by classical geography; the rock tombs were mistaken by its author for houses; the source of the story is unknown, as is that of 'Ad and their prophet Hūd. Tabari derives this tribe from the son of the Biblical Uz, also located in Arabia. The name seems to be the Biblical word for 'eternity,' and to be about as historical as Cadmus. The phraseology and to some extent the statements of the Qur'an are often illustrated from 'pre-Islamic poetry'; and some of this came to be recognized as classical at any rate in the early Abbāsid period. These poets, unlike those of other communities, seem to be entirely ignorant of their national or tribal religions, whence it has been suggested that they were all Christians! There appears, however, to be no possible method of reconciling their existence with the statements of the Qur'an cited above; for, even if these had been shameless falsehoods, the work should have produced some argument or reason for ignoring the poets' words, which (e.g., the *Mi'allaḡah* of Zuhair) contained moral precepts and at times accounts of the very matters narrated in the Qur'an (e.g., the poems of Umayyah b. Abi Ṣālt).

The source of every statement or expression in the Qur'an cannot of course be traced, and there is no reason for denying its author considerable originality. The requirements of the rhyme must of themselves have led to the invention of new phrases, and even of historical details—e.g., the location of the call of Moses in 'the holy vale Tuwā' (lxxix. 16), and of the meeting between Moses and the sorcerers 'at midday' (xx. 61). The same consideration perhaps dictated the specification of the 'tree Zaqqūm' as the food of the damned, which seems to have provoked criticism at Meccah (xvii. 62), and the description of Pharaoh as 'the man of the stakes' (*dhul-'aṭūd* [xxxviii. 11, lxxxix. 9]), though this may conceivably be a misunderstanding of the Greek word *αὐτῶν*. Originality is doubtless displayed in the descriptions of hell and paradise, though in these some details are traceable to the Johannine Apocalypse.

The claim to speak by inspiration and not as the result of study is in itself not different from that urged by other poets, who professedly obtain their information from the Muse, etc. It may have been taken too literally by the Prophet's opponents, and consequently, as it could not be withdrawn, it had to be maintained as a fact.

4. **Original theory of revelation.**—The Qur'an is, on the one hand, something written, on the other, something read or recited. The written document, however, is in heaven.

It is 'an honourable Qur'an in a hidden book which shall not be touched save by the cleansed' (vi. 75); and this is somewhat elucidated by another passage:

'It is a record on honourable, cleansed, exalted leaves in the hands of honourable, pure scribes' (lxxx. 11-14).

The 'cleansed leaves containing permanent writings,' which 'are recited by an Apostle from God' (xcviii. 2), are thus thought of as in heaven; and in vi. 7 the 'book' is clearly distinguished from such as are on ordinary materials:

'Had we sent down unto thee a book written on parchment, and they had touched it with their hands, the infidels had surely said: "This is nought but plain sorcery."'

Since in vii. 142 it is stated that the Deity wrote for Moses on the Tables a homiletic and encyclopaedic work similar in character to the Qur'an, which is itself said to be on 'a guarded table' (lxxxv. 22), it would seem that revelation means the mental perusal by the Prophet of the divine book which is in heaven, whose contents he communicates to his countrymen. And indeed the Jews are spoken of as 'those who read the Book before thee,' whom the Prophet is to consult, if he has any doubt about his revelations (x. 94). It is suggested that the language of the divine original is heavenly (xlii. 2f.), which is then translated into Arabic so as to be intelligible. Of the divine language it is probable that the letters prefixed to some of the *sūrah*s are specimens. This theory accounts in part for the fact that so many of the *sūrah*s are repetitions of the same matter; the reproduction by the Prophet of the portions of the divine book which he was privileged to peruse would not necessarily be verbally coincident. The book is brought down by 'the Faithful Spirit' (xxvi. 193), called Gabriel (ii. 91), to the Prophet's heart, while it is also in the books of the ancients (xxvi. 197), and in the breasts of those to whom knowledge has been given (xxix. 48), i.e. learned Israelites (xxvi. 197). For even the reduction of the Law of Moses to parchment is supposed to be an innovation (vi. 91), its proper seat being the memory of the rabbis (v. 48). It might have been revealed in a foreign tongue (xxvi. 198, xli. 44), but this would have involved various objections. Apostles are sent speaking the language of their own people only (xiv. 4); hence the notion of reproducing the contents of a concealed book has a tendency to give way to that of bearing a message, which the messenger would naturally express in his own words.

There does not appear to be any reference in the Qur'an to any but oral communication of its contents. The passage cited above from vi. 7 plainly indicates that it was not produced on parchment; and similarly in xvii. 95 the Meccans ask for a book to be brought down from heaven 'which they can read themselves.' The texts are recited either by the Prophet or by his followers (xxii. 71); there is little suggestion that the one or the other employed a written copy, though perhaps vi. 146, 'I find not in what has been revealed to me save . . .,' might be interpreted of a search through MSS. Hence, when the Qur'an quotes itself, it quotes rather the general sense than the exact words of the passages:

E.g., iv. 139: 'He hath sent down unto you in the Book that when ye hear the Signs of God denied and mocked, ye shall not sit with them until they discuss another topic.' The passage cited is vi. 67: 'When thou seest those who discuss our Signs, then leave them alone until they discuss another topic, and if Satan cause thee to forget, then sit not with the ungodly people.'

Where obliteration of texts is mentioned, the reference is to alterations made by the Deity in the divine original (xiii. 39, xlii. 23); to erase in

this case has for its equivalent 'to cause to be forgotten' (ii. 100).

The tradition at times agrees with the Qur'an in this matter, as where the Prophet is made to confess that he has forgotten a text which is recited to him, the genuineness of which he acknowledges,¹ or to explain differences between the forms in which the same text is current by the theory that the Qur'an had been revealed in seven different forms.² At other times it assumes that some one or other wrote down the texts as soon as they were delivered and kept a copy; so Zaid b. Thabit was summoned by the Prophet to write down a text which had been revealed (iv. 97), and brought a shoulder-blade for the purpose; presently some one complained that the verse was hard upon him, and some additional words were revealed meeting the case.³ Certain verses were lost because 'A'ishah kept the scroll which contained them under the Prophet's bed, and let it be worm-eaten during his illness.⁴ Long lists were given of people who 'copied down the revelations.'

On the whole, the phenomena displayed by the Qur'an itself render it difficult to suppose that it was committed to writing in the Prophet's time, though its character was greatly changed by the transference of Islām from Meccah to Medinah. The claim to uniformity and consistency which it urges is more intelligible if it is thought of as a lecturer's treatment of a subject than if it is regarded as a permanent document; the repetitions of the same narratives with insignificant variations are natural in the former case, almost unthinkable to the extent to which they are found in the Qur'an in the latter. But, if any revelation became fixed in writing, the need for having the whole so fixed would speedily make itself felt. The assertions that the statements of the Qur'an were absolutely consistent with one another and with the earlier Scriptures, which were reasonable enough when men were concerned with the general sense of what had been uttered, assumed a very different character when, by being committed to some writing material, they became definitely fixed.

When an official copy had been circulated to the exclusion of others, a theory of verbal and even literal inspiration began to be evolved, and ultimately became dominant, though loose citation is sometimes found where we should least expect it; thus Bukhārī⁵ says that the text, 'except that ye knit a relationship between me and you,' was revealed, but the commentators acknowledge that they cannot find it, and suppose the words to be a paraphrase of xlii. 22: 'save love of my kin.' Ibn Mas'ūd († 32), when ordered to alter his copy in accordance with the official text, declared that he had heard seventy *sūrah*s from the lips of the Prophet, and could not adopt these alterations;⁶ readings of his were employed as late as 322 A.H., when their use was forbidden on pain of execution,⁷ and the books which contained them were burned.⁸ These variants consisted mainly in the substitution of synonyms for the words of the text. Hence grammarians began to cite 'God who is exalted' for grammatical forms and rhetorical ornaments. A Masorah arose which counted not only chapters and verses but words and letters (the various computations are given by Suyuti, § 19). A pious woman never spoke except from the Qur'an for forty years, for fear of uttering what was false.⁹

⁹ *Rauḍat al-'Uḡala*, Cairo, 1323, p. 35.

In the early days of Islām inaccurate citation was common for a time at least; a Khārijite woman declared that the ignorance of God's book displayed by Umayyad governors had led her to revolt.¹ Fragments which, whether by the Prophet or not, were not included in the official Qur'an were here and there preserved as having once belonged to it; and, when a reader made a spurious addition to a *sūrah*, it was not always easy to detect its inferiority to the genuine matter.² Stories are told of lengthy interpolations by ministers in public worship who desired to further their own ends,³ and of others which were harmless supplements to the texts.⁴ See, further, art. INSPIRATION (Muslim).

5. **Chronology and arrangement.**—The order of the *sūrahs* (114 in number) is evidently according to length, but this is far from strict, and early traditions suggest that certain *sūrahs* were grouped together owing to their reaching a certain length, but that their order within those groups was haphazard.

In the *Musnad*⁵ we read: 'Said Ibn 'Abbās: I said to 'Uthmān: What induced you to take the *Surah Anfal* (vi) which is one of the *Mathānī* [*sūrahs* of less than 100 verses] and the *Surah Barā'ah* (ix) which is one of the hundreds [*sūrahs* of between 100 and 200 verses], and write them, not writing between the two the words "In the Name of God," etc., and to place them among the seven long *Sūrahs*? He said: As time passed numerous *Sūrahs* were revealed to the Prophet: when something was revealed to him, he used to summon one of his scribes and bid him place it in the *Surah* wherein such and such matters are mentioned; when a group of texts was revealed, he used to say, Place these texts in the *Surah* wherein such and such matters are mentioned; and he would say the same when a single text was revealed. Now the *Surah Anfal* was one of the first of the Medinese *Sūrahs*, whereas the *Surah Barā'ah* was one of the last *Sūrahs* of the Qur'an; but it resembled the other in matter, so we supposed that it belonged to it, and the Prophet died without distinctly asserting that it belonged thereto. This was the reason for our procedure.'

In the same work⁶ we are told that al-Ḥārith b. Khazamah brought 'Umar the last two verses of *sūrah* ix.; 'Umar recognized them as having been uttered by the Prophet; had there been three, he added, he would have made of them a separate *sūrah*; as there were only two, he bade al-Ḥārith find a suitable place for their insertion; he accordingly placed them at the end of *sūrah* ix.

These traditions indicate that both the second and the third Khalifahs had a hand in the arrangement of the Qur'an, though in the main the arrangement was the Prophet's; and it is noticeable that 'Uthmān, who, according to the most familiar tradition, is responsible for the circulation of a uniform copy and the destruction of all others, in a saying put by Ṭabarī into the mouth of one of his murderers,⁷ was the first whose hand wrote the *Mufasssal*, implying that his edition was the first written edition. Usually the collecting of the Qur'an is placed in the reign of the first Khalifah, whose scruples were overcome by the fear that the book might be lost if the readers should perish in the wars; and indeed it was asserted that parts actually perished with some of the martyrs of Yemamah;⁸ but admirers of 'Alī declared that he, noticing the bewilderment that arose after the death of the Prophet, immediately made a copy of the Qur'an from memory in three days; and this, wanting some leaves, was said to be still in existence in the 4th century.⁹ If there were any truth in this story, the copy should have wanted those verses which the person—Zaid ibn Ṭābit—who is said to have edited the ordinary text found with difficulty; so, according to Bukhārī,¹⁰ when he

copied the leaves into his edition, he missed a verse (xxxiii. 23) which he had heard the Prophet recite; finally he found it in the possession of Khuzaimah, the Anṣārī, whose evidence was worth that of two men.

The persons who produced these stories had to account for a fact which is generally acknowledged, viz. that the *sūrahs* often contain matter which belongs to very different periods, coupled with the assumption that single texts or small groups of texts were often revealed. If, e.g., ix. 85 was a special revelation for the instruction of 'Umar,¹ whereas ix. 1-10 was delivered on a different occasion to 'Alī,² how came these various texts and groups of texts to form one unit called a *sūrah*? In the *Musnad* the location is said to have been dictated in most cases by the Prophet; and the tradition admits that the *sūrahs* had as yet neither names nor numbers, so that they could only be distinguished as 'containing such and such matter.' Perhaps the only passage in the Qur'an which suggests that the Prophet arranged the texts is viii. 67, which restricts the promise of verse 66, that 100 Muslims should overcome 1000 unbelievers, to a promise that they should overcome 200, prefixing to the reduction the words, 'Now God has lightened your burden, knowing that there is weakness in you,' where the word 'now' indicates that an interval has passed between the two promises. But the suspicion lies near that this reducing verse is not from the Prophet himself, but from some later annotator. Ordinarily, where one statement corrects another, they are widely apart. So in viii. 9 the fighters at Badr are promised a reinforcement of 1000 angels; but in iii. 120 f. the number is increased to 3000 or even 5000, though the occasion on which the promise was made is the same, and the same comment is added on both (viii. 10 and iii. 122). It could scarcely have been the Prophet's intention to let both reports of his oracle remain.

Hence it is more usual to suppose that the *sūrahs*, where they are evidently collections of matter belonging to different times, represent the results of private effort, and the process called 'collecting the Qur'an' probably refers to this preliminary putting together of revelations delivered by the Prophet. According to the tradition, as early as the battle of Uhud (A.H. 3) special honours were assigned to those who had collected the Qur'an, and in proportion to the amount which they had collected; one Mujaṣṣimī, son of Ḥārithah, who figures in some incidents of the Prophet's biography, got his name from his carrying out this process;³ the name of the first person who 'collected the Qur'an' in Yemen is recorded;⁴ and we are told that 47 men of one tribe, who had collected the Qur'an, were killed on one morning.⁵ Four persons are mentioned in the tradition as having collected the Qur'an in the Prophet's time.⁶ Where, then, the same verses with slight differences are found in different *sūrahs*, the Prophet may be repeating himself, or the repetition may be due to our having the matter in the collections of different persons.

Cf., e.g., xlii. 6 f.: 'Say, O ye that have Judaized, if ye profess that ye are friends of God out of all mankind, then desire death if ye speak true. But never will they desire it owing to their previous handiwork, and God knoweth concerning the wrong-doers,' with ii. 88 f.: 'Say, if the last world be yours exclusively out of all mankind with God, then desire death if ye speak true. But never will they desire it owing to their previous handiwork, and God knoweth concerning the wrong-doers.'

It is hard to say whether this represents two reports of the same message to the Jews, put together by different collectors, or two messages delivered by the Prophet at different times, with a

very slight difference in the wording. And similar cases are frequent, notably the statements about the miracles in the wilderness, the entry into the Holy Land, and the transformation into apes of Israelites who broke the Sabbath, which occur in vii. 160, 161, 162, 166 and ii. 54-57, 61, though these *sūrah*s are supposed to have been delivered respectively in Meccah and Medinah.

To some extent, then, the *sūrah*s present phenomena analogous to those of the Gospels; i.e., the same matter is repeatedly produced with variation in the arrangement and in the expression, or even in the sense; it is difficult to think of these as reports of different matter; they are much more like reports of the same discourses with the variations inseparable from oral tradition.

An example may be taken from ii. 98: 'O ye that believe, say not "rā'nā" but say "unzurnā" and "hear."' In iv. 48 there is the following: 'Among those that judaize are such as corrupt the phrase from its location and say: "We hear and disobey," and "hear, not made to hear," and "rā'nā," twisting their tongues and attacking the religion. Had they said: "We hear and obey" and "hear" and "unzurnā," it would have been better for them and more correct.' In ii. 87 it is said of the Israelites that 'When we took their covenant and raised above them the mountain, "Take what we have given you with power, and hear," they said, "We hear and disobey".'

Now, the Arabic words quoted, of which one is approved and the other disapproved, appear to be synonymous, and in the later literature are both in common use; the phrases 'we hear and obey' and 'we hear and disobey' are contradictory; the phrase 'hear, not made to hear,' for which 'hear' is offered as the correct equivalent, is unintelligible. In *sūrah* iv. all three are offered as examples of improper expressions used by the Jews with malevolent intent; in *sūrah* ii. the phrase 'we hear and disobey' is recorded as the defiant reply of the Israelites to the commandments delivered from Sinai, whereas *unzurnā* is stated to be the proper substitute for the improper *rā'nā*, while the improper substitute for 'hear' is not recorded. In v. 45 we have another version of the commencement of iv. 48:

'Among those that judaize are hearers of falsehood, hearers of other people who have not come to thee, who corrupt the phrase from its location.'

The account which seems to agree best with the facts is that we have the inaccurate records in these various places of the same sayings put together by different persons long after they were delivered, when the circumstances of the original delivery had been forgotten. Hence the charge of 'corrupting the phrase from its location' in one *sūrah* is thought to refer to the conduct of the ancient Israelites, in another to the Prophet's Israelitish contemporaries, in a third to incorrect reporters of the Prophet's sayings, to whose testimony the Israelites of his time attached value.

Thus the questions of chronology, arrangement, and genuineness are inextricably connected, and any attempt at arranging the *sūrah*s in chronological order is impeded by the fact that the *sūrah*s are themselves largely agglomerations, while the probability that much was not committed to writing till long after the texts to be reproduced had been uttered necessarily affects the genuineness; and doubts about the genuineness of texts are not altogether wanting in the Muhammadan chronicles.

According to Tabari,¹ when Abū Bakr after the Prophet's death recited iii. 138, where the possibility of Muhammad's death is mentioned, 'the people did not seem to know that this text had been revealed to the Prophet until Abū Bakr recited it.' When this verse and another in which Muhammad's death is distinctly foretold (xxxix. 31) were repeated on this occasion, according to another account,² certain persons swore that they had not till then been aware of their existence.

The authenticity of the two final *sūrah*s was denied by some persons. European critics have naturally fewer scruples than Muslims about

obelizing verses, but, since these interpolations, if there be any, must belong to a period which is very imperfectly known, not many verses have been condemned. Certain passages very clearly belong to definite epochs in the Prophet's biography, for the order of which the work of Ibn Ishāq is generally trusted, though its authority was clearly not established in the 2nd century. Thus the authoritative Shāfi'i¹ places the Raid of Dhāt al-Riqā', which was the occasion of iv. 103 f., after the Battle of the Trench, whereas in the narrative of Ibn Ishāq the raid was in the year 4, and the battle in the year 5. The number of texts that can be dated by these considerations is comparatively small; for a great many commentaries, or special works dealing with 'the occasions of revelation,' invent cheap fictions to which no importance should be attached. The editions of the Qur'ān regularly divide the *sūrah*s into Meccan and Medinese, but it is admitted that some Meccan *sūrah*s are interpolated with Medinese matter. It is generally held that there are in the main three periods: one in which the productions were ejaculatory and tentative, represented chiefly by the short *sūrah*s towards the end, some of which, however, are very clearly fragments; one in which they were homiletic and narrative—to this class the greater number of the longer Meccan *sūrah*s belong; and one in which they were journalistic and legislative—this is the period of the Medinese *sūrah*s. About the first and last verses we have guesses recorded by Suyūṭi; the first was either xcvi. 1 or lxxiv. 1; the last was iv. 175, ii. 278, or ii. 281, etc.

The *Fihrist* gives a chronological order of the Meccan *sūrah*s and another of the Medinese, in both cases ostensibly following authorities of the 1st cent.; one which differs in numerous points is given by Suyūṭi, p. 21 f. The *Fihrist* also recorded the order in which they were arranged in the copies of Ibn Mas'ūd, Ubayy b. Ka'b, and 'Alī—but the last is lost in the MSS used by the editors. In a story told by Tabari² of the year 35 'Uthmān himself is made to refer to the Qur'ān according to the numbering in Ibn Mas'ūd's copy, in which the *sūrah* of Yūnus was the seventh. The author of the *Fihrist* states that he himself had seen many copies which professed to give the recension of Ibn Mas'ūd, of which no two agreed, while all differed from the authority whom he quotes for the order. His chronological list reverses ordinary notions in making *sūrah*s xcix., lxxvi., xiii., and others Medinese, since in both style and subject they seem clearly to belong to the Meccan period. Thus *sūrah* xiii. assumes that 'those who have knowledge of the Book' (i.e. the Jews) side with the Prophet against those who deny his mission, and that he is undergoing persecution which will be settled either by the fulfilment of God's promise or by his death—conditions which suit the Meccan period but had been changed when the Prophet was installed in Medinah. If these lists have the antiquity which is assigned them, they indicate that the early Muslims took no interest in the matter, and that no tradition of the occasions on which the *sūrah*s were first delivered was preserved.

The attempts made by Europeans to fix the chronology of the *sūrah*s are not likely to be more successful than those made by native critics. Thus, in Rodwell's translation, which is chronologically arranged, *sūrah* xvi. is numbered 73 and *sūrah* vi. is numbered 89; yet in xvi. 119 there is a reference to 'that which we narrated to thee before,' viz. in vi. 147! If the *sūrah*s are capable of being dated, vi. must be earlier than xvi.; on the other hand, vi. 119 states that 'God has already

¹ i 1816

¹ *Risālah*, Cairo, 1821, p. 27.

² i 2963.

explained to you what food he has made unlawful for you,' and, though this may be a reference to vi. 146, yet, since the list there begins with the words, 'Say: I find in that which has been revealed unto me nothing forbidden save,' etc., the reference to xvi. 116 seems the more natural; for, if the reference be to ii. 168, then we have a worse anachronism, since there will be a reference to a Medinese *sūrah* in two Meccan *sūrahs*! Dating by the supposed development of the Prophet's psychology is naturally an unscientific proceeding; nor does it seem possible to obtain any help from the development of his knowledge; thus A. Sprenger¹ asserts that about the year 617 the Prophet learned that the stories about Hūd and Sālih were apocryphal, and in consequence was careful to make no further allusion to them. In fact he alludes to them in *sūrah* ix. (71)—according to the tradition, the last *sūrah* but one, or the last, in the Qur'an.

6. The miracle of the Qur'an.—The meaning of the miraculous nature ascribed to the book has been the subject of much discussion, and the treatises in which it is explained are not very convincing. In xxix. 47–50 the miracle seems to be explained as the sudden acquisition by the Prophet of the ability to read and write; and somewhat the same is suggested in xlii. 52. More often it is interpreted as its claim to produce accounts of events which could have been revealed to the Prophet only by supernatural means, these being 'the contents of the former Leaves' (xx. 133). Why it should be lawful to identify the Qur'anic narratives with these, but impious to call them 'the Stories or Writings of the Ancients,' is not known. If these 'Leaves' were no longer in existence and the Prophet had no teacher, his knowledge of their contents, which was attested by the learned, could have been acquired only supernaturally; and there is nothing improbable in the Prophet's supposing these 'Leaves' to have perished, since in the 4th Islamic cent. at a public discussion in Baghdad both the Christian and the Muslim assume that the Greek classics had all perished and only survived in Syriac translations. Hence the reader is frequently reminded in the Qur'an that the Prophet, though he is able to report an event, was not present on the occasion; he was not with Joseph's brethren when they conspired, yet he knows about it (xii. 103); he was not present when lots were drawn for the guardianship of the Virgin Mary (iii. 39); and much the same is said with reference to the Deluge (xi. 51), the adventures of Moses (xxviii. 44–46), and the dialogue at the Resurrection (xxxviii. 69 ff.). It does not appear that the Prophet's contemporaries were much impressed by this reasoning; they supposed that he had been primed (vi. 105, xlii. 13) and were even prepared to name his mentor or mentors. What is most interesting to us in these passages is the implication that the Biblical narratives were quite unknown in Meccah before the Prophet told them. More importance might reasonably be attached to the prophecies of future events—the defeat of the Jews (iii. 107 f.), the recovery of the Nearer East by the Byzantines from the Persian conquerors (xxx. 1–4), to which Gibbon attached some importance, and the continuance of the bickerings between the Christian sects until the Resurrection (v. 17), a prophecy which thirteen centuries have not falsified. These passages occupy so small a space in the book that they can scarcely give a character to the whole. Hence it is usual to fall back on the literary style, and this, it may be supposed, is meant where the opponent is challenged to produce ten *sūrahs* (xi. 16) or one *sūrah* (x. 39, ii. 21) or any talk (lii. 34; cf. xxv. 35)

¹ *Das Leben und die Lehre des Mohammed*, Berlin, 1861–65, iii. xxiii.

which could rival it, and is assured that the united efforts of mankind and *jinn* would fail in such an endeavour (xvii. 90). This doubtless limits the effectiveness of the miracle in the first place to Arabs and in the second to experts in style; but it is pointed out that in most matters the majority are laity who have to be guided by experts. Hence works are composed by rhetorical experts who show how everything in the book is expressed in the best possible way; the recently published *Tirāz*, by the Zaidi Khalifah Yaḥyā b. Ḥamzah († 749 A.H.; 3 vols., Cairo, 1914), proceeds on those lines, and discovers unsuspected beauties—e.g., in the phrase 'and thou didst thy doing which thou didst' (xxvi. 18).

Possibly these expressions of self-approbation in the Qur'an do not differ much from those employed by other Oriental authors and at times by Europeans. What we learn from its statements is that the Meccans in general found it intolerable, and demanded a 'reading' of another kind (x. 16); and even in the late Medinah period (ix. 66, 125) there were Muslims who, to the Prophet's extreme annoyance, ridiculed the revelations. A curious method of dealing with the miracle is that ascribed to a Mu'tazil doctor, who supposed it to lie in the failure of the Arab poets and orators to take up the challenge of the Qur'an and produce a rival performance; if in spite of their number and ability they abstained, they must have been supernaturally prevented. It is urged against this view that, were it correct, the miracle would be not the Qur'an's, but God's; but it rests besides on premisses of very doubtful validity—one, that there were at the time numerous poets and orators, and a second, that the challenge was not taken up. Indeed, it seems certain that a rival Qur'an was produced by the pretender Maslamah or Musallimah; and Palgrave¹ asserts that much of it was preserved in Yemamah as late as the 19th century. The claims of this work as against the Qur'an were settled by the sword. The challenge has probably been taken up at various times—and indeed the Qur'an comes near admitting this for its own time (vi. 93)—notably by the famous Abū'l-Alā of Ma'arrāh († 449), of whose *Fuṣūl wa-Ḥāyāt* some fragments are preserved;² the work itself was destroyed from pious motives, though one person thought that it should have been allowed to exist as a monument of failure.³ The eminent vizier Ibn 'Abbād was not displeased when told that his own compositions were equal to the Qur'an;⁴ and we casually hear of books written by professing Muslims in which the defects of the Qur'an were pointed out; one Ibn Abī'l-Baḡhl, who aspired to the vizierate in the 4th cent., is credited with a work of the kind.⁵

The magical use of the Qur'an appears to have begun at an early time; the practice of opening it for *sortes* is mentioned in the year 33,⁶ and has been common ever since; and rules for this employment of the work are found in some MSS. Certain passages are written on amulets, and the water in which some have been washed is thought to be a preservative or cure.

7. Literary form.—The style of the Qur'an is twice described in the work itself by the word *tartīl*, the purpose of this artifice being to fix it in the Prophet's memory (xxv. 34); the sense of the word is not exactly known, but it is likely to refer to the rhyme, the existence of which cannot be denied, being indeed demonstrated by the variation in the order of the names Musa and Harun, of which the former as the more eminent should

⁶ Tabarī, i. 2923.

properly have the first place. But it is said to be improper to apply to this style the ordinary name for rhymed prose, *siġ*, which, according to a tradition, was said by the Prophet to be characteristic of paganism. Oracles that are supposed to have been delivered by pagan wizards (*kāhins*) are, indeed, in a style that differs from that of the Qur'ān by the regularity of the rhyme; these are most probably all spurious, as are other monuments of pre-Islāmic Arabic prose; in the later literature this style was popular especially for orations and official letters, the unit of the rhyme being usually a couplet, sometimes extended to a triplet, whereas in the sermon style the rhyme has a tendency to be maintained throughout the discourse, perhaps in imitation of the Qur'ān. Judged by these performances, the rhyme of the Qur'ān is illiterate, out such a view is naturally regarded as impious, and it is thought better to regard it as inimitable. In the Meccan period the Prophet was regarded as a poet by his countrymen, and this title might well be earned by the early ejaculatory *sūrah*s; it is, however, repudiated with vehemence in the Qur'ān, partly perhaps because the poets were thought to be inspired by *jinn*. Where, therefore, texts of the Qur'ān admit of scansion according to one or other of the recognized metres, this is not supposed to be intentional; and there is nowhere sufficient of a series to make the word 'metre' applicable, though *sūrah* xciv. almost fulfils the conditions.

Certain *sūrah*s contain besides special artifices; thus in lv. the texts are followed for the most part by the refrain, 'Which then of the bounties of your Lord will ye twain deny?' which may be compared with the refrain in the Song of the Three Holy Children and that in Ps 136. In xxxvii. after the story of each prophet the words 'Peace upon Ibrahim,' etc., follow, either the sentence or the name of the Prophet being accommodated to the rhyme.

The tendency of the earlier *sūrah*s is to employ short sentences, whereas rhythms more accommodated to prose prevail in the later parts of the work. It is noticeable that neither the antithetic method which is characteristic of Hebrew poetry nor the counting of syllables which is usual in Syriac forms an element in the style of the Qur'ān. The language claims to be perspicuous Arabic, and attention is often called to the clearness of the texts. This does not exclude the employment of phrases which require explanation; about a dozen times some phrase is employed followed by the formula, 'What is there to tell thee what it is?' Though extreme orthodoxy denies the existence of foreign words in the Qur'ān, it is generally recognized that its style admits not only foreign proper names, but a considerable number of words borrowed from other languages; a meritorious collection of these is to be found in the work of Suyūṭī,¹ which, however, contains many inadmissible statements. Many words are evidently of Persian, Ethiopic, Syriac, Hebrew, Greek, and Latin origin; but it is impossible for us to discover whether they were introduced by the Prophet or were already familiar. Some of the foreign usages can more easily be distinguished and located by European than by native critics—e.g., the employment of *faḥ* in the sense 'judgment' (Ethiopic), *faḥara* for 'create' (the same), *jabbār*, 'mighty' (Hebrew as applied to God), etc., where the Arabic language offers possible interpretations.

8. Place in Islām.—No sooner was the Qur'ān published than it became the basis of education, being studied immediately after the acquisition of the alphabet; so the first Umayyad Khalifah, Mu'awiyah, when he appointed a man governor of

Ta'if, said, 'He is in his ABC'; when made governor of Meccah, 'He is in the Qur'ān.'¹ Men were chastised by the Khalifah Walid I. for not having read it.² Public and private worship consisted largely in the repetition of portions of it; verses employed by the Prophet himself for this purpose are specified in traditions collected in the *Musnad*.³ After the Prophet's death it became the primary source of law, for in his own time it was hable to abrogation or addition, whence in v. 48-55 Jews and Christians who require their causes judged are referred to the Law and the Gospel. The difficulties of using the work compiled by 'Uthmān for this purpose were very great, though not too great for the ingenuity of the jurists, who began to arise in Medinah shortly after the Prophet's death. The difficulty of teaching the Qur'ān to foreign converts is said to have given rise to the study of Arabic grammar, for which of course it supplies an absolutely firm foundation. Orthodox theologians, arguing from certain statements in it, declare that it contains all possible knowledge. If Fakhr al-Din al-Rāzī († 606) could find 10,000 problems suggested by the *Fāṭihah* (introductory *sūrah* of seven short verses), it should be possible to discover 'a detailed account of everything' in it by the use of suitable methods.

Citation of and reference to the Qur'ān are exceedingly common in Muslim works, whether grave or gay. When the composition of State documents fell into the hands of non-Muslim secretaries, these persons were compelled by the needs of their profession to acquire a competent knowledge of the book, though the strict interpretation of a verse cited above, 'None save the cleansed shall touch it,' is thought to render such study highly improper; and anecdotes are recorded of divine favour shown to grammarians who had refused to teach Jews or Christians their subject because of the necessary reference to Qur'ānic usage. It is not easy, however, to reconcile with this theory the doctrine that the unbeliever should be converted by the miracle of the Qur'ān; the doctrine has to give way to the theory, so that those who raid the lands of unbelievers are forbidden to carry the Qur'ān with them lest it fall into infidel hands. Translation of the book was certainly not contemplated by the Prophet; the rhyme obviously constitutes a great difficulty, and the initial letters of some *sūrah*s an even greater one; Muslim sentiment has ordinarily been against attempts at translation even where the language of the version is one of those habitually and mainly used by Muslims; still such attempts have been made, though nothing resembling an 'authorized version' appears to exist in any Muslim language.

The Muslim notion of the sacred book as the main authority on law, the chief source of grammar, and the unapproachable model of eloquence not infrequently causes Muhammadan writers to misunderstand the place assigned to the Bible in Christian communities; on the other hand, there seems little doubt that this theory has influenced the Jews and Christians who are resident in Muslim countries.

9. Interpretation.—The sacred book gave rise to a great variety of studies, partly grammatical, partly exegetical; and the names of the authors who distinguished themselves in those lines with their works occupy some eleven pages of the *Fihrist* (23-39), though that work was composed near the end of the 4th century. Although Muhammadan learning attaches the very greatest importance to what is orally handed down, there is reason for thinking that the students had little to utilize besides the consonantal text fixed by

¹ Tabari, ii. 167, anno 64.

² *Ib.* ii. 1271, anno 96.

³ i. 226, 230, 265, v. 26.

¹ *Itgān fī 'ulum al-Qur'ān*, § 88.

'Uthmān at a time when the Arabic script left much ambiguity; certain peculiarities may therefore be due to misreading of this text—e.g., the form Yahyā for Yuhannan (John), Taghūt for Ta'ūth, and even Shu'aib for Hobab. Where either the words or the allusions offer difficulties, it does not appear that there was any trustworthy tradition which the interpreters could employ; e.g., in vii. 174, when the Prophet is bidden tell the history of a man 'to whom we vouchsafed our signs, and who departed from them,' some suppose the person meant to be Balaam, others the Prophet's contemporary Umayyah b. Abi Salt; a third suggestion is that he was 'the Monk,' i.e. a resident in Medina who was unable to accept the mission of the Prophet. In xvi. 49 there occurs a phrase of which the meaning is said to have been unknown to 'Umar, and very unconvincing explanations of it are given. On the whole it may be said that the tradition furnished no help that is of value for the explanation of hard passages, though the Prophet's biography, where it is independent of the Qur'an, furnishes some.

As Islam developed sects, the dogma of the infallibility of the sacred book was common to all; hence the champions of those sects were compelled to show that it supported their opinions; and sectarian commentaries arose, of which not many specimens survived the establishment of Ash'arite orthodoxy. The popularity of the *Kashshaf* of Zamakhshari († 538), in which Mu'tazilite opinions are boldly maintained, is surprising, and must be due to its author's fame as a grammarian and lexicographer. That unorthodox opinions are not always easy to reconcile with the text may be illustrated by his comment on iv. 51:

'Verily God forgiveth not association with Himself, but He forgiveth what is less than that to whom He will,' which he says means:

'God forgiveth not to whom He will association, unless he repent, but He forgiveth whom He will what is less than that, if he do repent.'

Yet perhaps the orthodox commentaries have at times to resort to equally drastic expedients. The most popular of the latter, the *Mā'alim al-tanzil* of Baidāwī († 691), is largely copied from Zamakhshari's work, and, though its author's object was to refute the unorthodox passages, he has taken over not a few unthinkingly. For European scholars neither of these works has the interest of the much earlier commentary of the historian Tabarī († 310), which is swollen to gigantic proportions by the chains of authorities quoted for each gloss; even so, it is said, it is an abridgment of a work three times the size, but it appears to give a complete record of the Qur'anic interpretation current in its author's time. Hence it is of great value for tracing the sources of statements found in later works, from which the chains of authorities are omitted. Great praise is bestowed by Sprenger on the commentary of Tha'labī († 427), which is as yet unpublished; and even greater is bestowed on that by his pupil Wāhidī († 487) in the account of this person given by Yāqūt (v. 101), who asserts that its merit was universally acknowledged. Mystical and devotional commentaries were produced by Sūfis, whose interpretations naturally wander far from the obvious sense of the passages. A commentary of this kind is that ascribed to Ibn 'Arabi.

D. S. MARGOLIOUTH.

10. Editions and various readings.—We have seen that the inspired oracles delivered by the Prophet in some circumstances of his life were not generally committed to writing. The Prophet had himself given orders not to hasten with the Qur'an before its inspiration was decided (xx. 113), and intimated that its collection, reading, and interpretation were lawful only to him (lxxv. 16 f.).

Our knowledge of how it was collected and put into the form in which we read it is commonly derived from writers belonging to the 'Abbāsid period, or approximately to the 9th Christian century. The necessity for a reasoned history of the Qur'an does not seem to have been felt very acutely under the Umayyad and the Pious Khalifas; what occasioned the appearance of some critical works on this subject was the era of religious controversies which animated the learned circles of the city of the Khalifate. At the end of the 8th cent. Timothy, Nestorian patriarch residing in Baghdād, had a public discussion before the Khalifah Maḥdī and the Muslim theologians of his time; Abu Noh, secretary to the governor of Mosul, was writing about the same time a refutation of the Qur'an in his native town (c. A.D. 820). Al-Kindi was completing his famous *Apology* of Christianity at the court of Ma'mūn. These public discussions and apologies, which contain severe criticisms of the Qur'an, had the salutary effect of inducing the Muslim theologians to define their positions with regard to their scriptures.

The method of reasoning from data furnished by authors living more than two hundred years after the events is somewhat precarious, and indeed there are scholars who would give but little credence to their stories. In view of this sceptical attitude of outsiders, great care is taken by the Muslim authors to authenticate their statements, by a chain of uninterrupted links of oral traditions going back to the first years of the Hijrah; frequently also there is reference to some accounts of men living at the end of the 1st Islāmic cent., who in their turn had heard them from companions of the Prophet; but, as these intermediary traditions have written nothing which has come down to us, it is practically with men of the 9th cent. and even of a later date that we generally work. These oral compilations afford for our investigations a field extending from the lifetime of the Prophet to A.D. 705, or roughly from A.H. 1 to 86. According to their attribution of the Collection (*Jam'*) of the Qur'an (1) to the lifetime of the Prophet, (2) to the time of the Pious Khalifas, (3) to the time of the Umayyad Khalifah 'Abdul-Malik and his lieutenant Ḥajjāj, these oral traditions will be classed in three groups.

If any Qur'anic verses were written in the Prophet's lifetime, they must have been written by secretaries and amanuenses. From different sources combined the number of these amanuenses totals forty, but it is very doubtful whether many of them did really help the Prophet in his literary task. The longest list is given by Ibn al-Athīr,¹ Dyarbakri,² Nawawī,³ and Tabarī.⁴

Ibn Sa'd⁵ enumerates ten different persons who had collected the Qur'an in the time of the Prophet. Bukhārī⁶ reduces this number to four; the *Fihrist*⁷ gives seven. Tabarī⁸ counts also four persons as having accomplished this task, but, as their names differ sometimes considerably in the various lists, we may perhaps be justified in saying that nothing was known with certainty at the time of the above writers. Some of them indeed report other oral traditions to the effect that it was 'Uthmān, the third Khalifah, who collected the Qur'an under the Khalifate of 'Umar⁹ or that its collection in *suḥufs* is due to 'Umar himself.¹⁰ Suyūṭī¹¹ has gathered a considerable number of such traditions, two of which have appealed to the critics of last century;

¹ *Uṣṣ*, Cairo, A.H. 1285-87, i. 50.

¹¹ *Itqān*, ed. Calcutta, 1854, p. 133.

they are those first reported by Bukhārī¹ and then reproduced by many subsequent writers. They state that Zaid ibn Thābit, one of the amanuenses of the Prophet, undertook the collection of the Qur'ān at the request of the first and third Khalifas, and that he made two recensions of it, his sources for the first recension under Abu Bakr having been palm-branches, white stones, bones, and memory of men; the second recension, which took place under the Khalifate of 'Uthmān, would be an official revision of the previous one, its primary object having apparently been to put an end to the 'discrepancies about the Book as the Jews and the Christians have.' His work finished, the Khalifah found himself powerful enough to destroy or burn 'everything else from the Qur'ān (found) in the form of *ṣaḥāfah* or *muṣḥaf*'; to circulate his version, he sent 'to every country' a *muṣḥaf* of what Zaid had transcribed. Nothing is said about what happened to the direct witnesses of the revelation—the white stones, bones, and palm-branches; but in the absence of better data the story is generally accepted as true by all writers belonging to a period later than the 9th cent., and is quoted in our days almost in every composition referring to the sacred book of Islām. The plausibility of the account is brooded over by some subsequent writers, who put the following accusation into the mouth of the third Khalifah's enemies:

'The Qur'ān was in many books, and thou discreditedst them all but one,'² and he 'tore up the Book.'³

It would be unsafe, however, to believe that this tradition can account for all the difficulties. For instance, there are numerous verses which refer to the Qur'ān as *kitāb* not only in the sense of a 'written thing,' but also in the sense of a 'real book' (xlvi. 11, lxxviii. 37, etc.). These verses, if not interpolated, can hardly be explained if the sources for the first edition of Zaid were only palm-leaves, white stones, memory of men, bones, and such things.

An attempt to produce an official edition of the Qur'ān is also attributed to the Umayyad Khalifah 'Abdūl-Malik and his lieutenant Ḥajjāj. They are said to have written copies of the Qur'ān and sent them to different provinces, as the third Khalifah had done before them.⁴ Some historians tell also that they proscribed various readings which were used in their time.⁵ Others go even so far as to ascribe to them the final collection of the Qur'ān,⁶ and some put in the mouth of the Khalifah the important saying,

'I fear death in the month of Ramaḍān—in it I was born, in it I was weaned, in it I have collected the Qur'ān (*jama'at al-Qur'āna*), and in it I was elected Khalifah.'⁷

It is a well-known fact that the Shī'ah writers accuse them of the elimination of many verses.

After A.H. 86 the process of collecting the Qur'ān came to an end, and, so far as we are aware, there are no historical data after this period for its further standardization; and therefore it is highly probable that the text with which we are familiar is the very text sanctioned by its *qurrā* (reciters and readers) of the end of the 1st Islāmic cent., and officially recognized by the third Khalifah.

Besides the official copy of the State, traces are found of the recensions made by other collectors of the Qur'ān, and the Muslim traditionists have preserved the names of some of them. Three deserve special mention: Ubayy b. Ka'b, 'Alī b. Abī

Talīb, and 'Abdallāh b. Maṣ'ūd. The two first are believed by all the best and earliest authorities quoted above to have even collected their Qur'āns in the lifetime of the Prophet, but, as the Sultāns and their officials had proscribed their copies, sometimes under pain of death, the author of the *Fihrist*¹ was unable to find a single one for purposes of comparison, and he contents himself with reporting the saying of Fadl b. Shadhān that some of his friends had seen a copy of Ubayy's recension, the order of which he gives; on p. 26 the order followed by Ibn Maṣ'ūd is also exhibited on the authority of the same man. As to the nature of their wording we are somewhat more fortunate, since the commentators have recorded it whenever it was known in their time. Zamakhshari is in this respect the best source of information. Some words are so different that we are entitled to believe that at least a few of them come from a source completely foreign to that of the official text.

In xix. 67 the official text has, 'I shall come forth'; but Maṣ'ūd reads, 'And He will give thee.' Mostly, however, these variants consist of synonyms or of one or two added or eliminated words, such as 'saying' for 'order' (xix. 65), 'they will become cloven' for 'they will burst asunder' (xix. 92), 'people were disputing' for 'disputed' (xix. 85).

Some Shī'ah books give examples of wonderful interpolations, and their authors state that the words that they have added had been purposely deleted from the official text, but there is reason to believe that most of them are the outcome of political intrigues which cannot seriously affect the early edition. One of the best works on this theme is the *Kāfi* of Abū Ja'far-al-Kulīnī († A.H. 328), which was lithographed in Persia in A.H. 1281. From a MS in the John Rylands Library we extract the following example (fol. 161):

'And if ye are in doubt of what we have revealed unto our servant, concerning 'Aḥ, then bring a Surah like it' (ii. 21).

The same author says that some of these interpolations were found in the Qur'āns used in the time of Imām Rida († A.H. 203); his contention is set forth in such an emphatic manner that we are obliged to believe him. The end of v. 11 and the beginning of v. 12 of *sūrah* xlii. were, according to him (*ib.*), as follows:

'A great thing to the idolaters is that which thou callest them to, O Muhammad, concerning the authority of 'Aḥ.'

More serious is the attempt of contemporary scholars who have called attention to some interpolations, political or religious. P. Casanova² has gathered several of them.

The variants of the official text itself are of two kinds. Some are due to the defective character of the Arabic script, which has many letters distinguishable from one another only by an extraneous dot put over or under them. Since the ancient Qur'ānic MSS were undotted, *qurrā* of one country often read words with letters different from those adopted by *qurrā* of another country. A second series of variants consists mainly of the addition or omission of one or two consonants, such as the copulative particle *wāw* and the feminine *z*. Many books have been written to collect these various readings, the handiest being the *Muknī* of Dānī (A.D. 1052). Even in the 12th Christian cent. Zamakhshari tells us that there were copies which occasionally added complete words to the standard text.

In xix. 19 some copies which he used added 'he ordered me,' and in xx. 15 some others added, 'How can I show it to you (the hour)?'

Our knowledge of these variants is derived exclusively from the commentators and some works written *ad hoc* by Muslim theologians. There are

in public libraries of Europe many Qur'anic MSS of high antiquity, the oldest dating probably from the 2nd Islamic cent., but, apart from some anomalies of spelling due to the rudimentary character of the early Arabic orthography, no real variant can be detected in them. This conclusion is borne out by Noldeke, who examined some such MSS, and by the present writer, who for the purpose of this article consulted three of them preserved in the John Rylands Library. To our knowledge, therefore, the only extant MS which offers slight variations is a palimpsest in the possession of Mrs. A. S. Lewis; its underscript contains scraps of Qur'ans written by different hands, and its variants consist of the addition or omission of a few consonants which, however, do not injure the general meaning, although in two cases it has words completely foreign to those of the official copy; there are sufficient grounds for stating that some of these scraps belonged to those early Qur'anic copies of Medinah, Kufah, and Damascus, which, according to Dāni and other writers, exhibited such variants.

11. External evidence for the existence of the Qur'an.—If we mistake not, there is no mention of the Qur'an in any Christian book till the end of the 8th century. The date of the Christian sources corresponds approximately with the first written records of the Muslim world. A curious fact is that the Christians of the beginning of Islam did not call the Muhammadans by the words 'Muslims' or 'Hanifites,' which refer to a religious belief, but simply applied to them the adjectives 'Hagarians,' 'Ishmaelites,' and 'Tayyāyē,' which denote their ethnological origins rather than their religious system. Numerous writers seriously believed that these Hagarians had come not so much to spread a new religion as to conquer new towns. The Muslims were helped in their conquests by many Christian Arabs, such as the powerful tribes of Banu Taghlib, 'Akūl, Tanūkh, and 'Tau', whose evangelization goes back to the 4th century. John of Phenek¹ expressly states about A.D. 690 that among the first Arab conquerors there were many Christians, some Monophysites and Melchites, and some Nestorians.

The anonymous historian printed by Guidi² gives Muhammad in the second half of the 7th cent. as a mere general professing the old Abrahamic faith preserved in the town of Madian (Medinah), named after the fourth son of Abraham from Keturah. John of Phenek³ attributes to him certain practices deviating in some points from the customs of the Old Covenant, but the word *mashūmanūtha* which he uses suggests that in his time and to his knowledge there was nothing yet committed to writing among the Muslims. This view of a political rather than doctrinal character of the Prophet's teaching is generally followed by all early Christians. Joannes Damascenus, writing at a later date, is more precise. Although not mentioning any sacred book, he refers to some Qur'anic doctrines and expresses his opinion about Muhammad as follows:

¹ Down to the time of Heraclius (the Ishmaelites) worshipped idols; from this time to our days a pseudo-prophet has risen to them, named Maḥūd, who through colloquies with an Arian monk had access to the Old and New Testaments, and founded a special sect.⁴

From a discussion which took place in Syria on Sunday, 9th May, A.D. 639, between 'Amr the 'amir' and John I. the Monophysite patriarch of Antioch, it would seem that the teaching of the Qur'an on the matter of heritages, the denial of the divinity and death of Christ, and on the subject of

the Tōrah, for which Muhammad's oracles show a marked predilection, was familiar to the Arab conquerors present in the discussion; but, on the other hand, it is certain that no Islamic book was mentioned in the course of the colloquy. This public discussion, the Syriac text of which has been published by F. Nau in *JA* vi. [1915] 248, is recorded by the historians Michel¹ and Barhebraeus.² The Qur'anic dogma which denies sufferings to Christ frequently helped the Nestorians against the Jacobites. So we are told in the letters of the patriarch Ishō Yabḥ of about A.D. 647.³ John of Phenek⁴ informs us that the Arabs 'had a special order from the one who was their leader in favour of the Christian people and the monks.' This would scarcely tend to corroborate ix. 31, 34, but it is in harmony with v. 85.

The first mention of the Qur'an by Christian writers is closely associated with the story of the monk Sergius Bhira ('the esteemed') which was current in Christian circles about the middle of the 8th cent., or some hundred years after the death of the Prophet. It is told in a modified form so persistently by Eastern and Western writers, and by Muslim traditionists themselves, that one is tempted to believe that it may contain some vague elements of truth.

The legend tells that an excommunicated monk called Sergius helped Muhammad in his literary, political, and religious career, and that after his death his rôle of mentor was taken up by a Jewish rabbi called Ka'b. According to Joannes Damascenus,⁵ Sergius was an Arian monk. More probable is the opinion held by all the Eastern and many Western historians that he belonged to the Nestorian community. The main sources of criticism are the Arabic *Apology* of al-Kindī (c. A.D. 820) and the Syriac text printed by W. Gottheil in *ZA* xiii. ff. (1898 ff.), which here and there contains elements dating from the same period. Some scholars of our day have even gone so far as to assert that the story of Sergius is necessary for the right understanding of the Qur'an.⁶

To Sergius are attributed, in their hypothesis, the very numerous passages worded in the following manner:

⁷ But if God bring thee back to a company of them, and they ask thee leave to go forth, say, "You shall never go forth with me" (ix. 84).

In this sentence the subject of the imperative 'say' can hardly be 'God'; otherwise instead of the word 'God' we should have had the pronoun 'I.' Until the story of Sergius is more surely established, nothing definite can be made of these surmises. The Muslim traditionists have as usual modified proper names foreign to them; so instead of *mar Yabḥ* they read the uncommon *Murḥab*; and instead of naming Sergius they generally adopted for his proper name the Syriac word *Bhira*, which means 'the esteemed,' and which is applied by the Syrians to every monk as a title. The Muslim traditions bearing on the subject have been gathered by Sprenger and Noldeke,⁷ and the Byzantine sources have been analyzed by Nau.⁸

12. Translations.—The Qur'an has been translated into many European languages, but, as its miracle lies in its style, it is doubtful whether any of these translations can satisfy all the exigencies of a Semitic language exhibiting the phenomenon of rhymed prose (*saḥf*). The Oriental images coloured by the tints of local

⁴ *PG* xciv. 764.

topics are also to be counted among the many difficulties which the translator has to meet, not to speak of the play on words, or intended catch-words of which only the original Arabic can give a true idea.

The first translations came into existence immediately after the period of the Crusades, when Western people became more acquainted with Islām. At the initiative of Petrus Venerabilis, abbot of Clugny, the Qur'ān was rendered into Latin by Robert of Retina and Hermann of Dalmatia in 1143, and published in Basel in 1543 by T. Bibliander. A better translation is that of L. Maracci (Padua, 1698). An Arabic-Latin Qur'ān was published (Leipzig, 1768) by J. F. Froriep.

The first French translation is apparently that of A. du Ryer (Paris, 1647). Better translations are those by M. Savary (do. 1783), M. Kasimirski (do. 1840), and G. Pauthier (do. 1852).

The first English translation is the extremely bad one made from du Ryer's version by A. Ross (1648-88). A much better, but somewhat paraphrastic, translation is that of G. Sale (London, 1734). J. M. Rodwell's version of 1861 marks the first attempt to arrange the *sūrah*s chronologically; the translation of E. H. Palmer (*SBE* vi., ix., Oxford, 1880-82) is more literal.

The earliest Italian version seems to be that made from the Latin of Bibliander by A. Arrivabene (Venice, 1547). A recent and much better version is that by A. Fracassi (Milan, 1914).

The first German translations were made from the Latin, the Italian, and the English. A better translation is that of G. Wahl (Halle, 1828), which is a revision of that by F. E. Boysen (do. 1773). A more recent version is that of L. Ullmann (Bielefeld, 1853).

There are also several Dutch versions, the best of which, it is said, is that by H. Keijzer (Haarlem, 1860). A Russian version appeared at Petrograd in 1776. J. Tornberg undertook in 1876 a translation into Swedish.

All the above translations are by European Christians. Some Muslims have in the last few years tried to render their Scriptures into English; the translation by Muhammad Abdul-Hakim

Khan (London, 1905) and that by Mirza Abdul-Fazl (Allāhābād, 1911) deserve special mention. The editor of the *Islamic Review* has announced a new translation, but *al-Manār*¹ is protesting against such an enterprise. Possibly it is of this translation, comprising, it is said, 30 volumes, that the first instalment appeared in 1916.

We cannot know the precise year in which the Qur'ān began to be translated into Oriental languages. The public libraries of Europe contain many MSS showing translations of the Qur'ān into Persian and Turkish. These versions do not seem to go back much before the era of the first Latin translations. There is reason to believe that a translation into Persian was in existence in the 13th century. The oldest MS to our knowledge which contains a translation into old Turki is found in the John Rylands Library—a beautiful MS of several volumes. The old Turki version which it contains may possibly date from the 14th century. The MS contains the Arabic text with an interlinear translation into Persian and Eastern Turkish, but the translation differs sometimes from the text (so the Arabic text of the MS in iii. 116 has 'and if it befall them,' while both Persian and Turki translations have 'and if it befall you'). There are many modern translations into Persian; the edition of Calcutta (A.D. 1831) and that of Delhi (1315 A.H.) seem to have widest circulation. Apparently the Turkish Government did not encourage the translation of the Qur'ān into Osmanlı Turkish, and it was only after the proclamation of the so-called Constitution in 1908 that a certain Ibrahim Hilmi could in 1912 print his version at Constantinople. It is said that the most used translation into Urdu is that by Wali Ullah (Delhi, 1790). We learn from the *Moslem World*² that a Christian missionary, W. Goldsack, had in 1908 undertaken a translation into Bengali.

LITERATURE—A bibliography of works which had appeared in Europe bearing on the Qur'ān was published by V. Chauvin, *Bibliographie des ouvrages arabes*, vol. x., 'Le Coran et la Tradition', Liège, 1907. Of native works, Jalāl al-Dīn-Suyutī († 911 A.H.), *Itqān fī 'ulūm al-Qur'ān*, first printed Calcutta, A.D. 1857, is the most complete. A. MINGANA.

R

RABBINISM.—See JUDAISM.

RACE.—**i.** Race-feeling and ethnology.—The word 'race' is used in different senses by men of science and ordinary people. The scientific ethnologist is concerned to find some precise, objective classification of mankind, and he employs the word 'race' to denote the particular differentia by which he classifies. As he classifies principally by physiological factors, such as shapes and proportions of skulls, degrees of pigmentation, facial angles, cross-sections of the hair, and so on, he groups the human species into corresponding 'races'—dolichocephalic and brachycephalic, brunette and blonde, prognathous and orthognathous, round-haired and elliptical-haired. This physiological classification is dealt with in detail in the art. **ETHNOLOGY**, but there are other objective or apparently objective characteristics which can be, and generally are, taken into account. Men can be classified by their language, and in this sense we can talk of the Latin, Teutonic, or Slav race. It is equally admissible to classify them by their social organization (matri-

archy or patriarchy, blood-feud or criminal law, primogeniture or division of inheritance, etc.), or by their material technique (stone age, iron age, nomadism, agriculturalism, industrial revolution, etc.). All these classifications are taken into account by the ethnologist. See artt. **ETHNOLOGY**, **MOTHER-RIGHT**, **BLOOD-FEUD**, **LAW**, **INHERITANCE**, **FIRST-BORN**, **AGRICULTURE**, **HUNTING AND FISHING**, **PASTORAL PEOPLES**, etc.

It is worth noting here that the ethnologist frequently blunders in attempting to make different schemes of classification coincide with one another. He tends to identify the group with yellow skins, round hair, and slanting eyes with the group that speaks agglutinative languages, or even with the group that has a shamanistic religion, and to bracket together all these differentiae as the marks of a single race. This tendency is unscientific, because it does not correspond to the facts. There are white populations, like the Finns, Magyars, and Ottoman Turks, who speak languages of the agglutinative family. There are yellow populations which are Christian, Muhammadan, or Buddhist in religion. The groups based on these

different factors of classification cut completely across one another; and these cross-divisions increase with the increase of civilization, for the 'objective' characteristics of civilized communities are more highly differentiated and more subject to modification than those of primitive man.

The tendency to ignore this fact is an instinctive approximation, on the part of the scientist, to the popular conception, and marks the distinction between ethnology and race-feeling. Race-feeling represents the divisions between races as clear-cut and absolute. The idea that men can belong to one race in one respect and to another in another is quite foreign to it, and this simple view is not contradicted by the data of its experience, for many of the scientific ethnologist's differentiae are unknown to it. No racial feeling, for instance, has ever been excited by difference in skull-form, on which particular stress is laid in ethnological classification. Only students are acutely aware of the cranial differentia, which demands the application of exact scientific measurements to hundreds of thousands of human beings, and an elaborate synthesis of the experimental data, before it can be used. Yet, though race-feeling is unscientific and uninformed, it is a very real factor in social psychology, and it is the purpose of this article to examine its nature.

Race-feeling generally asserts itself by contrast with other social principles.

The bonds and divisions which it creates, and actions which it excites, are remarkably different from those produced by the feeling of State. As members of a state, men are nearly always prepared to go to war for their state and to fight members of another state which is thought to menace their own state's existence. Community of race-feeling does not inhibit in any degree this willingness to fight, and some of the fiercest political wars have been inter-racial; e.g., the white populations in the Northern and Southern States of the United States felt themselves racially one, yet, because they were divided politically into Virginians, Pennsylvanians, and so on, and the Virginians held by 'State rights,' while the Pennsylvanians held by 'the Union,' they went to war with one another and fought out their difference. Again, the English-speaking ('Anglo-Saxon') race as a whole is divided into two political groups—the British Empire and the United States—which have been more hostile to one another than friendly. Britain is the only State against which the United States of America have fought twice since their independent existence. It has been the same with Prussians and Austrians on the European continent. Both were Germans, yet they went to war with one another repeatedly for more than a century to decide whether the Prussian or Austrian State should have the hegemony of Germany.

When we study this political feeling, it seems the paramount principle that divides or unites mankind. Yet all the time there are other relations between Germans as such, or 'Anglo-Saxons' as such, which are unaffected by the political barriers that happen to arise among them. The Northerners made the political rights of the Negro race the chief principle for which they fought, but their race-feeling towards the Negro has remained as strong as, or stronger than, the Southerners'. The tabu against intermarriage between the black and white races is still as absolute in the North as in the South, while Northern and Southern Whites have intermarried as freely since the Civil War as before it. Again, the political schism between the United States and Britain has not affected their feeling of a common racial inheri-

ance. The American draws his culture from Milton, King James's Bible, and Shakespeare; he holds by the Habeas Corpus Act as the foundation of his civil liberties; he makes pilgrimages to English castles and cathedrals as shrines in which the romance of his early history is preserved, while the Englishman, on his part, takes pride in the voyages of Sir Walter Raleigh and the Pilgrim Fathers, which were the foundation of the United States. It is the same with the Prussian and Austrian. Turn their minds from Sadowa and Frederick the Great to Goethe or the hero Siegfried, and they become simply Germans, of one 'race,' with one another and with the German-speaking Swiss.

In most human societies there is, in fact, a sense of some 'objective' grouping more permanent, and in the last resort more strong, than the political organization created artificially by acts of will. You may make and unmake social contracts, draw up acts of union and declarations of independence, make slavery a legal status or abolish it by emancipation, but these underlying bonds and divisions remain eternal, and are not to be modified by human desire or human contrivance. This objectivity of race is proverbial. 'Blood is thicker than water,' we say, when we see the bond of race-feeling overcoming the divisions of interest and accident; or 'Can the Ethiopian change his skin?', when race-feeling emerges as a disruptive force and checks some effort after fraternity or common citizenship by the conviction that 'Black is Black and White is White,' and that good intentions cannot change them.

This sense of an objective grouping has played an important part in history, of which we shall give a brief account. But it is essential to note, once again, that we are dealing with the sense, or mental representation, of objective grouping, and not with the really objective classification which the scientific ethnologist sets out to discover. The factors which race-feeling represents to itself as objective, and from which its stimulus is derived, are often far from being objective in fact. They vary perpetually from each other and from the scientific norm. But it is the representation, and not the external stimulus of it in any given case, that is the important element in the feeling of race.

2. Racial myths.—In a completely isolated, and also completely undifferentiated, human group the race-feeling of the members would be an accurate scientific analysis of the real objective factors constituting the character of the group. These factors would be handed down unincreased and undiminished from one generation to another, and their aggregate would be as constant as the race-feeling that it stimulated represented it to be.¹ But this is only an abstraction, and there are no actual human groups of this kind. There is no known group which does not mix and cross itself to some extent with other groups of mankind, and it is probable historically that all existing groups are differentiations from a single original stock. Even endogamous communities, which aim (of course unsuccessfully) at isolation, tend, on the other hand, to a specially sharp differentiation of 'marriage-classes' internally. Whether by internal differentiation or by coalescence with other groups outside, the permanence and objectivity of the group-character are in practice destroyed, and the sense of permanence and objectivity, which we call race-feeling, can therefore only express itself intellectually by a myth.

¹ Even in a perfectly isolated and undifferentiated group this would be true only in theory, for it appears that the factors in the character of any living organism are infinite, or, in other words, that there is a constant process of variation which makes immunity from differentiation impossible.

There are probably the rudiments of a racial myth wherever race-feeling exists, though they are often inarticulate and do not attract our attention. There are cases, however, in which myths have been deliberately invented to express existing race-feeling or even to stimulate race-feeling where it did not before exist.

The name 'Belgium' is a myth of this artificial kind. In 1830-31 certain populations which had been grouped together politically, and separated from their neighbours, for about three centuries by accidents of ecclesiastical history and the dynastic balance of power, felt an impulse to break away from Holland, with which the act of a European Congress had united them for the past fifteen years, and to form an independent political group of their own. The impulse issued in a revolution; the revolution was successful; a new state was founded. It was a very living state—the creation of a group which had just asserted its independence by fighting for it, and was determined to maintain it for the future. But this group and this state were without a name. The country had been called the Spanish Netherlands or the Austrian Netherlands for the past three hundred years, but these names were merely negative; they expressed the absence of any independent group-impulse and group-idea, and therefore could not express the new growth and realization of them. A new name was wanted for a new thing; and the Southern Netherlands, ransacking history, appropriated the name of a conglomeration of tribes that lived between the Seine and the Meuse when Cæsar conquered Gaul. The real connexion between Cæsar's 'Belgæ' and 'Belgica' and the new group and state of 1831 was infinitesimal. Cæsar's Belgæ spoke Celtic, the Netherlands Teutonic and Romance, and even the Romance-speaking half of the group were only very doubtfully descended from Latinized Belgic provincials. There was no relevant continuity of culture, for the Netherlands drew their cultural inspiration from mediæval Flanders and Revolutionary France, the Belgæ theirs from the Central European Iron Age, and then from Rome. But the dead name artificially revived was given life by the new group-feeling by which it had been appropriated. All the national feeling of 1831 found expression in the Belgian myth; and in 1914—the next great crisis in the national history—King Albert exhorted his army to withstand the Germans by the reminder that Cæsar had called the Belgæ the bravest of the Gauls. In eighty-three years an academic myth had penetrated to the heart of a group-emotion.

The stimulation of feeling by an artificial myth, where the feeling did not exist before, can be illustrated from the history of Athens. About 511 B.C. the Athenian statesman Kleisthenes wished to abolish the traditional groupings within the Athenian State, which were bound up with the old social order, and to establish new groupings in their place which would stimulate a more democratic feeling in the members of them. The new groups that he planned were highly artificial in their character. They were to be territorial, but, to prevent them from becoming vehicles of local feeling, the territory of each group was to be scattered in three different parts of Attica. The problem before Kleisthenes was to inspire these new artificial groups with a corporate feeling stronger than the loyalty to the traditional groups. Unless he solved this, his reorganization might nominally be accepted, but would have no practical influence on Athenian political life. Yet the traditional groups not only were knit by the bonds of kinship and locality, which Kleisthenes deliberately eschewed, they were fortified by the existing body of Attic mythology, which traced back the ancestry of each *φύλη* and *φαστρία* and *γένος* to some hero worshipped by the Athenian people.

Kleisthenes decided to canonize his artificial groups by inventing an even more artificial myth for each of them. He drew up a panel of a hundred Attic heroes, asked the god at Delphi to select the ten most suitable, and then proclaimed these ten as the *ἀρχαγευεῖς* ('ancestors' or 'founders') of his ten new *φύλαι*. To a modern statesman this would have seemed the surest way of exposing the new *φύλαι* to ridicule, but Kleisthenes knew just where the vein of race-feeling in his fellow-countrymen lay. The statues of the ten *ἀρχαγευεῖς* were solemnly set up before the government house at Athens; festivals were enjoined on their *φύλαι* in their honour; and the contingent of each *φύλη* was placed under its own hero's protection in war. And in less than a century the *ἀρχαγευεῖς* were the most living myth in Athens after the national myth of Athens Pothas. They had appeared to their tribesmen in battle; they were appealed to in patriotic speeches; in fact, they had developed individual personalities. The new myth had struck root, and it had brought a new group-feeling with it. The new *φύλαι* supplanted the old as completely as the Departments supplanted the old French Provinces, and an Athenian now felt that he was an Erechtheid or Pandionid, and all his ancestors before him, back to Erechtheus or Pandion himself. The ten *φύλαι*, invented by an Athenian's statesmanship, had become for other Athenians part of the objective order of the universe.

Race-feeling is one of the strongest conservative forces in social life. It tends to stabilize any human institution, any system of grouping or division, to which it once becomes attached, no matter how recent, artificial, or transitory in its nature that institution may be. This effect of

race-feeling was known to Plato, and in a famous passage of the *Republic*¹ he exploits it, half humorously and half in earnest, to conserve the highly artificial constitution of his ideal State.

Plato's State is to be differentiated into rigid castes, with the sharpest division of function and privilege; but the castes are to be recruited by merit, and every individual, starting as a child on an equality with every other, is to be assigned to his caste by a process of selective education. The psychological problem before Plato is to reconcile the feeling of permanent objective likeness and difference implied in the system of caste with the feeling of change, development, and competition implied in the process by which the castes are to be recruited. Unless his citizens feel that they each and all belong inevitably to whatever caste they have been assigned to, the castes will be mere forms without moral influence on the life of the community. But the competition by which the caste of each individual is to be determined is calculated to stimulate the very opposite feeling—that human will and effort are the determinants of human relations; and the change, at an arbitrary moment, from competition to fixity is likely to aggravate this feeling rather than to make it give place to the other feeling of objective determinism, on which the caste-system itself must depend. On the other hand, if once the sense of fixity is implanted in the adults, they will tend to extend it to their own children in turn, and will feel that they must derive their caste from their birth, and not from the selective process through which the parents have originally passed themselves, and which, like caste, is the law of the State.

The problem, in fact, is to make the citizens of the ideal State hold two opposite views of social relations simultaneously, and Plato proposes to solve it by making them—if not the ruling caste, at any rate the rest—believe 'a single noble lie.'

'I shall try,' he says, 'to make them believe that the upbringing and education we gave them was all a dream, and that, while they imagined they were being given it, they were really being moulded and brought up in the bosom of the Earth, and that their arms and tools were being fashioned there too. Then when they were finished off, I shall tell them, the Earth, their mother, brought them to the light, and it is now their duty to take counsel and arms for the country in which they find themselves (if that country is attacked), as for their nurse and mother, and to feel for their fellow-citizens as brethren born of the same Earth as themselves. . . .

"All of you in the State are brethren," we shall tell them in our myth, "but when God moulded you, he blended gold in the substance of those among you fit to rule, and that is why they are the finest; in the warriors he put silver, and iron and bronze in the peasants and other workers. You are all of one stock, so you will generally beget children like yourselves; but sometimes there will be silver offspring from gold, gold from silver, and all the other possible permutations. So this is God's first and chiefest commandment to the rulers: Show yourselves good guardians and keep vigilant guard above all things over the children, to see which metal is blended in their souls; and if your own children are born with bronze in them or iron, have no pity on them, but dismiss them to the workers and peasants, where they belong by nature; and if workers or peasants have a gold or silver child, put him too where he belongs and promote him among the guardians or warriors, as the case may be. Thus saith the Lord, on the day when he that ruleth the State is of iron or of bronze, on that day the State shall be brought to destruction."

The imaginary speaker then proceeds to ask his interlocutor in the dialogue whether he can see any way of getting this myth believed. 'None,' he answers, 'of making your citizens themselves believe it; but one could make their children believe it, and their children's children, and everybody that followed after.'

The suggestion is a dogmatic State education, and there is nothing visionary in expecting it to produce the intense psychological effect which Plato demands. The national states of the modern world have all organized this kind of education for their children in different degrees, and the stimulation of race-feeling in each state has been remarkably proportionate to the thoroughness with which this has been done. But the racial myth is capable

of striking root without an educational propaganda, as is shown by the example of Kleisthenes quoted above. It can do so because the race-feeling to which it gives form is one of the instinctive social needs of mankind. There are other feelings and myths on which human societies may be founded, but they show a strong tendency to revert to the racial type in the last resort. The Jews, for instance, think of themselves theoretically as a 'Chosen People'; their foundation-myth is a 'Covenant'; their physical hall-mark is not a skin which they cannot change or a stature to which they can add no cubit, but the artificial and deliberate custom of circumcision. The covenant between Jahweh and Abraham is essentially an act of will on both sides (see art. COVENANT, § 3). Jahweh chooses Abraham, and Abraham accepts the choice; and logically every member of the Chosen People from Abraham onwards can be so only by receiving and answering the same call. Yet the idea of race has been imported into the Jewish foundation-myth. Abraham's covenant is made 'for his seed for ever,' and the chief factor in the Jewish group-consciousness is the racial factor of 'having Abraham to their father.' The report that 'God out of these stones can raise up children to Abraham' is a profound criticism on the idea of race itself. It implies that an objective or external principle of grouping, even if it exists, will be utterly inconsequent in its workings. If you trace Judaism by descent, any one or any thing may be a Jew without partaking of any of the factors essential to Jewish group-character. To be a true heir to Abraham's covenant depends on a subjective not an objective factor—not on race but on will.

Christianity was in its origin a reaction against this reversion to race-feeling in the Jews. It proclaimed that the covenant was made not with every descendant of Abraham, but with any individual in the world who was converted to accepting it. Christianity deposed race and set up faith instead of it, and it is the more remarkable that Christianity, in turn, should have reverted towards race-feeling in the doctrine of predestination.

This doctrine may be reconciled with free choice by theological dialectic, but its underlying motive is to go behind free choice and represent it as a mere expression of an objectively determined classification. It really eliminates from the covenant the will of man, and leaves only the will of God, which, being external to man, is, from the standpoint of man's personality, as mechanical as physical phenomena. Predestination divides mankind into two races sundered from one another by an unalterable difference of spiritual morphology, just as ethnology divides it into races by the different morphology of pigmentation or skull-form. It is a racial myth considerably hypostatized, but it is a racial myth none the less, like the myth of descent from Abraham, or from the ten *apxnyereis*, or from the Belgæ in Cæsar's Gaul.

This persistent return of the social consciousness to the racial basis is doubtless the response to a psychological need. Race-feeling puts those who experience it into an atmosphere of eternity and certainty. It is like a treasure laid up in heaven, which cannot be impaired by the weaknesses and vagaries of the human will. It is an antidote to the sense of transience, effort, and weariness, which infects the world of time and change. But, though it lightens the burden on the individual, it also diminishes his power and cramps his initiative, and there is therefore a counter-current in mankind of revolt from racial determinism towards free association. The patriarchal myth is challenged by the hypothesis of the social contract, the system of

caste by citizenship. This tendency towards self-determination in social grouping may be classed as political, in contrast to the racial tendency (though both these terms are possibly too narrow to cover the psychological fields included under them here). The two tendencies can be seen at tension in the course of history.

3. Historical survey.—(a) *General tendencies.*—All group-feeling implies a standard—a common idea of what is 'the normal,' and a common impulse to approximate towards this type.

The need for 'normality' is illustrated by the case of the African explorer who, after he had lived several years among negroes without seeing any white man but himself, used to be turned sick by the sight of his own white skin, which now seemed a leprous and obscene exception from the normal black. The abnormal man is in fact usually more conscious of the type, and craves more keenly towards it, than members of the group who are not conscious of any peculiarity in themselves. He is his own most effective chastiser (for example, the Indian Sweeper, who accepts his caste as religiously as the Brâhman, and is as careful as he to keep his proper distance when they meet in the street, though it is the Brâhman who is in danger of being defiled). It is this homage to type on the part of the individual who varies from it that gives the group-spirit its crushing disciplinary power, and makes a group, once constituted, so inelastic towards its members within and towards other groups without. There is an element of rigidity in every group, which is probably necessary for its preservation; but the degree of rigidity varies vastly from group to group, in proportion to the degree in which the group-feeling is based on race or on free association.

The less advanced people are in civilization, the less their life (both physical and spiritual) is under their control. Nearly all the forces of nature, and many of the workings of their mind, are data external to their will instead of material to be moulded by it, and social groups are as rigid for them as all other phenomena. The internal bonds seem indissolubly intimate, the external barriers insuperably wide. Each tribe, each sex, each age within each sex or tribe, is discrete from every other; and it is just as incomprehensible (and formidable) that a boy should turn himself into a man, or a seed into a tree, as that a man should turn the tree-stem into a boomerang. Yet these miracles are happening all the time. Nature passes, and men like her, through the changes of birth, maturity, and death, and the human will is increasingly (though still unconsciously) imposing on its environment a purpose of its own. There is a contradiction in primitive man's experience, and he solves it by an elaborate development of initiation-ritual, to tide over the changes of unchanging things, which are an intolerable abnormality in a group founded upon race.

In primitive man race-feeling is thus strong, but it is an obstacle in his path which he is using all his ingenuity and imagination to surmount. The initiation-ritual is the germ of free association and conscious control, and these constitute civilization (see INITIATION [Introductory and Primitive]). In civilized society race-feeling is relatively weak, but it grows strong again in civilizations that are in bad health or on the decline—no longer as an obstacle now, but as a preservative.

When a group is decadent, it has lost its power of growth, differentiation, and assimilation; it is even losing the accumulated capital of the past; and change, instead of being the essential expression of its vitality, seems to be the process by which its vitality is wasting away. Change must be arrested if the decadent group is to survive, and the members of the group attempt to arrest it, not merely by conscious archaism and reactionary legisla-

tion, but by concentrating their group-feeling upon the objective, unalterable aspects of the group-character. If a Chinaman is always a Chinaman, if every Chinaman born inherits the qualities of the eternal Chinese race, then the China of the Boxer rebellion is as good as the Celestial Empire of the Han; and Chinese vitality, like water from a never-failing reservoir, is always bound to find the level of its highest altitude in the past. The 'foreign devils' may superficially be more clever and successful than the Chinaman of to-day, but that need not confound him so long as he holds fast to his race. They are children of to-day and will perish to-morrow, while he is of the race of the Han, who were at the zenith of human achievement when the foreigners lived like the brutes.

This defensive recrudescence of race-feeling is characteristic of all civilizations that have passed their prime—the Chinese, the ancient Egyptians (whose priests told Solon that 'the Greeks were always children,' and showed Hekataios the statues of 345 high-priests descending from father to son¹), the Spartans and Athenians in the first centuries of the Christian era, the East Romans in the Middle Ages. It is strong at the present day among the Jews in Europe and the Jewish and Near-Eastern immigrants in the United States; and this is a remarkable case, because the motive of self-defence is here comparatively weak. These immigrants do not find themselves at a disadvantage individually as against the aliens with whom they come in contact. Unlike the Egyptians or Chinese, they adapt themselves successfully to the modern environment, and even attain the highest positions of wealth and power in the new groups to which they attach themselves. The pressure which maintains their race-feeling is not external, but arises within themselves. The Gentile group is not closed against the Jew; it is the Jew who will not merge himself in it, because that would be a tacit admission that his own group had lost its existence—a failure which he refuses to face. The more successfully, therefore, a Jew or Eastern European adapts himself to his present group-environment, the more jealously he cherishes the race-feeling that identifies him with the group of the past. He cultivates the ritual and language, prophecies and heroes, folk-songs and national dress of a group which was broken up five hundred or eighteen hundred years ago, by Muhammad the Conqueror or by Titus and Vespasian. Only a few individuals overcome this instinctive group-reaction and surrender themselves spiritually to the new group in which they live and have their individual being. Such individuals are often scorned for 'losing their race'; they should rather be commended for casting out an irrational race-feeling which no longer corresponds to their real social relations, and giving their allegiance to the new group into which they have voluntarily entered.

(b) *Race-feeling in ancient Greece.*—It has been suggested above that race-feeling in any human society tends to be in inverse ratio to the vitality of its civilization. There is not space here to trace this curve of race-feeling through the whole of history consecutively, but it may be tested in two important instances—the civilizations of ancient Greece and modern Europe.

Ancient Greek civilization sprang more abruptly out of primitive conditions than ours, and was therefore penetrated by race-feeling more profoundly at its roots. The city-state (which was the ancient Greek state-form, as the national state is ours) was rooted in it. Historically, these city-states were not racial unities at all. They were combines of smaller groups—village communities

scattered over a plain (*παρρηλαί¹*), or bands of rovers flocking together from across the sea (*φυλαί²*), and even these smaller units were not homogeneous in themselves. They had come together in the Ægean from the four quarters of the earth, and an ethnologist would have analyzed in each of them every variety of skull-form and pigmentation. Yet race-feeling dominated the group-consciousness of the city-state and its structural parts. The city's legendary founder was conceived as the ancestor of the living citizen-body. He had fixed the constitution and begotten the men and women who were to live under it. The constitution could be supplemented by current administrative regulations, but (like the American federal constitution) it could be altered only by elaborate 'initiation-ritual' or else by revolution. The citizen-body, again, could be supplemented by immigration; but the immigrants remained resident aliens. They might live in the city from father to son, build up its trade, pay its taxes, serve in its wars, and even create its literature (Lysias, the model of Attic oratory and leader of the Athenian bar, was a resident alien of ancient family); but they were still aliens, without a vote and even without a status before the law (Lysias, who could present the case of his citizen-clients, could not enter the court as a principal himself). The fullest participation in the city's life could not make the blood of the founder flow in their veins, and citizenship was inseparable from this racial qualification. 'Naturalization,' like constitutional development, could be brought about only by revolution, and revolution, when it occurred, was generally complete. Every free inhabitant of the city territory—citizen, free immigrant, or enfranchised slave—then became a citizen of what was virtually a new state, with a new internal organization and a new racial myth which made the new citizen-body just as exclusive as the old.

The city-states of ancient Greece were thus racial to the core, and that is why they were never transcended—a failure that was the political ruin of the Greeks. Greek national life, on the other hand, which sprang from the same origins as the city-state, emancipated itself from race-feeling easily and quickly. It has been mentioned that in Greece, as in primitive societies, every racial group was a religious group as well, so that race-feeling and religious feeling were co-extensive (see art. GREEK RELIGION, § 4). But there were several Greek groups—Delphi, Pisa, Eleusis—which, as it were, abnormally developed their religious side and received into their religious communion neighbour-groups which would have remained hopelessly sundered from them and from each other on the narrow racial principle. Delphi, for example, by the 6th cent. B.C. had received into its 'amphictyony' about two-thirds of the Greek-speaking population on the mainland, and had given the common name of 'Hellenes' to all Greek-speaking people. All 'Hellenes,' in turn, were admitted at Pisa to the religious festival of the Olympian games. Admission to the games became the test of 'Hellenism' or Greek nationality.

This Hellenism was at first conceived racially. The Hellenes were contrasted with the 'barbarians' (the man who spoke jargon), and was thus distinguished by language, which, though a far broader basis of association than the ancestral basis of the city-state and its sub-groups, was still external and objective. But his Hellenism was never tested by his mother-tongue alone. Slaves, for example, were excluded from the games, though most slaves in 6th and 5th century Greece were Greek by speech and ancestry; and a man was not necessarily a Hellenes even if he spoke Greek and was free. In

¹ Herod. ii. 143.

¹ Lit. 'brotherhoods.'

² Lit. 'growths (from one stem).'

the 5th cent. B.C. a Macedonian king entered himself for the foot-race at Olympia and was appealed against as being a 'barbarian' by his competitors, but was admitted to be a Hellene on showing that his genealogy derived from the mythical ἀργυρεὺς of the city-state of Argos.¹ Now a king was certainly a freeman, and the Macedonians spoke as genuine a Greek dialect as the Argives themselves. The appeal against this Macedonian king therefore looks like a reversion from the linguistic basis of Hellenism to the narrower ancestral basis of the city-state. Really, however, it marks an advance in the other direction, for the qualification required of him was not that he should be a registered citizen of this city-state or that (as in fact he was not a citizen of Argos), but that he should be within the pale of the 'city-state culture.' Hellenism, by this ruling, implied not merely the freeman's status and the Greek mother-tongue, but a certain kind of social life, and other Greek historians besides Herodotus support this view. Thucydides calls the inhabitants of Epirus barbarians, though they too spoke Greek. Aristotle, on the other hand, talks of Rome² as a πόλις Ἑλληνίς, classifying not by language but by constitution; and he also describes the constitution of the city-state of Carthage in his *Politics*—a work otherwise devoted almost exclusively to the politics of Greece.

These standards of Hellenism led up to the conception that Hellenism was not an inalienable and untransmittable race-character, but a quality that could be acquired.

'The Hellenic people,' says Herodotus,³ 'has in my opinion spoken the same language ever since it existed [a concession, this, to the objective notion of race]. It was originally an offshoot of the Pelasgian people, and started weak; but from small beginnings it has grown to include a multitude of populations which have become assimilated to it—chiefly Pelasgians, but many other barbarian populations as well. As for the Pelasgians, I do not imagine that, as barbarians, they grew to anything great previously to the growth of the Hellenes.'

In other words, the essence of Hellenism is not a certain language spoken from time immemorial by a certain group, but a development of culture which enabled this group to assimilate far larger groups outside it—the population of Attica⁴ among others. This cultural evolution of Hellenism, by which an ever-expanding group is distinguished progressively from the raw material of humanity, is sketched in by Thucydides:

'Hellen and his sons grew to power in Phthiotis and were called in to assist the other city-states; and so, one by one and by the effect of intercourse, chiefly, they came to be called Hellenes, and it is only a short time ago that this name established itself among them all.'⁵

'Once all Hellas wore arms in civil life like the barbarians. The parts of Hellas that still live like this witness to the life that was once lived by all alike.'

The Athenians were among the first to leave off weapons and change to less austere habits. . . . The Lacedaemonians were the first to strip naked and to take off their clothes in public and rub themselves with oil when they took exercise. Formerly even in the Olympian games the competitors wore girdles when they competed, and it is not many years since this was given up. Among some barbarians, especially the Asiatics, they still wear girdles when they box or wrestle. In fact, a great number of points can be adduced in which the life of the ancient Hellenes was undifferentiated from that of the modern barbarians.'⁶

This evolutionary view of Hellenism is at the farthest remove from the racial concept of φύλη and φασαρία which pervaded the city-state, and contemporary Greek thinkers were conscious of the contrast. They called the two opposite principles νόμος and φύσις, and debated their relation to one another. Pindar, the reactionary poet, was always proclaiming the paramountcy of φύσις, but it was also his saying that 'νόμος is king of all,'⁷ and this idea entered profoundly into the attitude

of the Greeks towards the likenesses and differences between group and group.

During the 5th cent. the Greeks became intimately acquainted with peoples strikingly unlike themselves—the Egyptians in the Nile valley and the Skythians in the Russian steppes; and this might have stimulated their race-feeling afresh. To recognize a common Hellenism in the descendants of Theseus and the descendants of Herakles was one thing, but to recognize a common humanity in men with brown skins or men who never tilled the ground needed a greater intellectual effort. The Greeks, however, accomplished this feat of imagination. The strangeness of the country and climate in Egypt and Skythia struck them as forcibly as the strangeness of the inhabitants; and they concluded that the latter was conditioned by the former, and that Skythians, Egyptians, and Hellenes were the same human metal stamped with a different impress by the diverse environments into which it had been introduced. Thus the experience of alien human types, so far from stimulating race-feeling in the Greeks, tended to make them sceptical of race altogether.

This explanation of group-differences by adaptation to different environments is worked out in a treatise on *Atmospheres, Waters, and Localities* included in the 5th cent. collection of medical writings left by the Hippokratean school.¹

'Some (human) natures,' the writer lays down, 'are like well-wooded, well-watered mountains, some like thin-soiled, waterless country, some like meadow and marsh land, some like stiff, arable lowland.'² 'The Skythians,' he says elsewhere,³ 'are like one another and no other people in the world, and it is the same with the Egyptians, except that these have been forced into their physique by the heat, and the Skythians by the cold.' He explains temperaments in the same way. 'A wild, unsociable, impetuous temperament' is produced by a climate of extremes, for in such a climate 'the mind receives constant shocks which implant wildness and weaken the mild and gentle side of character.'⁴ He even traces differences in group-temperament to differences in political constitution: 'The inhabitants of Europe are also made more warlike by their institutions, because they are not ruled by kings like the Asiatics. Where people are ruled by kings, they are inevitably more cowardly.' He discusses in detail the psychological reasons for this, and cites the exception which proves the rule—'The Greeks and barbarians in Asia who are not under autocratic government, but are self-governing and labour for their own profit, are as warlike as anybody.'

But, if the group-differences between Hellene, Egyptian and Skythian, European and Asiatic, were accidental and alterable by human endeavour, if your group-character merely depended on whether you lived a thousand miles nearer the Equator or the Pole, in a swamp or on a mountain, whether you built your city with this aspect or that, whether you let yourself be governed by a king, then racial barriers were potentially abolished. Any barbarian, by taking thought, could raise himself into a Hellene, and any Hellene could sink into being a barbarian.

This conception of Hellenism, not as race, but as a culture for all humanity, gained ground steadily from the 5th cent. on. Herodotus tells the story⁵ of the Skythian king who lived as a Hellene in a Greek trading-settlement several months each year, till his tribesmen discovered the double life that he was leading and killed him. The campaigns of Alexander gave vast populations the opportunity of 'Hellenizing' themselves freely; and, though this Hellenization was sometimes superficial (e.g., in the propaganda of 'Jason' [Joshua] the Jewish high-priest, who conceived Hellenism in terms of a gymnasium and felt hats, and was very properly overthrown by the Maccabean reaction), yet in other cases it was profound. The cities beyond Jordan produced a distinguished

generation of Hellenic rhetoricians, scientists, and poets, and a new school of Hellenic philosophy was founded by the Phoenician Zeno. Taking the profound and the superficial together, it is true to say that the idea of Hellenism in ancient Greek civilization did transcend completely the idea of race inherent in the city-state. It made possible a feeling of unity between all men, and passed over without a break into Christianity.

Christianity in its origin was the antithesis of race-feeling; its membership depended on an inward spiritual act, and within the Christian group there was no more Jew or Gentile, Skythian or Hellenic, bond or free. But in this it had been anticipated by the little Greek *φρατρία* of Eleusis, which had developed its primitive initiation-ritual into a spiritual religion and had thrown it open to all mankind.

(c) *Race-feeling in modern Europe.*—The history of race-feeling is more difficult to trace in modern Europe, because it is still unconcluded, but it is clearly very different from the development just outlined in the case of ancient Greece. European civilization did not spring straight, like Greek, from primitive social life, and was therefore partly emancipated from race-feeling at the outset. It had behind it Hellenism and Christianity—two social forces which were the antithesis of race—and also Roman imperialism, which had imperfectly translated Hellenism and Christianity into political terms by building a 'world city state'.¹ The Latin Church of the Middle Ages, with its common ecclesiastical organization, common culture-language, and common outlook on life, overrode race-feeling triumphantly. It assimilated the outer barbarians who broke into the Roman Empire in its decay. It initiated into European civilization populations which had lain entirely outside the Roman pale—Angles and Saxons, Scandinavians, Poles, Hungarians, Lithuanians. It looked on all Latin Christendom as one, and on heathens and Muslims not as vessels of destruction, but as raw clay ready for the Christian mould. The legend of Prester John (*q.v.*), the mighty Christian king who was to come out of the heart of Africa or the heart of Asia and aid his fellow-Christians to make Christianity prevail all over the world, shows how completely free from race-feeling the spirit of mediæval Christendom was. And the history of mediæval theology, orthodox and heretical, shows how living was the community of thought within the Christian group. A new doctrine travelled within a few years from one end of Christendom to another, was passed on from Croats to Albigenses, from Englishmen to Czechs, receiving a fresh but unbroken development from each of the wandering students or pilgrims by whom it was transmitted. No race-feeling inhibited this general interplay of ideas.

But this great anti-racial force on which European civilization was founded has been invaded by race-feeling to an increasing degree. The linguistic basis of association and dissociation, which had been transcended first by Hellenism, and of which Christianity in its origin had been independent, began very early to assert itself and to split the Church, united by the subjective bond of a common belief and a common will, into a number of groups divided from one another by their 'mother tongues.' This relapse towards race-feeling as the basis of grouping began on the eastern fringes of the Christian world. It first made itself felt in the disguised form of doctrinal disagreement. The Jacobite, Nestorian, and Gregorian Churches left the Catholic communion nominally because they differed on some article of the creed or some ruling

of a council; and the founders of those Churches were probably unconscious that they were also ministering to an impulse in their followers to have a liturgy and a literature in their own vernacular—Coptic, Syriac, or Armenian. A few centuries later the Orthodox Church broke communion with the Roman Church, also nominally on doctrinal grounds; but the practical issue was the struggle of the Greek and Latin languages each to become the official language of the Church, and the inability of either to conquer the whole field of Christendom from the other. This linguistic element in Orthodoxy reveals itself in the liberality with which the Greek Orthodox Church allowed its Slav converts in the Balkans and Russia to form autonomous Orthodox Churches with the Bible and liturgy in their native tongue. And it is noteworthy that among the Slavs on the Adriatic littoral, who bordered on the field of Orthodox missionary expansion, the papacy was forced by competition to make equally liberal linguistic concessions, in complete contradiction to its general policy elsewhere.

The Protestant Reformation (*q.v.*) in W. Europe was in large part a linguistic movement too. The Hussites (*q.v.*) in Bohemia took up arms for 'communion in both kinds,' but they were in fact the Czech peasantry reacting against German penetration. Luther (*q.v.*), a century later, set out to restore the Bible to the laity, and with this object he and his fellow-Protestants in other countries translated the Bible into the High German, Danish, Swedish, Dutch, French, and English tongues. But the translators were also ministering to an impulse among these populations to develop native linguistic cultures of their own, of which these vernacular Bibles became the foundation.

Moreover, there was a political side to the Protestant movement, and this again was disruptive in its effect. Luther attacked the ecclesiastical centralism of the Roman papacy, and so transferred an immense field of patronage and administration to the local state. The rule '*Cuius regio eius religio*' was formulated in Germany, but it was acted upon just as ruthlessly by Henry VIII., and a momentous increase in state sovereignty was the result. Each state aimed at establishing its own uniform state religion, uniting all the members of the state to one another and dis severing them from members of other states beyond the frontier. This state uniformity at the price of a schism in European civilization was enforced by persecution (such as had only been employed before by the Catholic Church acting for Christendom as a whole), and persecution led to religious war, both internal and inter-state, which widened the breaches still further.

Historians often allege nowadays that religious persecution is obsolete, that European civilization has transcended it, and that this is a notable triumph in its progress. In reality it has not been transcended, but has simply completed its development. The Reformation and Counter-Reformation were largely secular at the outset: in the course of several centuries the groups to which they gave birth have been secularized completely. The Dutch national state—to take an example—is the lineal descendant of a Protestant group which differentiated itself in the 16th cent. from the Church of Rome; the Belgian national state owes its historical limits to the fact that the population of the present Belgian territory held fast to Catholicism when its neighbours, all round it, were breaking away. In instances like those we can see the ecclesiastical factor in the group-character being eliminated, and the linguistic factor coming to the front more and more, but all the time the race-feeling, once generated in the group, has preserved

¹ 'Urberem fecisti quod prius Orbis erat' (Venantius Fortunatus to Rome)

its continuity, and has increased rather than diminished in its sense of objectivity and its intolerant spirit. It still produces persecution, civil war, and war between state and state, by a fanatical belief in the necessity and rightness of external uniformity, and by an uninhibited craving to impose this uniformity by violence. And this ideal of linguistic uniformity is the religion of Europe in the 20th cent. (so far as religion is a group-phenomenon) in the same sense as the ideal of doctrinal uniformity was in the 17th. In spite of the superficial change of orientation, the creed of 'Cuius regio eius religio' has persisted, because the race-feeling behind it has remained the same.

Thus the inheritance of internal unity which European civilization derived from Hellenism and the Christian Church has been frittered away, and the anti-racial group-feeling of Catholicism has degenerated gradually into the acutely racial group-feeling of nationalism. There has been a corresponding 'racialization' of the division between those inside and those outside the civilized pale.

It has been said that mediæval Catholicism divided mankind into Christians and pagans (including Muslims), and regarded the latter, not as creatures different in species, but as potential Christians capable of becoming actual Christians at any moment by an individual act of will.¹ But, about the time of the Reformation, the great maritime discoveries brought Europeans into contact with other populations markedly different from the people of Europe and W. Asia in externals. Their pigmentation was at the opposite extreme of the human colour-scale; their culture was too primitive to be placed in any scale of comparison at all with European culture; and the climate in which they lived was tropical instead of temperate. In coming into contact with these populations, Europeans were having the same experience as the Greeks when they came into contact with Egyptians and Skythians, but their reaction to it was not the same. The Greeks, struck by the environmental contrast as much as by the contrast in human type, explained the latter by the former, and concluded that all human beings, however acute their superficial differences, were the same in essence, and that every variation of human kind was potentially transmutable into every other. The Europeans were struck so forcibly by the external differences that it never occurred to them to explain their origin by the secondary influence of environment, or to look forward to their elimination by change of environment or progress in culture. The differences hypnotized them as the one overwhelming fact. The black man might become a Christian, he might adopt European clothes or habits of life; but he remained black, and the European white. The colour-barrier presented itself to the European as insurmountable, and it displaced religion for him as the dividing-line between people within the pale of civilization and people without. Instead of classifying mankind as Christians and pagans, transmutable, by conversion, into one another, he now classified them as 'white men' and 'natives,' the 'white race' and the 'black race,' divided from one another by external objective characteristics which no act of will on either side could surmount. And, just as the Greek's hypothesis of adaptation to environment, as an explanation of the Egyptian and the Skyth, reacted on his own feeling of Hellenism, making it more humane and un-racial in quality, so the European's hypothesis of a specific difference between Black and White reacted on his own growing nationalism and made it more uncompromisingly racial than it need otherwise have become.

¹ It is typical of mediæval Catholicism that its artists represented one of the Three Magi as a negro.

The internal unity and external assimilative power which Christendom once possessed can be inferred by comparison with the Islamic world as it still is—Islam being an inferior reproduction of Christianity with a belated development (see MUHAMMADANISM). The Muslim missionary in W. Africa or India makes more converts than the Christian missionary, because he really receives his converts into his own group, treats them as social equals, and gives them his daughters in marriage, while the European missionary is divided by the colour-bar from Christian natives just as acutely as from pagan, and can only organize his converts into a 'native church,' which is still outside the pale of the European community.

It is noteworthy, however, that the Muslim populations which have approached nearest to the standards of European civilization are also losing their pan-Islamic sense of brotherhood and acquiring a sense of linguistic nationality of the European kind. Among the Arabs of Syria this new nationalism, which is dividing them from their Persian or Turkish-speaking co-religionists, has tended in compensation to break down the barriers between Christians and Muslims of Arabic speech. The Osmanli Turks, on the other hand, have developed a nationalism of the purely dissociative kind. Before 1908 the Ottoman Empire, like mediæval Christendom, was a group which gave the privileges of its membership to all inhabitants of its territory who professed the established group-religion, whether they inherited its creed or adopted it by conversion. The Young Turkish party, when it came into power, substituted for this pan-Islamic basis a programme of 'Ottomanization,' which made the Turkish language, instead of the Muslim faith, the obligatory group-characteristic, and set out to eliminate all inhabitants of Ottoman territory who would not or could not be 'Ottomanized' by force. The racial persecutions in Turkey during the European War were directed against the Muslim Arabs as well as the Christian Armenians; and, though the Armenians were offered the traditional alternative of conversion, those who accepted it either were distributed among Turkish families, if they were individual women and children, or, if they were whole towns or villages, were made away with as mercilessly as those who refused. Communities converted wholesale would have retained their linguistic nationality, as the Slavs of Bosnia retained theirs after their wholesale conversion in the 15th century. But the Young Turks set no store by the religious uniformity¹ which had been the paramount social bond for their forefathers, if it left outstanding the external, objective differences that offended their sharpened racial sense.

This historical outline of the development of modern race-feeling raises a problem. Why should the most progressive Muslim populations be affected most powerfully by 'racialization,' which is clearly a retrogressive tendency? And, if European influence is the cause, how has European civilization made such vigorous and constant progress as it has from the Dark Ages to the present day, with this equally rapid and steady counter-current carrying it in the reverse direction?

The answer seems to be that the degeneration of group-feeling which we have traced, from the anti-racial spirit of the Catholic Church to the almost unmitigated racialism of contemporary nationality, is only one strand in the development of European civilization seen as a whole. Even in the movements through which we have observed race-feeling

¹ In the case of forced converts, the uniformity would of course be purely nominal, and in no sense an act of will implying a unity of spirit; but history shows that the spiritual bond, which the forced converts never feel, establishes itself almost automatically in their descendants.

progressively gaining ground other and anti-racial forces were disengaged. The schisms of doctrinal theology were not only expressions of linguistic particularism but fields for intellectual activity; the Lutheran Reformation was not only a descent towards the national state but a victory for freedom of thought and conscience; and the narrowest and most intransigent nationalism of the 20th cent. is not a mere substitution of dogmatic barriers for the brotherhood of mankind, but the struggle towards equality of populations which, through disunion, numerical weakness, illiteracy, or other adverse social and political conditions, had previously been dominated by other groups or had altogether lacked a group-consciousness of their own. The stimulation of race-feeling, which resulted from these movements, and which we have so far considered in abstraction from the other consequences that they had, was often only the lesser backwash of a forward wave—the toll which liberation of mind and will had to pay to slavery. And there were also movements, like the American or the French Revolution, in which the gain so outbalanced the loss that no definitely new stimulation of race-feeling can be traced to them, to offset the impulsion which they gave towards free association.

This anti-racial tendency in European civilization, which has so far outdistanced the racial tendency of nationalism by the whole span of European progress, is what we name 'democracy'; and modern democracy has liberated broad fields from race-feeling which Hellenism and Christianity never conquered.

There was the inveterate racialism of the ancient city-state, which on its political side was only superficially transcended by the Roman Empire; and the Roman Empire, at the time when Christendom was offering spiritual unity to all mankind, was disintegrating into the 'feudal system,' under which a man was bound to the soil on which he was born by more sordid and prosaic fetters than the *φυλαί* and *φρατρίαι* of the historical Greek city-state, or the citizens of gold, silver, and bronze in Plato's racial myth. Feudalism is the greatest, though by no means the only, incubus of racialism inherited by European civilization and successfully thrown off. But, as was remarked at the beginning of this section, it is impossible to trace the history of race-feeling in European civilization with a certain hand, because it is still in the making. In the phase of history that led up to the European War nationalism made such formidable advances among almost all civilized peoples that race-feeling and democracy seemed on the way to equilibrium, and the continued progress of civilization probably depends upon the ulterior consequences of the war. For this equipoise which is embodied in the contemporary 'democratic-national state' is not, after all, a stable condition. Nationality and democracy are really opposite tendencies—the one towards race-feeling and the other away from it—and one of the two must have the mastery in the end. But the data are insufficient for speculation into the future, and we must be content to study race-feeling through the past history of it, which has been outlined in this article.

LITERATURE.—I. GENERAL.—W. S. Ripley, *The Races of Europe*, London, 1900 (for distinction between race-feeling and ethnology); Eduard Meyer, *Gesch. des Altertums*, I. 1, Stuttgart, 1907.

II. ANCIENT GREECE.—Herodotus; Thucydides; Plato, *Republic*, ed. J. Burnet, in 'Oxford Texts,' Oxford, 1901-08; H. Francotte, *La Pólis grecque*, Paris, 1908 (for the internal structure of the Greek city-state).

III. MODERN EUROPE.—H. S. Chamberlain, *The Foundations of the Nineteenth Century*, Eng. tr., London, 1911 (for unscientific theorization); *The Birth of a Nation*, cinematograph film produced by W. W. Griffiths (showing genuine race-feeling and its essentially negative character).

RĀDHĀ SOĀMIS.—The Rādhā Soāmi Satsang is one of the numerous sects which have sprung up in India since the opening of the 19th cent. as a result of Christian and Western influence. It is a Hindu sect, its closest affinities being with the Vaiṣṇavites, and especially with Kabīr (*q.v.*).

A banker of Kṣatriya caste, resident in Agra, and known as Śiva Dayāl Saheb, was already regarded as a notable teacher and saint before the Mutiny. He came of a Vaiṣṇavite family, and had connexions with the Vaiṣṇavite priests of Brindāban. Very little is known about his life, but it is clear that he gradually gathered round him a band of devoted disciples, and exercised considerable influence. His theology was similar to that of Kabīr, but he also taught his pupils a system of secret meditation, which induced trances and other hypnotic results. He claimed for himself the title Sant Satguru, 'holy preceptor.' His wife, who was a woman of character, also took part in the teaching. Photographs of husband and wife were given to disciples to be contemplated during meditation, and husband and wife were worshipped as divine *gurus*. In 1861 the *guru* made a public statement of his doctrine, and he left two books in Hindī, both called *Sār Bachan*, 'Essential Utterance,' which form part of the scriptures of the sect.

His most famous disciple was Saligram Saheb, a Government official, who rose to the position of Postmaster-General of the United Provinces and received from Government the title Rai Bahadur. He was a man of vigorous and orderly mind. The horrors of the Mutiny drew his thoughts away from the world, and he became a disciple and devoted personal attendant of the Sant Satguru. Max Müller gives a short account of him in his life of Rāmakṛṣṇa.¹

In 1878 the *guru* died, and Rai Saligram Saheb Bahadur was at once accepted by the disciples as his successor. It seems clear that, while the essentials of the system came from the first *guru*, everything else is the work of Saligram Saheb. He organized the sect, gave it its name, and formulated the theology, doubtless following closely the lines of the original *guru's* teaching. The following sketch of the system is drawn from his *Rādhā Soāmi Mat Prakāśh* ('Exposition of Rādhā Soāmi Doctrine'), a short systematic manual in English, which was printed at Benares in 1896 for private circulation:

The universe is in three spheres or divisions, each subdivided into six regions.

A. The first sphere is purely spiritual. In it dwells the Supreme Being, who is altogether unknown. His name, however, is known to be Rādhā Soāmi; for that name resounds through all regions, and can be heard by those who have had the proper initiation and training.

B. The second sphere is spiritual-material. It contains matter as well as spirit, but its matter is comparatively pure and is controlled by spirit. Over this region presides a Viceroy, who is said to be the God of the Bible, the *Brahman* of the *Upanisads*, the *Lāhut* of Muslim saints.

C. The third region is material-spiritual. In it matter dominates spirit, and all spirits contained in it are clothed in gross matter. The Governor of this material universe is identical with the Hindu *Brahmā* and with the ordinary gods of other religions.

From the Supreme Being there proceeds an emanation called the *Sabda*, i.e. the Word, which streams down through all regions and returns again to the Supreme. From the *Sabda* there rings out in all regions the divine name Rādhā Soāmi.

Man's soul is a pure drop from the ocean of the Supreme Spirit; but, being wrapped in coarse matter, it falls into bondage to material things, and may degenerate seriously, unless spiritual help is given; but the Supreme Being has certain 'beloved sons'—men who have risen to perfect union with himself, who from time to time descend from the spiritual sphere in mercy and love, in order to deliver men from the bondage of matter and to enable them to rise to the highest spiritual heights. Each of the *gurus* of the sect is one of those beloved sons.

The *guru* teaches his disciples, by means of the secret discipline of the sect, to hear in their inner organs the sound made

¹ Rāmakṛṣṇa: *his Life and Sayings*, London, 1898, p. 20 ff.

by the Śabda, as it resounds through all regions. He then teaches them to mount on this spirit-current and to rise on it to the Supreme. There is no way of approach to the Supreme except through the Sant Satguru; so that all men ought to have recourse to him for salvation. The secret discipline is called *Surat-Sabd-Yoga*, 'union of the human spirit with the Word.' The methods of this discipline are not known further than that they are said to be meditative, and that the *guru* gives the disciple his photograph, and bids him contemplate it as the revelation of God in his meditations. In addition to the secret practice, men are told that prayer, works of faith and charity, a vegetarian diet, abstinence from intoxicating drink, and attendance at meetings of the sect for worship are necessary for the holy life.

The second *guru* died in 1898. Besides the English booklet mentioned above, he left behind him four volumes in Hindī verse, named *Prema Bānī*, 'Love Utterances,' and six volumes in Hindī prose, named *Prema Patra*, 'Love Letters.'

The third *guru*, Brahmā Sankara Miśra, a man of Bengali extraction, resident in Benares, guided the sect from 1898 until his death in 1902. His book, *Discourses on Rādhāsoāmī Faith* (Benares, 1909), contains brief statements about the *gurus*, which have been used in this article.

Since the death of the third *guru* the sect tends to fall into two sections, one of which is in favour of appointing a new *guru*, while the other is opposed to it. The former section recognizes at present Anand Swarūp as their *guru*, while the other party is led by Mādhava Prasād, who refuses to be called a *guru*.

The Sant Satguru is held to be identical with the Supreme Being, and receives lofty titles to express his dignity. The worship of the sect therefore centres in him. All the excesses of Hindu *guru*-worship are reproduced among Rādhā Soāmīs. They not only prostrate themselves before the *guru*, adore him, meditate on his virtues, pray to him, and believe that everything that has touched his body is filled with spiritual power; they also follow certain Hindu sects in a number of disgusting practices. They drink the water in which he has washed his feet, eat certain products of his body, and, after his death and cremation, drink his ashes in water.

When a *guru* dies, his relics are placed in a tomb, his photograph is affixed to it, and round it is erected a building which, because it is sanctified by the relics of the *guru*, is called a *gurudvāra*. Since three *gurus* have passed away, there are three *gurudvāras*: (1) the shrine of the first *guru*, who is called Rādhā Soāmī, or Soāmiji Mahārāj, is at the Rādhā Soāmī Bāgh, some four miles from Agra; (2) the shrine of the second *guru*, who is called Huzoor Mahārāj, is at Pipalmandi, Agra; (3) the shrine of the third *guru*, whose title is Mahārāj Saheb, is in a fine new building in Madho Das's garden, Benares.¹

Apart from the adoration of the *guru*, the worship of the sect is a simple service consisting of scripture-reading, hymn-singing, prayer, and a sermon. Their scriptures are the writings of Kabīr and of certain other Hindu saints and the works of their own *gurus*.

Since the sect is largely guided by Kabīr, and recognizes one God only, the visiting of Hindu temples and the worship of Hindu idols are discountenanced. Yet a Hindu, a Muslim, or a Christian may remain outwardly a member of his old religious community and conform to its usages, while secretly avowing himself a Rādhā Soāmī and partaking in the worship and private meditations of the sect.

The name of the sect is rather an enigma. The word *satsang* is quite clear, for it is a Hindī word used by the Sikhs for a company of pious people; but *Rādhā Soāmī* is obscure. It is a phonetic misspelling of Rādhāśvāmī, 'Lord of Rādhā,' a

¹ Farquhar, *Modern Religious Movements in India*, p. 165, lines 19-27, is erroneous.

title used of Kṛṣṇa in relation to Rādhā, his famous cowherd mistress, in the latest cycle of the myth. It is most strange that, in a sect which worships one God only, this phrase with all its coarse associations should be declared to be the name of God, and should also be used as the title of the first *guru* of the sect, and to form the name of the sect itself. No credible explanation has ever been given by any member of the sect. It transpires, however, that the first *guru* and his wife used to dress up as Kṛṣṇa and Rādhā to receive the worship of their disciples; and when, in February 1914, the writer of this article visited the *gurudvāra* of the first *guru*, he found two photographs hanging on the tomb. An educated member of the sect, who acted as cicerone, said that they were the photographs of Rādhā and Soāmī, the first *guru's* wife and the *guru* himself. Thus it is probable that, during the lifetime of the *guru* and his wife, when the disciples went to worship them, they addressed them as Rādhā and Soāmī, and that the double name thus became associated with the chief act of worship of the sect. That would be sufficient to account for the way in which it is used.

While the main body of the teaching and the practice of the sect comes from Kabīr and other Vaisnavite sources, certain phrases and ideas are clearly Christian in origin. In many points both of teaching and of practice there is a curious similarity between the system and theosophy (*q.v.*).

LITERATURE.—The chief publications of the sect have been mentioned in the course of the article. A valuable pamphlet, *The Radha Swami Sect*, by H. D. Griswold, was published several years ago by the Cawnpore Mission Press, but is now out of print. The fullest account of the sect will be found in J. N. Farquhar, *Modern Religious Movements in India*, New York, 1915, pp. 167-173. J. N. FARQUHAR.

RĀDHĀVALLABHIS.—The Rādhāvallabhīs are a Vaisnava sect of N. India, numbering about 25,000 adherents, and founded in the early part of the 16th cent. by one Harivaṁśa, the son of a Gauṛ Brāhmaṇa living in the Sahāranpur District. Harivaṁśa's name appears in the list of teachers of the Sanakādi-sampradāya of the Bhāgavata faith, founded by Nimbārka (see artt. NIMBĀRKA and BHAKTI-MĀRGA, vol. ii. p. 545). This *sampradāya* was divided into five *śākhās*, or branches, by a teacher named Harivyāsa, and Harivaṁśa's name is entered in the list as that of the third teacher of the fourth branch.¹ Other authorities state that he belonged to the Mādhva-sampradāya² (see artt. MĀDHVA and BHAKTI-MĀRGA, vol. ii. p. 545), and his teaching, as Glowse³ points out, was professedly derived partly from the one and partly from the other of these churches.

Harivaṁśa was born in A.D. 1502, his father being at the time a high official in the service of the emperor.⁴ He married, and had two sons and one daughter. After settling his daughter in marriage he determined to become an ascetic. On the way to the holy land of Vṛndāvana he met a Brāhmaṇa, who declared that he had been commanded in a dream to present him with his two daughters and also with an image of Kṛṣṇa in the character of Rādhāvallabha, or lover of Rādhā. Harivaṁśa married the girls and, in A.D. 1525,⁵ set up the image in a temple which he had founded in Vṛndāvana, on the bank of the river Jamnā.

The worship of the sect founded by him is nominally directed to Kṛṣṇa as Rādhā's lover, but practically it is devoted to Rādhā herself. Rādhā was one of the *gōpīs*, or herdmistresses, who are

¹ *Vaiṣṇavasamvatsara*, p. 15.

² *Bhaktanāmāvalī*, p. 11.

³ *Mathurā*, p. 186.

⁴ The *Bhaktanāmā* does not say who the emperor was. Sikandar Lōdī was at that date reigning at Agra.

⁵ So *Bhaktanāmāvalī*, p. 11. This would make him twenty-three years old, which does not give much time for him to have a marriageable daughter. But girls are married in infancy in N. India.

celebrated as the companions of Kṛṣṇa during his youth spent in Vṛndāvana. The legend of his sports with these herdmistresses is fairly old. It appears in the *Harivaṁśa*, or supplement to the *Mahābhārata*, and in the *Viṣṇu* and *Bhāgavata Purāṇas*, but it is not till we get to the *Brahma Vainavata Purāṇa*, a late sectarian work, that we find prominence given to Rādhā as the leader of the *gōpīs* and as Kṛṣṇa's beloved mistress. Here we are told that Rādhā, from the beginning of all things, had been Kṛṣṇa's *śakti*, or energetic power, and that, when he came down to earth in human form, she also became incarnate.

In many religions there has been a tendency exhibited to worship a female counterpart of the deity, as his energetic power. This was not confined to India. It has even appeared in corrupt forms of Christianity which substituted the Virgin-Mother for the Third Person of the Trinity. In India this *śakti*-worship became most developed among the Śaiva sects, but it has also obtained some currency among Vaiṣṇavas, some of whom direct their prayers more particularly to Lakṣmī or to Sitā, the spouses of Viṣṇu and of Rāmacandra respectively; but among Rādhāvallabhis this is carried to an extreme length. Rādhā is the supreme object of worship, and the writings of the sect are devoted to singing her praises, and to describing, with most sensuous and erotic detail, the union of Kṛṣṇa with his beloved. The whole is, of course, capable of mystic interpretation, and is so interpreted by the pious, but Growse,¹ in commenting on one of Harivaṁśa's devotional poems, is not unfair in saying:

'If ever the language of the brothel was borrowed for temple use, it has been so here. But, strange to say, the Gosāins, who accept as their Gospel these nauseous ravings of a morbid imagination, are for the most part highly respectable married men, who contrast rather favourably, both in sobriety of life and intellectual acquirements, with the professors of rival sects that are based on more reputable authorities.'

To indicate the fervour of his love for Rādhā, Harivaṁśa took the prænomen of Hita, 'affectionate,' and he is generally now known as Hita Harivaṁśa. This custom was followed by his disciples, so that we find names such as Hita Dhruva Dāsa and Hita Dāmōdara as those of his pupils and imitators.

Harivaṁśa was about sixty-five years old at the time of his death. He was the author of two works. One of these, written in Sanskrit, is the *Rādhāsudhāmādhī*, 'Store of the Nectar of Rādhā,' extending to 170 long couplets. The other, the *Chaurāsi Pada*, 'Eighty-four Stanzas,' is in Hindī. They are both very erotic in character and exhibit much poetical fancy. Portions of them have been translated by Growse. Stray verses attributed to him are also recited. Wilson mentions a work entitled the *Sēvāsakhi-vāṇī*, 'Sayings of the Companions in (Rādhā's) Service.' He states that it is a more ample exposition of the notions of the sect and of their traditions and observances, as well as a collection of their songs and hymns. He does not mention the author's or compiler's name.

By his later marriage Harivaṁśa had two sons, one of whom, Vraja Chandra, or Braj Chand, was the ancestor of the present Gosāins of the temple of Rādhāvallabha in Vṛndāvana, the chief temple of the sect. It dates from the end of the 16th or beginning of the 17th century.

LITERATURE.—The only English authors who have written original accounts of this sect are H. H. Wilson, *Sketch of the Religious Sects of the Hindus*, London, 1861, p. 173 ff., and F. S. Growse, *Mathura, a District Memoir*, Allahābād, 1880, p. 185 ff. The following Indian authorities may also be consulted: Nābhā Dāsa, *Bhaktamālā* (see *ERE* ii. 546), verse 90, and Rāyā Dāsa's commentary thereon; the best ed. is that of Sitārāmaśaraṇa Bhagavān Prāsāda, Benares, 1905 (the account in this is summarized by Wilson, and given in full by Growse);

Dhruva Dāsa, *Bhaktamāvalī*, ed. with full commentary by Rādhākṛṣṇa Dāsa (Nāgari Prachārīnī Sabhā), Benares, 1901, p. 11 f., Harischandra, *Vaiṣṇavasārvasva* (in *Harischandra-kālā*, Bankipur, n.d.), p. 16; Lakṣmīnārāyaṇa Upādhyāya, *Hita Harivaṁśa Prāghatya*, Brindāban, 1910; Gaṇeśavihārī Miśra, *Syāmavihārī Miśra*, and Sukadēvavihārī Miśra, *Mārabandhuvinōda*, Kharqwa and Allāhābād, 1913, p. 284 ff.

RAGGED SCHOOLS.—See JUVENILE CRIMINALS.

RAI DĀSIS.—The Rai Dāsīs are a Vaiṣṇava sect of N. India, founded by Rai (or Ravi) Dās, one of the twelve chief disciples of Rāmānanda (see *ERE* ii. 546, and art. RĀMĀNANDĪS). Its members are low-caste Chamārs, or leather-workers, and, in fact, Chamārs, as a caste, often call themselves 'Rai Dāsīs.' Their doctrines do not differ materially from those of other followers of Rāmānanda. They are chiefly found in the United Provinces of Agra and Oudh, where their numbers are considerable, but, owing to the use of the title not only as a sect name but also as the name of a caste, the total is quite uncertain. In the census of 1891 their numbers were recorded as 417,000, and in that of 1901 as 47,000; but nothing can be deduced from these figures except that, in the latter year, it is probable that many were shown, not as belonging to their particular sect, but under the more general title of Rāmāwat.

Rai Dāsa, like his followers, was a Chamār by caste, and the sect founded by him, if it can be called a sect, is hardly more than an association of Chamārs who have adopted the tenets of his master, Rāmānanda. It has no peculiar sacred book, although it has orally preserved a number of hymns attributed to its founder. Several of these have found their way into the Sikh *Graṇth*, and another collection of them has lately been printed under the title of *Rai-dās-jī-ki Bāṇī aur Jivan-charitra* (Allāhābād, 1908). A perusal of these hymns shows that the only important point on which their author laid more stress than did some of the contemporary Vaiṣṇavas was that *bhakti*, or devotional faith, in Rāma was of infinitely more importance than a belief in the Vedas or in the teaching of Brāhmanical Hinduism. As is natural in members of a despised community, stress was also laid on the unimportance of caste-distinctions, but this doctrine is common to all the developments of Rāmānanda's teaching.

Rai Dāsa's home was at Benares, and, as a disciple of Rāmānanda, he probably flourished in the earlier part of the 15th century A.D. He was a fellow-disciple with Kabīr (*q.v.*), with whose teaching his doctrine regarding the uselessness of the Vedas and Brāhmanical Hinduism had much in common.

In the art. RĀMĀNANDĪS attention is drawn to the catholicity of Rāmānanda's reformation. His twelve chief disciples included not only women, but men not of the Brāhman caste, such as Kabīr, the Musalmān weaver, Sēna, the barber, and, lowest of all, Rai Dāsa, the despised leather-worker. Salvation was now no longer the monopoly of Brāhmins, nor was it any more conveyed through the medium of Sanskrit, a dead language. It was now freely offered to all men, of no matter what caste, and in the language of their everyday life. A man could be a saint, and yet adhere to that state of life to which it might please God to call him. Saint and teacher though Rai Dāsa was, he nevertheless lived the life of a married man, and supported himself by his caste-trade, as a shoemaker.

The *Bhaktamālā* contains several legends concerning him, of which a brief account may be given. In order to get over the inconvenient fact of his low caste, it is stated that he was originally a Brāhmana. Contrary to his teacher Rāmānanda's instructions, he took alms from a shopkeeper who had dealings with Chamārs. Rāmānanda cursed him to be reborn in that

¹ *Mathura*, p. 199.

caste. He at once died, and was born again in the house of a neighbouring Chamār; but, owing to his former piety, he came into the world with a memory of his previous instruction, and refused to drink his mother's milk till he had been duly initiated as a Vaisnava. Rāmānanda was informed of this by a direct divine communication, and hastened to the house. There he saw the babe, and whispered into its ear the initiatory formula, or *mantra*. The infant thereupon accepted the breast and grew up a pious votary of Rāma. His father at length expelled him from the house, and he set up a little hut close by, where he lived with his wife in great poverty, carrying on his trade as a shoemaker. He made a practice of presenting a pair of shoes to any pious man who happened to pass by, and kept body and soul together by selling what remained. Further legends tell how, by the direct interposition of Rāma, he became wealthy and was able to found a monastery, to which he attracted numerous disciples. He was persecuted by Bāhmanas, and hailed before the king as an unauthorized teacher, but, in consequence of a miracle performed by the deity in answer to his prayer, reminding us of Elijah's trial of strength on Mount Carmel, not only was he released, but he converted his opponents.

One of his converts was Queen Jhālī of Chitaur. She invited him to come thither to a great religious feast. The local Bāhmanas refused to eat with him, and were provided by the queen with uncooked food, which they prepared for themselves in a place apart. When, however, they sat down to eat, they found that, by a miracle, Rāi Dāsa had multiplied himself, and was sitting and eating between each two of them. This opened their eyes, and, filled with humility, they also became his disciples. Rāi Dāsa then tore open his skin, and, showing to them beneath it his former Bāhmana body wearing a sacred caste-thread of gold, he died and went to heaven.

These legends were recorded by Priyā Dāsa, under the instruction of Nābhā Dāsa, who lived only three generations later than Rāi Dāsa, and their marvellous character illustrates the impression that his teaching must have made upon his immediate successors.

LITERATURE.—Practically the only authority is Nābhā Dāsa, *Bhaktamālā* (see *ERE* ii. 546), verse 54, and Priyā Dāsa's commentary thereon. See, however, Literature at art. ŚIVANĀYANIS. The best ed. of the *Bhaktamālā* is that of Sitā-rāmaśarana Bhagavān Prasāda (Benares, 1906). A summary will be found in H. H. Wilson, *Sketch of the Religious Sects of the Hindus*, London, 1861, p. 113 ff., where the legends about Rāi Dāsa will be found related more fully than above, but not quite in accordance with the original. Cf. also Dhruva Dāsa, *Bhaktanīmāli*, ed. with a full commentary, by Rādhākṛṣṇa Dāsa (Nāgarī Prachārīnī Sabhā), Benares, 1901. In this Rāi Dāsa is no 110. According to the editor, there are still descendants of Rāi Dāsa in Benares, who carry on their ancestral trade of shoemaking. For an ed. of his songs see the text above (p. 560).

GEORGE A. GRIERSON.

RAIN.—Water is the first need of man, since without it vegetation withers and animals and men languish and die. It is therefore not to be wondered at that in countries inhabited by primitive people where rain is scarce magico-religious ceremonies are resorted to in order to regulate the supply. In fact, so important is this aspect of primitive cult that a special class of magicians, and, in some cases, a particular totem, are set apart for the due performance of rain-making ceremonies. From an anthropo-geographical survey of the distribution of these rites it is evident that the supernatural control of rain is chiefly found in areas in which there is an abnormal rainfall, as, e.g., in sultry lands like Australia, and parts of E. and S. Africa, where for months together the sun blazes down from a cloudless sky on the unprotected bodies of men and the parched and withering vegetation. At the same time it must be remembered that it is not unknown in the moister climate of Europe, as, e.g., in Russia.

1. The water-totems in Australia.—Among the Arunta tribe of Central Australia is a group of people who have water for their totem, and to whom the secret of rain-making was imparted in the *alcheringa*, or 'dream-time' of long ago, by an individual named Irchwoanga, who also settled upon the exact places at which the *intichiuma* ceremony should be performed. One of the most important of the water-totem groups is a local subdivision of the Arunta, inhabiting a district about 50 miles to the east of Alice Springs, called by the natives the 'rain country' (*Kartvica quatcha*).

VOL. X.—36

When the *chantchwa*, or leader, of this group is about to hold a rain-making ceremony, 'he sends messengers, called *Imwura*, to the surrounding groups, to inform them of his intention, and to call the members of the totem together. When all are assembled . . . the men of the totem march into camp, painted with red and yellow ochre and pipeclay, and wearing bunches of eagle-hawk feathers on the crown and sides of the head. At a signal from the Chantchwa all sit down in a line¹ and sing. At another signal they all jump up and walk in single file out of the camp, and spend the night a few miles away. At daybreak they scatter in all directions in search of game, which is cooked and eaten, but on no account must any water be drunk, or the ceremony would fail. While some of the men paint themselves, others erect a 'wurley,' or shelter of boughs, near the main camp. When the decorating is complete, the men march back to the wurley silently and in single file. The young men enter first and lie face downwards at the inner end, while the older men, after decorating the leader, take up a position near the opening. Singing continues for some time, and then the *chantchwa* walks up and down a trench outside the wurley, his body and legs quivering in a most extraordinary manner. This performance is repeated at intervals during the night, the singing continuing practically all the time. At daybreak he executes a final quiver, and, thoroughly exhausted, 'declares the ceremony to be at an end, and at once the young men jump to their feet and rush out of the wurley, screaming in imitation of the spur-winged plover. The cry is heard in the main camp, and is taken up with weird effect by the men and women who have remained there.' On the next night an ordinary rain-dance is held by the men.²

J. G. Frazer explains the ceremony by making it imitative of a rising storm.² The wurley, he imagines, stands for the vault of heaven, from which the rain-clouds, represented by the chief actor strutting across the trench, come forth to move across the sky. The other performers imitate birds that are supposed to be harbingers of rain.

The Kaitish tribe of Central Australia has also a water-totem.

When the headman desires to hold an *intichiuma* ceremony to make rain, 'he goes to a place called Amra, where, in the Alcheringa, two old men sat down and drew water from their whiskers, the latter being now represented by stones, out of which the rainbow arose. First of all he paints the stones with red ochre, and then he paints a rainbow on the ground, one or more on his body, and one on a shield, which he also decorates with zig-zag lines of white pipeclay to represent lightning. After 'singing' the stones and pouring water from a vessel on them and on himself, he returns to camp, taking with him the shield, which must be seen only by the men of the same moiety of the tribe as himself, lest the rites be rendered of no avail. The shield is hidden away in his camp until sufficient rain has fallen, after which it is brought forth and the rainbow is rubbed out. A vessel containing water is kept by the side of the headman, into which he throws pieces of white down from time to time, representing clouds. The wife of the leader is obliged to absent herself from the camp for the time being, and on her return imitates the sound of the plover, a bird whose characteristic cry is always associated with rain in these parts. 'If rain follows it is attributed to the performance of the ceremony, but if it does not then it simply means that some one else has prevented it by superior magic.'³

2. Rain-charms.—(a) *Animals*.—The Tjingilli, to the north of the Arunta, have a curious ceremony concerned with rain-making, apart from the ordinary *intichiuma*.

'A fat bandicoot is caught, care being taken not to injure it.' A man belonging to a special moiety of the tribe 'then wraps it up in paper-bark and carries it about in a *pitche* (hollowed trough), singing over it until such time as it becomes very thin and weak. Then he lets it go, and the rain is supposed to follow.'⁴ Spencer and Gillen could find no explanation of this relationship between the bandicoot and rain.

In the Anula tribe of N. Australia rain-making is specially associated with one particular spot called Upintjara, where there is a water-hole in the bed of a creek. The dollar-bird, commonly known as the rain-bird, is connected with the rainy season.

A man of the Mumbakuu totem can make rain by catching a snake and putting it alive into the water-hole. 'After holding it under for a little time, he brings it out, kills it, and lays it down by the side of the creek. Then, in imitation of a rainbow, he makes an arched bundle of grass stalks . . . and sets it up over the snake. All that he then does is to sing over the snake and the imitation rainbow, and sooner or later the rain falls.'⁵

J. Batchelor describes a curious method of mak-

⁵ *Ib.* p. 314 f.

ing rain by the aid of animals practised by the Ainus.

When fishermen, after a long spell of fine weather, are tired and long for a rest, they take out at night the skulls of racoons (animals capable of hearing a request for rain) and pray to them, throwing water over one another. If this is done properly, bad storms are sure to follow, and the people get their desired rest. As soon as the rough weather begins, the men buy *sake* and offer libations to the skull, if very bad weather indeed is required, the people make gloves and caps of racoon- and marten-skins, put them on, and dance.¹

Animals intimately associated with water, such as frogs, toads, etc., have a wide-spread reputation as custodians of rain,² and therefore often play a part in charms designed to draw the needed showers from the sky. In order to give effect to the rain-charm, the animal in some cases must be black, the colour being typical of the appearance of the desired rain-clouds. Conversely, if fine weather is needed, the animal must be of a spotless white.³

(b) *Stones* are often supposed to possess the power of bringing rain, provided they are brought into contact with water.

In New South Wales the natives supplicate 'invisible beings' to send rain, by placing a particular sort of stone on the edge of a water-hole.⁴ In this district, as in Queensland, quartz crystals figure in rain-making ceremonies.⁵ Again, in Samoa a stone was carefully housed in a village as the representative of the rain-making god. When there was too much rain, the stone was laid by the fire and kept heated till fine weather set in. In a time of drought the priest and his followers dressed up in fine mats, and, wending their way in procession to the stream, dipped the stone in and prayed for rain.⁶ This custom may, perhaps, be compared with the practice prevailing till recently in France of dipping the image of a saint in water as a means of procuring rain.

No doubt the fact that stones are often regarded as the abodes of spirits accounts for their use as rain-making charms.

(c) *Pouring water* is a common feature in ceremonies for the procuring of rain in some parts of the world, a survival of such a practice being found in various rain-charms resorted to in times of drought in S. and N. Russia.

In Africa it is common to attribute lack of rain to the concealment of miscarriages by women. To remove the pollution and thus set free the rain, a black ox is killed, and the partly digested grass from its stomach placed in a pot buried in the ground. Into this vessel little girls pour water till it overflows along four channels, representing the cardinal points. The women then strip off their clothes, dance a rain-dance, and thereupon proceed to dig up the remains of the premature births, pouring water on the graves. At dusk they bury the remains in the mud near a stream. Then the rain will be free to fall.⁷ The custom of pouring water on a leaf-clad mummer is still resorted to at carnivals in parts of Europe for the purpose of producing rain.⁸ In Celebes, in times of drought, the villagers go to a stream and splash each other with water, sometimes imitating the sound of falling rain by hitting the surface of the water with their hands or with an inverted gourd.⁹

(d) *The dead*.—Sometimes the dead are involved in rain-making ceremonies.

In New Caledonia the priests blacken themselves all over. They then exhumate a dead body, take the bones to a cave, suspend the skeleton over some taro-leaves, and pour water over it so that it runs down on to the leaves. It is thought that the soul of the departed takes up the water, makes rain of it, and showers it down again. Since the rain-maker has to fast and remain in the cavern until it rains, it is not surprising that the wet months (March and April) are usually chosen for the performance of the rite.¹⁰ The Euahlayi tribe in Australia think that a dead person always sends rain within a week of his death to wash away his tracks on the earth.¹¹ In times of drought in Zululand girls carry pots of water to a certain tree

under which an ancestor who was in his day a great rain-maker has been buried. They dance around the tree and pour water on its roots, so that the rain-maker may send them rain.¹

Such ceremonies as these can hardly be described as magical, if magic imply the presence of an automatic efficacy, since they imply a belief in a control from without, the appeal for help being made to the supernatural powers of the deceased.

(e) *Bull-roarers* are used for procuring rain in Australia, Africa, and Central America. The reason for the association of this ceremonial object and rain is apparent. Heavy rainfall accompanies thunder-storms in arid regions, and therefore, since the swinging of the bull-roarer causes a noise bearing a striking resemblance to thunder and wind, both harbingers of rain, it is in accordance with the principles of savage philosophy that the bull-roarer should figure in rain-making ceremonies. The Navahos say that the 'sacred groaning stick' (bull-roarer) which makes a mimic storm may be made only of the wood of a pine tree which has been struck by lightning,² thus showing the connexion between a thunder-storm and the instrument.

Among the Zufi Indians the rain-maker whirls a bull-roarer, while one of his associates whips a mixture of water and meal into frothy suds, symbolic of clouds, and another plays the flute. 'All this is an invocation to the gods for rain—the one great and perpetual prayer of the people of this arid land.'³ The bull-roarer is then laid aside, and the offerings are sprinkled six times with the consecrated water, whereupon the bull-roarer is again sounded.

It is significant that in parts of Africa, where the bull-roarer is little more than a toy, the Kafirs still have sufficient regard for the rain-making qualities of the instrument to forbid boys to play with bull-roarers when they want dry weather, lest a gale of wind should be attracted.⁴

3. *Dances*.—From Carl Lumholtz⁵ we have a detailed description of the rain-dancing of the Tarahumare Indians of Mexico.

In describing the relation of these Indians to nature, he says that rain 'is the focal point from which all their thoughts radiate,' 'since the people obtain their subsistence from the products of the soil.' In order to induce the gods to let it rain, dancing, consisting of a series of monotonous rhythmical movements, is kept up sometimes for two nights. 'The dancing is accompanied by the song of the shaman, in which he communicates his wishes to the unseen world, describing the beautiful effect of the rain, the fog, and the mist on the vegetable world. He invokes the aid of all the animals. . . . The Tarahumares assert that the dances have been taught them by the animals.'

'The Indian never asks his god to forgive whatever sin he may have committed; all he asks for is rain, which to him means something to eat, and to be free from evil.' If there should be too much rain, the people also dance to avoid calamity from floods. Therefore dancing expresses not only prayers for rain, but also petitions to the gods to ward off evil to the crops and to man. Sometimes the family dances alone, the father teaching the boys, one being deputed to bring down the fructifying rain by this means, while the rest of the family plant, hoe, weed, or harvest. In the evening the others sometimes join the unfortunate dancer for a while, but often he goes on alone all night. In winter they dance for snow, at other times in order that the clouds from the north and south may clash and bring down rain to make the grass grow and the deer and rabbits multiply.

4. *Prayers*.—Reference has already been made to prayers for rain. In Australia the only actual instance of prayers being offered to supernatural beings is in connexion with rain-making.

In the Dieri country the sky in which the *mura-muras*—the predecessors and prototypes of the blacks—live is supposed to be a vast plain inhabited by wild tribes. The clouds are regarded as bodies in which rain is made by rain-making *mura-muras*. In times of severe drought the Dieri call upon these supernatural beings to give them power to make a heavy rainfall, proclaiming in loud voices the impoverished state of the country and the half-starved condition of the tribe consequent upon the difficulty of procuring food in sufficient quantities to preserve life.⁶ In S.W. Africa, 'if a drought has lasted long,

the whole tribe goes with its cattle to the grave of some eminent man . . . lay offerings of milk and flesh on the grave and utter their plaint "Look, O Father, upon your beloved cattle and children, they suffer distress, they are so lean, they are dying of hunger. Give us rain."¹ Among the Bari of Central Africa the rain-maker, after anointing rain-stones with oil, prays to his dead father to send rain.² If there is a drought among the Masai, the women collect together, and, having tied grass on to their clothes, sing an invocation to their god to refresh them with his cooling showers.³ The Nandi in times of drought look towards the Tindiret or Chepusio Hill every morning and say, '*Robon, Tindiret*' ('Rain, Tindiret'). If the drought is protracted and a famine is threatened, the old men collect and take a black sheep with them to the river. Having tied a fur cloak on to the sheep's back, they push it into the water, and take beer and milk into their mouths and spit them out in the direction of the rising sun. When the sheep scrambles out of the water and shakes itself, they sing, 'God! have we prayed to thee, give us rain.'⁴ In the last instance prayer is found in association with a piece of sympathetic magic.

In Upper Burma bread, coco-nuts, plantains, and fowls are offered to the spirit who is thought to send rain, with the prayer, 'O Lord *nat* [spirit], have pity on us poor mortals, and save not the rain. Inasmuch as our offering is given ungrudgingly, let the rain fall day and night.'⁵ In the sacred rites at Eleusis 'the worshippers looked up to the sky and cried "Rain!" and then looked down at the earth and cried "Conceive!"' These mysteries were celebrated at the end of the long drought of summer and before the first rains of autumn, and therefore no time could be more suitable for the invocation to the heavens to pour down rain, and the earth to conceive seed under the fertilizing shower.⁶

5. **Sacrifice.**—Closely related to prayers for rain is the offering of sacrifices in order to make rain.

Thus, in S. Africa Umbandine, the old king of the Swazis, had vast herds of cattle of a peculiar colour which he sacrificed for large sums of money to make rain. 'He could threaten to "bind up the skies" if they [the natives] did not pay him what he demanded, and thus exercised enormous power. When the ox is killed the blood is caught in calabashes, and is on no account allowed to fall to the ground. The dish of blood is then placed in a hut, together with the meat of the dead ox, which is left untouched for the night; on the morrow the meat is eaten, and on the third day the bones of the ox are burnt. The priest is said to confess over the beast the sins of the people; but this confession of sin is little more than an admission that they have not honoured the ancestral spirits sufficiently.'⁷ The Akikuyu of British E. Africa sacrifice sheep and goats beneath the sacred *mgomo*-trees by way of intercession for rain. 'The whole of the meat is left under the tree, the fat being placed in a cleft of the trunk or in the branches, as special tributes for Ngai [the good god who sends rain, riches, thunder, and lightning]. Those who worship merely cross their lips with a morsel of meat before sacrificing.'⁸

6. **The rain-maker.**—In Australia any members of the tribe, men and women alike, irrespective of class or totem, are permitted to take part in some of the ceremonies connected with rain-making; but in the sacred *intichiuma* ceremonies only the initiated men of the water-totem may take part. The majority of the members of this totem belong to the Purula and Kumara class, since it was to them that the secret of rain-making was imparted in the *alcherunga*. Among the Arunta the office of *chantchwa*, or rain-maker, descends from father to son, provided he belongs to the water-totem. If the *alatunja*, or leader, has no son of the right totem, then the office descends to one of his blood-brothers, always provided that he is of the right totem; and, failing such a one, to some tribal brother or son of the water-totem as determined upon by the elder men or, more probably still, by the old *alatunja* before his death.⁹ In the Dieri country the whole tribe joins under the direction of the medicine-man in 'making rain.' Among the Kurnai the rain-makers (*bunjil-willung*) could also bring thunder, and it is said of them, as of the other medicine-men, that they obtained in dreams the songs which form part of the ceremonies.¹⁰

The principal work of the chiefs among the

Wambugwe, a Bantu people living in E. Africa, and among other African tribes is rain-making. So important is this aspect of their office that it often is a rule that, should the chief be unable to make rain himself, he must procure it from some one who can.¹ The Nandi rain-makers belong to a special clan.² In olden times the chief was the great rain-maker among the Kafirs. Some chiefs allowed no one else to compete with them, lest a successful rain-maker should be chosen as chief in their stead.³ The rain-maker invariably exerts great power over the people, and so it is important to keep this function in the 'royal household.' Tradition always treats the power of making rain as the fundamental glory of ancient chiefs and heroes, and it therefore probably played an important part in the origin of chieftainship, hedging round the chief's person with tabus, though not necessarily, as Frazer suggests, with divinity. All influential people are sacred, but the most sacred do not work—e.g., the Mikado. If the chief were divine, so sacred would be his person that he would not be able to execute his functions. An ordinary chief or king is charged with *mana* only to an extent sufficient to hedge him round with simple tabus. Frazer's divine kings are a specialization of the conception of kingship, occurring only where the *mana* aspect of chiefs is exaggerated.

The rain-maker is simply a particular individual—usually a medicine-man—who is endowed with *mana* (q.v.), by means of which he is able to control the weather by supplying wind, calm, rain, thunder, famine, and plenty at will and for a price. It is not surprising that, in those parts of the world in which recurring periods of drought are frequent, the powers of the rain-maker cannot be lightly esteemed. Among the Dinka rain-makers are considered to be animated by the spirit of a great rain-maker, which has been handed down through a succession of rain-makers. By virtue of this inspiration a successful rain-maker enjoys great power. In fact, so sacred is the office that the holder thereof is put to death before old age and infirmity creep on, lest his demise from natural causes should bring distress on the tribe. But so honoured a life and death are not always the lot of the rain-maker. His position is beset with difficulties. Though a successful career offers great rewards, the unskilful practitioner may easily hit upon hard times. When people believe that a man has power to make the rain to fall, the sun to shine, the winds to blow, the thunders to roll, and the fruits of the earth to grow, they are also apt to attribute drought and dearth to his negligence or evil magic. Thus, the Banjars of W. Africa beat the chief in times of drought till the weather changes, and the tribes on the Upper Nile rip up the abdomen of the rain-king, in which he is supposed to keep the storms, if he does not make the showers fall.⁴

7. **Rain-gods.**—The Dieri believe in rain-making supernatural beings, known as *mura-muras*, who live up in the sky and make the clouds, which are the 'body or substance of rain.' The rain-making ceremonies are thought to be seen by the *mura-muras*, who cause the clouds to appear in the sky, unless they are angry or influenced by the evil magic of some other tribe. In Africa rain is attributed to a high god. The Akikuyu recognize three gods, two good and one bad. The first sends rain and riches, the second good wives and healthy children, and the third sickness and loss. All three are called *ngai*, but it is the god who sends the rain that is considered the supreme deity and credited with divine powers.

The Aikuyu regard their deities as common to other tribes, such as the Masai and Akamba.¹

The Ewe-speaking people associate a falling star with a powerful rain-god, who sends the showers from the sky. In times of drought they call upon him by night with wild howls, and once a year an ox is sacrificed to him. The priests consume the flesh, while the people smear themselves with the pollen of a certain plant, and go in procession through the towns and villages, singing, dancing, and beating drums.² The Dinka believe in a great god who sends the rain from the 'rain-place' where he dwells, and who animates the human rain-maker. His name, Dengdit, means literally 'great rain.' It was he who created the world and established all things in their present order; and, according to the Niel Dinka, he was the ancestor of a clan which has rain for its totem. Bullocks are sacrificed in spring to a spirit, Lerpiu, for the purpose of inducing him to move Dengdit to send down rain on the parched earth.³ Likewise among the Shilluk a bullock and a cow (or hen) are given to Nyakang, the semi-divine ancestor of their kings. One (or both) of the animals is slain, while the king prays to the divine hero for rain.⁴

In Mexico Tlaloc, or Tlalocateuchtlī, is the god of water and rain, and the fertilizer of the earth. He is thought to reside where the clouds gather, on the highest mountain-tops, especially those of Tlaloc, Tlascalā, and Toluca, his attributes being the thunderbolt, the flash, and the thunder. Prayers were offered to him in times of drought, as the chief of the water-gods, to look down in mercy on the sufferings of man and beast, and give the things which are 'the life and joy of all the world, and precious as emeralds and sapphires.' When there is no rain for four years, children are sacrificed to Tlaloc by being closed up in a cave.⁵

The rain-god of the Kandhs is Pidzu Pennu, a being who rests on the sky and whom the priests propitiate with eggs, rice, and sheep, and invoke with prayers, so that he may send down water upon them through his sieve before men and cattle die of want.⁶ The Kol tribes of Bengal consider their great deity Marang Buru, 'great mountain,' to be the rain-god. His dwelling is on one of the most conspicuous hills of the plateau near Lodmah in Chotā Nagpur. In times of drought the women climb the hill, led by the wives of the *pahans*, with girls drumming, to carry offerings of milk and *bel*-leaves, which are put on the rock at the top. The women then invoke the deity to give the seasonable rain, wildly gesticulating and dancing till the prayer is answered by distant peals of thunder.⁷

E. B. Tylor thinks that the rain-god is usually the heaven-god exercising a special function, though sometimes taking a more distinctly individual form, or blending in characteristics with a general water-god.⁸ Although the tribal All-Father in very primitive cult is remote and in need of nothing that man can give, and therefore is not concerned with human affairs⁹—rain-making being the function of the *mura-muras*—yet it seems that the rain-god proper is a heaven-god. This view is supported by the evidence from the Aikuyu, where it is the supreme deity who sends down the refreshing showers to water the parched ground in answer to the prayers of the people.

Likewise, Dengdit is the creator and sustainer of all things. The Mexican Tlaloc was probably originally a heaven-god, since he is supposed to reside where the clouds gather, and is evidently superior to the god of the earth. Pidzu Pennu, the rain-god of the Kandhs, rests on the sky, and Marang Buru of the Kol tribes dwells on the top of a high hill. In classical times it was to the heaven-god Zeus that the Athenians turned with requests for rain,¹ while in later and still more enlightened ages it is the Lord of heaven and earth that men supplicate in times of drought by solemn litany and procession to send such 'moderate rain and showers that they may receive the fruits of the earth to their comfort and to His glory.'

8. Conclusion.—Frazer is of the opinion that the method adopted by the rain-maker is usually based on homœopathic or imitative magic. In other words, he seeks to produce rain by imitating it.² Now, there can be no doubt that many of the rites associated with rain-making imitate the natural process. Thus, *e.g.*, when the Dieri erect a hut over a hole in the ground and drop blood on the men sitting round, while others throw handfuls of down in the air, they symbolically represent the natural phenomena connected with rainfall. The hut portrays the firmament, the down the cirrus clouds, the dropping blood the rain. The two large stones in the centre of the hut suggest gathering clouds presaging rain, and the overthrow of the hut by men butting at it with their heads the piercing of the clouds and the downpour of rain. Such a rite as this certainly contains an element of imitation, but only because the savage is a man of action, who 'dances out his religion.' When he wants wind or rain, he does not, in the lowest states of culture, prostrate himself before his remote All-Father, but gathers certain people together, often members of a water-totem, to perform magico-religious rites. Thus he expresses by actions, sometimes accompanied by suitable exclamations, his inmost desire. Rain-making ceremonies, therefore, may be described as outward and visible signs of inward emotions and longings.

It is not surprising that primitive ritual is often imitative, since it *represents* symbolically that which in higher cult is expressed by utterances. Frazer's theory of imitative magic does not take into account the emotional and representative aspect of rudimentary religion—the pent-up desire to act discharging itself on the mere symbol of the object. In developed magic the operator is more or less aware that he is dealing with a symbol, yet, in his need for emotional relief, he makes himself believe that the desired effect, though enacted on the symbol, is actually transmitted to the real object.³ What applies to magic in general is equally applicable to rain-making in particular.

A modern community is chiefly dependent upon the weather for its incomings and outgoings, and for the variation in the prices of bread and vegetables, yet even so it is not easy for us to understand a condition of life in which a bad harvest means starvation. But in primitive society, where the food-supply is governed directly by the rainfall, the attitude of man towards the weather is one of grave anxiety calculated to produce states of emotional intensity. The emotions must find outlet somewhere. This they do in representative and emotional ceremonies to produce the desired result.

³ Cf. R. R. Marett, *The Threshold of Religion*, London, 1914, ch. ii.

When the savage wants thunder to bring rain, he does not imitate it, but simply swings his bull-roarer in order that he may actually make it. It is not a noise like thunder that he imagines he hears, but the thunder itself. It is only as the belief in magico-religious practices declines that primitive ideas of making or being a thing degenerate into a merely imitative ceremony, a piece of frivolous and valueless mimicry. Thus the prayer attitude is but the more developed expression of the hope and faith with which the so-called 'magical' rite is instinct.

RAINBOW.—See PRODIGES AND PORTENTS, vol. x. p. 371 f.

RAJPUT.—Rajput (Skr. *rājaputra*, 'a king's son,' 'a prince') is the general term applied to a group of septs which constitute the so-called 'military' class of India. At the census of 1911 they numbered 9,430,095, appearing in the greatest numbers in the Panjāb, United Provinces, and Bengal. In Rajputāna, the head-quarters of the tribe, they numbered 675,789.

1. **Ethnology.**—Within the last few years an important change of view regarding the origin of the Rajputs has taken place. Following the universal tradition of the Hindus, it was generally assumed that they were the direct successors of the Kṣatriyas, one of the four groups (*varṇa*, 'colour') which constituted the Vedic polity. According to Manu (*Laws*, i. 89), the Creator commanded the Kṣatriya 'to protect the people, to bestow gifts, to offer sacrifices, to study (the Veda), and to abstain from attaching himself to sensual pleasures.' The true position of this group of septs has now been clearly ascertained.

'So far back as the time when the *Dialogues of the Buddha* were composed, the Kṣatriyas were recognised as an important element in society, and in their own estimation stood higher than the Brahmins. The fact probably is that from very remote days ruling clans of Kṣatriyas essentially similar to the Rajputs of later days, existed and were continually forming new states, just in the same way as in the mediæval period. But their records have perished, and only a few exceptionally conspicuous dynasties are at all remembered, and so stand out on the page of history in a manner which does not fully correspond with the truth. The term Kṣatriya was, I believe, always one of very vague meaning, simply denoting the Hindu ruling classes which did not claim Brahman descent. Occasionally a rāja might be a Brahman by caste, but the Brahman's natural place at court was that of minister rather than that of king' (V. A. Smith, *The Early Hist. of India*, Oxford, 1914, p. 408).

In the tradition, which in India ranks as history, there is a sudden gap: the old Kṣatriyas disappear, until the 6th and 9th centuries A.D., when we find a group of states under Rajput rulers. But it is impossible to say whether these rājas were merely successful adventurers, or how far they were the heads of dominant clans. The true situation has now been ascertained from a study of the epigraphic evidence in N. and W. India. It is clear that the break in the tradition—in other words, the disappearance of the old Kṣatriyas—was the result of the invasion of India by successive hordes from Central Asia. The earliest of these were the Sakas in the 2nd cent. B.C., followed by the Yueh-chi or Kushāns in the 1st cent. A.D. It is believed that the chiefs of these invading hordes rapidly succumbed to the influence of their new environment, became Hindus, and assumed, as ruling princes, the old name of Kṣatriya. But it is still uncertain whether the pedigrees of any of the ruling clans go back to this period. During the 5th cent. A.D. and the early part of the 6th cent. the Huns (or Hūnas, as the Hindus called them) made a fresh invasion, and crushed the Hindu polity. They settled

principally in the Panjāb and Rajputāna, their most important group being that of the Gurjaras, who, in name at least, are represented by the modern Gūjars (*ERE* vi. 453). The Gurjaras founded important kingdoms, and gave their name to the province of Gujarāt. These Gurjaras were soon admitted to the status of Hindus, and we are thus enabled to interpret the strange legend of the fire sacrifice at Mount Abū (*ERE* i. 51 f.). Their passing through the fire was a mode of expressing the purgation which they underwent; then impurity was removed, and they became fitted to enter the Hindu caste system (W. Crooke, 'Rajputs and Mahrattas,' *JRAI* xl. [1910] 42).

In later times the same process of introduction into the Rajput body has continued. Many chiefs of the so-called aboriginal races, with their followers, have marked their rise to the status of rulers by assuming the title of Rajputs, which, as has been said, merely implies the fact that they claim to be rājas or cadets of a ruling house. For further details of this, the most recent and important advance in our knowledge of Indian ethnography, see Smith, p. 412 ff.; Crooke, p. 41 ff.; *BG* ix. pt. i. [1901] 443 ff., where full details and references will be found.

This mixed body, containing perhaps some survivors of the older Kṣatriyas, reinforced by foreigners and aborigines, being thus admitted to Rajput status, were naturally desirous of authenticating their descent. Complacent bards, like the heralds of modern times, were ready to provide pedigrees linking the new ruling class with the gods and ancient heroes, just as Livy and Virgil affiliated the new Roman Empire with the heroes of the Trojan war. Hence arose the mass of legend assigning to various septs their descent from the sun or moon or other gods, or from the heroes who fought in the great war described in the *Mahābhārata* epic. These legendary pedigrees are recorded in great detail by J. Tod, the enthusiastic historian of the Rajputs, in his *Annals of Rajast'han*.

2. **Religion.**—As might be expected from what has already been said, the Rajput cults and beliefs are of a mixed type, including those taught by their bards and Brahmins who trace their pedigrees to gods or legendary heroes, and those of the foreign or aboriginal stocks from which the Rajputs are derived.

(a) *The place of Rajputs in the development of Hinduism.*—In the early Hindu period tales are told which describe the antagonism between the Kṣatriya and the Brahman. Some refractory rājas are said to have opposed the pretensions of the Brahmins (Manu, *Laws*, vii. 38–42). Viśvāmitra, a Kṣatriya, is said to have attained the rank of a Brahman (Muir, *Orig. Skr. Texts*, i. [1858] 58 ff.). The same feeling appears in the rise of the Bhakti-mārga, or the monotheistic Bhāgavata religion, which was the work of Kṣatriyas (*ERE* ii. 537 ff.). In the same way, both Buddhism and Jainism were the result of a Rajput reaction against the claim of Brahmins to retain the monopoly of admission into the ascetic orders (*ERE* vi. 694, vii. 209). Even at the present day some Rajput septs assign a higher rank to the bard than to the Brahman, and this feeling is encouraged by the notorious laxity of practice among some classes of Brahmins in Rajputāna (*ERE* vi. 693). But the Brahmins are anxious to accept the new situation, and by politic concessions to Rajput feeling lose no opportunity of regaining their position in the courts of the reigning princes.

(b) *Cult of Śiva and the mother-goddesses.*—As a martial race, many Rajputs favour the cult of Śiva. Mahādeva combined with that of his consorts, the latter being largely drawn from the non-Aryan races, but now freely admitted into Hinduism.

If, as some believe, the cult of Śiva had its origin in the Himālaya, we may suspect that it was introduced, or rapidly assimilated, by the Scythian or Hun invaders. Vāsudeva, king of the Kūshāns (c. A.D. 140-173), figured on his coins the image of Śiva with that of his bull, Nandi (Smith, p. 272). The chief Śaiva temple in Rājputāna is that known as Eklingī, 'he that is worshipped under the form of a single *li'gam*.' It is also known as Kailāspurī, Mount Kailāsa being the Himālayan seat of the god. It is situated 12 miles from Udaipur, the capital of Mewār (H. D. Erskine, *Rajputana Gazetteer*, ii. A. [1908] 106; Tod, i. 409 ff.). The Rānās of Mewār combine the functions of prince and priest, and are known as the vice-regents (*śivān*) of the god (Tod, i. 182). With the cult of Śiva is combined that of his consort Durgā. In another form she is known as Māmā Devī, 'mother of the gods,' and round her image are grouped those of the other gods (ib. i. 553). Again, as Gaurī, the 'yellow' or 'brilliant' goddess, probably representing the ripe corn, she is the subject of a special cult, when at the Gangaur festival her image is taken to the lake at Udaipur and ceremonially bathed, possibly in order to free her from the last year's pollution, or as a rain charm; as in the worship of the Bona Dea, no male may be present at the rite (ib. i. 544; *JA* xxxv. [1906] 61). She is also worshipped as Annāpūrnā, 'she who is possessed of food,' and her mimic marriage to Śiva is performed (Tod, i. 455). In other forms she is worshipped as Śākambharī, 'nourisher of herbs,' Mātā Janamī, 'the birth mother,' and Āsāpūrnā, 'she who fulfils desire.'

(c) *Kṛṣṇa*.—In Rājput belief Kṛṣṇa is the deified hero of the Yādava tribe, and he has his seat at Mathurā (*q.v.*), where he sports with the *gopīs*, or milkmaids. In another form, at Dwārakā, he is god of the dark storm-cloud (J. Kennedy, *JRAS*, 1907, p. 951 ff.). His shrine is at Nāthdwārā, 30 miles N.N.E. of the city of Udaipur. His image is said to have been removed from Mathurā to escape the persecution of Aurangzib; when the cart came to this place, the god refused to go farther, and a shrine was erected for him, which is a sanctuary for criminals, receiving donations from merchants throughout the Hindu world, and his pontiff is a personage of great sanctity and authority (Tod, i. 415 ff.). It is strange that the gentle Kṛṣṇa should be worshipped side by side with Śiva. On the whole, his cult has exercised a good effect on Rājput society, and Tod quotes a case in which he interposed to prevent *sati* (i. 423).

(d) *Ancestor-cults*.—It is the primary duty of the Rājput to visit the cenotaphs of his ancestors in the season of mourning, and to feed their hungry ghosts. Special veneration is paid to the *mahā-sati*, or place of sacrifice of faithful wives.

'The Rājput never enters these places of silence but to perform stated rites, or anniversary offerings of flowers and water to the manes of his ancestors' (ib. i. 62).

He also venerates the heroes of his sept, as in the remarkable court at Mandor, which contains images of the heroes of the Rāthors (ib. i. 573 f.).

(e) *Tutelary deities*.—Each sept worships its tutelary goddess; Rāthasen or Rāshtrasenā is the embodied luck of the Sesodias of Mewār, as Nag-nēcha, the serpent, protects the Rāthors, and Vāyan Mātā the Chāvadas, while Khetrapālā, 'the field-watcher,' is the patron of agriculture (ib. i. 225 n.). The patron god or goddess of the sept used to accompany the chief to battle. On one occasion the Rāthor god fell into the hands of the Kaēhwhālas of Jaipur. Their prince took him to his capital, wedded him to the Jaipur goddess, and returned him with his compliments to his defeated adversary. 'Such,' says Tod (ii. 87), 'were the courteous usages of Rājput chivalry.'

The tutelary god of Kotah is Brajñāth or Kṛṣṇa, and the chief at every battle used to carry his golden image on his saddle. He too was lost in battle, and it was many years before he was restored, 'to the great joy of every Hārā' (ib. ii. 413).

(f) *Cult of youthful heroes*.—The cult of the youthful hero (*putra*) is common among the Rājputs. Laut, the young hero of Ajmēr, is worshipped by the Chauhān sept, and, as he wore at the time of his death a silver chain anklet, this ornament is tabu to the children of the sept (Tod, i. 200 n.). The cult is not confined to youths. The queen of Ganor, who killed by means of a poisoned robe the Musalmān who attempted to outrage her, receives no special worship, but in the spirit of sympathetic magic a visit to her tomb cures tertian ague (ib. i. 497).

(g) *Worship of natural objects*.—Water-spouts are honoured by throwing coco-nuts into the water. The spirit of the Banās river used to raise her hand over the water to receive the offering, but, as in the common fairy-gift legend, 'since some unhal-lowed hand threw a stone in lieu of a coco-nut, the arm has been withdrawn' (ib. i. 527; *PR* i. 287 ff.). There was a sun fountain at Valabhī, whence at the summons of Rājā Śilāditya, the seven-headed horse which bears the chariot of the sun rose to bear him to battle (Tod, i. 179).

(h) *Snake-worship*.—The Pushkar lake is provided with a remarkable snake legend indicating a conflict of cults (C. C. Watson, *Rajputana Gazetteer*, i. A. [1904] 19). The Nāgpanchamī festival, 'the cobra's fifth,' is celebrated in its honour (Tod, i. 462). The usual tales are told of the serpent protecting or recognizing the true heir to the throne (ib. i. 236, ii. 281). The worship of snake heroes, like Tejaji, Guḡā, and Pipā, is common (*PR* i. 213 f.; Tod, i. 580).

(i) *Sacred animals and trees*.—Next to the cow, the boar is sacred to the Rājput, and possibly represents the corn-spirit (*GB*³, pt. v., *Spirits of the Corn and of the Wild*, London, 1912, i. 298 ff.). Birds of augury are carefully protected, and the pigeon, as the bird of love, has become associated with the erotic cult of Kṛṣṇa, and is still regularly fed at every courthouse in Rājputāna. Among trees the varieties of the fig are especially sacred. It was from a *pipal*-tree (*Ficus religiosa*), that Āsāpūrnā, the tutelary goddess of Būndī, appeared to protect the queen (Tod, ii. 368).

(j) *Festivals*.—The Rājput festivals are numerous and interesting. The reader may be referred for details to Tod's classical account (i. 444 ff.). But, when he compares the ritual with that of Egypt and other countries to the west of India, it must be remembered that his theories are, to a large extent, obsolete.

LITERATURE.—The classical authority is J. Tod, *Annals and Antiquities of Rajast'han*, 2 vols., London, 1829-32 (the original ed. is now very scarce, but it has been often reprinted, the references in the text are from Routledge's popular ed., London, 1914). For the Rājputs of districts outside Rājputāna see A. K. Forbes, *Rās Māla*, London, 1878; H. A. Rose, *Glossary of the Tribes and Castes of the Punjab and the N.W. Frontier Province*, vols. ii., iii., Lahore, 1911-14; D. C. J. Ibbetson, *Punjab Ethnography*, Calcutta, 1888; W. Crooke, *Tribes and Castes of the N.W. Provinces and Oudh*, do 1896; R. V. Russell, *Tribes and Castes of the Central Provinces*, London, 1916.

W. CROOKE.

RAMAISM.—i. *History*.—Vaiṣṇavism, one of the two main divisions of the Hindū religion, includes, besides the worshippers of Viṣṇu in his proper form as a supreme personal god, two large sects embracing not only the great majority of the Vaiṣṇavites, but also a very considerable portion of the Hindus of to-day. These two parties are the votaries respectively of Viṣṇu's two last incarnations, Kṛṣṇa and Rāma.¹ The cult of Rāma as a chief god at the present day prevails over an ex-

¹ See art. INCARNATION (Indian), vol. vii. p. 113.

tensive area in India. But Rāma was at first only an epic hero; for in the original part (bks. ii.-vi.) of the *Rāmāyana* (*q.v.*), which celebrates his life and deeds, he is represented as an essentially human character. On the other hand, in bks. i. and vii., which are admittedly later additions, his divine nature is fully accepted. In another passage also (vi. 117), which is without doubt an interpolation, the gods, with Brahmā at their head, appear and declare Rāma, who had till then regarded himself as a man, to be Nārāyaṇa, *i.e.* Viṣṇu, the highest god. The character of Rāma, already a model of morality as the hero of the *Rāmāyana*, was still more exalted by later poets, including those of the *Purāṇas* and especially by Bhavabhūti (first half of the 8th cent. A.D.), the author of two Sanskrit dramas concerned with the life of Rāma. Having thus become immensely popular, the epic hero was before the lapse of many centuries generally acknowledged, by a people ever prone to deification, as an incarnation—an already familiar feature of the Hindu religion—of the supreme god Viṣṇu. Though there is not sufficient evidence to show exactly when Rāma came to be accepted as an *avatār*, there is good reason to regard this belief as having already existed in the early centuries of the Christian era. Thus in the 10th canto of Kālidāsa's epic, the *Raghuvamśa*, which dates from the first half of the 5th cent. A.D., the poet, before relating the story of Rāma's birth, represents Viṣṇu as promising to be born as a son of King Daśaratha for the destruction of the demon Rāvana. The *Vāyu Purāṇa*, which probably belongs to the same century, also refers to his divine character. Much later, A.D. 1014, we find the Jain author Amitagati making the statement that Rāma was regarded as the all-knowing, all-pervading protector of the world. But, though the divinity of Rāma had thus been recognized for centuries, there is no evidence that any cult in his honour existed during this long period. It cannot, however, have been established much later than the 11th century A.D. Thus Madhva (*q.v.*), otherwise called Anandatīrtha (the founder, in the 13th cent., of a Vaiṣṇava sect, which aimed at confuting not only Śaṅkara's theory of the unreality of the universe and the identity of the human soul with the supreme deity, but also Rāmānuja's doctrine that God is the material cause of the world), is declared to have brought the image of Rāma from Badarikāśrama in the Himālaya, and to have sent his pupil Naraharītīrtha to Jagannātha in Orissa, about A.D. 1264, to bring back what were called the original idols of Rāma. Hemādri, a voluminous Sanskrit writer who flourished in the latter half of the 13th cent., describes the ceremony connected with the birth of Rāma on the 9th day of the bright half of the month Chaitra (March-April). An indication of the comparative lateness of the cult of Rāma as an incarnation is the fact that, among the 24 names of Viṣṇu that are repeated at the present day by Vaiṣṇavites at the beginning of every ceremony which they perform, the name of Rāma does not occur, though those of two other incarnations, the Dwarf and the Man-lion, are mentioned. Again, while the ordinary ceremonies of Vaiṣṇavism include a repetition even of Vedic *mantras*, or formulae, this is not the case in the cult of Rāma. At the present day every Hindu is familiar with Rāma's exploits, and throughout the length and breadth of India his name is on every one's lips irrespective of class, caste, or creed. Thus, when friends meet, they often greet each other by uttering Rāma's name twice ('Rām, Rām'). No name is more frequently given to children, and none is more often invoked at funerals and in the hour of death.

2. Literature.—The literature of Rāmāism is of

late origin. There exist in the first place various manuals which describe the forms of Rāma-worship by means of *mantras*, or formulae, and magic circles, like those prescribed in the *Sāvata-Saṃhitā* for the worship of Vāsudeva (Viṣṇu). There are besides a few works that set forth the doctrines of the Rāmāite faith. The *Adhyātma-rāmāyana* aims throughout at expounding the divinity of Rāma and explaining the relation of the individual soul to him as the supreme soul. Sītā and Rāma are introduced by the author as the exponents of the doctrines inculcated in this work. The fifth canto of the last book is entitled *Rāma-gītā*, 'the Song of Rāma,' which is intended to correspond to the Kṛṣṇaite *Bhagavad-gītā* (*q.v.*), and which is narrated by Rāma to his brother Lakṣmaṇa, the counterpart of Arjuna in the parallel poem. The teaching is monistic throughout, the world and the individual soul being described as illusory, while the one supreme spirit, here Rāma, alone really exists. Composed of extracts from older writings, it has no claim to any connexion with Vedic literature. It is also mentioned as a modern treatise by Ekanātha, a Mahārāṣṭra saint of the 16th cent., in his *Bhāvārtha-rāmāyana*. There is another Rāmāist work (published at Madras) also entitled *Rāma-gītā*, which is composed in 18 chapters like the original *Bhagavad-gītā*. Its contents are narrated by Rāma to Hanumān. It is a very modern compilation, for it professes to be based on the 108 *Upaniṣads*, some of which are unmistakably very recent. What may be regarded as the Bible of the Rāmāites is the *Rāmcharit-mānas*, an adaptation of Vālmiki's *Rāmāyana*, composed in Hindī by Tulasī Dāsa, the greatest of modern Hindu poets, in the 16th century. What the *Bhāgavata Purāṇa* and the *Bhagavad-gītā* are to the Kṛṣṇaite, Tulasī Dāsa's poem, together with the Sanskrit *Rāmāyana*, is to the many millions in N. India whose vernacular tongue is Hindī.

3. Doctrine.—The following are the doctrines held by all Rāmāites in common: (1) the deity is not devoid of qualities (as is *brahman*, the impersonal world-soul of Śaṅkara); (2) Viṣṇu is the supreme deity and should be the object of worship together with Lakṣmī, his wife; (3) Rāma is the human incarnation, or *avatār*, of Viṣṇu; (4) Rāmānuja and all the great teachers who have succeeded him are also *avatārs* of Viṣṇu. The first three of these doctrines afford a parallel to the conceptions of Western religion. Like Jahweh, Viṣṇu is a personal supreme deity who is an object of worship, while the relation of Rāma, as a human manifestation of the supreme deity, to Viṣṇu is analogous to that of Christ to God. The Rāmāist attitude resembles that of a Western deist who might adopt Christ as the main object of his devotions.

4. Sub-sects.—Rāmānanda, fifth disciple in succession from Rāmānuja, from whose school he seceded, was the founder of the Rāmāite sect which goes by the name of Rāmāwats, in the 14th century.¹ A teacher named Kilh, separated from Rāmānanda by a successive series of several disciples, founded the Khākī (*q.v.*) sect, which is a striking example of the tendency of Hinduism to eclecticism and compromise. See also art. RĀMĀNUJA.

LITERATURE.—H. H. Wilson, *A Sketch of the Religious Sects of the Hindus*, new ed. (*Select Works*, i.), London, 1861, pp. 46, 54-57, 63-65, 671, 98 f.; W. J. Wilkins, *Modern Hinduism*, do. 1887, G. A. Grierson, *IA* xxii. [1898] 227; M. Monier-Williams, *Brahmanism and Hinduism*, London, 1891; R. G. Bhandarkar, *Vaiṣṇavism, Śaivism, and Minor Religious Systems* (= *GLAP* iii. vi.), Strassburg, 1913, pp. 46-48.

A. A. MACDONELL.

RĀMAKR̥ṢṢNA.—Rāmākr̥ṣṣna is the adopted name of one of the three leaders of the revival of Hinduism during the latter half of the 19th cent.,

¹ See art. RĀMĀNUJAS.

the other two being Dayānanda Sarasvatī (1824-83) and Svāmī Vivekānanda (1862-1902). All three adopted in early youth the life of the ascetic devotee—striking illustrations of the deeply-rooted conviction which prevails among Hindus that renunciation (*g. v.*) is the highest religious ideal, and which for more than two thousand years has led innumerable young Indians to give up home, marriage, property, and money for the attainment of union with God.

I. Life.—Gadādhara Chatterji, the son of a poor but orthodox Brāhman, was born on 20th Feb. 1834, in the village of Kamarpukur, situated in the Hugli district of Bengal. Losing his father when he was seventeen, he migrated to Calcutta, where for a few years he earned his living as a *pūjārī*, or ministrant attending to the worship of the household idols in Hindu families. In 1855, when a temple of the goddess Kālī, built on the bank of the Ganges by a rich Bengali lady named Rānī Rāmoni, a few miles from Calcutta, was opened, his elder brother was appointed chief priest, while he himself not long after became one of the assistants. His religious instinct, of which he had shown signs as a boy, now developed into passionate worship of the image of Kālī in the temple. Thinking of her as the mother of the universe and as his own mother, he used to sing hymns, talk, and pray to her by the hour till he became unconscious of the outer world. He would then pass into the state of religious trance called *samādhi*, which often lasted for hours, and in which the action of the pulse and the heart became imperceptible. When he was twenty-five, his relatives, hoping to cure him of his religious ecstasies, induced him to undergo the usual ceremony of child-marriage, though his bride was only six and would not live with him as his wife till she was eleven or twelve years old. Returning to the temple and being now convinced that it was possible to see the deity visibly, he renewed his devotions with such intensity that he neglected his duties and could no longer retain his official position. So he left the temple and settled in a neighbouring wood, where for the next twelve years he lived a life of strenuous prayer and self-repression in continuous efforts to attain union with God. Having as yet received no education or training, he was helped during this period in his aspirations first by a Brāhman nun, who instructed him in *yoga*, or the system of exercises producing mental concentration, and in the *Tantras*, or manuals dealing with the worship of Kālī and the theology concerned with her cult. Afterwards he came for nearly a year under the influence of an ascetic named Totāpuri, who expounded to him the monistic Vedānta doctrine of Sankara, that God is impersonal, that the human soul is identical with God, that the world is an illusion, and who taught him the highest stage of religious trance in which every trace of consciousness disappears. Totāpuri also initiated him as a *sannyāsī*, or ascetic who renounces every worldly attachment. In accordance with the practice of such devotees, Gadādhara now assumed a new name. Henceforward he was known as Rāmākṛṣṇa; and later he received from his friends the title of Paramahansa, which is given only to ascetics of profound knowledge and sanctity. After Totāpuri's departure he lived for six months almost continuously in a state of exalted religious trance. This condition ended in a severe attack of dysentery, from which, however, he recovered after a month or two.

Rāmākṛṣṇa now entered on a new phase of religious aspiration—the craving to realize the Vaiṣṇava ideal of passionate love for God. This aim he sought to realize by imagining himself one of the great devotees of ancient stories. Thus at

length in a trance he saw the beautiful form of Kṛṣṇa. Now he was satisfied; he had at last achieved mental peace. By this time (1871) he was thirty-seven years of age and was becoming famous. His wife, who was now eighteen, came to see him. When he explained that, being a *sannyāsī*, he could not live with her as her husband, she agreed to reside at the temple as his pupil and be taught by him how to serve God; she thus remained a devoted disciple till the end of his life. She survived her husband many years, during which she regarded him as an incarnation of God Himself, and endeavoured to further the work that he had begun.

Though as an ascetic he no longer had any caste, he now began to feel that he had not yet given up his Brāhman prejudices towards the lower orders. Having accordingly resolved to do the work of men of the lowest caste, he acted as a scavenger in the temple and cleansed it like a Pariah during the night. He also collected and ate the fragments of food left by the beggars who were daily fed at the temple, and who included Muhammadans, outcasts, and bad characters.

The last stage in his religious development was the result of a new desire that arose in him to know and understand other religions. Thus he went to live with a Muhammadan saint, becoming temporarily a Muhammadan in dress, manner of life, and religious practice. He then turned to Christianity and once saw Jesus in a vision, being unable for three days after to think or speak of anything else but of Him and His love. These experiences led him to the conclusion that all religions are true, as being various paths leading to the same goal.

At the end of 1872 one of his intimate friends, Pandit Vaiṣṇava Charan, took him to Calcutta, where he stayed till the beginning of the following year. During this visit he made the acquaintance of Dayānanda Sarasvatī, the founder of the Arya Samāj. About 1875 Keshab Chunder Sen, one of the leaders of the Brāhma Samāj, made the acquaintance of Rāmākṛṣṇa, and, becoming deeply impressed by his devotion and conversation, went to see him often, occasionally accompanied by a number of his adherents, and drew public attention to his merits both by talking and by writing about him. The result was that Rāmākṛṣṇa was now visited at his temple by many educated Hindus from Calcutta, and also made the acquaintance of the young men who became his attached pupils and continued his work after his death. His conversation is described as brilliant, and was listened to by many noted Indians who went to see him at his temple. During the last seven years of his life he was constantly engaged in talking to his visitors. He never wrote anything, even in this last period; but his disciples made copious notes in Bengali of his sayings, of which several collections were published after his death. He was essentially a conversationalist, and not a formal instructor; indeed, he regularly disclaimed the status of a *guru*, or teacher. According to the testimony of his most celebrated disciple, Svāmī Vivekānanda, his conversation was of two main types. On the one hand, he represented himself as the servant of all human beings and would never claim any high position. On the other hand, he would speak of himself not only as possessing all power and all knowledge, but as the re-incarnated soul that had once been born as Rāma, as Kṛṣṇa, or as Buddha. Such things were not said in any spirit of arrogance, but as a result of his intense realization of the Vedānta doctrine of the identity of the individual soul with the impersonal God.

The incessant labour of speaking to the increasing crowds of men and women that came to see

him at the temple of Dakṣiṇēśvara at last told on his health. In 1885 he began to suffer from an affection of the throat, which after a time developed into cancer. He was removed to Calcutta, where he was attended by the best physicians. They advised him to keep the strictest silence; but he could not refrain from addressing the crowds that gathered wherever he went. He would still fall into trances, on awaking from which he would talk incessantly as before. Even when his throat became so constricted that he could hardly swallow even liquid food, he continued his efforts, cheerful and undaunted, till 15th March 1886. On that day he fell into a *samādhi* from which he never returned. After his death a group of his disciples decided to devote their lives to the spread of his teaching, and to become *sannyāsīs*. The most prominent of these was Narendra Nath Dutt, a Bengali, who on becoming an ascetic took the name of Vivekānanda.

2. **Habits and character.**—Rāmakṛṣṇa had not many personal traits. Though a *sannyāsi*, he not only dressed, but lived, like an ordinary Bengali. He is described by one of his disciples as distinguished by profound humility and childlike tenderness, the outward manifestation of which was a singular sweetness of expression. His character was simple, for every detail of his life can be explained from the one motive of a passion for God, which mastered his whole being. It was this that made him at an early age enter the life of a *sannyāsi*, in which he renounced all earthly ties and by tremendous self-repression completely conquered the sex instinct and acquired a hatred of money. His aversion to gold and silver became so great that he could not even touch them, and the simple contact of a coin, even when he was asleep, would make him shrink convulsively. In his later days he could touch no metal, not even iron. Mathurānātha, the son-in-law of the founder of the temple, repeatedly offered to hand the temple over to him together with a property yielding an income of 25,000 rupees a year, but he refused and threatened to leave the place if the offer were pressed. A gift of 25,000 rupees pressed on him by another wealthy man was similarly declined. His deep sincerity and exclusive devotion to God won him the boundless love and reverence of his disciples, who regarded him as a divine person.

3. **Belief.**—Rāmakṛṣṇa had no proper education. He knew no Sanskrit and scarcely any English, and he possessed no scholarly knowledge even of Bengali. Never having had any systematic training in philosophy, and deriving, with the aid of a retentive memory, practically all that he knew of it from his occasional intercourse with the religious teachers with whom he came in contact at his temple, he neither was nor claimed to be the founder of a new religion. His belief regarding God and the relation of God to man and the world was based on the Vedānta system. It may be summed up thus: God is unknowable and utterly beyond the reach of man; on the other hand, every human being and every thing that exists is a manifestation of God, who is so truly all that is that everything that happens is in a sense done by Him, and therefore moral distinctions become obliterated in Him. Hence, as he looked upon every human being as a manifestation of God, Rāmakṛṣṇa would, if he met an unfortunate, bow down before her in adoration. Like every ordinary Hindu, he also regarded all deities as manifestations of the impersonal Supreme Soul. But he believed the goddess Kālī to be the chief manifestation of God as the divine mother of the universe. He worshipped her more than any other divinity, and that by means of idols; for he implicitly held

the Hindu belief that the divinity fills every one of his own idols with his presence. He further shared the ordinary Hindu idea of the *guru*, or spiritual teacher, declaring that the disciple should never criticize his own *guru* and must unquestioningly obey his behests. Thus he was a true Hindu, and was always ready to defend the whole of Hinduism. In these respects he was only one of the multitude of very devoted Hindus who might have lived at any time during the last 2000 years.

4. **Distinctive doctrine.**—What differentiated his belief from that of other revivers of Hinduism was the doctrine that all religions are true, because in their inner essence they are identical, and that each man should therefore remain in the religion in which he has been born. In order to illustrate the idea of the harmony of all religions and of the part played by Rāmakṛṣṇa in introducing it to Keshab Chunder Sen, a pupil of his caused to be painted a symbolical picture in which a Christian church, a Muhammadan mosque, and a Hindu temple appear in the background, while on one side in front Rāmakṛṣṇa is pointing out to Keshab a group in which Christ and Chaitanya are dancing together, and a Muhammadan, a Confucianist, a Sikh, a Parsi, an Anglican, and various Hindus are standing round. Rāmakṛṣṇa's universalistic theory of the truth of all religions furnishes a strong defence of Hinduism because it implies that no Hindu should abandon his religion either as a whole or in any of its individual doctrines.

Mozoomdar, *Paramahansa Rāmakṛṣṇa*, Calcutta, 1910; [M. N. Gupta], *The Gospel of Sri Rāmakṛṣṇa*, Madras, 1913; Svāmī Vivekānanda, *My Master* (a lecture), Calcutta, 1911; J. N. Farquhar, *Modern Religious Movements in India*, New York, 1915, pp. 188-200. The work of the Rāmakṛṣṇa mission is described in the *Hindoo Patriot*, 14th Oct. 1912.

A. A. MACDONELL.

RĀMĀNANDIS, RĀMĀWATS.—The Rāmānandis or Rāmāwats are an important Vaiṣṇava sect in N. India, numbering from 1,500,000 to 2,000,000. Their founder was Rāmānanda, a teacher who was fifth in descent from Rāmānuja (*q.v.*), the *Bhaktamāla* giving the succession as (1) Rāmānuja, (2) Lōvāchārya, (3) Haryānanda, (4) Rāghavānanda, (5) Rāmānanda. According to the N. Indian tradition regarding Rāmānanda's life and times, Rāghavānanda was a prominent teacher of the Sri Vaiṣṇava church founded by Rāmānuja. He travelled over India spreading its doctrines, and finally settled in Benares. In the year 4400 of the Kaliyuga, corresponding to A.D. 1299,¹ Rāmānanda was born at Prayāga, the modern Allāhābād. His father was a Kānyakubja Brāhmana named Puṇyasādana (or Bhūrkarna or Dēvala), and his mother's name was Susilā. The child was named Rāmadatta, and, as he grew up, he acquired knowledge rapidly, so that by the time he was twelve years old he had become a finished *pandita*, and went to Benares to study religious philosophy. There he attached himself to a Smārta teacher, who followed the Advaita philosophy of Sankarāchārya.² One day he happened to meet Rāghavānanda, who had the power of foretelling future events, and who expressed his sorrow that Rāmadatta had not yet taken refuge with Hari (*i.e.* Rāma), as his days were fulfilled and he had but a short time to live. Rāmadatta returned to his Smārta teacher and reported the conversation. The teacher had to

¹ So all native authorities. Bhagavān Prasāda (*Bhaktamāla*, p. 452) refers to eight or nine, and quotes three. Tradition says that it was 102 years after Rāmānuja's death, which would thus have occurred in A.D. 1187.

² It is noteworthy that both Rāmānuja and Rāmānanda are represented as having begun by being followers of Sāṅkara, and later to have seen the error of their ways.

confess that the prediction was a true one, and that he himself could offer no remedy. He therefore recommended him to throw himself on the mercy of Rāghavānanda. Rāmadatta did so, and Rāghavānanda received him, taught him the Śrī Vaiṣṇava initiatory *mantra*,¹ and changed his name to Rāmānanda. He also instructed him in the *yōga* methods of suppression of breath, etc., leading the practiser into intense mental absorption, and, when the time for his death arrived, with their aid, put him into a trance. Death came to take him away, but, finding him in this death-like condition, departed leaving him unharmed. Rāmānanda then awoke from his trance, and thenceforth devoted himself to attending on and learning from Rāghavānanda, who blessed him and gave him the boon of an exceptionally long life.² After serving his *guru* for a considerable time, he went on a pilgrimage over the greater part of India. A persistent tradition asserts that he even visited the island of Gangāsāgara at the mouth of the Ganges, and that there he discovered the site of Kapila's hermitage, all trace of which had long been lost. After completing his pilgrimage he returned to Benares, and settled at Pañchganga Ghāt, where his footprints can still be seen by the faithful.

The Śrī Vaiṣṇava church, of which Rāghavānanda and Rāmānanda were members, allows only Brāhmanas to occupy the post of teacher, and imposes upon all the strictest rules as to the preparation and consumption of food. When Rāmānanda returned from his long wanderings, he essayed to rejoin the brotherhood, but they refused to receive him, alleging that it must have been impossible for him during his peregrinations to carry out all these observances. They accordingly demanded that Rāghavānanda should impose a penance upon him. Rāmānanda resisted this, and in the discussion that ensued Rāghavānanda finally solved the problem by deciding that Rāmānanda must go his own way, and might form a sect of his own. This quarrel thus resulted in one of the most momentous revolutions that have occurred in the religious history of N. India. Its effects were by no means confined to Rāmānanda's immediate disciples, for his teaching worked as a leaven upon the beliefs of nearly the whole population. Rāmānanda took his *guru* at his word, and founded the Rāmāwat sect—also nowadays called, after him, the sect of the Rāmānandis. The philosophical system is the same as that of Rāmānuja (*q.v.*) and need not detain us; but Rāmānuja wrote for Brāhmanas and in Sanskrit, and imposed a rule of ceremonial purity that was strict in the extreme. Rāmānanda, by his expulsion from the brotherhood for an imaginary impurity, was converted to broader notions. His ethical system was based, not on spiritual pride, but on spiritual humility. It was developed in various directions by his successors, but through all their teaching we find insistence ever laid upon two great principles: (1) that perfect *bhakti*, or faith in God, consists in perfect love directed to God, and (2) that all servants of God are brothers. Rāmānanda called his followers 'Avadhūta,' because they had 'shaken off' the bonds of narrow-mindedness. His follower, Kabir, carried this doctrine of catholicity still farther, and it reached its full development, and — what is more — its general acceptance by the masses of Hindōstān, seven generations later, through the works of modern India's greatest poet, Tulasī Dāsa.

The most striking point about Rāmānanda's

teaching, and that which has so captured the mind of India as to be enshrined in a proverbial saying, is that, so long as a man or woman has genuine loving faith in the Supreme, his or her caste and position in life are matters of no importance. The Śrī Vaisnavas admitted only Brāhmanas as teachers, and only people of high caste as lay members. But Rāmānanda permitted no such bounds. As the saying referred to above says, he taught:

*gāṭi pāṭi pūchhai nahī kōi,
Harī-ku bhajai, sō Harī-kaṭi hōi,*

'Let no one ask a man's caste or with whom he eats. If a man shows love to Hari, he is Hari's own.'

Hari is the name given to the Supreme when allusion is made to him as a loving father, and, in this character, it is to the incarnation of Viṣṇu as Rāmachandra, the hero of the *Rāmāyana*, that the devotion of Rāmānanda and his followers was more particularly directed. His initiatory *mantra*, or formula, was the words 'Śrī Rāma,' the salutation among members of the community being 'Jaya Śrī Rāma,' 'Jaya Rāma,' or 'Sītā Rāma.'

Rāmānanda had twelve chief disciples or apostles, and the list shows his disregard for caste in matters of religion. They were:¹ (1) Anantānanda, (2) Sukhānanda, (3) Surasurānanda, (4) Narahariyānanda, (5) Pipā, (6) Kabir, (7) Bhāvānanda, (8) Sēnā, (9) Dhanā, (10) Rai Dāsa, (11) Padmavati, (12) Surasari.

Of these nos. 11 and 12 were women. Regarding Padmavati nothing is known. Surasari was the wife of Surasurānanda, and the *Bhaktamāla* (66) tells a pretty story of how she was once wandering alone in the forest praying, when she was attacked by Musalmān robbers. Thereupon Rāma took the form of a lion, and guarded her, like another Una, till she was out of danger.

Anantānanda was Rāmānanda's first disciple. He is most famous as the apostle of the Jōdhpur country, the king of which he converted by a miracle at Sambhar, recalling that of the barren fig-tree in Mk 11:20¹. (*Bhaktamāla*, 32). The third in descent from Anantānanda, in line of teacher and pupil, was Nābhā Dāsa, the author of the *Bhaktamāla*.

Sukhānanda was a poet. His hymns are famous, and have been collected in a volume entitled the *Sukhasāgara* (*Bhaktamāla*, 64).

Surasurānanda, the husband of Surasari, was famous for his faith. The *Bhaktamāla* (65) tells a curious story about him, the lesson of which reminds us of Mk 7:18. A wicked Musalmān gave him and his disciples cakes secretly mixed with flesh (an impurity). He accepted them as food offered in the name of the deity, and they all ate the food. Then the Musalmān told the disciples of the presence of meat in the cakes. They came to their master in alarm at the defilement that they had incurred. But he replied that they had not eaten the food in faith, and bade them vomit. They did so, and meat issued from their mouths. Then he vomited, and showed them that by his faith the impure meat had been transubstantiated into leaves of the holy *tulasī*-plant. He is of importance, for through him Tulasī Dāsa traced his descent from Rāmānanda in line of teacher and pupil.

A curious legend is told about Narahariyānanda. One day, being in want of fuel to dress food for a party of holy men, he took an axe, and went to a temple of Dēvi and cut away from it a sufficient portion of wood.² Dēvi promised, if he would desist from spoiling her temple, to give him a daily supply of fuel, and so it came about. A covetous and unregenerate neighbour, hearing of this, thought that he would follow the saint's example, but, as soon as he applied his axe, Dēvi attacked him, and wounded him sorely, so that, when people came for him, they found him at death's door. Dēvi spared him only on condition that for the rest of his life he would supply Narahariyānanda's wants in the way of fuel (*Bhaktamāla*, 67).

Pipā was a Rājput rāja of Gāgarān. He was originally a worshipper of Dēvi, but was commanded by her in a dream to become a disciple of Rāmānanda. Rāmānanda refused to accept him, saying that he had no dealings with men of war like him, and, when Pipā persisted, angrily told him to go and fall into a well. Pipā at once tried to cast himself into the well in the courtyard of Rāmānanda's house, and was with difficulty stopped by the bystanders. Rāmānanda then took pity on him, and received him on probation as a disciple. After a year's trial he was fully admitted, abandoned all his early possessions, and, in spite of the remonstrances of his family, set out with Rāmā-

¹ The list given by Wilson (*Religious Sects*, p. 56) is incorrect, being based on a mistranslation of the *Bhaktamāla*.

² Almost the only stringent duty laid upon the followers of Rāmānanda was that of showing hospitality to wandering holy men. The necessity of providing the means for this seems to have been held to justify almost any course of conduct. We shall see extreme instances of this in the case of Pipā. Cf. also the story of Dhanā, below.

¹ *Om Rāmāya namaḥ.*

² The legend of this boon is of some importance. Rāmānanda does seem actually to have lived to a great age. Nābhā Dāsa takes pains to record that he 'bore his body for a very long time,' and tradition says that he lived 111 years.

nanda on a pilgrimage to Dvāraka, accompanied by Sitā Sahachārī, one of his wives, who had become as ardent a devotee as himself.

The *Bhaktamāla* devotes much space to Pipā, and narrates or alludes to a great number of legends regarding him and his wife. Some of them are given by Wilson (p. 87 ff.). Two or three of the legends regarding Sitā Sahachārī illustrate the lengths to which Rāmāwats are supposed to be willing to go in order to fulfil the duty of hospitality to wandering saints. She is represented as a peculiarly holy woman and as a devoted wife, and yet, on more than one occasion, she was ready to sacrifice her chastity in order to provide the means for carrying out this duty, being each time saved from the last extremity by miraculous intervention (*Bhaktamāla*, 81).

Kabīr (ib. 80) was a Musalmān weaver. It was through him that Nānak Shāh, the founder of the Sikh religion, inherited much of Rāmānanda's teaching (see *ERE* vii. 632).

The *Bhaktamāla* gives no particulars concerning Bhāvānanda, beyond mentioning his name, nor can the present writer find anything about him elsewhere except an anonymous couplet praising his devotion to Rāma and his wisdom.

Sēnā was a barber by caste (for the tradition concerning him see art. SENĀPANTHIS).

Dhanā was a simple peasant. He belonged to the Jāt caste, which is notorious for the boorishness of its peasant members. The account of him given by the *Bhaktamāla* (82) tells that one day some wandering saints asked him for food, and he gave them the only grain that there was in the house—that which had been reserved for seed. To conceal the pious theft from his parents, he proceeded to plough a field, into which he pretended to sow the grain. He was subjected to much ridicule from neighbours who knew the facts of the case; but, as time went on, a miraculous crop sprang up in the field, which surpassed the crops of those who laughed at him. On one occasion he saw a Brāhmaṇa worshipping a sacred *śālagrāma* stone, and, in his simplicity, asked him for a similar object of devotion. The other picked up an ordinary pebble, and, giving it to the silly boor, said, 'Here is your god. Take it home and worship it.' Dhanā, looking upon it as a representation of Rāma, carried it home, and tended it with great devotion. The god, pleased at the simple faith of the peasant lad, came to him in person, in the character of a fellow-Jāt, and served him as a ploughman. After some time he recommended Dhanā to go to Benares and become Rāmānanda's disciple. He did so, and, after receiving instruction from the teacher, returned home. There he again saw his ploughman, and, his eyes being opened, he recognized him as Rāma. The god then blessed him and departed, and Dhanā remained at home, carrying on his household duties, and worshipping the Supreme.

Rai Dāsa (*Bhaktamāla*, 59) was a Chamār, or leather-worker, and belonged to one of the most degraded and despised castes (for particulars see art. RAI DĀSIS).

This account of Rāmānanda's twelve apostles, childish though some of the legends may appear, is interesting, and is typical of the doctrine of the equality of all men and women before God. While we may assume that such men as Anantānanda and Sukhānanda were Brāhmaṇas, the list also contains a Musalmān, a professional soldier, a barber, a boorish Jāt, and, lowest of the low, Rai Dāsa, the Chamār. Note also the important position assigned to women. It is true that in all the sects of the Vaiṣṇava reformation (see *ERE* ii. 548) women saints are frequently met with, but, so far as the present writer is aware, Rāmānanda was the only teacher who placed the sexes on an equality by calling two women to be his apostles.

According to modern belief, Rāmānanda was a direct re-incarnation of Rāmachandra, and each of his twelve apostles was also an incarnation of some subordinate god or demi-god. Thus Anantānanda was an incarnation of Brahmā, Sukhānanda of Śiva, Surasurānanda of Nārada, Kabīr of Prahlāda, Sēnā of Bhīṣma, Rai Dāsa of Yama, and so on. Rāmānanda borrowed from his predecessors the title *ānanda*, 'joy,' which he added to the names of most of his disciples, to indicate the joy of their devotion to Rāma. Probably the full names of Pipā, Sēnā, and Dhanā were thus Pipānanda, Sēnānanda, and Dhanānanda. Not being Brāhmaṇas, they could be addressed familiarly, and it is a common familiar custom in India to omit the final syllables of a name, just as we say 'Will' for 'William.'

Although the great claim of Rāmānanda to recognition is his insistence on the equality of all believers, a corollary of this teaching also deserves more than a passing notice. The doctrines of his

predecessors, the Rāmānujas, were, in N. India, taught only in Sanskrit. Their scriptures were learned books, written for learned men, in a learned language. But, for Rāmānanda, with disciples like Kabīr, Pipā, Sēnā, Dhanā, and Rai Dāsa, who were not Sanskrit scholars, this was intolerable. His teaching was therefore everywhere in the vernacular, and his followers wrote their hymns and other similar compositions in one or other of the various dialects of Hindi. He himself wrote little that has come down to us, but—not to mention the less known works of men like Sukhānanda—his successor Kabīr was one of the most voluminous authors in that language. It was largely owing to the influence of Rāmānanda and his followers that Hindi became a literary language, and not only was its most shining light, Tulasī Dāsa, a devout Rāmāwat, but all his poetry was written under the direct influence of Rāmānanda's teaching. The debt which the literature of Hindōstān owes to Rāmānanda cannot be over-estimated.

While we may be fairly certain that Rāmānanda was born in A.D. 1299, the date of his death is involved in some obscurity. The popular tradition is that he died in Samvat in 1467 (= A.D. 1410). This would give him a life of 111 years, which is improbable. We can, however, accept the tradition, borne out, as it is, by the direct statement of the *Bhaktamāla*, that he had an exceptionally long life, and this would authorize us to state that he lived during the greater part of the 14th century A.D. He was thus contemporary with the later Khiljī kings, and with nearly all the kings of the house of Tughlak. In his youth occurred the famous sack of Chitaur by 'Alāu'd-dīn Khiljī, and his ripe manhood corresponded with the insanely tyrannous rule of Muḥammad Tughlak. If he lived to the age of 99, he saw the invasion of India by Tamerlane, and the sack and massacre of Delhi. It is impossible not to believe that this series of calamities exercised much influence on Rāmānanda, and that his doctrine of faith in the benignant and heroic Rāmachandra, offered to all classes of the community, owed much of its ready acceptance to the sufferings then being undergone by the Indian people under cruel, alien rule.

Of Rāmānanda's twelve apostles three—Kabīr, Sēnā, and Rai Dāsa—founded branch sects of their own. The others contented themselves with preaching the doctrines of their master. Separate articles are devoted to Kabīr, Sēnā, and the Rai Dāsīs. Kabīr was the only one of these three that really founded a sect. The other two so-called sects are little more than separate groups of Rāmānandīs called after the respective names of the teachers from whom they are spiritually descended. Through the preaching of these twelve and of their followers the pure and chaste worship of Rāma became widely spread over Hindōstān, and successfully competed with the more sensuous worship of Kṛṣṇa and Rādhā that centred round Vrndāvana, and reached its culminating point in the erotic raptures of the Rādhāval-labhis (q.v.; see also art. BHAKTI-MĀRGA, vol. ii. p. 545, and VALLABHĀCHĀRIS).

LITERATURE.—Numerous books have been published in Hindi devoted to the life and teaching of Rāmānanda. The only really authoritative work is the *Bhaktamāla* (80 f.) of Nābhā Dāsa, with Priyā Dāsa's commentary; the best ed. is that of Sitārāmaśaraṇa Bhagavān Prasāda (Benares, 1905), in which are given extracts from the contents of the more modern works dealing with Rāmānanda. A summary (not always correct) of the statements in the *Bhaktamāla* will be found in H. H. Wilson, *Sketch of the Religious Sects of the Hindus*, London, 1861, pp. 46 ff., 54 ff.; other European accounts are based on this, and reproduce Wilson's mistakes. For a briefer summary see R. G. Bhandarkar, *Vaiṣṇavism, Saivism, and Minor Religious Systems* (= *GLAP* iii. 6), Strassburg, 1913, p. 661. Other Indian accounts that may be consulted with advantage

are Dhruva Dāsa, *Bhaktanāmavalī*, ed Rādhākṛṣṇa Dāsa (Nāgārī Prachārini Sabha), Benares, 1901, p. 83 ff.; Jivārāma, *Sṛīrasakṛpākāśa-bhaktamālā*, Bankipur, 1887, verse 10 ff.; Hārischandra, *Vaiṣṇavasārasava*, do., n.d., p. 14.
The account given in the present article is based entirely on Indian authorities.

GEORGE A. GRIERSON.

RAMĀNUJA.—Tradition dating from the 13th cent. A.D. ascribes the birth of Rāmānuja to the year 938 of the Saka epoch (=A.D. 1016-17). In his youth he lived at Conjeeveram, and was a pupil of Yādavaprakāśa, an adherent of the strict Advaita philosophy of Sankara. Rāmānuja, however, fell under the influence of the Vaiṣṇavism which had been made current by the efforts of the Ālvārs in the Tamil country, and separated on this ground from his preceptor, attaching himself instead to Yāmunamuni, who represented the philosophical aspect of the creed of the Ālvārs. In due course he succeeded his new teacher as the head of this school of opinion, and settled at Śrīraṅgam near Trichinopoly, where most of his life was spent. In his old age he is said to have fallen under the disfavour of the Chola king, Kulottunga, who was an adherent of Saivism, and to have removed his residence in 1096 to the dominions of the Hoysala princes of Mysore, where in 1098 he succeeded in converting to his faith Bitti Deva, or Viṣṇuvardhana, at that time a viceroy for his brother, Ballāla, and later (1104-31) himself king. Another tradition recorded in Nṛsiṃha's *Smṛtyarthasāgara*¹ refers to him as alive as late as 1127, and it would clearly be unwise to attach too much weight to the precise dates assigned for his birth; his activity, it is certain, fell in the last quarter of the 11th cent. A.D., with which accords the statement of the *Prapaṇnāmṛta*² that in 1091, towards the end of his life, he dedicated an image of Nārāyaṇa on Yādavāchala. Numerous works are attributed to him,³ in many cases doubtless without just cause; of special importance are only the *Vedāntadīpa*, the *Vedāntasūtra*, the *Vedārthasaṅgraha*, which are independent works, and his commentaries (*bhāṣyas*) on the *Bṛahmasūtra* and the *Bhagavad-Gītā*.

1. Philosophical tenets.—The essential contribution of Rāmānuja to Indian thought was the effort to develop in a complete system, in opposition to the uncompromising Advaitism of Sankara, a philosophical basis for the doctrine of devotion to God which was presented in poetical form in the hymns (*prabandhas*) of the Ālvārs—a task for which his training under a teacher of Advaitism rendered him specially fit. In attempting this task, which he undertook on the bidding of his teacher, Yāmunamuni, he was, it is clear, not developing any essentially new line of thought, and he makes no assertion of originality; in his interpretation of the *Bṛahmasūtra* as a text-book of Vaiṣṇavism, he claims merely to be following the commentary (*vṛtti*) of Bodhāyana and the opinions of previous teachers, of whom elsewhere he enumerates several—Tanka, Dramida, Guha-deva, Kapardin, and Bhāruchi; of these Dramida at least preceded Sankara, and indications in Sankara's own commentary show that Rāmānuja's claim to be following tradition is not unfounded. The disappearance, however, of the works of his predecessors and the hopeless obscurity in itself of the *Bṛahmasūtra* render it impossible to determine what degree of independence is to be assigned to Rāmānuja. The *Sribhāṣya*, his commentary on the *Bṛahmasūtra*, conveys an impression of no mean philosophical insight, and it is fair to assume that his work in substantial merit and complete-

ness far outdid any previous effort to find in the *Bṛahmasūtra* a basis for monotheism.

To Sankara the whole universe was one, *Brahman* without a second (*advaita*), without qualities, consisting of thought, but without differentiation of subject and object: the world of experience arises from the association with the one reality of *māyā*, or illusion, and has therefore but a conventional existence, being the object of the lower knowledge as opposed to the higher knowledge of the one reality. Escape from the fetters of transmigration, which is an essential part of the conventional life, is obtained by the act of intellectual intuition which appreciates the illusory character of the empirical universe. A creator (Ivara) exists, and his grace serves to secure in some degree this intuition, but the existence of God, as also of the soul itself as individual, is in ultimate analysis mere illusion, and His grace is equally illusory. To establish this scheme Sankara does not rely on the human faculties unaided: freely as he uses argument, he bases his views on the *Upanisads* and the *Bṛahmasūtra* as an eternal and conclusive revelation.¹ Rāmānuja is no less dogmatic, but the doctrine which he deduces is very different. In the *Upanisads* his opinions find their chief support in the *antaryāmi-brahmīna*, contained in the *Bṛhadāraṇyaka Upanisad*,² in which *Brahman* is described in detail as the inner ruler of the whole of the universe in all its aspects, and in a passage in the *Svetāśvatara Upanisad*³ in which stress is laid on the threefold unity in *Brahman* of the empirical subject (*bhoktr*), the objective world (*bhogya*), and the power which instigates (*preritr*). He teaches, therefore, a monism, for all is *Brahman*, but a qualified monism (*viśiṣṭādvaita*), since room is found for the reality of individual souls and the external world. The highest reality is God, endowed with all desirable qualities, not consisting of knowledge alone, but having knowledge as an attribute, all-powerful, all-pervading, and all-merciful. Whatever exists is contained within God, and therefore the system admits no second independent element. But within the unity are distinct elements of plurality which, if effects or modes (*prakāra*) of God, are yet absolutely real, and not figments of illusion. These are souls of varying classes and degrees (*chāt*) and matter in all its forms (*achūt*), which together are represented as constituting the body of God, standing to Him in the same dependent relation as is occupied by the matter forming an animal or vegetable body towards the soul or spirit. Both matter and souls exist eternally in God, and have had no absolute beginning and will have no absolute end. But there are two distinct forms of this existence. In the *pralaya* condition, which occurs at the end of each world-period (*kalpa*), matter exists in a subtle state in which it possesses none of the qualities which make it an object of ordinary experience; the souls likewise cease to be connected with bodies, and, though retaining the essential quality of being cognizing agents, are unable to manifest their intelligence; in this condition *Brahman* is said to be in the causal state (*kāranāvasthā*). From this condition creation develops by the will of God: subtle matter takes on its gross form,⁴ souls expand their intellect, entering at the same time into connexion with bodies in accordance with their deeds in previous forms of existence; in this condition *Brahman* occupies the state of an effect (*kāryāvasthā*). But between the two states there is no essential difference; the effect is the cause which has undergone

⁴ The details of the process are borrowed bodily from the Sāṅkhya system, and have no independent value.

a process of development (*parināma*). The difference, however, serves to explain in the view of Rāmānuja those passages in the *Upanisads* which seem to deny all duality: in the causal state the differences are merely implicit and may be ignored; passages which assert the creation of the material world, while assuming the eternal existence of soul, are explained away by the fact that in its subtle state matter may be regarded as in a sense non-existent, since it has in that condition none of its essential qualities, while even in the *pralaya* condition the soul remains essentially intelligent. There is, however, clear proof that Rāmānuja felt difficulty in picturing to himself the relation of the non-sentient matter to *Brahman*: in discussing the *Brahmasūtra*¹ there are presented, as possible explanations of the relation, the views that such beings are special arrangements (*saṁsthānaviśesa*) of *Brahman*, as are the coils of the body of a snake, or that the relation of the two entities is comparable to that of the luminous object and light, which are one in that both are fire, or that the material world is a part (*aṁśa*) of *Brahman*, which is the position definitely assigned to the soul. The relation of souls and the material world causes Rāmānuja no difficulty; he accepts the same frankly realistic position as Sankara, though in the case of the latter the realism is ultimately illusory.²

As with Sankara, the fate of the soul is determined by its knowledge, but, as the nature of that knowledge differs entirely in the two systems, so does the fate of the soul. Knowledge means not extinction of individuality, but a life in heaven of eternal bliss, distinguished from God Himself merely by the fact that the released soul does not possess the powers of creating, ruling, and retracting the world which are the special characteristics of the supreme soul.

2. Religious system.—The actual system of religion expounded by Rāmānuja and his school, while resting on the basis of the metaphysics of the *Śrībhāṣya*, is clearly largely the traditional inheritance of the Pāñcharātra or Bhāgavata school; in the *Śrībhāṣya* itself the only sectarian hint is the use of the term Nārāyaṇa as a synonym of *Brahman*. In the theology of Rāmānuja God manifests Himself in five forms. The first is the highest (*para*), in which, as Nārāyaṇa or Parabrahman, He dwells in His city of Vaikunṭha, under a gem pavilion, seated on the serpent Śeṣa, adorned with celestial ornaments and bearing His celestial arms, accompanied by His consorts Lakṣmī (prosperity), Bhū (the earth), and Līlā (sport); in this condition His presence is enjoyed by the delivered spirits. The second form of manifestation consists of His three or four *vyūhas*, conditions assumed for purposes of worship, creation, etc.; of these Sankarsaṇa possesses the qualities of knowledge (*jñāna*) and power to maintain (*bala*); Pradyumna has ruling power (*aīśvarya*) and abiding character (*virya*); Aniruddha has creative power (*śakti*) and strength to overcome (*tejas*); while Vāsudeva, when included as a fourth *vyūha*, has all six qualities. The third form comprises the ten *avatāras* of the ordinary mythology; the fourth the *antaryāmin*, in which condition He dwells within the heart, can be seen by the supernatural vision of the Yogi, and accompanies the soul in its passage even to heaven or hell, while the fifth form is that in which the deity dwells in idols or images made by men's hands.

The individual soul, which is a mode of the supreme soul and entirely dependent upon and controlled by it, is nevertheless real, eternal, endowed with intelligence and self-consciousness,

without parts, unchanging, imperceptible, and atomic¹—a doctrine denied energetically by Sankara. Souls are classified as eternal (*nitya*) in a special sense, such as those of Ananta or Garuḍa, which dwell in constant communion with Nārāyaṇa, released (*mukta*), or bound (*baddha*). Of the latter some seek mere earthly gains, others aim at the joys of heaven, while others strive for the eternal bliss of final deliverance. For the latter two means of attaining the end desired are available; the former is confined to the three higher classes alone, excluding the Śūdra; it leads through the *karmayoga* and the *jñānayoga* to *bhakti*, while the latter is open to those who despair of accomplishing this elaborate process and fling themselves upon the will of God (*prapatti*).

The *karmayoga* is the teaching of the *Bhagavad-Gītā*, which bids man perform acts without desire of reward; it includes the ceremonial worship of the deity—the practice of penance, the offering of sacrifice, the bestowal of charity, and the performance of pilgrimages. It serves as a preparation for the *jñānayoga*, in which the devotee attains the knowledge of himself as distinct from matter and as a mode of *Brahman*. This, again, leads to *bhakti*, which for Rāmānuja is not ecstatic devotion, but a continuous process of meditation upon God. This meditation is to be promoted by subsidiary means, including the use of none but unpolluted food, chastity, the performance of rites, the practice of such virtues as charity, compassion, abstaining from taking life, truth and uprightness, the maintenance of cheerfulness, and the absence of undue elation. Thus promoted, *bhakti* results in an intuitive perception of God, the highest state realizable. *Prapatti*, on the other hand, consists in the sense of submission, the avoidance of opposition, the confidence of protection, the choosing of God as the saviour, the placing of oneself at His disposal, and the consciousness of utter abasement.

The relation between *bhakti* and *prapatti* was left obscure in Rāmānuja's teaching, for it immediately formed a subject of bitter division between the two schools which claimed to follow his teaching—the Vāḍagalai, or northern school, which used Sanskrit as its medium of teaching, and the Teṅgalai, or southern, which resorted to the vernacular, thus continuing the tradition of the Ālvārs. The former, which seems to reflect more closely the temper of Rāmānuja in its conservatism and restraint, claimed that *prapatti* was merely one way of salvation, not the only way, and that it should be resorted to only when it was found impossible to attain the desired result by the other modes; moreover, they found in it essentially an element of human action in that it demanded a distinct effort on the part of the *prapanna*, resulting from the effect of his sense of submission, etc. The southern school, on the other hand, maintained that *prapatti* was the only mode of salvation, that it precluded any action on the part of the devotee,² action emanating from God alone, and that the sense of submission, etc., was the outcome of *prapatti*, not the means of producing it. Similarly, the schools differed in their treatment of Śūdras: the Vāḍagalai confined equality to conversation alone, and forbade the teaching to them and indeed even to Kṣatriyas and Vaiśyas of the *mantra* of homage to Nārāyaṇa with the syllable *Om* prefixed, while the southern school asserted the equality of the castes and permitted the use of *Om* by all.

In addition to *bhakti* and *prapatti* Rāmānuja is credited with permitting the attainment of deliverance by *ācāryābhīmānayoga*, in which the votary places himself under the control of his

each, who performs for him the necessary acts to attain deliverance.

Greater importance attaches to the ceremonial worship of the deity in the practice of the school. It has been seemingly laid upon it by Rāmānuja himself, though he fully accepted it and made it an integral part of his system. The modes of worship prescribed include the stamping of the discus or conch of Hari on the body, the wearing of a mark on the forehead, the repeating of *mantras*, the doing of service to his devotees, fasting on the eleventh day of both lunar fortnights, the laying of *tulasi*-leaves on his idol, the drinking of the water in which the feet of the idol are washed, and the eating of the food presented to Hari. Importance attaches to the last practice, for it bears a certain resemblance to the Christian sacrament and suggests the possibility of borrowing from the Nestorian Christian communities of S. India. The same conclusion is also indicated by certain features of the doctrine of *prapatti*, and above all by the method of salvation in which the teacher performs the necessary steps, while the part of the devotee consists in implicit faith in the teacher—a mode which bears a remarkable similarity to the doctrine of vicarious sacrifice. It is unnecessary, however, to assume that these features in the system of Rāmānuja were borrowed by him personally from Christian teaching; they are much more likely to have been already incorporated in the Vaisnavism which he expounded and defended. It is characteristic of the intellectual rather than emotional character of Rāmānuja's teaching that he ignores the aspect of Viṣṇu's character in which he appears as Gopāla-Kṛṣṇa and sports with Rādhā and the cowherdesses, and that even Rāma does not appear to have been the object of his special devotion.

LITERATURE.—The chief authorities for Rāmānuja are R. G. Handarkar, *Report on the Search for Sanskrit MSS in the Bombay Presidency during the Year 1883-84*, Bombay, 1887, p. 68 ff.; *Vaiṣṇavism, Saivism, and Minor Religious Systems* (GIAF III VI.), Strassburg, 1913, p. 50 ff.; G. Thibaut, tr. of *Advaita-Sūtras*, with Śaṅkara's comm., *SBE* xxiv. [1890] cited, and tr. of Rāmānuja's *Sūtrabhāṣya*, *SBE* xlviii. [1911]. A. BERRIEDALE KEITH.

RĀMĀYANA.—1. **Character.**—This poem, 'the career of Rāma,' is one of the two great Sanskrit epics of ancient India. Both have been a national obsession for at least 2000 years, deeply influencing the literary production as well as the moral and religious thought of the Indian population. But they offer several contrasts. The *Mahābhārata* (v.) in its literary aspect represents the type of a popular legendary tale called *purāṇa*, while the *Rāmāyana* belongs to the class called *kāvya*, an artificial epic, in which form is regarded as more important than the story, and poetical ornament (*alankāra*) is abundantly applied. The *Mahābhārata*, being a congeries of many parts loosely connected by the thread of its epic element, which forms not more than one-fifth of the whole work, is hardly an epic at all, but rather an encyclopædia of moral teaching; its authors are known, and the traditional name of its final factor, Vyāsa, 'the arranger,' is evidently mythical. The *Rāmāyana* is a real epic of the romantic type, being homogeneous in plan and execution, the whole the work of a single author named

Vālmiki. Being in its main and original narrative almost free from interpolated and secondary episodes, it is also much shorter than the *Mahābhārata*, containing about 24,000 as compared with 100,000 stanzas. The warfare in the epic nucleus of the *Mahābhārata* is that of heroic human combatants on both sides; in the *Rāmāyana* it consists of conflicts with monsters and demons such as are described by writers of fairy-tales without first-hand knowledge of real fighting. The *Mahābhārata* was composed in the western portion of N. India, the ancient Madhyadeśa, or Middle Land, which lies between the eastern confines of the Panjāb and the city of Allahābād, while the *Rāmāyana* arose in the ancient kingdom of Kosala, which lay to the north-east of the Ganges, and roughly corresponds to the modern Oudh.

2. **Importance.**—The importance of the *Rāmāyana* is twofold—literary and religious. It is the first product of the artificial epic, or *kāvya*, literature of India. It thus always served as a model to be imitated by the later classical poets, who regarded it as 'the first epic' (*ādī-kāvya*) and its author as the 'first epic poet' (*ādī-kavi*). Thus it supplied the subject of Kālidāsa's epic, the *Raghuvaṁśa*, 'the Family of Raghu,' as well as of two of the plays of the great dramatist Bhavabhūti. Even at the present day the recital of the *Rāmāyana* is listened to with delight by many thousands of Hindus at the great festival of Rāma held every year at Benares. In the Middle Ages the Sanskrit epic was translated into the spoken languages of India, beginning with the Tāmil version, which appeared at the beginning of the 12th cent. and was followed by adaptations and renderings in the vernaculars all over the country. On the *Rāmāyana* the greatest mediæval poet of India, Tulasī Dās (1532-1623), founded his religio-philosophic poem in Hindi, entitled *Rām Charit Mānas*, 'Lake of the Doings of Rāma,' which as a lofty standard of purity and virtue is like a Bible to over 90,000,000 of the population of N. India. Dramatic representations of the story of Rāma are still performed at religious festivals in the towns and villages of India. Thus the 'Play of Rāma' (*Rām Lila*), in which the most popular scenes from the *Rāmāyana* are exhibited, is annually performed at Lahore before a vast number of spectators.

Probably no work of world literature, secular in its origin, has ever produced so profound an influence on the life and thought of a people as the *Rāmāyana*. The nobility and magnanimity of Rāma's character and the conjugal devotion and fidelity of his wife Sītā have, for a great many centuries, exercised a far-reaching moral effect as paragons for imitation among Indians. His early dedication has, moreover, secured to the hero of the *Rāmāyana* the worship of the Hindus down to the present day. The belief that he was an incarnation of Viṣṇu, which forms the fundamental doctrine of the religious reformers Rāmānuja (q.v.) in the 12th and Rāmānanda (see art. RĀMĀNANDIS) in the 14th cent., has contributed much to counteract the diffusion of the degrading superstitions of Saivism in the south as well as in the north of India.

3. **Recensions.**—In its present form the *Rāmāyana* consists of about 24,000 couplets composed almost entirely in the ordinary epic metre called *śloka*, which consists of two hemistichs of sixteen syllables with an iambic cadence. It exists in three recensions—the Bengal, the Bombay, and the West Indian, which differ to the extent that about one-third of the verses contained in each do not occur in the other two. The oldest appears to be the Bombay recension, in which the irregularities of the epic language have not been removed, as is the case in the other two. It must not,

however, be regarded as representing the original text of which the other two recensions are mere revisions. The variations can for the most part be explained by the divergent forms which the popular tradition had assumed, in different parts of India, by the time when those three recensions came to be written down. There is, moreover, evidence to show that those recensions existed at a comparatively early period. Thus quotations from the epic in works of the 8th and 9th centuries indicate that a text allied to the Bombay recension was then in existence, while a poetical abstract of the *Rāmāyana* composed by Ksemendra proves that at least the West Indian recension was known to that author in the first half of the 11th century A.D.

4. **Present text.**—The *Rāmāyana*, as it has come down to us, consists of seven books; but careful and detailed research has shown that the first and last were later additions. The former not only contrasts as inferior in language and style with the original, but contains both internal contradictions and statements conflicting with the following books. Thus it includes (in cantos i. and iii.) two tables of contents which must have been composed at different times; one of them, which takes no notice of the first and last books, was evidently made before these were added. Again, Lakṣmana is stated in bk. i. to have been married at Ayodhyā at the same time as his brother Rāma, while at a later period, in bk. iii., he is expressly said to be still unmarried. The original poem evidently came to an end with the conclusion of bk. vi. For in bk. vii as well as bk. i. the tribal hero of the old books has become a national hero, the people's moral ideal; and the human hero of those books appears in the first and last as an incarnation of the supreme deity Viṣṇu (while Indra, and not Viṣṇu, is accounted the highest god in the original parts). Again, Vālmīki, the author of the epic, is in the additional books introduced as a contemporary of Rāma and is regarded as a seer. In bks. i. and vii. the thread of the narrative is characteristically interrupted, as in the *Mahābhārata*, by numerous episodes, myths, and legends, while this feature is very rare in the other books. Some cantos have been loosely interpolated in the genuine books also, but these consist chiefly of extensions of the finest passages added by professional rhapsodists wishing to meet the demands of the popular taste. Though the additions to the original poem must have been made before the three recensions came into being, it is evident that they could have become part of the epic only a long time after the old part was composed.

5. **Place of origin.**—There is evidence indicating that the *Rāmāyana* was composed in the country of which the capital was Ayodhyā, the royal residence of the race of Ikṣvāku. Thus it is stated in bk. i. that the *Rāmāyana* arose in the family of the Ikṣvākus; the hermitage of Vālmīki is described in bk. vii. as situated on the south bank of the Ganges; and the poet must have been connected with Ayodhyā, for Sītā, Rāma's wife, sought refuge in his forest retreat, where her twin sons were born, brought up, and taught to recite the epic by the poet. In or near Ayodhyā, therefore, Vālmīki may be assumed to have worked into a homogeneous whole the various epic tales current among the court bards of Ayodhyā about the life of the Ikṣvāku hero Rāma. This poem was then learnt by rhapsodists, who wandered about reciting it in different parts of the country.

6. **Age.**—The question of the age of the *Rāmāyana* is involved in some doubt, because the arguments bearing on it are rather inconclusive. There is no evidence to show that either the *Mahā-*

bhārata or the *Rāmāyana* existed even in its earliest beginnings before the end of the Vedic period (c. 800 B.C.). As regards the relative age of the two epics, it is probable that the original form of the *Rāmāyana* was finished before the epic nucleus of the *Mahābhārata* had assumed definite shape. For, while the leading characters of the latter are not referred to in the *Rāmāyana*, the story of Rāma is often mentioned in the sister epic. Again, two of Vālmīki's lines (vi. 81, 28) are quoted in a passage of the *Mahābhārata* (vii. 143, 66) which there is no reason to regard as a later addition. There is an episode of Rāma (*Rāmapāhyanam*) in the *Mahābhārata* that presupposes the existence of the extended *Rāmāyana*, in which Rāma was already deified as Viṣṇu. The *Rāmāyana*, moreover, was along with its later additions a complete work by the end of the 2nd cent. A.D., and was already an old book by the time the sister epic had more or less attained its final shape in the 4th cent. of our era. With this divergence in the date when their growth was completed the permeation of all the old parts of the *Mahābhārata* with new matter is in keeping, while in the *Rāmāyana* such permeation hardly extends beyond the first and the last books. Both epics not only have, in all their books, many phrases, proverbial idioms, and whole lines in common, but also betray a far-reaching general agreement in language, style, and metre. Hence it may safely be concluded that the period of the growth of the *Rāmāyana* coincides with that of the *Mahābhārata*, though it came sooner to an end. The earliest elements of the original *Mahābhārata* may, however, be older than the original *Rāmāyana*, because the former has certain archaic features compared with which Vālmīki's poem shows an advance. Thus, while speakers are introduced in the longer epic with prose formulas such as 'Yudhiṣṭhira spoke,' in the sister poem such expressions invariably form part of the verse. The *Rāmāyana*, too, comes decidedly nearer the classical poets in the use of poetical figures. Various sources of evidence have been examined in order to fix approximately the upper chronological limit of the *Rāmāyana*. The history of early Buddhism supplies no decisive information. In the oldest Buddhist literature, the Pāli *Tiṭṭaka* (see art. LITERATURE [Buddhist]), there is no mention at all of the *Rāmāyana*. It is true that in a *Jātaka* (q.v.) concerned with King Daśaratha there are twelve verses in which Rāma consoles his brothers for the death of his father, Daśaratha, and that one of these verses actually occurs in our *Rāmāyana*. The fact, however, that there is only one verse in common indicates that some old story about Rāma rather than the epic itself is the source of the *Jātaka* verses; for there is not a word in the whole *Jātaka* about Ravana and his following, though it is full of fabulous matter and has much to say about demons and *rakṣasas*. On the other hand, excepting one evidently interpolated passage, there is not a trace of Buddhism in the *Rāmāyana* itself. Such silence, however, may very well be due to the absence of any reason to mention Buddhism in a poem like this. Now, H. Oldenberg has shown (*Gurupāṭhakeumudī*, Leipzig, 1896, p. 9 ff.) that the metre of the *Rāmāyana* represents a later stage of development than that of the Pāli poetry of Buddhism. This positive evidence would place the composition of the original *Rāmāyana* appreciably later than the rise of Buddhism, c. 500 B.C.

Excepting in two passages, which have been shown to be later additions, the *Rāmāyana* contains no reference to the Greeks, who first came into direct contact with India during Alexander's expedition in 327 B.C.

A. Weber's belief that Greek influence can be traced in the *Rāmāyana* seems to be baseless. There is no real parallelism between the story of the abduction of Sītā by the demon Rāvana and Rāma's rescue expedition to Lankā on the one hand and that of the rape of Helen and the Trojan war on the other. Nor need the account of Rāma's bending a powerful bow to win Sītā have any connexion with a similar exploit performed by Ulysses. Stories of such feats of strength for a like object are met with in the literature of others as well as the Greeks, and may easily have grown up independently.

Thus far we have no reason to go back much farther than 300 B.C. for the genesis of Vālmiki's poem. H. Jacobi, however, adduces some arguments based on the political conditions appearing in the epic to show that it dates from before the rise of Buddhism.

In the first place, he notes that the city of Pāṭaliputra (now Patna), which had become the capital of India by 300 B.C., is not mentioned at all, though Rāma is described (i. 35) as passing its very site, and the poet makes a point of referring (i. 321.) to the foundation of various actual cities in E. India to show how far the fame of the *Rāmāyana* had spread beyond Kosala, the country of its origin, he could therefore hardly fail to mention it had it existed. He further observes that in the old part of the *Rāmāyana* the capital of Kosala is always called Ayodhyā, while to Buddhists, Jains, Greeks, and Patañjali (c. 150 B.C.) its name is invariably Śāketa. In bk. vii. we learn that Lava, one of Rāma's twin sons, established his government in Śrāvastī, a city which is not mentioned at all in the original *Rāmāyana*, but which we know to have been ruled in Buddha's time by King Prasenajit of Kosala. From these data he infers that the original epic was composed while Ayodhyā was still the capital of Kosala, before its name of Śāketa was known, and before the seat of government was shifted to Śrāvastī. It would seem, further, to follow that the first and last books, which also mention Ayodhyā and, though added much later, do not know the name Śāketa, must have been composed considerably before the time of Buddha. Such a conclusion is in the highest degree improbable. Jacobi finally notes that in bk. i. Mithilā and Viśālā are twin cities governed by separate rulers, while it is known that by Buddha's time they had become a single city named Vaiśālī ruled by an oligarchy.

It is to be observed that these arguments are based on data to be found in the late first and last books, the evidence of which for the time of Buddha and before must be regarded with suspicion. They do not appear to the present writer to have any cogency as proof of a pre-Buddhist date for the original *Rāmāyana*.

A further argument has, however, been adduced to show that the old part of the *Rāmāyana* dates from before the time of Buddha.

The *Rāmāyana* is a popular epic, and its language is a popular Sanskrit. Now, about 200 B.C. King Aśoka used for his inscriptions not Sanskrit, but vernacular dialects resembling Pāli. Buddha himself before 500 B.C. preached not in Sanskrit, but in the speech of the people. A popular epic could not have been composed in a language that was already dead, but must have been written in one that the people understood. The original form of the epic must therefore date from a pre-Buddhist period when Sanskrit was still a living tongue. Now, the foregoing argument is not cogent, because Sanskrit has always lived as a literary language beside the popular dialects, and has been understood by large sections of the population. There is therefore nothing strange in Sanskrit epics being composed and listened to while Jain and Buddhist monks were writing poetry and preaching in popular dialects, especially when these dialects had as yet diverged comparatively little from the literary language. Even at the present day it is not uncommon in India for two languages to be current side by side in the same district; and in a great part of N. India there is in use a modern Indian literary language which diverges very considerably from that of everyday life.

Occasionally verses occurring in the *Mahābhārata* and *Rāmāyana* are also found as Pāli or Prakṛt verses in Buddhist and Jain texts. This by no means implies that such verses have been translated into Sanskrit from popular languages. Still more baseless is the view of several scholars that the two great epics were originally composed in popular dialects and were only later translated into Sanskrit. Not the slightest trace of any record that such a translation ever took place has come down to us. On the other hand, the fact that in the Sanskrit drama (cf. *ERF* viii. 112) the bard (*śūta*) regularly speaks Sanskrit, and not a popular dialect, indicates that the poetry of the bards, i.e. the epic, was composed in Sanskrit. This hypothesis was first propounded by A. Barth in *RC*, 6th April 1886, and further elaborated by him in *RHR* xxvii. [1893] 238 ff., xlv. [1902] 195 f. It has been refuted by Jacobi in *ZDMG* xlviii. [1894] 407-411.

A review of all the available evidence appears to the present writer to indicate that the original part of the *Rāmāyana* came into existence about the middle of the 4th cent. B.C., when popular stories

current about Rāma were collected and worked up into a homogeneous epic by the poet Vālmiki; while it attained its present extent by the end of the 2nd century A.D.

7. Two parts.—In the story of the *Rāmāyana*, as told in the original books, two parts can be clearly distinguished. The first is an ordinary narrative of human life without any admixture of mythological elements. Beginning with the intrigues of a queen at the court of Ayodhyā to ensure the succession of her son to the throne, it describes the results that followed. Had the poem ended with the return of Rāma's brother Bhārata to Ayodhyā after the death of their father, King Daśaratha, it might have passed for an epic based on historical events. On the other hand, the second part, being founded on myths, is full of marvellous and fantastic adventures. The theory was formerly held (by Lassen and Weber) that the narrative is an allegorical representation of the spread of Aryan culture to the south of India and Ceylon. This view is, however, not borne out by the statements of the epic itself. The poet is evidently unfamiliar with the south, which he fills with the fabulous beings that might easily be imagined to haunt an unknown country. There is much more probability in Jacobi's theory that the second part of the original *Rāmāyana* represents a narrative of terrestrial events based on mythological elements traceable to the earliest Veda. The name of the heroine Sītā appears in the *Rigveda* as the personified Furrow invoked as an agricultural goddess (iv. lvii. 6). In a ritual work of the latest Vedic period (*Kausika Sūtra*, 106) she appears as a divinity of the ploughed field, a being of radiant beauty, black-eyed, adorned with lotuses, the wife of the rain-god. In the *Rāmāyana* itself Sītā is said to have arisen from the earth when her adoptive father Janaka was ploughing, and in the last book she finally disappears underground, received into the arms of Mother Earth. Her husband Rāma would then represent Indra, and his fight with the demon Rāvana a modification of the Vedic conflict of Indra with Vṛtra, the demon of drought. It is here probably significant that Rāvana's son is called Indra-satru, 'foe of Indra,' which is an epithet of Vṛtra in the *Rigveda*. The rape of Sītā by Rāvana is parallel to the abduction by the demons of the cows later recovered by Indra. Again, Hanumān, the chief of the monkeys, who aids Rāma in flying hundreds of leagues to recover Sītā from the island of Lankā, is the son of the god of wind and bears the patronymic Māruti, 'son of the Maruts.' This suggests a reminiscence of Indra's association with the Maruts, or storm-gods, in his fight with Vṛtra. The name of the dog Saramā, who for Indra crosses the river Rasā in search of the captured cows, reappears as that of a demoness who consoles Sītā when imprisoned by Rāvana in the island of Lankā.

8. Contents.—Such being the general character of the original *Rāmāyana*, we may now proceed to sketch the contents of the complete epic in the expanded form in which it has come down to us.

(a) First part.—Bk. i., called *Bāla-kāṇḍa* ('Childhood Section'), commencing with an introduction on the origin of the poem, goes on to narrate the story of Rāma's youth. We are told how Vālmiki in his forest hermitage was preparing to describe worthily the fortunes of Rāma. While he was watching a pair of birds on the bank of a river, the male was suddenly shot by a hunter and fell dead to the ground weltering in its blood. The poet, touched by the grief of the bereaved female, uttered words lamenting the death of her mate and threatening vengeance on the murderer. Strange to relate, his utterance was no ordinary speech, but issued from his lips in metrical form. As he wandered towards his hut pondering this occurrence, the god Brahmā appeared and, announcing to the poet that he had unawares created the rhythm of the *śloka* metre, bade him compose the divine poem on the life and deeds of Rāma in that measure. This story possibly preserves a histori-

cal reminiscence: it may mean that the epic *śloka*, which in the form of the *anustubh* goes back to the *Rigveda*, and which is identical in structure throughout the *Mahābhārata* and the *Rāmāyana*, was fixed in its final form by Vālmiki.

There follows an account of the city of Ayodhyā, in which the wise and mighty Daśaratha ruled. The king, being for a long time without a son, resolved to offer a horse-sacrifice, to direct which he appointed the potent seer Rṣyaśrīga. Just at that time the gods were suffering many things from the violence of the demon Rāvana. They accordingly turned for help to Viṣṇu, imploring him to consent to be born in human form, because Rāvana was immune from death except by the hand of a human foe. Viṣṇu having consented to be born as a son of Daśaratha and the horse-sacrifice being over, the three wives of the king bore four sons, Kauśalyā becoming the mother of Rāma (the incarnation of Viṣṇu), Kaikeyī of Bharata, and Sumitrā of the pair Lakṣmaṇa and Saṭrugṇa. Of these sons Rāma was his father's favourite, and to him his brother Lakṣmaṇa was particularly devoted from the beginning. After the sons were grown up, the great seer Viśvāmitra, who had come to Ayodhyā, conducted the two princes Rāma and Lakṣmaṇa to the court of Janaka of Videha. That king had announced that he would give his daughter in marriage to the prince who could bend a powerful bow that he possessed. Many had tried in vain; Rāma not only bent the bow, but broke it in two. The wedding of Rāma and Sītā, attended by King Daśaratha, was then celebrated with great festivities. For many years after the young couple lived in great happiness.

In this supplementary book the thread of the narrative is, just as in the *Mahābhārata*, interrupted by numerous episodes, many of which, in different versions, recur in the sister epic, and which are constantly alluded to in the later classical literature. One of these (I 51-65) deals with the enmity of the famous sages Viśvāmitra and Vasiṣṭha. The former, a powerful king (though originally, in the *Rigveda*, a seer), came into conflict with the latter in the endeavour to deprive him forcibly of his miraculous cow. Unsuccessful in his attempt, Viśvāmitra undertook great penances which extended over thousands of years, and in which he resisted the seductions of beautiful nymphs, till at last he achieved Brāhmanhood and became reconciled to his rival Vasiṣṭha. Among others may be mentioned the story of the dwarf-incarnation of Viṣṇu (I 29), of the birth of the war-god Kumāra or Kārttikeya (I 35-37), and of the churning of the ocean by the gods and the demons (I 45). The fantastic legend of the descent of the Ganges (I 33-44) relates how the sacred river was brought down from heaven to earth in order to purify the remains of King Sagara's 60,000 sons, who had been burnt to ashes by the sage Kapila enraged by their disturbing his devotions.

Bk. II, called *Ayodhyā-kāṇḍa* ('Ayodhyā Section'), with which the main story of the epic begins, describes the events that occurred at Daśaratha's court of Ayodhyā. The king, by this time growing old, held an assembly, in which he announced, amid general approval, his intention to make Rāma his heir-apparent. Kaikeyī, Bharata's mother, whose heart was set on her son's succession to the throne, now reminded Daśaratha of his former promise to grant her any two boons she might choose. On his consenting to fulfil his promise, she requested him to appoint Bharata his successor and to banish Rāma from Ayodhyā for fourteen years. Kaikeyī having refused to withdraw her demand, Daśaratha passed a sleepless night. Next day, when the consecration of Rāma was to have taken place, the king sent for and explained the situation to his son. Rāma, accepting his father's commands calmly and dutifully, without delay set forth into exile, accompanied by Sītā and his half-brother Lakṣmaṇa. The old king, overwhelmed with sorrow, cut himself off entirely from Kaikeyī, remained with Rāma's mother, and died after a few days, lamenting the banishment of his son. Bharata, who had been living with his maternal grandparents at Rājagṛha, was now summoned to Ayodhyā, but, indignantly refusing the succession, set out for the purpose of bringing Rāma back as king to the capital. In the wild forest of Daṇḍaka he found Rāma living happily with Sītā and Lakṣmaṇa. But Rāma, though deeply affected by the magnanimity of his brother's request, declined to return, considering it his duty to fulfil his vow of exile. He accordingly took off his gold-embroidered shoes, and handed them to his brother, in token of transferring the succession to him. Bharata then went back to Ayodhyā and, placing on the throne Rāma's shoes surmounted by the royal umbrella as emblem of sovereignty, retired to Nandigrāma, whence he administered the affairs of State as Rāma's vicegerent. Herewith ends the first part of the original epic, which deals with the world of reality.

(b) *Second part*—With bk. III, the *Aranya-kāṇḍa* ('Forest Section'), we are introduced to the world of romance in which Rāma is constantly engaged in adventures and conflicts with fantastic creatures and demons of various kinds till the end of the poem. After the exiles have been living for some time in the Daṇḍaka forest, pious anchorites come to seek Rāma's protection against the *rākṣasas*, or demons, infesting the forest and terrorizing their hermitages. Rāma, having promised his aid, now enters upon a series of efforts to clear the forest of these monsters. Rāvana's sister Sūrpanakhā, falling in love with Rāma, is rejected first by him and then by Lakṣmaṇa. To avenge the insult, she brings her brother Khara with 14,000 demons against Rāma, who, however, destroys them all together with their leader. She then hastens across the sea to the fabulous island of Laṅkā and complains to her brother, Rāvana, its ten-headed ruler. The latter, filled with rage and bent on revenge, speeds through the air in his golden car to the forest. There he transforms one of his followers into a golden deer,

which appears to Sītā and at her request is pursued by Rāma and Lakṣmaṇa. Meanwhile Rāvana, disguised as an ascetic, approaches Sītā, seizes her, and carries her off by force in his chariot through the air. The vulture Jāṭayu, an old friend of Daśaratha, attacks him on his flight and succeeds in shattering his car, but is finally slain. Rāvana again seizes Sītā with his claws and carries her across the sea to his palace in Laṅkā. He shows her all its splendours and tries to persuade her to become his wife. She indignantly refuses and is finally confined in a cave guarded by female demons. Rāma returns from a fruitless chase only to find that his wife has vanished. Reduced to despair, he wanders southwards with Lakṣmaṇa in search of Sītā. They fall in with a headless demon, who advises Rāma to conclude an alliance with the monkey king Sugriva, who will help him to find his lost wife.

Bk. IV, called the *Kiṣkindhā-kāṇḍa* ('Kiṣkindhā Section'), describes the alliance concluded by Rāma with the monkeys for the purpose of recovering Sītā. At the lake Pampā they meet Sugriva, who tells them that he has been robbed of his wife and sovereignty, and expelled from his kingdom, by his brother Valin. Rāma and Sugriva then form an alliance. At Kiṣkindhā, the capital of Valin, a battle takes place in which Rāma slays Valin. Among the councillors of Sugriva, who has now become king, the wisest and most trustworthy is Hanumān. He is accordingly entrusted with the task of finding Sītā, and, accompanied by a host of monkeys, proceeds southwards. After many adventures they fall in with Sampātī, a brother of the vulture Jāṭayu, who tells them he has seen Rāvana carrying off Sītā, and describes the position of Laṅkā. On reaching the coast the monkeys are filled with despair as to how they can cross the sea. Hanumān, who has proved his ability to leap farther than any of the rest, ascends Mount Mahendra and prepares to bound across the ocean.

Bk. V, which describes Hanumān's doings in Laṅkā, is called the *Sundara-kāṇḍa* ('Beautiful Section'), perhaps as especially attractive because it contains more fabulous stories than any of the other books. With a mighty spring from Mount Mahendra Hanumān rises in the air and after a flight of four days, during which he undergoes various adventures, he reaches Laṅkā. From a hill he first surveys the city, which looks almost impregnable. Then, reducing himself to a minute size, he enters Laṅkā after dark, and inspects the whole city—Rāvana's palace, his marvellous aerial car, and the women's apartments. After a long search he at last discovers Sītā in a grove. He rouses her from her grief by the news that Rāma is coming to the rescue. Hanumān then returns as he came, reports to Rāma the success of his search, and gives him a message from Sītā.

Bk. VI, entitled the *Yuddha-kāṇḍa* ('Battle Section'), describes the great conflict between Rāma and Rāvana. Sugriva having advised the building of a bridge from the mainland to Laṅkā, an attack on the island is arranged and the vast monkey army marches to the seashore. On the news of its approach Vibhīṣana, Rāvana's brother, counsels the surrender of Sītā. Repelled and insulted by Rāvana, Vibhīṣana flies across the sea, allies himself with Rāma, and advises him to seek the help of the god of the sea, with whose aid the monkeys build the bridge in the course of a few days. The city being now invested, Rāvana's army sallies forth and a general battle, as well as many single combats, ensues. In one of the latter Rāvana's son Indrajit is slain by Lakṣmaṇa. Enraged at this, Rāvana appears on the scene and fights a duel lasting a day and a night with Rāma, till at last he falls pierced to the heart. Rāma then orders the funeral of the dead chief of the demons to be celebrated and appoints Vibhīṣana to succeed him as king of Laṅkā. Summoning Sītā, he announces his victory, but rejects her in the presence of all the monkeys and the *rākṣasas*. Loudly lamenting Rāma's unjust suspicions, Sītā then throws herself into the flames of a funeral pyre, but the god Agni, raising her unhurt, hands her over to Rāma, assuring him that she has been faithful to him throughout her captivity. Rāma hereupon declares that he has never doubted her innocence, but has considered it necessary that her purity should be proved in the eyes of the people. Sītā now returns joyfully with Rāma to Ayodhyā, where he is consecrated king and reigns gloriously, inaugurating a new golden age for his subjects.

Bk. VII, called the *Uttara-kāṇḍa* ('Last Section'), is, as we have seen, a late addition to the original poem. Only about one-third of it is concerned with Rāma and Sītā. It is here related that one day Rāma hears that the people are dissatisfied at his having taken back Sītā after she has so long been a captive of Rāvana, because they thought this would have a bad influence on the women of the country. Unable to endure the reproach that he was setting a bad example to his subjects, he requests Lakṣmaṇa to take Sītā away and abandon her. Lakṣmaṇa, conducting her to the bank of the Ganges and explaining why Rāma has cast her off, leaves her there. The weeping Sītā at length finds her way to the hermitage of the sage Vālmiki, who entrusts her to the charge of the twin sons Kuśa and Lava in the hermitage. Many years pass by. The boys have grown up and become the pupils of Vālmiki, who takes them with him to attend a great horse-sacrifice undertaken by Rāma. The two boys are selected to recite the *Rāmāyana*, which has been composed by him, and are listened to with rapture by the audience. Rāma, hearing that the two youthful bards are the sons of Sītā, requests Vālmiki to cause Sītā to purify herself by an oath. The sage brings her and solemnly declares that she is innocent and that the twins are the actual sons of Rāma. The latter admits that he is satisfied by Vālmiki's words, but nevertheless desires Sītā to clear herself by the ordeal of the oath. Then all the gods descend from

heaven, and Sītā prays that, as surely as she has not even thought of any other man than Rāma, the goddess Earth may open to receive her. Scarcely have the words been uttered when Mother Earth, rising from the ground, embraces Sītā and disappears with her in the depths. Rāma in vain implores the goddess to give Sītā back to him; but the god Brahmā appears and holds out the hope of Rāma's being again united with her in heaven. Soon after Rāma, making over the kingdom to his two sons, enters heaven and again becomes Viṣṇu.

As in the first book, the thread of this narrative is interrupted by many myths and legends which have no connexion with the story of Rāma. Such are the well-known tales about Yayāti and Nahuṣa, of the slaying of Vṛtra by Indra, of Urvaśi, beloved of the gods Mitra and Varuṇa, besides several others aiming at the glorification of the Brāhmins quite in the spirit of the latest parts of the *Mahābhārata*.

LITERATURE.—1. **TEXTS**—Bengal recension, ed. G. Gorresio, Turin, 1843-67, Calcutta, 1850-60; Bombay recension, with three commentaries, 3 vols., Bombay, 1895, ed. K. P. Parab³, do. 1902; W. Indan recension only in MSS (cf. Hans Wirtz, *Die westliche Rezension des Rāmāyana*, Bonn, 1894).

RAM MOHAN RAY.—See BRĀHMA SAMĀJ.

RĀMOSHĪ.—The Rāmoshī, also called Nāik (Skr. *nāyaka*, 'leader'), a jungle tribe found in the Deccan and W. India, profess to derive their name from the demi-god, Rāma, who is said to have created them when on his way to Laṅkā to recover Sītā; others doubtfully connect the name with Skr. *aranyavāsin*, 'jungle dwellers.' At the census of 1911 they numbered 60,064, found in Bombay, with a small body in the Central Provinces and Berār.

Those in the Deccan appear to be an outlying branch of the Kanarese or Telugu tribe or group of tribes known under the general name of Bēdar or Byādaru, hunters or woodmen.¹ The fact that the branch in Poona is divided into two groups, Chauhān and Yādava, names of leading Rājput septs, has been held to indicate an admixture of higher blood. Like their neighbours the Kolis (see art. KOL, KOLARIAN), they were for a long time notorious on account of their disorderly and predatory habits. They supported the Marhātā leader, Sivaji, against the Muhammadans, and under British rule, as late as 1879, they committed outrages in Satārā and the neighbouring districts. In virtue of their traditional descent from Rāma, some of the tribes in Poona are called Rāmbhakt, 'worshippers of Rāma,' and are vegetarians. But more generally they have adopted Śiva in his form Khandobā as their tribal deity. He is represented riding on a horse with two women—a Vānī (or merchant-women), his wedded wife, and his Dhāngar (one of the jungle tribes) concubine behind him. As turmeric is a vegetable in which Khandobā is supposed to dwell, they swear by it, and no other oath is considered so binding. The oath ritual prescribes that the person swearing shall take a leaf of the *bel*-tree (*Egle marmelos*)

¹ E. Thurston, *Castes and Tribes of S. India*, Madras, 1909, i. 180 ff.

sacred to Śiva, a few grains of millet, and some turmeric powder which has been laid on the *lunga*. The oath is recited with an imprecation against perjury, a little powder is eaten, and some is rubbed on the forehead. They also revere Kedāri, now regarded as a form of Śiva, the tutelary deity of the Purandhar fort in the Poona District, before whose image Raghūji, one of their leaders, is said to have laid his turban, with an oath that he would never wear this head-dress until his tribe should be restored to the privileges of which they had been deprived by the Marhātās. Besides these they worship many local gods, Musalmān saints (*pir*), the demon-leader Vetāla, who has many female spirits, or 'mothers,' in his train. The tomb of an Englishman in the neighbourhood of Poona is called by them Rāndeval, 'Rāma's temple,' and is tended by an old Rāmoshī woman, who pours water over it, keeps a lamp burning, and allows no one who has eaten meat that day to visit the place.

Mackintosh remarks that both men and women had frequently to 'undergo the expiatory penance of the swinging ceremony, when the penitent is elevated to a considerable height and swung over a pole erected in front of the entrance of the temple, supported by a hook run through the skin and sinews of the back.'¹

Indications of totemism are found in the badge, or crest (*devak*), which is generally some tree or a bunch of the leaves of several trees. Persons with the same crest are regarded as brothers and cannot intermarry, nor can they eat the fruit or use the tree in any way. They dread the spirits of the dead. At a funeral, on the way to the grave, the corpse is turned round and the bearers change places in order to baffle the spirit and prevent its return. As an additional precaution, heavy stones and thorns are placed in the grave. The same fear of the dead appears in the marriage rites. If a woman has lost three husbands in succession and wishes to marry a fourth, she holds a cock under her left arm, and the tribal priest marries her to the bird before she is joined to her new husband. The intention is that the vengeance of her former husbands may fall upon the bird. Their belief in amulets is shown by the story told of their noted leader, Dādji. When he was brought to execution, it was impossible to behead him until he had made an incision in his arm and removed from his flesh a gem which he had inserted as a protective. Like other tribes in the same state of culture, they are much vexed by witches and sorcerers, and have a profound faith in omens.

LITERATURE.—The best account of the tribe is that by A. Mackintosh, *An Account of the Origin and Present Condition of the Tribe of Ramoosies, including the Life of the Chief Oomiah Nāik*, Bombay, 1853; W. F. Sinclair, *IA* iii. [1874] 186 ff.; *BG* xviii. pt. i. [1885] 409 f., pt. iii. [1885] 34 ff., xvii. [1884] 208, xix. [1885] 108 f., xxi. [1884] 174 f., xxiv. [1886] 107; *Census of India, 1911*, vol. viii., Bombay, 1912, pt. i. p. 800; *Bombay Ethnographical Survey*, monograph no. 138, do. 1909; M. Kennedy, *Notes on the Criminal Classes of the Bombay Presidency*, do. 1908, p. 145 ff.; R. V. Russell, *CC Central Provinces*, London, 1916, iv. 472 ff. W. CROCKE.

RANTERS.—The term 'Ranters' was the nickname given to an antinomian movement—hardly cohesive enough to be properly called a sect—in the period of the English Commonwealth, appearing about 1644. The name is derived from the English verb 'to rant,' i.e. to talk in an extravagant, high-flown manner (cf. Shakespeare's phrase, 'I'll rant as well as thou' [*Hamlet*, v. i. 307]).

The Ranters constituted the somewhat chaotic 'left wing' of a serious attempt to work out in England in the 17th cent. a type of Christianity conformed to apostolic, primitive Christianity, free from what the leaders of this movement called 'the apostacy,' and loosely enough conjoined and

¹ *Account*, p. 53.

organized to allow very wide individual liberty of thought and action. The central individualism of the movement tended to produce a great variety of groupings around prominent leaders, so that England at this epoch appeared to 'swarm with sects,' though the 'sects' were hardly more than marked variations of one general ground-swell movement. Ephraim Pagitt's description is vivid and well expresses the horror which the guardians of orthodoxy felt as this 'infection' swept over the country:

'The plague is of all diseases most infectious: I have lived among you almost a jubilee, and have seen your great care and provision to keep the city from infection. The plague of heresy is greater, and you are now in more danger than when you burned five thousand a week. You have power to keep these heretics and sectaries from convecting and sholing together to infect one another' (*Heresiography*, Dedication to the Lord Mayor).

Marsden very well reproduces the prevailing feeling among those who were contemporary with what Milton called the 'year of sects and schisms.'

'Absurd excesses of opinion now appeared, as exotics in a hotbed. The distractions of the times suspended the restraints of Church discipline; opinionous monstrous and prodigious started up every day, and were broached with impunity in public and in private, and multitudes were led astray. The number of new sects, religious and political, with which England swarmed appears almost incredible. The sober Puritans were confounded. The state of England reminded them of the fabulous description of the sands of Libya, where scorching suns produce new monsters every year' (*Hist. of the Later Puritans*², p. 224).

All movements, such as this one, which express a deep popular striving to escape from the rigidity of old systems and to secure a large area of individual freedom tend to develop an extreme wing. Persons of unstable equilibrium are swept on by the contagion of the movement. Those who are abnormally responsive to suggestion are certain to be carried along with the movement. These psychopathic persons, lacking in perspective and balance, bring into strong light the dangers that are involved in complete religious liberty. The Ranters were largely composed of this type of person, and some of them were obviously insane.

The Ranters, so far as they can be differentiated from the general ferment of the time, show two marked characteristics: they were (1) pantheistic, and (2) antinomian. Masson says:

'Pantheism or the essential identity of God with the universe, and His indwelling in every creature, angelic, human, brute or inorganic, seems to have been the belief of most Ranters that could manage to rise to a metaphysics' (*Life of Milton*, v. 18).

Richard Baxter says of them:

'These also made it their Business . . . to set up the Light of Nature, under the name of *Christ in Men*, and to dishonour and cry down the Church, the Scripture, the present Ministry, and our Worship and Ordinances; and call'd Men to harken to Christ within them' (*Reliquiae Baxterianae*, i. 76).

Joseph Salmon and Jacob Baunthumley may be taken as characteristic specimens of the leaders and exponents of the Ranter idea. Baunthumley (or Bottomley), who was called by George Fox 'a great ranter' (*Journal*, ed. N. Penney, i. 151), was the author of a pantheistical book with the title *The Light and Dark Sides of God* (London, 1650). The book opens in his best and sanest vein as follows:

'O God, what shall I say thou art, when thou canst not be named? What shall I speak of thee, when speaking of thee I speak nothing but contradiction? For if I say I see thee, it is nothing but thy seeing of thyself; for there is nothing in me capable of seeing but thyself. If I say I know thee there is no other but the knowledge of thyself, for I am rather known of thee than know thee. If I say I love thee it is nothing so, for there is nothing in me can love thee but thyself, and therefore thou dost but love thyself. My seeking thee is no other but thy seeking of thyself' (p. 1 f.).

On p. 77 he develops his extreme doctrine of the inward Light:

'It is not so safe to go to the Bible to see what others have spoken and writ of the mind of God as to see what God speaks within me and to follow the doctrine and leading of it in me.'

Joseph Salmon wrote *Heights in Depths, and Depths in Heights: or Truth no less Secretly than*

Sweetly, Sparkling out of its Glory (London, 1651). This strange tract recounts in extravagant style the mystical experiences of the writer:

'I appeared to myself as one confounded into the abyss of eternitie, nonentitized into the being of beings, my soul split and emptied into the fountaine and ocean of divine fulness, expired into the aspires of pure life' (p. 13).

The tract is throughout a presentation of extreme pantheism. A tract entitled *The Smoke of the Bottomlesse Pit* (London, 1650-51), written by J. Holland Porter, who claims to be 'an eye and ear witness,' gives many details of the Ranters' views and their manner of life. All contemporary writers unite in the opinion that the Ranters were morally disordered in their way of living, and that they held antinomian views of conduct; i.e., they were 'above' the usual moral distinctions of right and wrong. George Fox's *Journal* gives many concrete accounts of personal experiences with Ranters, and these accounts generally emphasize the two aspects under consideration—the pantheistical and the antinomian. In 1649 Fox went to visit a group of Ranters in prison in Coventry. He says:

'When I came into the jail, where the prisoners were, a great power of darkness struck at me, and I sat still, having my spirit gathered into the love of God. At last these prisoners began to rant, and vapour, and blaspheme, at which my soul was greatly grieved. They said they were God; but that we could not bear such things. When they were calm, I stood up and asked them whether they did such things by motion, or from Scripture, and they said, from Scripture. A Bible being at hand, I asked them to point out that Scripture; and they showed me the place where the sheet was let down to Peter, and it was said to him, what was sanctified he should not call common or unclean. When I had showed them that that Scripture proved nothing for their purpose, they brought another, which spoke of God's reconciling all things to himself, things in heaven, and things in earth. I told them I owned that Scripture also, but showed them that that was nothing to their purpose either. Then seeing they said they were God, I asked them, if they knew whether it would run to-morrow? they said they could not tell. I told them, God could tell. Again, I asked them, if they thought they should be always in that condition, or should change? and they answered they could not tell. Then I said unto them, God can tell, and God doth not change. You say you are God; and yet you cannot tell whether you shall change or not' (*Journal*, bi-centenary ed., i. 47 f.).

Under date of 1654 Fox writes:

'During the time I was prisoner at Charing-Cross, there came abundance to see me. . . . Among those that came to see me, was one Colonel Packer, with several of his officers; and while they were with me, came in one Cobb, and a great company of Ranters with him. The Ranters began to call for drink and tobacco; but I desired them to forbear it in my room, telling them, if they had such a desire for it, they might go into another room. One of them cried, "all is ours", and another said, "all is well" (ib. i. 211 f.).

Richard Baxter's testimony almost certainly overstates the case against the Ranters, but, as it is the opinion of a high-minded contemporary, it must be given due weight. After presenting the views of the Ranters, he describes their manner of life:

'But withal, they conjoynd a Cursed Doctrine of *Liber-tinism*, which brought them to all abominable filthiness of Life: They taught as the *Familiars*, that God regardeth not the Actions of the Outward Man, but of the Heart; and that to the Pure all things are Pure (even things forbidden): And so as allowed by God, they spake most hideous Words of Blasphemy, and many of them committed Whoredoms commonly. . . . There could never Sect arise in the World, that was a lower Warning to Professors of Religion to be *humble, fearful, cautious, and watchful*. . . . But the horrid Villanies of this Sect did . . . speedily Extinguish it' (p. 76 f.).

The Ranters were vigorously dealt with by Acts of Parliament, and many of the extreme Ranters were severely punished for their views and for acts considered either blasphemous or immoral. The better element in the groups of Ranters were 'convinced' by the preaching of George Fox and became Quakers. The movement was checked, and gradually disappeared from public notice, though the antinomian tendency has at intervals continued to reappear sporadically both in England and in America.

LITERATURE.—The most important books for a study of the movement are the following: E. Pagitt, *Heresiography*, London, 1845; T. Edwards, *Gangrenæ*, do. 1846; L. Stuckley, *Gospel Looking-Glass*, do. 1867; R. Hickock, *A Testimony against the People called Ranters*, do. 1859; J. H. Porter, *The Smoke of the Bottomless Pit*, do. 1850-51; G. Roulston, *A Ranter's Bible*, do. 1850; J. Jackson, *A Sober Word to a Serious People*, do. 1851; G. Fox, *Journal*, 2 vols., ed. N. Pennay, Cambridge, 1911, and bi-cent. ed., 2 vols., London, 1901; W. Penn, *The Spirit of Alexander the Copper-smith lately Revived*, do. 1873; R. Baxter, *Reliquiæ Baxterianæ*, ed. M. Sylvester, do. 1896; S. Fisher, *Baby Baptism meer Babism*, do. 1853; R. Barclay, *The Inner Life of the Religious Societies of the Commonwealth*, do. 1876; R. M. Jones, *Studies in Mystical Religion*, do. 1909; D. Masson, *Life of Milton*, 6 vols., do. 1859-80; J. B. Marsden, *Hist. of the Later Puritans*, do. 1854; H. Weingarten, *Die Revolutionen in England*, Leipzig, 1893; T. Sippell, *William Dells Programm*, Tübingen, 1911.

RUFUS M. JONES.

RASHI.—This is the name familiarly applied to Rabbi Solomon ben Isaac; it is, indeed, derived from the Hebrew initials of his name. Some writers erroneously called him Jarhi (Yarhi), supposing that his name was connected with the city of Lunel (*yerah*=lune=moon). Rashi, however, was born in Troyes in 1040, and died in the same town in 1105. Like most of his contemporaries, Rashi did not derive any emoluments from his work as rabbi. He was among the many Jews of his epoch in France who engaged in viticulture. He was nevertheless an industrious student and author, and his works have won an enduring fame. No mediæval commentator is more studied in modern times. His exposition of the Pentateuch is still beloved of Jews, while his Commentary on the Talmud remains absolutely indispensable to the understanding of that work.

The first Hebrew book to be printed (of known date) is Rashi's Commentary on the Pentateuch (Reggio, Feb. 1475). Rashi expounded most of the Bible, but his repute now depends on his Pentateuch. In this Commentary he combined the newer grammatical method with the older Midrashic style, creating a harmony of unique charm. Nicholas de Lyra (1270-1340) familiarized Europe with Rashi's Biblical exegesis, and through de Lyra Luther carried on Rashi's influence into his German translation. A well-known line tells of Luther's indebtedness to de Lyra: 'Si Lyra non lyrasset, Lutherus non saltasset'; and Lyra, on his part, was much indebted to Rashi.

Rashi compiled *Responsa*, liturgical and other compendia, but apart from his Pentateuch he is best known for his great Commentary on the Talmud. He did much to settle the text, and added notes which for lucidity and brevity have few rivals. The Talmud is invariably read with Rashi by Jewish students, and all scholars are dependent, either directly or indirectly, on his interpretation. This has stood the test of time, and the numerous super-commentaries and annotations on Rashi have only brought out the supreme merits of his work.

LITERATURE.—L. Zunz, 'Salomon b. Isaac,' in *Zeitschrift für die Wissenschaft des Judenthums*, 1823, pp. 277-384, Feb. tr., Lemberg, 1840; I. H. Weiss, 'Rabbeinu Shelomoh b. Yizhak,' in *Beit-Talmud*, n. s., nos. 2-10, reprinted in *Toledot Gedolei Yisrael*, Vienna, 1882; M. Liber, *Rashi* (Jewish Worthies Series), tr. from French, London and Philadelphia, 1906, with bibliography, pp. 231-239.

I. ABRAHAMS.

RATIONALISM.—1. Definition.—Rationalism, says A. W. Benn, means the hostile criticism of theological dogma, 'the mental habit of using reason for the destruction of religious belief.'

'Custom has ruled that the submission of belief to pure reason shall be called rationality in reference to every branch of natural knowledge, and rationalism only when it leads to the rejection of those supernaturalist beliefs with which religion has become identified.'

J. B. Bury has the following:

'The uncompromising assertion by reason of her absolute rights throughout the whole domain of thought is termed

rationalism, and the slight stigma which is still attached to the word reflects the bitterness of the struggle between reason and the forces arrayed against her. The term is limited to the field of theology, because it was in that field that the self-assertion of reason was most violently and pertinaciously opposed.'

The usage involves us in obvious difficulties. An argument will or will not be rationalistic, not according to its intrinsic contents alone, but according to the intention of the user or to its effects upon the hearer—and indeed certain theses of geology or astronomy which have been classed as rationalistic in one century have in a later century been accepted by all parties. A further difficulty lies in the use of the word 'reason.' It would seem impossible to deny the right and the duty of good thinking, of the utmost use of intelligence, in every department of life. Even the appeals to revelation or to authority, to the usefulness of a certain belief, or to the needs and rights of feeling and action, are themselves appeals to our intelligent judgment for comprehension and sympathy. Thought can be criticized, on whatever grounds, only through thought.

The use of 'rationalism,' indeed, whether as a war-cry or as a term of reproach, is a use belonging to popular philosophy, and cannot be pressed with too much exactness. (Its more technical uses in the theory of knowledge are not considered here.)

On the whole, the usage is governed by two considerations. (1) An argument is rationalistic when it is directed against a belief which by many of its holders at any rate is counted a 'religious' belief. The person bringing the argument may or may not have a constructive philosophy of his own to maintain. He may be a monotheist attacking polytheism, or a deist criticizing the doctrine of the Trinity; he may be a materialist, or an agnostic, or none of these things; the 'rationalism' of his argument lies in its attack, in the name of sound thinking, on the particular shape of a particular religious system. Obviously such arguments, though anti-religious in one sense, may be used in the service of religion. A higher form of religious belief in conflict with a lower must sometimes use negative criticism as well as positive teaching. And a developing belief, trying to fit itself continually better to the facts of the soul and of the universe, must often use such criticism on itself.

(2) In its derogatory use, on the other hand, the name of 'rationalism' is specially applied to a certain kind of bad thinking—an unimaginative criticism from the outside. If a difficult idea has been crudely and imperfectly stated by those who have groped after it and only half attained it, the lower rationalism makes no attempt to reach it and to state it better, but fastens on the crudities of the accepted statement, is triumphant in showing the untenability of this as it stands, and thereby rejects the whole conception.

In rationalism in this sense 'reason holds off, as it were, from trying to comprehend what is most characteristic in religious experience. Instead of allowing the paradoxical nature of religious doctrines to be provocative to it and to stimulate it to further effort, the rationalistic understanding makes it a ground for declining to consider them further. Thus doctrines like those of the Trinity or of Original Sin in Christian theology are set aside because in arithmetic one and three are different numbers, and because the citizen of a civilized state will not accept responsibility for his ancestors' criminal acts. The question is not put, why such obvious contradictions to our ordinary ways of thinking have been entertained and considered of high importance. Or it is put, and the answer is suggested that we have here mere survivals of fanciful notions elsewhere discarded; and the further question is not raised, why they are not discarded here also; for it is plainly not because they have not been made the subject of close attention. The rationalistic criticism ought only to bring out the need of putting and answering such enquiries, but it may simply lead to the neglect of them as not worth pursuing.'

¹ *Hist. of English Rationalism in the Nineteenth Century*, vol. i. pp. viii, 4, 6.

2. History.—There can scarcely have been a century or a country in the history of the world where rationalistic thoughts have not existed in some men's minds. For the Western world rationalism enters into history with the criticisms brought by Ionian philosophers against the popular mythology of Greece. Early Christian apologists attacked paganism on rationalistic grounds. In the Middle Ages the controversies among Christians and Jews and Muhammadans similarly had to be largely rationalistic. When men of one religion dispute with men of another, they can appeal only to the human intelligence which is common judge for both. After the Reformation, again, when Church opposed Church, or Church collided with State, reason was invoked by all parties.

In the development of Christian thought rationalistic contributors or opponents have stood sometimes outside the Christian Church and sometimes inside it. Of their arguments, drawn from philosophy, science, history, or the criticism of documents, some have fallen to the ground; others have had real effect in modifying or developing the doctrines grouped together under the general name of Christianity. For this, like every other system of living thought, has developed partly by taking up criticisms into itself, and it is almost inevitable that disputes should arise in each generation as to the amount of new modification that can be allowed if the system is still to retain the name of Christian.

It is not possible to write the history of rationalism as one would write the history of a religion or a science, or that of a nation. The story of England can show a continuous line of movement; it is complex but unified; whereas the story of 'attacks on England' will have disconnected factors of the most various kinds. A religion has unity and definite movement, but the series of criticisms brought against that religion may have little of either. Some slender thread of historical development must, indeed, run through it, appearing and disappearing, since to some extent the criticism must follow the movement of religious thought—changes in this either giving rise to new forms of attack or abolishing old forms. Or, again, the story of rationalism may exhibit fragments of many histories, because some part of the negative criticism in any generation may be the cutting edge of a single positive, brought forward by a rival religion, or by a school of philosophy or science, whose own development makes a true history.

All these features appear in the rationalism of the last hundred years in Europe. The first point hardly needs illustration—new developments in religion are sure to call out opposition and therefore argument, not only from those who stand outside the religion, but still more from conservative supporters of the religion itself, and from followers of rival movements within it. The second event—the supersession of an important criticism by a change in the doctrine criticized—is a good deal rarer, but has occurred more than once even in the last hundred years. Historical examination of Biblical documents had been practised ever since Spinoza, but 19th cent. studies gave it impetus enough to take irresistible effect, and the Mosaic authorship of the Pentateuch (at any rate) is probably no longer a 'religious opinion' in most circles. The idea of a gradual formation of the world and its inhabitants is a good deal older than Darwin, but, since it was taken up into the form that he gave it, the ordinary religious belief of educated persons has gradually ceased to include a six days' creation. For the third point—the exhibition of fragments of other histories—the illustrations just given would still serve, since they belong not only to the history of religious opinion but also to that

of the study of documents and of natural science. Or we might select another fragment: part of rationalist argument in the last four generations has been the cutting edge of a change in the science of collective psychology, and this has turned not only against certain religious doctrines but against some older criticisms of them. D. F. Strauss, *e.g.*, offers his 'mythical' account of the Resurrection deliberately as superseding older explanations, such as the suggestion that the disciples stole the body of Jesus for the sake of their own ambition and self-interest, or the other suggestion (which Strauss calls specially 'rationalist') that Jesus recovered consciousness after a deep swoon but was never able thenceforth to persuade his disciples that he was not a being from another world.¹ We are probably safe in saying that these explanations have indeed been superseded by the growth of a psychological school in which Strauss may stand as one of the pioneers.

Nevertheless, it is impossible to arrange individual rationalists in a clear order of historical development. The threads cross too much. Opinions and criticisms which are obsolete in some circles are not obsolete in others. Different men may use the same argument in the interests of the most diverse schools of thought; and few men can be fairly described as if they were specialists of a single argument. What Renan says of himself is true of most—that their doubts arose not from one train of reasoning but from ten thousand.

Renan's own difficulties, indeed, were comparatively specialized, numerous as they were:

'If I could have believed that theology and the Bible were true, none of the doctrines . . . would have given me any trouble. My reasons were entirely of a philological and critical order; not in the least of a metaphysical, political, or moral kind. These orders of ideas seemed scarcely tangible or capable of being applied in any sense. But the question as to whether there are contradictions between the Fourth Gospel and the synoptics is one which there can be no difficulty in grasping. I can see these contradictions with such absolute clearness that I would stake my life, and, consequently, my eternal salvation, upon their reality without a moment's hesitation.'²

A clearer example than Renan's of doubts arising from ten thousand trains of reasoning may be found in one who, like Renan, started from the most devout and orthodox standpoint of his time and country, and only gradually and reluctantly came to oppose what he used to believe. This was Francis William Newman, younger brother of Cardinal Newman. In *Phases of Faith, or Passages from the History of my Creed* (London, 1850), he describes his evangelical upbringing and youthful belief, then his testing of various points by his Bible reading. In one matter after another—the Sabbath, the Mosaic Law, infant baptism, episcopacy, the Lord's return—he found discords between the teaching of the NT and what he had been taught himself. Persisting, as a lay missionary in Persia, in trying to read the Gospels with fresh eyes, he found the Fourth Gospel clash with the Athanasian Creed, and returned to England to find himself cast off by his friends as a heretic. He moved next, on grounds of moral criticism, to the rejection of eternal punishment, original sin, and the vicarious suffering of Christ. He had already begun to discern that it was impossible with perfect honesty to defend 'every tittle contained in the Bible,' and further study forced him to conclude that the assumed infallibility of the entire Scripture was a proved falsity, not merely as to physiology and other scientific matters, but also as to morals. Finally, the NT miracles became a burden to the doctrine instead of a support. Miracles were irrelevant as a means of proving the goodness and veracity either of the person who

¹ *Der alte und der neue Glaube*, Bonn, 1874, sect. 15.

² *Recollections of my Youth*, Eng. tr.³, London, 1897, 'The St. Sulpice Seminary,' pt. iii. p. 260.

worked them or of God; and the kind of evidence on which the NT writers accepted them was definitely inadequate for a modern mind.

Newman claimed that what was left to him in the end was still the essential part of religion—the heart's belief in the sympathy of God with individual man. What Renan kept was not theology, but the sympathy of a scholar, a poet, and an Eastern traveller with the persons who founded Christianity. His *Vie de Jésus* (Paris, 1863) was not intended as a scientific work either for historians or for theologians, but was simply a poetic retracing, in the clearest and the tenderest colours at his command, of a picture which religious tradition had veiled, he thought, from many readers.

A very different book on the same subject was published almost immediately afterwards—D. F. Strauss's *Leben Jesu für das deutsche Volk* (Leipzig, 1864). His more famous *Leben Jesu* had appeared nearly thirty years before. The purpose in these books is not to paint a picture, but to re-interpret the growth of a doctrine. Stories of miracles arise for the most part, the author urges, not by any one's deliberate invention, but out of the unconscious imagination of a community. As with ancient myths, the fact is created by the idea, the legend grows of itself. Interpretation on this line was not new as regards the OT, but Strauss was the first to apply it with anything like such thoroughness to the narratives in the Gospels. His view in 1835 was that very few of these were newly created myths; most were based on OT legends and pictures, transferred, between the Exile and the birth of Jesus, to the person of the expected Messiah. The Messiah must be transfigured like Moses, must multiply food and raise the dead like Elijah and Elisha, must perform works of healing because Isaiah had said that in His day the eyes of the blind and the ears of the deaf should be opened. In 1864 Strauss left much more room for the growth of legend within Christian circles, reflecting the growth of Christian experience and thought, and laid less stress on the OT correspondences. It was far easier of course to apply interpretation by myth to the Gospels, if once it had been admitted that none of these was the work of an eye-witness; and Strauss, though not himself a professional critic of documents, had studied most attentively the contemporary work of F. C. Baur and others. His sketch of the doings and the personality of Jesus is less vivid and definite than Renan's, largely because of his scrupulousness in evaluating the sources and confining himself to what he thought to be proved facts.

While Strauss worked at re-stating the history of the Christian form of religion, his contemporary, L. A. Feuerbach, in *Das Wesen des Christentums* (Leipzig, 1841), re-stated its philosophy. The universal reason of the human race operates on an uncultured man only under the image of a personal being. He must separate from himself the element in his own nature which gives him moral laws, and place it in opposition to himself; thus we have the picture of a personal God. Yet, if God were really a different being from myself, why should His perfection trouble me? God is the latent and the ideal human nature, the truth of man; to doubt of Him is to doubt of myself. Our gods are strong first, because physical strength is the first thing we count as glorious; then they are majestic and serene; finally, God loves and suffers, because we have come to see that feeling is absolute, divine in its nature. 'God loves man' is an Oriental expression of the truth, 'The highest conceivable is the love of man.' Not the attribute of the divinity, but the divineness or deity of the

attribute, is the first true Divine Being. When this projected image of human nature is made an object of theology, it becomes an inexhaustible mine of falsehoods. The foundation of religion is man's feeling of the sacredness of man and nature; the result of religion too often is that he sacrifices man and nature to his God.

In the line of Strauss and of Feuerbach, whether consciously or not, stand several living writers, including in France Emile Durkheim (*Les Formes élémentaires de la vie religieuse*, Paris, 1912) and L. Lévy-Bruhl (*Les Fonctions mentales dans les sociétés inférieures*, do. 1910) and in England F. M. Cornford (*From Religion to Philosophy*, London, 1912) and Jane E. Harrison (*Ancient Art and Ritual*, do. 1911, *Themis*, Cambridge, 1912, *Alpha and Omega*, London, 1915). For these writers the beginning and the foundation of religion is the 'collective consciousness' of a group, dominating the primitive individual as an irresistible pressure from outside, and answering to itself as the voice of conscience within. He 'projects' it first in the figure of a totem animal or plant, later in other figures which grow out of primitive ritual. All such projections are embodiments of collective emotion, desire, and law. High emotional tension is caused and maintained for a savage only by a thing felt socially; the group-consciousness in tension then makes a picture of itself, which takes finally the form of a god. The mystery-god is both human and daemonic, re-created at every celebration of his central rite, in the collective emotion of his congregation. Such a scheme provides the appropriate setting for figures half-human and half-divine—actual living prophets who during their lives or after their deaths become the daemons of religious societies. Group-action and group-emotion, not their formulation in any theology, make the essence of religion.

In this line of writers we certainly find a section of real history of rationalism. How far we judge them to have succeeded in interpreting the facts of religion will probably depend on our opinion, and on our estimate of these writers' opinion, of the reality of the concrete universal. In the common Spirit within us, and in the divinity of the attribute, have we something which merely deludes us into forming a religion, or have we something of which the highest language of religion is really true?

There remain some typical or outstanding figures in 19th cent. rationalism which stand apart from those already described. F. K. C. L. Büchner (*Kraft und Stoff*, Leipzig, 1855) is not so much a landmark as a type recurrent in every century, though the special forms of the arguments change. He attacks the idea of the creation of the world; for no force can exist except as a property of matter; and matter itself can never be either produced or annihilated. Writing five years before the appearance of *The Origin of Species*, Büchner claims it as highly probable, even certain, that life may be spontaneously generated out of the non-living, and that higher forms of life have been slowly developed by a natural process out of lower forms. No soul can exist without brain; the experimenter's knife cuts off the soul piecemeal. It would be waste of words to try to prove the impossibility of a miracle. No educated, much less a scientific, person, who is convinced of the immutable order of things, can nowadays believe in miracles. There exist no supersensual or supernatural things, and no supersensual capacities; and they can never exist, as the eternal conformity of the laws of nature would thereby be suspended. Having laid down these metaphysical doctrines, Büchner adds that there is no such thing as meta-

physics, and that all metaphysical systems come to nothing and lose themselves in an unintelligible play of words. All our knowledge is relative; we can have no knowledge and no conception of the Absolute—of that which transcends the sensual world.

Buchner ends with agnosticism, though he does not begin with it. The name 'agnostic' was originated by Huxley, but popularized by Leslie Stephen, whose *Agnostic's Apology* was first published in the *Fortnightly Review* for June 1876. Dogmatic atheism, he holds, is a rare opinion, but agnosticism is increasing. The agnostic asserts that there are limits to the sphere of human intelligence, and that theology is 'metempirical' knowledge which lies outside these limits. In the whole history of the race no agreement on theological questions has ever been attained. In matters that are still involved in endless and hopeless controversy ignorance is no shame, but a duty. Many of the Christian doctrines have created far more numerous and far more horrible difficulties than those which they profess to remove. It is better to admit openly that man knows nothing of the Infinite and Absolute, that the ancient secret is a secret still.

Agnosticism is metaphysics binding her own hands, and constructive criticism of religious doctrine will not come from this quarter. A different position belongs to philosophical workers whose negative criticisms are incidental, though necessary, in their own constructive thought. Such, among living writers, is J. M. E. McTaggart (*Some Dogmas of Religion*, London, 1906). The subjects of religious discussion, he says, are the most important and the most practical in the world. Religion rests on a conviction of the harmony of ourselves with the universe, and nothing but exact metaphysics can justify us in holding this conviction. We are not justified in believing any dogma because all, or most, people believe it; nor because it is held by people who can work miracles; nor because of its importance for our happiness. Nor could observation without metaphysics ever give it sufficient support.

McTaggart's negative criticism is directed chiefly against certain conceptions of the Deity. If God is strictly omnipotent, He cannot be good, for He has permitted evil when He need not have permitted it. It is said that He could not secure the benefits of human free will without also permitting the evil of sin, but there is nothing that an omnipotent being cannot do. When believers in God save His goodness by saying that He is not really omnipotent, they are taking the best course open to them; but then they must accept the consequences of their choice, and realize that the efforts of a non-omnipotent God in favour of good may, for anything they have yet shown, be doomed to almost total defeat. Again, suppose God not to be omnipotent—can He be creative and still be good? A creator has nothing but his own nature to determine him, and, if a being who is completely self-determined produces evil, knowing that it is evil, how can we say that such a being is not wicked? Could there be a God, perhaps, who was neither omnipotent nor creative, but just a person more wise, good, and powerful than any other? He might be well deserving of worship, and might dominate the universe as much as an efficient schoolmaster dominates his school. It is a possible theory, though not an established one.

But, McTaggart asks, does religion require the existence of a personal God at all? Suppose our metaphysics led us to believe that the universe consisted, not of matter, but of a harmonious system of selves. Then the directing mind of a God, though not disproved, would not be needed

in any way to account for the traces of order in the universe.

'The non-existence of God would leave it as possible as it was before that love should be the central fact of all reality. . . . Whether the friends whom all men may find could compensate for the friend whom some men thought they had found is a question for each man to answer. It is a question which can never be answered permanently in the negative while there is still a future before us' (p. 290).

'If we want to know the truth . . . we must have faith in the conclusions of our reason, even when they seem . . . too good or too bad to be true. Such faith has a better claim to abide with hope and love than the faith which consists in believing without reasons for belief. It is this faith, surely, which is sought in the prayer, "Suffer us not for any pains of death to fall from thee." And for those who do not pray, there remains the resolve that, as far as their strength may prevail, neither the pains of death nor the pains of life shall drive them to any comfort in that which they hold to be false, or drive them from any comfort in that which they hold to be true' (p. 75).

LITERATURE.—For all except the most recent years A. W. Benn, *Hist. of English Rationalism in the Nineteenth Century*, 2 vols., London, 1906, covers the ground and gives a great number of references. A smaller book is J. B. Bury, *A Hist. of Freedom of Thought*, do. 1913. Brilliant work within its own limits is to be found in O. Pfeiderer, *The Development of Theology in Germany since Kant, and in Great Britain since 1825*, Eng. tr., do. 1890. HELEN WODEHOUSE.

REALISM AND NOMINALISM. — I. Ancient and mediæval.—Although these terms are most properly used only of mediæval schools of philosophy, the disputes of the Middle Ages were prepared by the division already existing in the fragments of Greek philosophy which they inherited. Plato was known as a realist, and Aristotle was usually believed to be opposed to him—in spite of the fact that after Thomas Aquinas 'Aristotle' meant a synthesis of realism and its opposite. We may judge from the first statement of metaphysics which we now possess, the Platonic dialogues, that the forms (ideas) had been accepted as the explanation of the likeness between objects or individuals, before Plato wrote.¹ This meant that the data of experience were (1) individuals, objects, or things, and (2) certain other realities called 'forms' (*εἶδη, ἰδέαι*) with peculiar relations to the individuals. The relation was sometimes said to be participation or copying; and it was implied in the Platonic school that the individuals were in some sense less real than, or dependent upon, the forms. Aristotle seems to have objected that this was only to add a new kind of individual existence to what was obvious; and his argument was perhaps intended to prove that individuals were ultimately real; but the result was that he appeared to make the forms less real than, or dependent upon, the individuals.

At the very beginning of mediæval thought (cf. art. SCHOLASTICISM) Scotus Erigena² attempted to reduce to logical coherence the confusion of semi-philosophical statements, primitive science, and popular superstition, which was known as *catholica fides*. But the guide that he took was the obscure Neo-Platonism of the pseudo-Dionysius. In accordance with this, he established a form of realism. Being, the most general of all likenesses or forms, was said to be the ultimately real, and we departed more and more from reality in approaching the objects of sensation. The theological results we need not discuss; on the philosophical side, realism implied that what is usually called 'abstraction' is the correct method for the study of the real world to the subordination, if not the exclusion, of sense-perception, and therefore the real was contrasted with the apparent. The result was a form of mysticism in which all exact knowledge seemed to be useless.

Against this nominalism was a revolt. Aristotle had said that 'things [*res* = realities] cannot appear

¹ Cf. A. E. Taylor, *Varia Socratica*, ser. i., Oxford, 1911; J. Burnet, *Greek Philosophy*, pt. i., 'Thales to Plato,' London, 1914.

² *De Divisione Naturæ*

as predicates,' and the conclusion was made that universals, or the likenesses between things, were not *res*. But, since the word *res* seemed to mean what we now mean by 'reality,' the nominalists were charged with saying that universals were mere words or *flatus vocis*. Unfortunately we know the early nominalists only from their opponents. It is, however, quite possible that they were attempting to turn philosophical attention towards the individual objects of perception. Abelard (*q.v.*), the first great mediæval thinker, easily showed, on the other hand, that the classification of things as like, one to the other, cannot be due to the caprice of the perceiver and must therefore have a ground in the things. It is probably unhistorical to make Abelard a pure conceptualist or to suppose that he had a theory of forms of the mind or categories due to the structure of mind. It is difficult to be historically just to the early mediæval thinkers. They were probably even more simple and primitive than their words seem to imply. The great step onwards came with the introduction of more works of Aristotle; and Thomas Aquinas (*q.v.*) easily dominated the current of thought. He was a realist in the sense that, although he held the individual to be ultimately and irreducibly real, he maintained that universals are objective (in the mediæval language, 'subjective') and are 'in the things' (*universalia in rebus*). Duns Scotus, the great opponent of Aquinas in other issues, in this did not differ very much from him, although he preferred 'thisness' (*haecceitas*) to the 'principle of individuality' (*principium individuationis*) as the explanation of the individual. It is to be noted, however, that both seem to hold the individual object of perception to be a composite, made up of universals (likenesses, etc.) with some individuating element added. Realism, thus modified, was triumphant. It was conclusive in showing that classification was not arbitrary, and that objects or individuals were like one another quite independently of the perceiver. But it had in it the seed of its own destruction in the mistaken Aristotelian attempt to secure the universal by making it a component part of the object of perception.

The last stage of the mediæval controversy was reached by William of Ockham (see art. SCHOLASTICISM), who to the mind of his time completely destroyed the realism of Aquinas and Scotus. His most effective argument was directed against the *principium individuationis* of his predecessors. He showed that this ultimate difference was nothing else than the individual itself; and, asserting that the individual needed no explanation, he turned upon the universals of the realists. He showed that they did not exist *in re* and the alternative, as he phrased it, was that they existed *in mente*. Probably Ockham was not clear as to what he meant; but he certainly did not mean that universals are fictions or even 'the work of the mind'; for he expressly dismisses that theory. At this stage the controversy was displaced from its mediæval prominence; but, being still logically implied in every new metaphysical theory, it was handed on through the Renaissance to modern philosophers. The accepted view was generally what Ockham had left it. The individual objects of perception were real and the source of all our knowledge; and the likenesses between them were mental or conceptual. There was still the implication that such likenesses were due to the structure or activities of the perceiving mind; but the attention to sense-perception for which Ockham's nominalism stood combined readily with the new interest in physical science. Thus Ockham was opposed to mediæval realism, according to which universals were *actual*, but he is the precursor

of modern realism in giving them conceptual (objective) existence and in refusing to suppose the thing to be made up of its qualities.

It is not quite fair to the earlier modern philosophers to class them as realists and nominalists; for this particular issue was never faced in the same terms after the Renaissance. The two tendencies, however, continued, and conceptualism (*q.v.*) was developed as a theory that the objects of perception were what they were because of the perceiving mind. This theory in Berkeley and Hume (*qq.v.*) seems to have implied that there was a certain human arbitrariness in classing things as like, one to another. The elaborate study of mental process added to the philosophical prejudices which implied that we never observe the thing 'itself'; and then with Hegel (*q.v.*) the whole of what the plain man regards as the world was supposed to be an emanation from percipient mind. The result was to make of exact science only a study of mental process or its effects; and realism was driven from the field.

C. DELISLE BURNS.

2. Realism in modern thought.—Modern realism differs from its earlier connotation largely owing to this displacement of the centre of interest from ontology to epistemology; it is a doctrine concerning the relation between cognition and the thing known. In its simplest form as the naive realism of the unphilosophical man it holds that the subject has immediate knowledge of the external world, that things are what they seem, and that they are independent of being known. The view that things are what they appear as, taken apart from the further supposition of independence, is variously called 'epistemological monism,' 'the theory of immanence,' and 'phenomenalism.' The last term is a survival from, and represents the antithesis of, an earlier meaning of the 'real' as contrasted with appearance. In this sense the real is that of which something is known, not what it is known as. The 'natural realism' of the Scottish school was of this 'substance' type,¹ and arose as a protest against the 'theory of ideas' of Berkeley and Hume (see art. SCOTTISH PHILOSOPHY). Cartesian dualism had asserted that we can have experience only of 'ideas' which merely represent external objects, and led to a subjectivism which Reid was anxious to avoid. He argued that, since the qualities of a body do not themselves constitute the body, there can be no question of their remaining mere ideas through the uncertainty of the existence of the underlying body. This argument as against ideas is curious; for, in sharply distinguishing between a body and its qualities, the possibility is introduced that in all cognition what is known is never the object itself but only an idea representing that object. And it was precisely this dualism in knowledge that Reid wished to avoid;² indeed he claims, but nowhere substantiates, that cognition is immediate. In fact epistemological dualism is born of the belief that propositions about things are of the subject-predicate form (cf. below, § 3), and leads naturally, as in Hamilton and Spencer, to agnosticism regarding the 'real' object—thus being fatal to all naturalisms of substance. It remains to be shown how the epistemological monism part of naive realism came to be recognized as expressing a relational view of cognition.

Shadworth H. Hodgson, the forerunner with L. T. Hobhouse³ of English 'new realism,' sought in his 'subjective analysis of what is actually experienced'⁴ to reach the reality of objects in

¹ Reid, 'On the Intellectual Powers,' in *Works* 2, ed. Sir W. Hamilton, Edinburgh, 1840, p. 282.

'face to face perception.' A thing is what it is known as¹—a reality independent of the existence of a perceiving consciousness. Now, Berkeley himself had escaped from the difficulties of epistemological dualism by denying it; and it was therefore of vital importance for realism to distinguish between his monism and his subjectivism so as to be able to avoid the latter and to assert independence. That is why 'The Refutation of Idealism' by G. E. Moore² cleared the way for future realist construction. Moore contends that a sensation is in reality a case of knowing or being aware of something. Therefore, when we know that the sensation of blue exists, the fact which we know is that there is awareness of blue. On analysis the 'sensation of blue' is thus seen to include, besides 'blue,' both a unique element, awareness, and a unique relation of this element to blue. From this it follows that, when we know that the sensation of blue exists, we know blue—i.e., we are already outside the subjectivist's circle of his own ideas and sensations. This distinction between sensation and sense-data thus forms a step towards the generalized argument against subjectivism,³ basing itself on the externality of relations—a doctrine supported by the success of modern logic, since it merely expresses the justification of logical analysis.⁴ New realist adherence to analysis⁵ is exemplified in the significant attempt of the 'platform' realists,⁶ E. B. Holt, W. T. Marvin, W. P. Montague, R. B. Perry, W. B. Pitkin, and E. G. Spaulding, at what Russell called, in welcoming their appearance, the 'patient co-operative accumulation of results by which the triumphs of science have been achieved.'⁷ Perry⁸ believes that realism is further strengthened by the possibility of showing that critical naturalism 'gives to being in the last analysis a logical rather than a physical character.'⁹ But 'logical atomism,' the search for 'piecemeal, detailed, verifiable results,'¹⁰ renders it difficult to give any adequate summary, in the crude unanalyzed language of common discourse, of the positions gained, such as the according of full ontological status to logical entities (not only particulars but also universals are real) or the acceptance of Kant's contention that, if any knowledge is possible, mathematical and logical knowledge is,¹¹ without acknowledging the priority of epistemology.¹²

There is one important difference between, speaking roughly, American and English new

⁹ Cf., however, C. D. Broad's acute critique of anti-realist thought in *Perception, Physics, and Reality: An Enquiry into the Information that Physical Science can supply about the Real*, Cambridge, 1914. In this work it is shown by detailed analysis how much more must be assumed than is generally believed before even the naivest realism can be overthrown. Broad differs from Russell in clinging to the physical object as well as to sense-data and sensation; but in his discussion of Russell's present view of 'things' as series of aspects in *Proc. Arist. Soc.*, new ser., xv. [1914-15] 250, a partial reconciliation seems indicated.

¹⁰ Russell, *Our Knowledge of the External World as a Field for Scientific Method in Philosophy*, Chicago and London, 1914, p. 4.

realists; and this is due largely to William James, who has been to the one school what Hodgson was to the other. In his *Essays in Radical Empiricism* (London, 1912) James approved of the view that things are what they are known as (p. 27), but insisted that they need not be known in order to be (p. 26). The divergence comes when he urges that there is no specific character of mental things, the difference between mental and physical being one of context and arrangement (*ib.* p. 25). The origin of this lies far back in Hume's application of the argument from the ego-centric predicament to the subject as object. Thus, if subjectivism is assumed, we reach the radical phenomenalist world of neutral elements in momentary being at the instant of perception. The further step of giving these elements independent existence apart from perception Hume mentioned¹ only to reject it because he thought that the so-called illusions of sense proved the dependence of ideas on the structure of our organs. But, on Hume's initial assumption, our organs have no permanent structure; they exist when somebody perceives them and not otherwise.² If we now retrace our steps, we have the following results: (1) since the argument based on relativity to sense-organs is inoperative, Hume's tentative step of assuming independence for the elements becomes a possible one; but (2) we were led to the necessity for this step by the difficulty of knowing the subject as object, which (3) arises only if subjectivism is assumed, and this (4) has been refuted by Moore. Now American realists believe that they can retrace step (1) without retreating farther, and so find themselves in James's position of neutral epistemological monism plus independence. The argument against this, elaborated above, applies equally to the phenomenalist naturalisms of Clifford, Karl Pearson, Ernst Mach, and Avenarius.³

A detailed analysis of neutral monism is given by Russell.⁴ Some important consequences follow from the theory; e.g., a mind which had only one experience would be a logical impossibility, since, according to it, a thing is mental in virtue of its external relations—a view which places the important realist claim of independence at the mercy of a thoroughgoing relativist like N. Wiener.⁵ Furthermore, neutral monism unduly assimilates belief or judgment to sensation and presentation, thus leading to the view of error as belief in the unreal, and so to the admission of unreal things.⁶ The problem of error must, however, be disentangled from that of 'sense-illusion.' The more complete avoidance of subjectivism by the English realists makes this easier, and renders the question of secondary qualities much more amenable. The objects of acquaintance cannot be illusory or unreal;⁷ so, when a hot metal touches a cold spot on the skin, the 'coldness' is objective.⁸ Though sensations are functions of the sense organs and the nervous system, this is not primitive knowledge and cannot form part of the epis-

¹ *Treatise of Human Nature*, ed. L. A. Selby-Bigge, Oxford, 1888, p. 207.

² Broad, p. 165.

³ We may note that S. Alexander holds that Berkeley in some passages avoids the confusion of mental act and what it is about (the confusion which gives rise to subjectivism), and regards sensible things as independent presentations ('The Basis of Realism,' *British Academy*, vi. [1914]; cf. also J. Laird, 'Berkeley's Realism,' *Mind*, new ser., xxv. [1916] 308).

temological premisses of epistemology.¹ Furthermore, the difficulty of colours occupying the same place at the same time has been resolved. T. P. Nunn² concluded that a wider idea of 'thing' must be constructed. The necessary logical work has been accomplished by Bertrand Russell, who showed that the difficulty over the phrase 'in the same place' arose from a too simple and unambiguous conception of space.³

It is obvious that much remains to be done; in the words of a keen critic of realism, 'the new philosophy is not out of the wood, but it has cleared hopeful paths in it.'⁴ A. E. HEATH.

3. Modern logic and realism.—A stimulus to philosophical realism came through modern logical analysis of mathematics and mathematical advances in theories of infinity and continuity (cf. art. CONTINUITY, vol. iv. pp. 96-98).

The traditional logic of Aristotle and the Schoolmen was principally a collection of rules of syllogistic inference, and propositions were analyzed into attributing of predicates to subjects. Leibniz, indeed, perceived that there could be valid syllogistic inferences, such as 'Jesus Christ is God, therefore the mother of Jesus Christ is the mother of God,' and 'If David is the father of Solomon, without doubt Solomon is the son of David.'⁵ The logic of relations which was indicated by Leibniz was cultivated with not much success by Johann Heinrich Lambert,⁶ and with great success in the middle of the 19th cent. by Augustus de Morgan. In this respect de Morgan's work was on quite different lines from that of George Boole, whose symbolism for logic was ultimately based on the Aristotelian logic. De Morgan's work was published in the *Transactions of the Cambridge Philosophical Society* from 1850 to 1865 and in his *Syllabus of a Proposed System of Logic* (London, 1860). This part of de Morgan's work may be shortly indicated by saying that it was a successful attempt to fulfil a certain recommendation expressed by Sir William Hamilton:

'Whatever is operative in thought must be taken into account and consequently be overtly expressible in logic; for logic must be, as to be it professes, an unexclusive reflex of thought, and not merely an arbitrary selection—a series of elegant extracts—out of the forms of thinking.'⁷

But modern logic proper may be said to begin with the work of Gottlob Frege. Frege's first work, *Begriffsschrift, eine der arithmetischen nachgebildete Formelsprache des reinen Denkens* (Halle, 1879), should be read in connexion with his second work, *Die Grundlagen der Arithmetik, eine logisch-mathematische Untersuchung über den Begriff der Zahl* (Breslau, 1884). For the purpose of coming to a decision as to the nature (synthetic or analytic, *a priori* or *a posteriori*) of the concept of number, Frege devised an extraordinarily effective, though rather clumsy, symbolism for expressing with great precision the various concepts and methods of deduction in logic; and this symbolism and analysis were developed in the years 1879-1903. Frege's final statement of his whole theory is in his *Grundgesetze der Arithmetik begriffsschriftlich abgeleitet* (2 vols., Jena, 1893-1903). Philosophically speaking, Frege's point of view is clearly expressed in his criticism of the psychological logic of Benno Erdmann's *Logik* (Halle, 1892):

'It seems to me that different conceptions of the truth are

the origin of the controversy. I look upon the truth as something objective and independent of the person who judges. It is not so according to the psychological logicians. What Erdmann calls "objective certainty" is only a general acknowledgement proceeding from those who judge, and which therefore is not independent of them but may change with their psychological nature . . . I acknowledge an objective domain which is not a domain of actual things; while the psychological logicians, without more ado, look upon the non-actual as subjective.'¹

In many of his works Frege carried on a sometimes ironically expressed polemic against the thesis that the subject-matter of arithmetic is the actual symbols and not the universals denoted by the symbols. Even eminent mathematicians such as H. L. F. Helmholtz, L. Kronecker, H. E. Heine, J. Thomae, O. Stolz, A. Pringsheim, H. Schubert, and many others maintained, in most cases quite explicitly, this form of nominalism. Frege succeeded in showing quite satisfactorily that the numbers used in arithmetic belong to a domain which is both non-actual and non-mental.

The logical work of Giuseppe Peano began to be published nine years after that of Frege, but was quite independent of Frege's work. The foundations of Peano's logical system were much more in conformity with those of Boole and his successors, but Peano used a very convenient and ingenious symbolism and attempted with great success the analysis of whole trains of reasoning which included already symbolized mathematical deductions. Peano laid stress on the fact that his symbolism was a true 'ideography' and thus did not make use of anything expressed in ordinary language. Although in many respects Peano's analysis was greatly inferior to that of Frege, Peano has the merit of being the first explicitly to point out the fact that the two propositions 'Socrates is mortal' and 'All men are mortal' are different in form. This distinction, which seems to have been well known to Frege also, though it was not explicitly expressed by him until after Peano had done so, was and is unfamiliar to most other logicians, including some symbolic logicians, because of the use of verbally the same copula ('is' or 'are') in both cases. The philosophical aspect of this distinction has been thus expressed by Russell:

'This [corresponding] confusion . . . obscured not only the whole study of the forms of judgment and inference, but also the relations of things to their qualities, of concrete existence to abstract concepts, and of the world of sense to the world of Platonic ideas.'²

The work of Bertrand Russell began with the completion of Peano's system by the addition of a correspondingly symbolized logic of relations, and advanced, by the independent discovery of many of Frege's subtle distinctions as well as by unanticipated discoveries, to a very satisfactory combination and development of the results of Frege in logic, Georg Cantor's results in the theory of transfinite numbers, and Peano's symbolism. The more philosophical discussion formed the subject of *The Principles of Mathematics* (vol. i., Cambridge, 1903), and a detailed symbolical exposition of the theory of A. N. Whitehead and B. Russell was given in *Principia Mathematica* (3 vols., Cambridge, 1910-13).

The philosophical bearing of modern logical work has been particularly emphasized by Russell. Broadly speaking, proper names stand for particulars, while other substantives, adjectives, prepositions, and verbs stand for universals. Pronouns and some adverbs stand for particulars, but are ambiguous. Only those universals which are named by adjectives or substantives have been much or often recognized by philosophers, while those named by verbs and prepositions have

⁷ Quoted in de Morgan's *Syllabus*, p. 27.

usually been overlooked. Speaking generally, adjectives and common nouns express qualities or properties of single things, whereas prepositions and verbs tend to express relations between two or more things. Thus the neglect of prepositions and verbs, which is due to the fact that, in practical life, we dwell only upon those words in a sentence which stand for particulars, led to the belief that every proposition can be regarded as attributing a property to a single thing (the belief that all propositions are of the subject-predicate form) rather than as expressing a relation between two or more things. Hence it was supposed that ultimately there can be no such entities as relations, and this leads either to the monism of Spinoza (*q.v.*) and Bradley or to the monadism of Leibniz (*q.v.*).¹ The belief just referred to gives rise to reflexions of much the same kind as the one of Hamilton and de Morgan mentioned above.² It seems that most philosophers have been less anxious to understand the world of science and daily life than to convict it of unreality in the interests of a super-sensible 'real' world either revealed to mystical insight or consisting of unchangeable logical entities. We find examples of such reasons with Parmenides, Plato, Spinoza, Hegel,³ and this is at the bottom of the idealist tradition in philosophy. However, it is not true that all relations can be reduced to properties of apparently related terms.⁴ Here we may refer to § 2 above and to *Principles*, p. viii; cf. p. 448.

Another of the grounds on which the reality of the sensible world has been questioned by philosophers is the supposed impossibility of infinity and continuity.⁵ The explanation of the world which assumes infinity and continuity is much easier and more natural,⁶ but from the time of Zeno, whose paradoxes were invented to support indirectly the doctrine of Parmenides,⁷ the supposed contradictions of infinity have played a great part in philosophical speculation. Some of the problems of infinity were well treated by Bernard Bolzano;⁸ but it was the mathematician, Georg Cantor, who, about 1882, first practically solved the difficulties. In fact, it is not essential to the existence of a collection, or even to knowledge and reasoning concerning it, that we should be able to pass its terms in review one by one; but infinite collections may be known by their characteristics although their terms cannot be enumerated—collections can be given all at once by their defining concepts. Thus, an unending series may form a whole, and there may be new terms beyond the whole of it.⁹ Because of the fact that infinite collections are not self-contradictory, 'the reasons for regarding space and time as unreal have become inoperative, and one of the great sources of metaphysical constructions is dried up.'¹⁰

LITERATURE.—See the works quoted throughout the article.

PHILIP E. B. JOURDAIN.

REALITY.—The words 'real' and 'reality' are used in a variety of different senses; it is therefore impossible to give a single satisfactory definition of them. Moreover, in the most fundamental sense in which they are used they are indefinable. Their meaning is best made clear by considering certain correlative expressions in which they are commonly met (*e.g.*, reality and appearance) and

by discussing their relations to certain other notions with which they are very closely connected (*e.g.*, existence).

1. Existence and reality.—In the ordinary philosophic use of reality it would seem that a distinction is drawn between it and existence; for some things which would be asserted to exist would be denied by the same philosopher to be real, and some things that are said to be real are denied to exist. The two words, therefore, cannot be reasonably regarded as having the same intension, and any one who says that their extension is identical is called upon to give some proof of his assertion; *e.g.*, many philosophers deny that such things as colours are real, but it seems hardly possible to deny that they exist. When I see a colour or hear a sound, I am aware of something, and not of nothing. Also I am aware of something different in the two cases, and the difference seems to be between the objects of which I am aware, and not merely between my two awarenesses as mental acts.

Sounds and colours then may be said to exist, at any rate so long as any one is aware of them; and those who deny that they are also real are denying something the absence of which is compatible with their existence in the above sense. The two words are not, however, used consistently, and it would perhaps be as much in accordance with usage to say that colours are real but do not exist. At any rate, this example shows that reality and existence differ in intension; and we shall see reasons for preferring to say that colours exist even though they be unreal rather than that they are real even though they do not exist.

The fact that reality and existence differ in intension can also be shown from another side. Many philosophers hold that such things as the number 3 are real; but hardly any one would say that 3 exists, though of course certain collections of three things may exist—*e.g.*, the Estates of the Realm and the Persons of the Trinity.

As a foundation for setting up a consistent terminology, we have the following two facts about the common use of words: (a) hardly any one would think it appropriate to say that such things as numbers exist, but many would say that they are real; and (b) there are two kinds of things which almost every one would agree to exist if they be real—physical objects and minds with their states. With these two facts fixed, we may proceed to deal with the more doubtful cases of such objects as sounds and colours. We note that the two kinds of objects which are said without hesitation to exist if they be real are particular individuals; *i.e.*, they are terms which can be subjects of propositions but not predicates. Minds and physical objects clearly stand in this position. Objects which are said to be real but are seldom naturally said to exist are universals, whether qualities or relations—*i.e.* terms which can be subjects of propositions but can also occupy other positions in them. The number 3 is an example; for we can say both that 3 is an odd number and that the Persons of the Trinity are three. We may therefore lay it down as a general rule that objects are most naturally said, not merely to be real, but also to exist, when they are real and have the logical character of particular individuals.

When a man says that he sees a colour, he means that he is aware of an extended coloured object and not merely of a quality. This coloured object—*e.g.*, a flash of lightning—is a particular, and therefore, if real, exists. When we say that red exists, we mean two things: (1) that there are red objects, and (2) that these are particulars. The first part of our meaning corresponds to the

wider technical use of existence which is involved when mathematicians talk of existence-theorems. In this sense a universal is said to exist if it can be shown that it has or may have instances. Thus the number 3 exists in this sense because we can point to collections having three terms. But this is not the common use of existence in philosophy. To be able to say that a quality like red exists, we must be able to show both that it has instances and that these are particulars; for it is only particulars that are primarily said to exist, and existence, in the secondary sense in which it is ascribed to red, is derived from the existence, in the primary sense, of its instances. It seems, however, that we do not naturally ascribe existence to a universal in all cases where it has instances which are particulars. The number 3 has instances which are particulars, yet we do not commonly say that it exists. This difference in usage seems to depend on whether or not the judgment in which the quality is asserted of the subject occurs instinctively and without a recognized process of intellectual analysis. When we see a red object, we pass, if we choose, to the judgment 'This is red' without explicit analysis, and so we say that red exists; to judge that a collection which we see has three members, we have to break it up in thought and re-synthesize it, and so we hesitate to say that 3 exists, though we admit that it is real. It is difficult to believe that this difference of usage is of any philosophical importance, but it is necessary to notice it.

2. *Reality of universals.*—We have now to ask in what sense such objects as colours can be said to be unreal though they exist. It certainly seems that in the primitive senses of reality and existence nothing can exist that is not real. And this must be accepted; coloured objects, while we see them, both exist and are real in the primary sense of reality. But both their reality and their existence are denied by many philosophers; those philosophers must therefore be using the terms in a new sense. To say that red is unreal though it exists means (a) that red objects exist while they are perceived; (b) that nothing is red except when some one perceives it; and (c) that it is commonly believed that things might be red though no one perceived them. The third factor is quite essential. Toothache exists only when some one feels it, yet no one calls toothache unreal on this account. We may say, then, that reality is denied of a quality in this special sense when there are particular instances of it which we perceive, and our perception is accompanied by the belief in unperceived instances of it, and this belief is held to be erroneous.

It is clear that every immediate object of our senses both exists and is real in the primary meaning of these terms so long as we remain aware of the object. For it seems to be a synthetic *a priori* proposition that anything of which we can be directly aware by our senses is both real and particular; and what is real and particular exists in the primary meaning of that word. In a secondary meaning of reality, such objects may be called unreal if they give rise instinctively to judgments asserting the continued existence of the same or similar objects when unperceived, whereas in fact nothing of the kind can exist unperceived. Questions as to the reality of any particular, when reality has its primary sense, can arise only if that particular be not an object of direct awareness. Thus we ask, Does God really exist? or, Are atoms real? The meaning of such questions is as follows: God and atoms are not the direct objects of our minds at any time; if they were, there could be no doubt of their existence and reality in

the primary sense at certain times (viz. when we were directly aware of them). But we know what we mean by the words 'God' and 'atom'; e.g., we may mean by 'God' an *ens realissimum* or a First Cause. But these descriptions which we understand are partly in terms of universals; thus 'first' and 'cause' are universals. When we ask whether God really exists, we mean, Is there an instance of the complex universal involved in the definition or description of what we mean by the word 'God'? We can see that, if there be an instance, it must be a particular; so that, if there be one, God is both real and existent.

We may now turn to those objects that commonly would be said to be real but not to exist. It would seem that every simple universal of which we are immediately aware must be real (a) in the primary sense, and also (b) in a secondary sense which involves the already-mentioned secondary sense of existent as a special case. If we are directly aware of a universal, it is the object of a thought, and is clearly something real in the same sense in which a particular flash of light is real when it is the object of our senses. It does not, however, exist in the primary sense, because it is not a particular. Again, to be aware of a simple universal, it is necessary to have been aware of some instance of it. Thus any simple universal of which we are directly aware must have instances. It must therefore exist in the mathematical sense. It need not, however, exist in the philosophical sense, because its instances may not be particulars; e.g., we are directly aware of the universal colour, but the instances of colour are red, yellow, etc., which are themselves universals. Thus it seems more natural to say that colours exist than that colour exists. Nevertheless this is largely a matter of mere usage. We cannot become aware of a simple universal of a higher order unless we are aware of one of the next lower grade, and so on till we come to the lowest universals in the hierarchy—those whose instances are particulars. Thus, to become acquainted with colour, we need to be acquainted with colours; and, to become acquainted with colours, we need to be acquainted through our senses with particular coloured objects. So we may fairly say that every simple universal of which we are directly aware either exists in the secondary sense or is known through universals that are instances of it and themselves exist in the secondary sense.

It follows that the only universals about the reality of which questions can reasonably be asked are either (1) those which are not directly cognized by us, but are described in terms that we understand, or (2) complex universals. The questions that can be asked about the reality of such universals are closely connected; e.g., it may reasonably be doubted whether any one is directly acquainted with the number twelve million and forty-nine. But we all know this number perfectly well under the description of 'the number which is represented in the decimal scale of notation by the symbols 12,000,049,' provided that we are acquainted with all the terms involved in this description and with the significance of their mode of combination in it. It is then open to ask: Is there really such a number? This question involves two others: (a) Is there anything contradictory or incoherent in the description, as there would be if a number were described as that represented in the decimal scale by a bow and arrow? and (b) If the description be self-consistent and intelligible, is there really an object answering to it? If both these questions can be answered in the affirmative, the number will be said to be real in the primary sense. We can then go on to ask

the question: Is there any collection of particulars that has this number? If so, we can add that the number exists in the secondary philosophic sense in which existence can be predicated of universals.

Very similar questions arise over complex universals—e.g., a golden mountain. It would seem that complex universals which involve no internal incoherence must be real in the primary sense if their constituents be real. Thus the universal 'golden mountain' is real even though there are as a matter of fact no golden mountains. If the universal has no instances, it will exist neither in the mathematical nor in the philosophic sense; if it has instances which are not particulars—as, e.g., the complex universal 'perfect number'—it will exist in the mathematical but not in the philosophic sense. But very difficult questions arise as to the reality of complex universals which involve a contradiction or some other *a priori* incoherence—e.g., a 'round square.' Can we say that such universals are in any sense real?

This question has been discussed very fully and acutely by Meinong and his pupils. The following are arguments for supposing that such universals are in a sense real. These incoherent universals appear as the subjects of propositions—e.g., in 'A round square is round' and 'A round square is impossible.' Such propositions are not about nothing; they seem to be about round squares; hence even these universals must have primary reality. Again, when we understand such a proposition as 'A round square is impossible,' the proposition is the object of an act of judgment, and, as such, is real. But the proposition is a complex, and, to understand it, its elements must also be the objects of acts of presentation. Hence the universal 'round square' must be the object of certain mental acts; it therefore cannot be nothing, and must have primary reality. It will be seen that the question discussed here is similar to that raised by Plato in the *Sophist*: In what sense, if any, can not-being be?

Meinong and his school have been led to the view that there is a most primitive form of being that applies to all objects about which assertions or denials can be made, whether they be internally coherent or not; that reality is a species of this and existence a species of reality. We may agree that anything that is really the object of a state of mind, or is really the subject of a proposition, has what we have called primary reality; but we may doubt whether such objects as round squares have any kind of being at all. For Meinong's views lead to very grave difficulties. This form of being will have no opposite, and the law of contradiction will not hold for propositions about impossible objects. Thus the propositions 'A non-human man is human' and 'A non-human man is not human' will both be necessarily true, and yet be contradictory. Again, the expedient leads to an infinite series of orders of being of increasing absurdity. Suppose we agree with Meinong that a round square has being. Then the proposition 'A non-being round square has not being' seems as genuine and necessary as 'A round square is round.' But, if the latter forces us to ascribe a kind of being to round squares, the former must equally force us to ascribe a kind of being to non-being round squares. And this process of postulating fresh and ever more absurd kinds of being will go on indefinitely. Closely connected with these difficulties is the question whether propositions, and in particular false propositions, be in any sense real. Meinong assumes that all mental acts concerned with propositions are founded on an act in which the proposition is before our minds as sense-data and universals are when we are directly

aware of them. If so, propositions which we judge, whether they be true or false, have exactly the same claims to primary reality as a red patch that we see or the quality of redness that we cognize. Yet it is very difficult to believe that every false proposition that any one has ever judged is real; whilst, if we reject the reality of false propositions, we can hardly save that of true ones.

The general means of meeting Meinong's difficulty depends on recognizing the fact that, in the verbal forms which stand for propositions, the word or phrase that counts as grammatical subject cannot be regarded always as the proper name of the logical subject of the proposition. In the sentence 'Red is a colour' the grammatical subject 'red' is the proper name of the logical subject of the proposition, and therefore the universal red is real; but it does not follow that in the grammatically similar form of words, 'A round square is round,' the phrase 'a round square' is the name of anything. In fact two other possibilities remain open: (1) that the sentence 'A round square is round,' though it has the same verbal form as some sentences which do stand for propositions—e.g., 'A penny is round'—does not itself stand for any proposition; and (2) that, whilst the sentence does stand for some proposition, the proposition for which it stands can be analyzed into a combination of several in none of which a single object whose name is 'round square' appears as subject.

Both these alternatives may be used for dealing with the reality of round squares. In the first place, we may suggest that a sentence like 'A round square is round' seems to stand for a proposition only because of its similarity in grammatical form to certain sentences which do stand for genuine propositions. Actually, when we see these marks or hear the corresponding sounds, we do not think of any proposition whatever. And likewise, when we say that it is necessary that a round square should be round, we mean only that sentences in which the name of a part of the grammatical subject appears as the grammatical predicate stand for necessary propositions *if* they stand for propositions at all. On the other hand, the statement 'A round square is contradictory' does stand for a genuine proposition, but it is not a proposition about an object denoted by the phrase 'round square.' The proposition really is: 'If an object be round, it cannot be square, and conversely.' This proposition does not contain a complex term denoted by 'round square,' but asserts a relation of incompatibility between roundness and squareness. Hence its reality, truth, and intelligibility do not imply the reality of a complex universal 'round square.'

Before leaving this subject, a word must be said about the reality of objects that involve an *a priori* incompatibility, but in which the incompatibility is not obvious without proof as in the case of 'round' and 'square.' Does the phrase, 'an algebraical equation of the second degree one of whose roots is π ,' stand for any real object? It does not, for it involves *a priori* incompatibilities. But we must not say that sentences with this phrase as their grammatical subject as used by most people are in the same position as 'A round square is round.' For persons who do not see the *a priori* incompatibility these sentences may stand for propositions, though they cannot be about any object of which the phrase in question is the name.

3. Appearance and reality.—The question of the reality of propositions would lead us into problems connected with Bertrand Russell's theory of judgment and G. F. Stout's doctrine of real possibilities which would carry us too far afield. We will

therefore pass at once to the opposition between reality and appearance, with which is connected the doctrine that there are degrees of reality.

The simplest and most obvious case of this opposition is what is known as the contrast between sensible appearances and physical realities. A cup is believed to be round, yet from all points of view but those which lie in a line through the centre of the circle and at right angles to its plane it appears elliptical. The elliptical shapes seen from the various points of view are called the 'sensible appearances' of the cup, and are contrasted with its real shape. It must be noticed that the opposition between sensible appearance and physical reality is not simply that between true and false judgment. The elliptical appearance may never lead us to the false judgment that the cup is elliptical; moreover, if it should do this and the error should afterwards be corrected, the cup does not cease to appear elliptical. It is important to be clear on this point because efforts are sometimes made to hold that appearances are not objects connected in a certain way with a physical reality, but are certain ways of viewing a physical reality. The latter theory makes appearances mind-dependent in a way in which the former does not. When we talk of different ways of viewing one reality, the differences must be supposed to qualify our acts of viewing, and not the object viewed; they are thus differences in mental acts and can subsist only while the acts themselves exist. But, if we suppose different appearances to be different objects, then, though it is possible and may be probable that these objects exist only when the acts which cognize them exist, it remains a fact that they are not in any obvious sense states of mind or qualities of such states.

Now it seems certain that different sensible appearances are different objects, and not merely different mental relations to the same object. Inspection shows clearly that the elliptical shape which is seen from the side is as good an object as the circular shape seen from above. Moreover, if we call the appearances mental acts, to what precisely does the quality 'elliptical' which we ascribe to the appearances belong? Surely not (a) to any mental act, for these have no shape; nor (b) to the physical object, for this is supposed to be round; and, if it be said (c) that it applies to 'the physical object as seen from such and such a place,' the supporter of this alternative may be asked to state what he supposes this partly mental and partly physical complex to be, and how he supposes it to have the spatial predicate of ellipticity. The view against which we are arguing is somewhat supported by the common phrase, 'The cup is round but looks elliptical.' But the only meaning which it seems possible to give to this is the following: viewing the cup from a position from which the real shape cannot be seen, we are aware of an appearance that has the same shape as we should see if we looked straight down on a cup that was really elliptical.

We may say, then, that a sensible appearance is a reality; but it is not a *physical* reality, because it does not obey the laws of physics; and it is not a mental reality in the sense of a state of mind, nor is it any quality of a mental act, though it is commonly believed that it exists only as the object of an act of sensation or perception. We may agree, then, so far with two celebrated dicta about appearance and reality: 'Reality must in some way include all its appearances,'¹ and 'Wieviel Schein soviel Hindeutung auf Sein.'² Since an

¹ F. H. Bradley, *Appearance and Reality*, bk. i. ch. xii. p. 122 (2nd ed.: 'Appearances exist . . . And whatever exists must belong to Reality').

² J. F. Herbart, *Hauptpunkte der Metaphysik*, in *Sämtl. Werke*, ed. G. Hartenstein, Leipzig, 1850-52, iii. 14.

appearance, taken by itself, is as real as anything else (in the primary sense of reality), it can be called an appearance only in virtue of some essential reference in it to something else with which it is contrasted. Thus *sensible* appearance is contrasted with *physical* reality; both are real in the primary sense, but the former is called an appearance because it always tends to make us think of the existence and qualities of the latter, and we have a tendency to ascribe qualities to the one that belong only to the other.

The last point is of considerable importance with reference to the statement that Reality is a harmonious whole and that appearances are condemned because of their internal incoherence or contradiction. Reality is here used as a concrete substantive, and means the whole system of what really exists. But presumably it is also true that anything that is real, and therefore any part of Reality, must be internally coherent. Now, sensible appearances are real, as we have tried to show; hence they must be internally consistent. There is no *internal* inconsistency in a red elliptical patch seen by any one, and the person who calls this an appearance does not do so because of any internal incoherence, if he knows what he is about. The incoherence arises when the elliptical red patch is taken to be identical with some other part of Reality (e.g., a colourless circle) whose qualities are incompatible with its own. The elliptical red patch is certainly real, and the colourless circle may very well be real; the former is called an appearance, and the latter a reality, because objects of the latter kind are of much greater practical interest and importance as obeying the laws of physics, and because the intimate relations between the two are liable to cause us to make the mistake of identifying the qualities of the two where they really differ. Reality—the whole system of all that exists—must include both the elliptical red patch and the colourless circle, if both be real; and their precise nature and relations are a matter for further philosophical investigation.

This seems obvious enough when we consider only the contrast between sensible appearance and physical reality. But we must notice that eminent philosophers use the contrast in many cases where what they call the appearance is not an object of sense-perception. F. H. Bradley, e.g., argues that the self and goodness and relations are all appearances, though appearances of different degrees of reality. What precisely does this mean? Primarily, that certain notions which we all use in thinking about the world are internally inconsistent. We treat the world, e.g., as consisting of various terms in various relations to each other. Bradley tries to show that such a view involves vicious infinite regresses. When appearance is used in this sense, it seems to be connected with a special kind of false judgment, viz. the assertion that the world or some part of it has incompatible characteristics. This is very different from the kind of false judgment connected with sensible appearances. (1) As we saw, no kind of false judgment need be made there, and, if it be made and corrected, the sensible appearance continues to exist and be perceived. (2) There is nothing self-contradictory in the predicate that is wrongly ascribed to physical reality through confusing it with sensible appearance. The judgment 'This cup is elliptical' is false, not because there is anything self-contradictory in the predicate 'elliptical,' but because it is incompatible with the circularity that the physical cup is supposed to possess. On the other hand, if the self be an appearance in Bradley's sense, the assertion 'Socrates is a self' is false, because the predicate is self-contradictory;

it is like saying 'Socrates is both tall and short.' The quality of being a self can be truly asserted of nothing, whilst that of being elliptical can be truly asserted at least of the sensible appearance. There is thus a great difference between what is meant by calling the seen ellipse an appearance and calling the self an appearance.

When this difference is recognized, we see that, whilst it is obvious that sensible appearances are contained in Reality, it is not at all obvious in what sense such appearances as the self can be contained in it; for these would seem to be in the position of round squares. This brings us to the doctrine that there are degrees of reality. It is held that all appearances are internally incoherent, but that some are more coherent than others. As a corollary to this, it is maintained that no appearance is as such contained in Reality; on the other hand, as Bradley puts it, 'appearances are transmuted' in order to be contained in Reality, and the one-sidedness of one appearance cancels out with and is corrected by that of others. This doctrine seems to be closely connected with three others: (a) Reality as a whole being a harmonious system, it is assumed that, the more an appearance needs to be modified and supplemented in order to take its place in Reality, the less coherent and therefore the less real it is; and (b) this is largely dependent on the view that all appearance is connected with the peculiar position of finite minds, which can know Reality only fragmentarily and from an individual angle; lastly (c) it is held that no part of Reality can be internally coherent in abstraction from its relation to the rest of Reality. We may trace the development of this view in Spinoza's doctrine of the three kinds of knowledge and in the Hegelian dialectic to its completest form in Bradley's philosophy.

It is clear that both (a) and (c) are needed if it is to be assumed that Reality is the only harmonious system. And this is assumed; for very often something is condemned as appearance, not so much because of any internal incoherence that can be directly detected in it as because it obviously cannot be predicated of Reality as a whole. It is impossible to give a fair and adequate criticism of so subtle and elaborate a doctrine here. But the following remarks may be made:

(1) Either Reality can be correctly regarded as possessing parts or not. If so, it would seem that there must be some propositions that are true about the parts and not about the whole (e.g., that they are parts). And again, if the parts be real, they must be as internally harmonious as the whole. It may be perfectly true that what we take as one self-substant differentiation of Reality is often neither one nor self-subsistent, but a mere fragment whose limits do not correspond with those of any single differentiation (cf. here Spinoza's distinction between the hierarchy of infinite and eternal modes and the finite modes, and his closely connected theory of error). But even a fragment is something and has a nature of its own, and perfectly true judgments should be possible about it. We may of course make erroneous judgments if we ignore the fact that it is a fragment, and if we make assertions about that in which depends on its relations to what is outside it. But we do not always ignore the fact that what we are talking about is not the whole; e.g., when we say that Socrates is a self, we are perfectly aware that Socrates is only a part of Reality, and that our statement may be false of the whole. And it is not obvious that all assertions about a fragment must depend for their truth on what is outside the fragment (cf. here Spinoza's doctrine of the function of the *notiones communes* in passing from imaginative to rational knowledge).

If, on the other hand, we suppose that Reality cannot be correctly regarded as having parts, the question arises: What precisely is it that is called an appearance, and what precisely is supposed to be 'transmuted and supplemented' in Reality? Something must be transmuted and supplemented; it cannot be Reality as a whole; what can it be unless Reality has real parts? Bradley has seen these difficulties perhaps more clearly than any other philosopher of his general way of thinking; but it is hard to believe that his doctrine that Reality is a supra-relational unity, and that all predication involves falsification is a satisfactory solution. Indeed, it perhaps comes to little more than a re-statement of the theological position that the nature of God can be described only in negative terms which at least ward off error.

(2) Sensible appearances, which, as we have seen, differ in important respects from others, are also held to exhibit what may be called degrees of reality in a special sense. As we know, these realities are called appearances and unreal only with respect to their relations to a supposed physical reality about which they are held to be an indispensable source of information. Now, those who deny the physical reality of secondary qualities would be inclined to say that the colours seen in waking life are less real than the shapes that are seen at the same time, and more real than the colours and shapes seen in dreams, delirium, or illusions. We may usefully compare here Kant's distinction between *Schein*, *Erscheinung*, and *Ding-an-Sich* in his example about the rainbow to that between the colours and shapes of dreams, the colours of waking life, and the qualities of physical objects (it is not of course suggested that Kant had in mind precisely the distinctions which we are now considering).

As far as can be seen, the ascription of degrees of reality to sensible appearances simply depends on how intimately their qualities are supposed to be connected with those of a corresponding physical reality. To a man who takes the position of Locke and of most natural scientists the elliptical shapes seen in waking life (to revert to our old example) are the most real of appearances, because the corresponding physical reality actually has a shape, and that shape is a closed conic section connected by simple laws with that of the appearance. The colours seen in waking life are less real appearances because it is not believed that any physical object has colour, though it is held that the colour seen is correlated with the internal structure of the corresponding object. And the shapes and colours of dreams or hallucinations are held to have the lowest degree of reality, because, while it is admitted that they are correlated with distinctions that exist *somewhere* in the physical world, it is held that these distinctions exist in the brain or in the medium rather than in any object that can be regarded as specially corresponding to the appearance in the way in which the round physical cup corresponds to the elliptical visual appearance seen in waking life.

4. Ethical sense of the term.—It remains to notice one more use of the words 'real' and 'reality.' They are sometimes used in an ethical sense to stand for what ought to be as distinct from what is. This is rather a paradoxical use of terms. Often we contrast real and ideal, and say that what actually exists is real, whilst what ought to exist but does not is ideal. Yet some ethical writers use the word 'real' for 'ideal,' when they speak of the real or true self, meaning the self that ought to be as contrasted with that which now is. This use of terms is generally connected with metaphysical theories of ethics such as Kant's or Green's, which hold that the self that

ought to be really exists and has a higher degree of reality than what would commonly be called the self as it really is.

LITERATURE.—The following works are of importance in connexion with the subject of this article. (1) On the relation of reality to existence and on the reality of contradictory objects.—Plato, *Sophist and Theaetetus*; St. Anselm, *Proslogium* and *c. Insipientem*; A. Meinong, *Über Annahmen*, Leipzig, 1910, *Über die Stellung der Gegenstandstheorie und Psychologie*, do. 1904; B. A. W. Russell, *The Problems of Philosophy*, London, 1912, *The Principles of Mathematics*, Cambridge, 1903; A. N. Whitehead and B. A. W. Russell, *Principia Mathematica*, do. 1910, I.; G. F. Stout, 'The Object of Thought and Real Being,' *Proc. of the Aristotelian Society*, 1911. (2) On the relation of reality to appearance.—Spinoza, *Ethics*, tr. W. H. White, London, 1894; F. H. Bradley, *Appearance and Reality*, London, 1902, *Essays on Truth and Reality*, Oxford, 1914. (3) On sensible appearance and physical reality.—Descartes, *Meditations*; G. Berkeley, *Principles of Human Knowledge*, London, 1776; Kant, *Critique of Pure Reason*, tr. J. H. Stirling, Edinburgh, 1881; H. A. Prichard, *Kant's Theory of Knowledge*, Oxford, 1909; Russell, *Our Knowledge of the External World*, Chicago, 1914; Stout, *Manual of Psychology*, London, 1913; S. Alexander, art. in *Mind*, new ser., xxi, [1912], *Proc. Arist. Soc.*, new ser., xi, [1910-11], and *Proc. British Academy*, vi, [1914]. C. D. BROAD.

REALITY (Buddhist).—In religious philosophy as in metaphysics the words 'real,' 'reality' express more than one aspect of things—the actual as opposed to the fictitious, the essential as opposed to the accidental, the absolute or unconditioned as opposed to the relative or conditioned, the objectively valid as opposed to the ideal or the imagined, the true as opposed to the sham, the important as opposed to that which, in the same connexion, is of less value, and finally, that which ultimately and irreducibly *is* as opposed to that which names conventionally signify in the average mind's stock of knowledge.

Neither in the *Suttas* of the earlier Buddhist religious doctrines nor in the early or the early mediæval elaborations of a more metaphysical kind do we meet with terms quite so packed with meanings as 'real' and 'reality,' but all the above-named antitheses occur and find expression in a variety of terms. The *Suttas* are more deeply concerned with the truth and the pragmatical importance of things. And the true and the actual, or that-which-is, are identified by one and the same word: *sacca*=*sat-ya*, i.e. fact, or the existent (see art. TRUTH [Buddhist]). There were certain facts or realities relating to spiritual health concerning which it was of the first importance to hold right views and take action accordingly. To rank other realities, such as objects of sensuous and worldly desires, as of the highest value (*aggato karoti*) was likened to the illusion that the painted figures in a fresco were real men and women,¹ or to the illusions achieved in conjuring or occurring in dreams.² Metaphors again play around, not the actuality, but the essential nature of the living personality, physical and mental. Thus the material factors of an individual are compared to a lump of foam: 'Where should you find essence [lit. pith] in a lump of foam?', the mental factors—feeling, perception, volitional complexes, and consciousness—to bubbles raised in water by rain, to a mirage, to a pitless plant, and to conjuring respectively.³ The world is also compared to a bubble and a mirage,⁴ etc. These figures are not meant to convey the later decadent Indian Buddhist and Vedāntist sense of the ontological unreality of the objects and impressions of sense. The similes convey on the one hand a repudiation of (a) permanence, (b) happy security, (c) super-phenomenal substance or soul, and on the other a deprecation of any genuine satisfying value in the spiritual life to be found in either 'the pride of life' or the 'lust of the world.'

This trend in Buddhist teaching was not due to the absence of theories concerning the nature of being in the early days of Buddhism. There were views maintained very similar both to that of the Parmenidean school in Greater Greece—that the universe was a *plenum* of fixed, permanent existents; and to the other extreme as maintained by Gorgias and other Sophists—that 'nothing is.' These Indian views, probably antedating those of Greece by upwards of half a century, were confronted by the Buddha with his 'middle theory' of conditioned or causal becoming. His brief discourse is given in the *Suttas* of the *Saṃyutta Nikāya*,¹ and is cited by a disciple in another *Sutta* nearly adjacent to that containing the similes referred to above.² And we hear no more of the extremist views till we come to the book purporting to be the latest in the canon—the *Kathāvatthu*. There among the first, presumably the earliest compiled, arguments of the work³ we find that the positive theory—'everything exists' (i.e. continues to exist)—so far from being generally rejected among Buddhists, was maintained by a school which attained to great eminence not only in North India, especially in Kashmir, but also in Central and Eastern Asia, and in the south-eastern islands—the school of Sarvāstivādins (*q.v.*; Pali, Sabbatthivādins), or 'All-is-believers.

The attitude taken up in the Theravāda, or mother-church, towards what might now be called reality, developed along a different line. This confronts us in the very first line of the *Kathāvatthu*: 'Is the person (self or soul) known in the sense of a real and ultimate fact?' In other words (as is revealed in the process of the long series of arguments), does the term 'person,' conventionally used as a convenient label for the composite phenomenon of a living human being, correspond to any irreducible and permanent entity, noumenon, ego, soul, immanent in that phenomenon? This distinction between the current names in conventional usage and the real nature 'behind,' or 'above,' what is designated by them is anticipated already in the earlier books of discourses and dialogues ascribed to the Buddha.⁴ A man's personality is conceded as being real, or a fact (*sacca*) to him at any given moment, albeit the word expressing that personality is but a popular label, and is not paralleled by any equally fixed entity in man. But, in the inquiry of the later book, the *Kathāvatthu*, the more evolved philosophical problem is betrayed by the first appearance of a more technical nomenclature. *Sacca* ('true,' 'fact') is used in adjectival form—*saccika*, 'actual.' And *paramattha* ('ultimate sense,' lit. 'supremething-meant'), a word which, in Theravāda literature, has become an equivalent of philosophic or metaphysical meaning, here starts on its long career. It is along the line of this distinction between popular and ultimately real or philosophic meaning that the commentator (c. 5th cent. A.D.) discusses the opening argument in the controversy and perorates at the close of it.⁵ It is in the forefront of Anuruddha's planning of his classic manual, *A Compendium of Philosophy* (*Abhidhammattha-saṅgaha*): 'These things are set forth in their ultimate sense as Categories Four,'⁶ the commentaries pointing out that *paramatātho* is opposed to *sammūti*, the conventional. And Anuruddha discusses in his eighth chapter⁷ the distinction between the things that are real existents and those that are, in virtue of a name, apparently so. Finally the present-day vitality

of this aspect of reality for Buddhists is visible in the writings of Ledi Mahāthera.¹

In his discussion of the terms *paramattha* and *sacca* S. Z. Aung quotes mediæval philosophical works, which are practically at one in interpreting *paramattha* as meaning either a sense-datum or a thing *per se* (*sabhāva*) which is verifiably existent to the extent of irreversibility or infallibility. Such ultimately real things, referred by Anuruddha to a 'fourfold category,' may also be distinguished under two heads—as unconditioned and conditioned. Under the former head, meaning 'whatever is not causally related to anything else,' Buddhist philosophy refers its metaphysical conception of *nubbāna* (*nirvāṇa*), i.e. its hypothetical state which is not life, in that there is no birth or death, the essentials of life. Under the conditioned are comprised all the elements (not the compound phenomena) of matter and mind. In the former the elements, abstractions from earth, water, fire, air, are, respectively, that which extends itself, coheres, burns, moves. Mind is ultimately conceived as consciousness *plus* a number of what the present writer has called mental co-efficients (Pāli, *cetasika-dhammā*, 'mentals'), such as feeling, perception, volition, etc. All these conditioned elements, though ultimately real, are in a perpetual state of change, i.e. of genesis and cessation, wherein there is always a causal series, one momentary state arising because of its predecessor and transforming itself into its successor. Nothing is casual or fortuitous. All is in a state of causally determined becoming. In the ultimate constituents of conditioned things, physical and mental, Buddhism has never held that the real is necessarily the permanent. Unwitting of this anticipation, Bertrand Russell is now asking modern philosophy to concede no less.²

REASON.—**r. Definition.**—In the most generalized sense of all, reason might be defined as the relational element in intelligence, in distinction from the element of content, sensational or emotional. Such a definition could justify itself by etymology: both *λόγος* and *ratio*, from which the word as a philosophical term descends historically, have sometimes the meaning simply of 'relation.' This, however, is too generalized to be serviceable. We must seek for something more limited.

At the beginning of the search we are met by an ambiguity. Man is defined as the 'rational animal'; yet the 'reason of animals,' at a level below the human, is currently spoken of. The explanation of this ambiguity will point out the definition which we require.

It is true that the lower animals have 'reason' as well as 'instinct' (which may be defined as the direction, psychical as well as physical, of actions to ends, without knowledge of the end) in the sense that they, in varying degrees, direct their actions intelligently to desired ends; but not even the animals nearest to man have the power of thinking in general terms expressed in language. Man has this; and, in the traditional definition of man, it is this that is distinguished by the name of 'reason.' The subject may thus be dealt with either psychologically or epistemologically—i.e., we may consider the origin and growth of conceptual thought; or we may consider it as actually exercised in the discovery of true propositions.

¹ E.g., *Vipassanādiṭṭhi*, Rangoon; 'Expositions,' *Buddhist Review*, Oct. 1915; 'Some Points in Buddhist Doctrine,' *JPTS*, 1913-14, p. 129, as well as in S. Z. Aung's art. 'The Philosophy of the Real,' *Journ. Burma Research Society*, Rangoon, 1917.

² 'The Ultimate Constituents of Matter,' *The Monist*, London, 1915, p. 401 f.

Psychologically it has been dealt with under the head of INTELLECT. In the present article we shall consider reason, not further in relation to the classification of the mental powers, and not genetically, but in relation to the philosophical discussions on the validity of scientific knowledge, of moral precepts, and of metaphysical beliefs.

2. The term in Greek philosophy.—(a) *The pre-Socratics.*—Reason, of course, was used by man long before the use of it was reflected on, and long before it was appealed to as the ground of knowledge or belief. When it is thus appealed to, it comes to be set, along with experience, in antithesis to passively accepted custom or tradition; and then again, more precisely, in antithesis to the particular facts known, as distinguished from the form and the generality of knowledge. The last stage was reached in the early philosophy of Greece—not at the very beginning, but as early as Heraclitus and Parmenides (6th to 5th cent. B.C.). For the earlier period of the Hellenic world, as for the pre-Hellenic world generally, the vague Homeric use of such words as *νόος*, *φρένες*, *πρωπίδες*, in which reason is not clearly distinguished from sense, or the mental process from the organic process that goes with it physiologically, may be taken as characteristic. Something of this vagueness indeed always remains in literary and even in philosophical usage;¹ but there comes a time when language enables us to distinguish if we choose. The time when generalizing thought was consciously recognized, in distinction from the sense or experience in which it is immersed, arrived when the deductive science of mathematics had begun as a new departure of Greek science, marking a step beyond the accumulation of observations and empirical formulæ in the science of the ancient East. It was this, though perhaps neither thinker was fully aware of the source of his thought, that caused Heraclitus and Parmenides to begin the series of articulate statements of a philosophical criterion. Earlier thinkers had already started the series of doctrines, but without a definite test of truth.

The balance, as a necessary consequence of the new departure in which the inquiry had its source, inclines at first to reason in its distinctive meaning as against the later-formulated criterion of experience. Heraclitus, indeed, appeals also to experience against tradition² in the saying, *ὀφθαλμοὶ τῶν ὄντων ἀκριβέστεροι μάρτυρες* (frag. 15 [Lywater], 101^a [Diels]); but to reason is given the predominance. The final criterion is the judgment of the soul, not the witness of eyes (experience) or of ears (tradition), though the eyes are more trustworthy than the ears:

κακοὶ μάρτυρες ἀνθρώποισιν ὀφθαλμοὶ καὶ ὄτα βαρβάρους ψυχὰς ἐχόντων (frag. 4 [B 1], 107 [D.]).

This, however, is still vague philosophically. Parmenides is more precise, and in his affirmation that reason³ is the criterion he is more exclusive: we are to 'judge by argument' (*κρίναι λόγῳ* [frag. 1. 36]). Anaxagoras returns to a kind of balance, distinguishing the two modes of knowing as 'by rational consideration' (*λόγῳ*) and 'by experience' (*ἐργῳ*). This at least seems a fair interpretation of a fragment translated less determinately by Burnet:

'So that we cannot know the number of the things that are

¹ E.g., some misapprehensions would have been avoided if the 'common sense' of the Scottish school had been described as 'common reason.' Historically it takes its origin from *κοινὴ αἴσθησις*, but its meaning approximates rather to *κοινὸς λόγος* (see art. SCOTTISH PHILOSOPHY).

² See Burnet, *Early Greek Philosophy*², p. 147, n. 2.

³ The meaning of *λόγος* in Heraclitus is still disputed; but, when it most approximates to reason, it seems to mean a rational law of things and of the mind rather than a test applied by the mind to its knowledge of things (see art. LOGOS).

separated off, either in word or deed' (*ὥστε τῶν ἀποκρινομένων μὴ εἶναι τὸ πλῆθος μήτε λόγῳ μήτε ἔργῳ* [frag. 7; Burnet, p. 300]).

Democritus, not much later, declares outright that true knowledge is not by the senses but by reason. This is the interpretation of Sextus Empiricus; and it is supported by the strong terms in which Democritus rejects the claim of the senses to judge. As Sextus sums up his positions:

δύο φησὶν εἶναι γνώσεις, τὴν μὲν διὰ τῶν αἰσθήσεων τὴν δὲ διὰ τῆς διανοίας, ἣν τὴν μὲν διὰ τῆς διανοίας γνησίην καλεῖ, . . . τὴν δὲ διὰ τῶν αἰσθήσεων σκοτινὴν νομάζει. . . οὐκ οὖν καὶ κατὰ τοῦτον ὁ λόγος ἐστὶ κριτήριον, ὃν γνησίην γνώμην καλεῖ (ἀδν. *Math.* vii. 183f.).

These positions of the pre-Socratics may not be ultimately compatible with the outlook implied in their tracing of reason as well as other modes of mind to dependence on certain material mixtures in the bodily organs; but complete clearness could not be attained so early; and it is interesting to find that the most decided materialist, Democritus, lays most stress on reason as against the experiences of sense-perception. Perhaps, however, Democritus ought rather to be counted as belonging to the next phase, when attacks on the possibility of knowledge had to be expressly met. In his appeal distinctively to reason he was at one with his constructive contemporaries, however he might differ in his ontology.

(b) *Plato and Aristotle*.—When, in the Sophistic period, the subjective criticism that examined the mind's own process was turned against the efforts of the early thinkers to arrive at truth in a direct objective way, Socrates, as a preliminary to reconstruction, set himself to examine the nature of the concept. Though by Aristotle induction from particulars (*ἐπαγωγή*), as well as the search for general definitions, is ascribed to Socrates, it was as a dialectical rather than as an experiential thinker that he became most influential. His central effort, as distinguished from incidental positions that interested eccentric thinkers like Antisthenes and Aristippus, was carried forward by Plato and then by Aristotle. For Plato reason, or coherent thinking, decidedly had the predominance, as a test, over experience of particulars. 'Dialectic' was conceived as a more general method than that of deductive mathematics, which implies it, but adds untested hypotheses of its own. The appeal to reason, in Plato's ideal system of knowledge, thus became part of a whole in which, while experience had a place, dialectic, with deductive mathematics at the next step below, was the model of ultimately valid thought. At a higher stage than that of discursive reason (*διάνοια*) there was pure intellect, intuitive thought (*νοῦς*, *νόησις*), by which true reality is to be grasped; at a lower stage was opinion (*δόξα*), not properly scientific because not dialectical or mathematical, which deals by more or less conjectural methods with the phenomena presented to sense-perception.¹ On the dialectical side, what had been partially formulated by Plato was definitively formulated by Aristotle, who stated the axioms since known as the 'laws of thought,' and made them the basis of his codified formal logic. Aristotle, on another side of his mind, was much more of a naturalistic inquirer into detail than Plato; but, in his general view of the test or tests of truth, he remains faithful to the principles of his master.

(c) *Epicureans and Stoics*.—The next period of Greek thought, occupied as it was with the effort to formulate a rule of life for the individual in a cosmopolitan world for which the bond of the city-State had become a waning tradition, brought on the search for a more tangible reality than that

of the metaphysics in which the Platonic and Aristotelian dialectic found its consummation. To arrive at some external reality in the most expeditious way was the theoretical problem. Then, without useless lingering over this, the philosophic learner could go on to the essential thing, which was practice. The great positive schools of this period, the Epicureans and the Stoics (*q.v.*), while differing much in detail, solved this problem fundamentally in the same way. Going back to the earlier thinkers, they developed more consistently the naturalistic side of their doctrines. The rudiments could be found in them of theories which, in the explanation of mind, proceeded from the physiological organs and made the senses psychologically fundamental. From these rudiments the new schools, with the long dialectical development of the intervening period behind them, worked out in considerable detail what we may call an experiential theory of knowledge. Not rational argument as such was the criterion, but a certain mode of experience. Epicurus, while taking for his ultimate account of reality the atomism of Democritus (with changes that were scientifically for the worse), completely inverted the position of Democritus with regard to the senses. For Epicurus sense-perception is the criterion: things are exactly as they appear. This is formally stated by Sextus Empiricus, who was our authority for the precisely opposite affirmation of Democritus. Epicurus, he says, affirms that sense-perception is trustworthy in its hold of reality throughout:

τὴν αἴσθησιν . . . διὰ παντός τε ἀληθεύειν καὶ οὕτω τὸ δὴ λαμβάνειν ὡς ἔχει φύσεως αὐτὸ ἐκεῖνο (ἀδν. *Math.* viii. 9)

The more elaborate doctrine of the Stoics equally adopted for its criterion sense-perception, though not indiscriminately, but only when it was perception of a certain kind. The difference was in effect that Zeno and his successors laid stress on an active element in the grasp of external reality; mere reciprocity did not seem to them sufficient. Reality is seized, they said, by the *φαντασία καταληπτική*—a kind of presentation that is known to give a true account by the sense of possession that goes with it and the absence of any opposing presentation. As Sextus puts it,

κριτήριον εἶναι τῆς ἀληθείας τὴν καταληπτικὴν φαντασίαν . . . μὴδὲν ἔχουσαν ἐνστήμα (vii. 255)

The part of λόγος in the Stoic system, like that of νοῦς for Anaxagoras, is ontological. In one of its meanings λόγος is the law that runs through the world; but reason as the procedure of the mind in dealing with the general is not for the Stoic theory of knowledge the ultimate test of truth. The ultimate test for the Stoics, as for the Epicureans, is experience.

(d) *Sceptics*.—The opposition that this doctrine had to meet came from the sceptics, especially those of the New Academy. That the most reasoned scepticism should have proceeded from the Academy (*q.v.*) reveals its essential nature. For a time the attempt to build a positive system from the points of view developed in Plato's *Dialogues* was abandoned, and his school threw itself into negative criticism. A system of confident dogmatism like that of the Stoics provided it with material exactly to the purpose. Carneades recognized his dependence on his opponents when he said, parodying the verse that made Chrysippus the effective founder of the Stoa, *εἰ μὴ γὰρ ἦν Χρύσιππος οὐκ ἂν ἦν ἐγώ*. The method was to apply to the Epicurean and Stoic tests of truth a stringent dialectic which, after the emergence of idealistic criticism, no naively realistic doctrine could bear. Indirectly, therefore, scepticism, earlier and later, was the preparation for the next constructive school, that of the Neo-Platonists,

¹ See *Republic*, end of bk. vi., for an exact account.

which, arising independently, at length absorbed the Academy.

(e) *Neo-Platonists*.—With a positive, and no longer a negative, aim, Plotinus revived the Platonic idealism, bringing into it more system through the study of Aristotle, and turning it critically against the Stoic materialism (see art. NEO-PLATONISM). Even sense-perception, he showed, is inexplicable from the basis of mere physiology; but, for the test of truth, he turned away from sense and insisted on reason as that which judges. Mysticism, though a distinctive feature of his thought, does not furnish the criterion. For the mystical experience, being a state beyond knowledge, seizing upon that which is beyond mind, cannot be explained to one who has not had it. The reasoned system points to it, but does not include it as part of a completely rational process: it is *ἐκστασις*, a standing out of system. The system itself consists of demonstrations, and its criterion is reason. Thus, after a long and fluctuating process, thought had returned to the dialectic and logic of Plato and Aristotle as offering the soundest principles of knowledge yet discovered.

This was, however, more clearly brought out by Proclus (A.D. 410–485) two centuries after Plotinus (204–270). For Plotinus the ideal of reason is an intuitive thought such as Spinoza¹ holds to be the highest order of knowledge. Proclus does not reject this, as he does not reject the more distinctively mystical experience beyond it; but for the definitive test of truth he selects a more generally applicable criterion. The criteria that the thinker may use for himself in relation to different kinds of subject-matter are many; but the soul is a unity as well as a multiplicity; and there must be some universal criterion for every soul. This he finds to be neither pure intellect (*νοῦς*) at one extreme nor sense-perception (*αἰσθησις*) at the other, but discursive reason (*λόγος*). Here is the process of explicit formulation by which the higher is mediated to the lower and the lower to the higher. The mind may start from the glimpses of intuitive reason and may use sense-perception as material for criticism or confirmation; but, if there is to be a system of knowledge, it must be established by a process of argument. The circumspection which he ascribes to Plato in assigning their proper part in knowledge to all the modes of mind is certainly to be found in the passage where he gives this guarded expression to philosophical rationalism:

εἰ τοίνυν τὸ κρίναι ψυχῆς ἐστίν—οὐ γὰρ πον τὸ ἡμέτερον σώμα κριτικὸν ἔχει δύναμιν—ἡ δὲ ψυχὴ ἐν ἐστί καὶ πᾶσι, καὶ τὸ κριτικὸν ἐν ἐστίν ἡμᾶ καὶ πολλὰ, καὶ μονοειδὴς ἡ κριτικὴ δύναμις καὶ πολυειδής, τίς οὖν ἡ μὲν δύναμις; φαίη τις εἶναι τὸ λόγος, φησόμεν (*Comm. in Tim.*, ed. E. Diehl, Leipzig, 1903, I. 254–255).

As first matter, or mere possibility, below the limit of true knowledge, is seized by a kind of bastard reasoning (*νόθος λογισμὸς* in Plato's phrase), so the One, at the other extreme above knowledge, is seized by a kind of bastard intuition (*νόθος νῆς*). Thus every test finally has a certain resemblance to the model test of explicit reason. If the other tests are to be regarded as having their own validity, it must be shown by argument how they can have it; though argument, of course, cannot enable us to dispense with direct perceptions whether of intellect or of sense.

For antiquity, therefore, what may be called in the philosophical sense 'rationalism' remained finally supreme.

3. *Mediæval and modern use*.—(a) *Scholasticism*.—In the mediæval schools rationalism (*g.v.*) became predominant in a narrowed sense. The passage cited above from Proclus might have been taken by the Schoolmen of Western Christendom,

¹ *Eth.* II. prop. 40, schol. 2

without its qualifications, as a text to prove the exclusive value of their characteristic activity. It was long after Proclus, and long after the suppression of the school at Athens of which he was the last great name, that the revival of philosophical thought began in the West; but, when it came, it gave evidence of continuity with the latest thought of antiquity. Its first great movement was an immense development of discursive reason. Precisely because the Middle Ages had lost the freedom with which in classical antiquity ultimate beliefs could be discussed, there was such an elaboration of formal method as had never been known before. The value of this must not be underrated. In a sentence from W. Hamilton's *Discussions in Philosophy* which Mill prefixed to the first book of his *Logic* it is put thus:

'To the schoolmen the vulgar languages are principally indebted for what precision and analytic subtlety they possess.'

Croom Robertson says:

'All the world has heard of scholasticism as an oppressive system of pedantic belief: it has still to be known as a system of rationalism struggling to be' ('The English Mind,' *Philosophical Remains*, London, 1894, p. 34).

The reverse side of the case remains, of course, that this rationalism was very limited. The Schoolmen made a fine art of formal reasoning; but the habit of accepting traditional authority for facts and data was so fixed that the attempt to bring again into view the claims of experience remained merely sporadic. To get out of the circle of things taken for granted or assumed dialectically, a revolt against the School-philosophy itself became necessary. The controversy about the reality of universals was primarily ontological. By their contention that only particulars are real, and that the genus or species is only a name indicating resemblance between the members of a class, the nominalists might seem nearer to modern experimentalism than the realists, for whom class-names indicated a reality like that of the Platonic ideas; but the methods of both were equally dialectical. An aid to the imagination in forming a notion of the time that it took new views about method to emerge is to remember that there is a longer interval between the exhortations of Roger Bacon to go to experience and those of Francis Bacon, than between the publication of the *Novum Organum* (1620) and the present date.

Roger Bacon is an isolated figure in the greatest period of Scholasticism, the 13th century. Another great English thinker, William of Ockham, in the next century, promoted by his dialectic the disintegration of the imposing dogmatism of St. Thomas Aquinas (*g.v.*) and John Duns Scotus (see art. SCHOLASTICISM). Then came the beginnings of the new movement of humanism (*g.v.*), taking the form at first of a more literary interest in the Latin classics. After the revival, in the 15th cent., of direct knowledge of Greek thought in its original sources, followed by the setting up, in the 16th, of older types of thinking, in conscious rivalry with the whole mediæval scheme of theology and philosophy, the movement against Scholasticism took a more systematic new departure.

(b) *Experimentalism and rationalism*.—This, in the 17th cent., expressed itself in the effort to establish once for all the right 'method' of seeking truth. The new aspiration for firm knowledge, instead of barren disputes about insoluble questions, culminated for the time in the philosophical reforms of Bacon and Descartes (*qq.v.*). Bacon not only clothed in the most impressive language the appeal to experience as the test by which every claim to possess real knowledge must be verified, but also developed some genuine outlines of a theory of induction, no longer unsystematic, but rising by stages from particulars to generals, as deduction descends from generals to particulars.

Descartes, himself a discoverer in geometry, set against the sterile formalism of mere logic, which could bring out only what had been implicitly asserted, the real deduction of new truth in the mathematical sciences. Thus began the two great movements of philosophy known as English experientialism and Continental rationalism; but it is important to note that these were not so definitely rivals as they had become later when Kant turned his 'critical' thought on both at once. The great Continental rationalists, Descartes, Spinoza, and Leibniz (*q.v.*), all took occasion to recognize in some way the new departure of the English in their appeal to experience. In all the English thinkers, on the other side, unreduced elements from the rationalism of ancient science and of the Scholastic tradition remain over. It would be easy to show this in the case of Bacon, Hobbes, Locke, and Berkeley (*q.v.*). And Hume (*q.v.*), who carried farthest the effort to resolve all 'principles of reason' into derivatives of pure experience, treated his results not as 'dogmatic' but as 'sceptical,' i.e. as suggesting problems for reconsideration; finally abandoning his first elaborate attempt to explain mathematics as an essentially empirical science. By Kant (*q.v.*), while the opposition with him arrived at the most explicit statement, the reconciliation of 'reason' and 'experience' as constituents of truth was most systematically attempted. Reason, according to Kant, does not merely enable us to arrive at 'analytical' judgments implied in what has been already said, but, in mathematics at least, yields genuine new truth in the form of 'synthetic judgments *a priori*.' Yet, while these are not given in mere experience, they have no valid application beyond all possible experience. All true science consists in carrying reason into the construction of nature so as to make it intelligible to thought. Even those highest principles that seem to go beyond this have value only as furnishing an ideal that the actually working system of science may try to approach and so gradually perfect itself.

(c) *The Kantian reaction and the revival of experientialism.*—If we were to stop here, it might seem that now, as at the end of ancient thought, the supreme place, though with circumspection, was assigned to reason. Kant, however, did not, even at first, approximately satisfy any considerable group of thinkers. The problem became on the one side to develop him, on the other side to answer him. Hegel (*q.v.*) has been thought to have carried philosophical rationalism to the highest point. By a new logic, the whole order of the universe, he seemed to promise, was to be shown forth as a manifestation of reason. Yet, curiously, his power appears most in a strong grasp of experience intermittently attained, but unmediated by any method fitted to carry general conviction. The next representatives of experientialism, in contrast, were men of pre-eminently deductive minds, whose strength was in reasoned exposition, and who, in the days of Scholasticism, might have been famous as irrefragable doctors. For the complex period at which we have arrived it is more true than ever, in the phrase borrowed by Hegel himself from Anaxagoras, that things are not 'cut in two with a hatchet.'

It would have contributed much to a clear issue for the thinkers just alluded to had they known Kant at first hand; but they knew him only indirectly or very imperfectly. Comte, who, like Descartes and Leibniz among modern philosophers, was a mathematician of original power, thought that he could explain even mathematics philosophically as based in generalizations from pure experience (see art. POSITIVISM). J. S. Mill (*q.v.*), who succeeded in founding a valid inductive logic by

deducing the actual tests of experimental science from a general principle, 'the uniformity of nature,' fell back, for the proof of this, on the weakest mode of induction—viz. that 'induction by simple enumeration' which the Baconian canons and his own had been devised to supersede. And this, in both cases, without any close consideration of Kant's arguments for the necessity of *a priori* principles in the sciences of nature as in mathematics. It is not surprising that, both in France and in England, the two countries where the experientialism that took shape from Locke had been strongest, there was a reaction—or a forward movement, as some put it—in the Kantian direction. For the whole of Europe, however, it must be said that the predominant movement in the 19th cent., through the influence on philosophy of the enormous new developments in the sciences of experiment and observation, was greatly to enlarge the place given to experience as compared with that which it held in antiquity, and to reduce the principles of reason which science finds that it cannot do without to an attenuated form. The elaborate apparatus of Kant was not adopted by men of science; and in Germany the movement which took for its watchword 'Back to Kant' signified a return to the experiential side of Kant against the extreme speculative developments of his successors (see art. NEO-KANTISM).

There is, however, it has also become clear, an element in scientific knowledge not explicable as a resultant of accumulating experience. The most general principles of logic, whether of formal inference, of mathematical deduction, or of the natural and humanistic sciences, remain more than arbitrary linkings of ideas that can have their validity proved or disproved by their applicability to certain subject-matters. They are not in the end mere 'working hypotheses.' There is in reason, as Kant with all his over-elaboration proved, an *a priori* factor in virtue of which we distinguish it from pure experience.

4. *A priori.*—This term has been dealt with in a separate article, but calls for a brief discussion in relation to the present subject. Its source, as has been shown, was Aristotelian. Aristotle distinguished between that which is first in relation to us and that which is first by nature. In knowledge the experiences of sense-perception are first in relation to us, i.e. in the order of genesis; but, since, in his view as in Plato's, the formal essence (*εἶδος*), expressed in a concept, is the determining reality of everything, the ideal of knowledge for the philosophically trained mind is to begin with the general and proceed to particulars. Thus the syllogism, into which all formal reasoning can be thrown if we need expressly to test its validity, is 'first by nature' and has more in it of true cognition; but induction, which is the procedure from particulars to generals (*ἡ ἀπὸ τῶν καθ' ἕκαστον ἐπὶ τὰ καθόλου ἐφοδος*), is more persuasive and carries plainer evidence to the ordinary mind.¹ Quite fitly, therefore, the term *a priori* was adopted by Kant as the technical expression for reason in its purity, proceeding, whether theoretically or practically, as something necessarily general and not to be derived from experience conceived as a sum of unrelated particulars presented to the mind from outside. Since Kant the expression has become a kind of shorthand, understood without reference to its historical origin or to any distinctive system. Those who use it do not imply that they are reasoning from a formal cause, which has priority in the Aristotelian sense as being the real essence; nor even that they regard their general principles as transcendental in the Kantian sense, i.e. as not derived from ex-

¹ See *Top.* i. 12, 105^a 13, and *Anal. Pr.* ii. 23, 68^b 32.

perience though having possible application only within experience. Their claim is simply to be in possession of general principles, whatever the source of these, from which they are justified in inferring propositions applicable to groups of particulars. Herbert Spencer, *e.g.*, while he is always classed with the series of the English experientialists, uses the term as freely as Kant, and he was at least as confident an *a priori* reasoner as Aristotle and decidedly less of an observer. The ground of his *a priori*, however, was quite different. For him the order of genesis is the real order of nature; and the *a priori* principles of the mind, though it can now apply them with scientific security, are valid only as the last result of accumulated experiences in the race and the individual. Yet, perhaps, in a very broad sense, a philosophical conception of the *a priori* akin to that of Aristotle or of Kant lurks behind. For experience, according to Spencer, does not simply consist of 'feelings,' but includes 'relations between feelings'; and these are not derivative, but constitute a kind of *lógos*, or *ratio*, in which all explicit knowledge had a prior existence. In this extremely general sense of the *a priori*, Spencer also may be classed with the philosophical rationalists.

5. Reason in ethics.—Moral conduct may be considered as practically determined either by the notion of an end of action, a final good, or by the notion of a law to which action ought to conform. In whichever way it is considered, both reason and experience must be allowed a part in deciding what actual conduct shall be. For Greek and Roman antiquity moral philosophy was on the whole dominated by the idea of an end or good (see artt. ETHICS AND MORALITY [Greek] and [Roman]). This might be derived from experience and treated as something empirical to which the means had to be sought; or it might be determined in relation to some metaphysical reality that was thought to confer on it its ultimate desirability as an end. In the latter case it would naturally be regarded as ascertainable by the direct insight of reason. Plato's idea of the good is conceived as the final object of rational insight, conferring on all ends their desirability as on all modes of being their reality; but he admits that he cannot say what it is.¹ In Plato's and Aristotle's actual treatment of moral problems there is a mixture of points of view, both reason and experience being appealed to. This, however, does not make the philosophers illogical. Their ideal is that the end or the good should be rationally knowable; but they recognize, in the conditions of human nature, the need for much empirical balancing of one thing with another. The conceptions of 'pleasure' as the end, interpreted by Epicurus as in its highest degree tranquillity, and of the 'life according to nature,' selected by the Stoics as their final good, may be considered as experiential, in accordance with the theoretical philosophy of the schools that adopted them. In these schools, however, points of view came decisively forward that led on to the later 'ethics of law,' which in modern times has tended to become the type of rationalist, as distinguished from experiential, ethics. The Epicureans made considerable use of the notion of keeping contracts, already present in the Aristotelian theory of justice; and the Stoics brought the detail of their ethics under ideas of a natural justice or of a law common to all. This had much influence on the formulation of Roman legal conceptions. Neo-Platonism treated ethics on the whole from the metaphysical point of view, according to which degree of worthiness in ends corresponds to degree of reality in the scale of existences. Christian ethics adapted, for philosophical systematization,

¹ *Rep.* vi. 508.

Stoic, Platonic, and Aristotelian positions, in this chronological order. Its notion of a divine legislation tended to reinforce the beginnings that already existed of the 'ethics of law,' moral duties being put in the form of commands. Thus in the Middle Ages ethics took the name of 'moral theology.' In the early modern period a kind of ethics of law, placed on natural or rational grounds, was formulated by Hobbes (*q.v.*). Its precepts might be also divine commands, but they could be known, though not enforced, independently of all positive legislation, human or divine, as declarations by natural reason concerning that which ought to be done. A certain end was fixed, *viz.* social peace and security as the general condition allowing individuals to seek their personal good, which is no one thing, but consists in a multiplicity of things that present themselves as desirable in the course of experience. The end being fixed, the 'law of nature' in its ethical sense becomes demonstrable. Since, however, all ends are considered as known only empirically, and the law is determined ultimately by relation to these, Hobbes, though in part rationalist in his expressions, has always been classed with the experientialists in ethics and politics as in general philosophy. His successors and opponents, Cudworth and Clarke, with their appeal to 'right reason' and 'the fitness of things' as the proper determinants of action apart from command or self-interest, were stringently rationalist in form, but did not disentangle their ethics of law from the metaphysical points of view that they had inherited from Plato and his ancient or Scholastic successors. A new departure was taken by Kant when he insisted that the only generally valid form of ethics is that which expresses itself as the 'moral law,' obligatory without relation to ends; and that moral obligation is rationally determined by itself without reference either to experience or to any metaphysical propositions about the nature of a reality beyond experience. Ultimate moral judgments, stating what ought to be done, are determined by 'pure practical reason,' as the ultimate types of assertion about what is or may be real are determined by 'pure speculative reason.' This mode of ethical thought has since been developed and modified with most originality by C. Renouvier (*Science de la Morale*, 2 vols., Paris, 1869) and by E. Invalta (*Il Vecchio e il Nuovo Problema della Morale*, Bologna, 1914). For further details on rationalist positions in modern ethics see artt. MORAL LAW, MORAL OBLIGATION.

6. Reason versus understanding.—An antithesis that has had considerable importance historically is that which was set up by Kant's distinction between reason in an eminent sense (*Vernunft*) and understanding (*Verstand*). Understanding relates one thing to another within experience, but does not go forward to the ideal completion of experience in a total system. Such an ideal completion is wrought by the reason, which rises above the bounds of experience and affirms the three transcendental ideas of the soul as a permanent being (the psychological idea), of the world as a totality (the cosmological idea), and of God as the necessary being who is the cause of the whole (the theological idea). These ideas of the reason, Kant argues, are not theoretically demonstrable; but neither are they theoretically refutable; and we have the intellectual right to assert them as postulates of the moral life. For, while this, being autonomous, is independent of any metaphysical doctrine, it does not simply rest in itself, but claims that it shall find its fulfilment in a universe ordered in relation to its demands. By Kant's idealist successors in Germany the antithesis of reason and understanding was often turned to account—in defiance of Kant's aim at limiting the pretensions

of the speculative reason—to claim the warrant of a higher faculty for their own utterances, all detailed criticism being treated as an affair of the ‘mere abstract understanding.’ To English readers this procedure became familiar through its use by Coleridge and his disciples to discredit attacks on tradition, political or religious. The reason saw in this a deep meaning, placing it at once beyond the vulgar hostility of crude radicalism and the arid defences of conventional conservatism, both alike bound within the limits of the inferior pedestrian faculty. In Germany Schopenhauer (*q.v.*) made an attempt to turn the tables by contending that the understanding is always the originative thing, reason, as merely conceptual, being only the means of preserving consistency—*e.g.*, to be reasonable (*vernünftig*) is not necessarily to be moral; it may mean only consistency in pursuing well-understood self-interest; true morality implies a sympathetic insight that is not merely rational. Understanding no doubt includes what is below, but it also includes what is above, the process of logically connecting concepts—at once the instincts and perceptions of animals and the perception or ‘instinct’ of genius. This, however, means that Schopenhauer in his own manner continued the old distinction, while inverting the reference of the names. This he could easily do by limiting ‘reason’ to its sense of ratiocination. Whatever the terms used, the distinction in fact remains. A mind so strongly developed on the side of the understanding, or of reason in its sense of ratiocination, as that of J. S. Mill could acknowledge that in some respects Coleridge had deeper insight than Bentham. And Comte, while maintaining the claim of his philosophy to complete ‘positivity,’ found that, because it was philosophy and not merely science, the supreme place in it belonged to certain ‘*vues d’ensemble*.’ The problem of a truly philosophical reform must be to make the ‘*esprit d’ensemble*’ predominate over the ‘*esprit de détail*.’ ‘Dispersive specialism,’ when uncontrolled, becomes an aberration of the human mind, relatively justifying that conservative reaction which at least maintains the synthesis of the past. The Coleridgean distinction, it is evident in the light of these testimonies, cannot be dismissed as a mere verbal trick. The problem is to find the right terms. Thus only can we hope to set ourselves free at once from arrogance and from confusion. Now the right terms are ready to our hand in Milton,¹ who puts into the mouth of Raphael the declaration that the soul’s being is reason, ‘discursive, or intuitive,’ ‘differing but in degree, of kind the same.’ Those terms, taken no doubt from a Scholastic source, go back to Plato and Aristotle. Intuitive reason is the *νοῦς* of the Platonic theory of knowledge; discursive reason is the *δύναμις*. The former corresponds to the reason of Kantism; the latter to the understanding. These terms, ‘intuitive’ and ‘discursive’ reason, have the advantage of accurately rendering, without arbitrary specialization of meaning, a difference that really exists and is plain when it is pointed out. No difficult introspection is needed to see that there is a total grasp, a ‘synoptic’ view of things, and that there is also procedure from point to point. But it must always be borne in mind that, if the former is higher, it is unavailable till it has been mediated by the latter. The ideal of philosophic presentation is achieved by those who, like Plato and Berkeley, have both in due balance.

LITERATURE.—As the antithesis between reason and experience runs through all the history of philosophy, the following general authorities may first be mentioned: J. Burnet, *Early Greek Philosophy*², London, 1908; H. Ritter and L. Preller, *Historia Philosophiae Graecae*³, Göttingen, 1898; F. Ueberweg, *Grundriss der Gesch. der Philosophie*, 1.²⁰, Berlin, 1909, ii.³⁰

1915, iii.¹¹ 1914, iv.¹¹ 1916. On the impossibility of reducing the supreme principle of inductive logic to ‘hypothesis,’ Carveth Read, *Logic*⁴, London, 1914, p. 286f. On rational and empirical ethics, T. Whittaker, *The Theory of Abstract Ethics*, Cambridge, 1916. On the ‘synoptic’ view to which philosophy returns, J. T. Merz, *Hist. of European Thought in the Nineteenth Century*, iii., iv., Edinburgh, 1912-14.

THOMAS WHITTAKER.

REBELLION, REVOLUTION.—Rebellion, in the sense of active resistance to established authority, is a phenomenon as old as political society; the doctrine that there is a right so to resist was proclaimed somewhat late, and after the Reformation it came into collision with the theory that kings have a divine right to absolute power. The question was settled to their own satisfaction by the champions of absolutism, but Locke asserts (*Two Treatises of Government*, London, 1690, bk. ii. § 90) that a monarchy such as they advocate, arbitrary and unlimited, is no form of civil government at all; and he shows that the question of a right of revolution is not so easily disposed of. Still popular judgment on the subject of the rightfulness or wrongfulness of insurrection is so often influenced by religious considerations, by the ideas involved in the old theory of divine right (*q.v.*), that no fair conclusion can be formed without an examination of this theory, apart altogether from its political and historical importance.

All early government was monarchical, and the sovereignty of the ancient State was absolute. But this was not because of any belief in divine right, since on this and other kindred subjects men had not begun to hold theories at all; the reason was that they were not yet conscious of those rights as men and citizens which, by their very existence, limit the power of government. In more modern times, according to Bluntschli (*Theory of the State*, bk. vi. ch. viii.), among the Greeks and Germans, kings were regarded as being of divine extraction but not as being themselves gods or as superior to human laws. The Romans, again, chose their kings as a rule by election, and did not recognize a supernatural descent even for those who succeeded by inheritance, although they acknowledged the right of the gods to direct the affairs of the State (*ib.* ch. ix.). It was in mediæval times that it first became the custom to talk of a king as the vicegerent or anointed representative of God, responsible to Him alone. Even usurpers like Pepin regarded themselves as wearing their crown ‘*Dei gratia*.’ Such a claim as that of Louis XIV. to a monopoly in his own person of political rights could not find even outward justification except on the assumption that his power was divinely derived.

There is a sense in which this doctrine may be said to be based upon the teaching of the NT. It did not come from the Jews, whose chronicles show them to have been, as a nation, more rebellious than law-abiding, whose kings besides were in the strictest sense servants of Jahweh, subject in all their acts to the censorship of His prophets. Moreover, the God of the Hebrew people sometimes favoured insurrection, as we see in 2 K 18⁷, where it is stated that the Lord was with Hezekiah, the king of Judah, when ‘he rebelled against the king of Assyria, and served him not.’

On the other hand, the early Christian Church taught what amounted practically to a doctrine of passive obedience to the State. ‘The powers that be,’ says St. Paul, ‘are ordained of God’ (Ro 13¹). And again we find: ‘Submit yourselves to every ordinance of man for the Lord’s sake: whether it be to the king, as supreme; or unto governors, as unto them that are sent by him’ (1 P 2¹³). These words were held, after the Reformation, to support the theory to which we have referred, that kings

¹ *Par. Lost*, v. 486-490.

were the anointed representatives of God, who, according to Louis XIV., reserved 'to himself the right to judge their acts' (*Œuvres*, Paris, 1806, ii. 317). But such an inference leaves out of account the fact that the Christian religion made a sharp distinction between Church and State, between the all-embracing power of God and the mere temporal authority of the emperor. Its Founder was not a prince of this world, and He Himself expressly separated the things which were Caesar's from the things which were God's (Mt 22^d, Lk 20th). The only divine rule belonged to the Almighty, but the early Church preached an unhesitating submission to the laws of the State, so long as these did not conflict with the higher mandate of religion (Ac 5th).

The doctrine of an absolute sovereignty was first set forth in the form of a philosophical theory by Hobbes, and he urged passive obedience to the authority of the State under all circumstances whatsoever. Hobbes supported this extreme form of absolutism by an ingenious use of the theory of contract, which Locke employed later for the contrary purpose of upholding the ultimate right of the people 'to remove or alter the legislature'—the same theory which appeared at the time of the French Revolution to justify violent resistance to the government. We have to bear in mind, when reading Hobbes and Locke, that both are animated by the spirit of partisanship and are writing to condemn and defend, respectively, the rebellions of their time. But Hobbes did not carry his premisses to their logical conclusion. If right lies with might, as he asserts—and as has been held by J. Austin and the English jurists who strip sovereignty of every attribute but force—then right is with the people in any insurrection successfully carried out.

There can, in fact, be no legal right so called to disobey the established law of the land. We find it asserted, anarchical and contradictory as it is, in several of the American Declarations of Independence, along with other claims not less open to criticism (Ritchie, *Natural Rights*³, pt. ii., esp. ch. xi.). But a constitutional right of resistance is a contradiction in terms, absurd and unthinkable, though plausible in a certain degree on the old hypothesis of a contract between a ruler and his subjects, according to which it was the part of the former to rule justly and of the latter to obey, the contract lasting only so long as each fulfilled these obligations.

There is, however, another point of view. It is generally admitted that the end for which the State was instituted is, as Locke put it, 'the good of mankind' (ii. § 229). And there are conceivable conditions under which continued well-being may be impossible and the existence even of a nation may be threatened. Under such circumstances it is generally agreed that there is a moral right or even duty of resistance.

The question then may properly be asked, When is revolution justifiable? No rule can be laid down, although the first necessity is that the common good should urgently demand reform of a radical kind. Other considerations must be taken into account. From an ethical standpoint, resistance is to be attempted only where it seems to have a chance of being successful, and approved only where the victorious party has been able not only to overthrow the ruling administration, but to construct on its ruins a government capable of preserving the independence thus attained. Moreover, there is the reservation that this should be done only after every form of conciliation has been tried, and where there are extreme misgovernment and suffering so intolerable as to make the cause seem worth the price of inevitable misery and

bloodshed. Given these conditions, no one will dispute the right of what Schiller calls the 'appeal to Heaven' (*Wilhelm Tell*, act. ii. sc. 2). Even so zealous a defender of the power of the Crown as Johnson was forced to admit that there is a remedy in human nature against tyranny:

'If a sovereign oppresses his people to a great degree, they will rise and cut off his head' (Boswell, *Life of Samuel Johnson*, ed. H. Morley, London, 1884, ii. 144).

Hence we may say that, on moral grounds, revolution, like war, is to be justified only by the necessity which urges a nation to save its own existence at any cost.

It has been frequently argued, in the praise of democracy, that the so-called right of revolution cannot exist under a popular government, because the resistance of a part of the community to the will of the whole is, firstly, immoral owing to the supreme right of the majority, and, secondly, futile owing to its superior might. Henry Sidgwick (*The Elements of Politics*, London, 1891, p. 619 ff.) finds an element of sound reason in both these arguments, but decides in favour of the right of the minority to follow the dictates of its reason and conscience, inasmuch as it may possess superior knowledge and even have at its command superior physical force. Indeed, neither democracy nor any other form of government can prevent the possibility of civil war. Rather, as Kant—himself an advocate of passive obedience—points out, the safety of a State and its security against internal dissension and discontent lie in the education and moral development of its citizens. This is the sense in which statesmanship may best be defined as the art of avoiding revolutions. As Charles James Fox is reported to have said (John Stuart Mill, *Autobiography*, London, 1873, ch. v.), the theory of a right of resistance is a doctrine to be forgotten by subjects and remembered by kings.

LITERATURE.—J. C. Bluntschli, *Theory of the State*, Eng. tr., Oxford, 1885; D. G. Ritchie, *Natural Rights*³, London, 1916 (see also an essay on 'The Rights of Minorities,' in his *Darwin and Hegel*, do 1893). The subject of the ethics of resistance is discussed by T. H. Green, *Philosophical Works*³, do. 1908, i. 456 ff. Among Hume's *Essays*, pt. ii., Edinburgh, 1762, is one on passive obedience. M. CAMPBELL SMITH.

REBIRTH.—See REGENERATION, TRANSMIGRATION.

RECAPITULATION (Biological).—The biological facts indicated by the terms, recapitulation, rudimentary organs, reversion, retrogression, regeneration, rejuvenescence, and regression may be profitably discussed together.

I. Recapitulation.—All the higher organisms reveal in their development certain features which recall a distant ancestry. On each side of the neck of the embryo reptile, bird, and mammal there are branchial pouches comparable to those which have a respiratory function and may or do persist throughout life in fishes and amphibians. In reptiles, birds, and mammals these pouches are on the whole transient, like fleeting reminiscences. The first seems to persist as the eustachian tube, and the thymus gland is connected with another, but the rest pass away without persistent result. Similarly, the embryos of higher vertebrates show for a time a notochord—a primitive skeletal axis derived from the roof of the embryonic gut, and thus of endodermic origin. It persists throughout life in lancelets and lampreys, serving as the dorsal axis of the animal, as the forerunner of the backbone which, from fishes onwards, develops from the mesodermic sheath of the notochord. The notochord does not become the backbone, though perhaps serving as a sort of tissue-scaffolding for it, and every stage of the replacement of the one by the other is to be seen in fishes. Yet

on to man himself the notochord appears in development, has its short day, and passes, leaving but an unimportant vestige behind. Similarly, in the establishment of the brain, the skull, the heart, and other important structures the foundations are laid down on old-fashioned lines, not directly suggestive of what is to follow. Thus in individual organo-genesis there is frequently a recapitulation of historical stages. The development of many an organ is circuitous, as if the old paths had to some extent to be re-trod, and yet the progress of a hundred thousand years may be condensed into one day. Another aspect of the same fact is that the developing embryos of, say, bird and reptile are for some days very much alike, moving on parallel lines along the great highway of amniote development, but, sooner or later—about the sixth day in the case of the chick—their paths diverge and become distinctively avian and saurian. It is thus that the individual development (ontogeny) tends to recapitulate racial evolution (phylogeny), that the past lives again in the present with a compelling force. Three saving clauses must be noted: (a) the recapitulation is on the whole very general and always much condensed; (b) the individual development (especially when there are larval forms) often has its recapitulatory features obscured by secondary adaptations to relatively recent conditions of life; and (c) a living creature is extraordinarily specific from the very first—itself and no other. Yet it remains an important fact that the organism's inheritance garnered for ages does in many cases express itself in a step-to-step development, from the general to the special, which is in some degree a recapitulation of stages in what is believed to have been the racial evolution. But the doctrine of recapitulation is one that requires careful handling.

2. Rudimentary organs.—The fact of recapitulation leads naturally to the occurrence of rudimentary or vestigial structures, which linger on in dwindled expression long after they have ceased to be of use. Darwin compared them to the unsounded letters in some words, quite functionless, but telling us something of history. Some of the whales have deeply buried remnants of hip-girdle and hind-limb; birds have a vestigial and useless right oviduct; the skate has a minute remnant of a gill in its spiracle; man has a useless vestige of a third eyelid, occasionally with a supporting cartilage, and a large number of other historical relics. Among vestigial organs may be included those definite structures which appear in the course of development in weak expression and disappear without leaving a trace. Thus the whale-bone whale has two sets of tooth-rudiments which never cut the gum. But the list must not include those structures which, though not attaining their original expression or form, are diverted to some new line of development. Thus the spinnerets of spiders are morphologically equivalent to two or more pairs of abdominal appendages—much reduced when compared with limbs, but in no true sense vestigial. The eustachian tube, which leads from the tympanic cavity to the back of the mouth, is a transformed and persistent spiracle, but it should not be called a vestige. In fact, one of the great methods of organic evolution has been the invention of novel structures by the rehabilitation or transformation of what is really very old. The three-linked chain of ossicles which convey vibrations from the drum to the internal organ of hearing was once in whole or in part included in the commonplace framework of the jaws. It is interesting to inquire whether there may not be vestigial functions and habits as well as vestigial organs and structure. Thus, according to Darwin, the dog that turns round and round on the hearth-

rug before settling to sleep is making a comfortable bed in imaginary grass. Its needless activity is a vestigial survival of what its wild ancestors did to a purpose among the rough herbage. Similar interpretations may be given of 'shying' in horses and so on, but they must be considered critically.

When, because of some defect in nutrition or the like, there is an arrest of development, an organism may present an appearance which recalls what is permanent in a remote ancestral type. Thus harelip in man has been compared to the naso-buccal grooves normal in cartilaginous fishes. It does not tend to clearness to call this sort of thing a reversion; it is an unfinishedness in development, often due in mammals to some extrinsic cause affecting the mother. If, as the result of famine, war, over-work, poisoning, or other causes, infants are born markedly arrested in development, it would be justifiable to describe this as reversionary, but it cannot be asserted that the offspring of these under-average individuals would in conditions of good nurture be under-average. Many reversionary conditions exhibited by individual organisms are due to modifications (indents), not to variations (new outcomes), and are not directly transmissible.

3. Reversion.—In the art, ATAVISM it has been pointed out that what may be described as a harking back to a more or less remote ancestor may not be due to the re-assertion or re-awakening of ancestral hereditary contributions which have lain for several generations latent or unexpressed, like dormant seeds in a garden. This must be re-emphasized, especially in the light of Mendelian experiment, for it seems probable that many domesticated races of animals (such as hornless cattle or tailless cats) have arisen by the dropping-out of some item or items in the heritable complex of the wild species or of its descendants. By taking advantage of the mysterious natural analysis or 'unpacking' of the complex pelage of the wild rabbit, man has established many true-breeding colour-varieties or races of domestic rabbit. It may happen that a crossing of two of these races results in offspring resembling the wild rabbit. But this is not to be regarded as a mysterious rehabilitation of a dormant 'wild-rabbit character' but as a 're-packing' of what had been previously sifted out. This is the Mendelian interpretation of reversion, and it is corroborated by many experiments. On the other hand, the sudden appearance of stripes on the fore-quarters of a horse, or of a horned calf in a pure-bred hornless breed, may perhaps be due to the re-assertion of a particular 'factor' which has lain latent for many generations.

4. Retrogression.—The term 'retrogression' should be kept for cases where structures pass in the individual development from a higher to a lower grade of differentiation, or for cases where a similar reversal may be recognized, on presumptive evidence, in the history of a race. The larval ascidian is a free-swimming creature, like a miniature tadpole, with a brain and dorsal nerve cord, a brain-eye, and a notochord supporting the locomotor tail. In the course of the subsequent adaptation to a sedentary mode of life the nervous system is reduced to a single ganglion, the brain-eye disappears, and the tail is absorbed. As regards these structures the ascidian shows retrogression, though it must be clearly understood that the adult is on the whole a much more complex organism than the larva. The respiratory pharynx, e.g., exhibits a high degree of differentiation. Individual retrogression is well illustrated in the life-history of many parasites. Thus the well-known *Sacculina*, which is parasitic in crabs,

starts in life as a free-swimming Nauplius-larva, with three pairs of appendages, a median eye, and a food-canal, which all disappear in the course of the adaptation to parasitism. Similarly the thymus gland is relatively large in most young mammals, but undergoes retrogressive development as age increases, and this again suggests that retrogression does not necessarily imply any degeneration of the organism as a whole, but rather a re-adjustment to a changed mode of life. The gills of a tadpole exhibit retrogression and are entirely absorbed as the lung-breathing frog develops. But the frog as a whole is obviously on a higher structural plane than the tadpole. Retrogressive changes are sometimes exhibited seasonally, as is seen in the dwindling of the reproductive organs of birds after the breeding period; or at crises in the life-history, as in the extraordinary de-differentiation that occurs in the metamorphosis of insects; or after serious injuries when a process of dissolution and reduction often occurs before the reconstitution begins.

5. Regeneration.—Great interest attaches to the regenerative capacity exhibited by many animals and by most plants. It is exhibited in the repair of injuries, in the restoration of lost parts, and in the regrowth of a fragment into a whole. It is rarely exhibited in regard to internal organs by themselves, though it includes them if they are removed along with a portion of the body as a whole; it is not common in relation to wounds that border on being fatal; it has a curious sporadic distribution among animals, and this, taken along with other considerations, points to its occurrence being adaptive. Weismann in particular sought to show that the regenerative capacity tends to occur in those animals, and in those parts of animals, which are, in the natural conditions of their life, peculiarly liable to a frequently recurring risk of injury, provided always that the part is of real value, and that the wound is not fatal. The facts of regeneration are very remarkable, such as a fragment of begonia-leaf or potato-tuber growing an entire plant, a spoonful of minced sponge growing into an entire animal, one Hydra producing half a dozen when cut into pieces, a starfish arm forming a complete starfish, an earthworm growing a new head or a new tail, a lobster replacing a leg, a snail restoring its horn and the eye at the end of it forty times in succession, a newt's eye making a new lens, a lizard regrowing a tail, and a stork repairing a great part of its jaw. It is difficult to avoid the conclusion that, in the process of differentiation that goes on in normal development, the essential constituents of the inheritance are distributed throughout the body in all the cells though only a few of them are expressed in each cell. If we think of the inheritance as a bag of diverse seeds, and of the cells of the body as the thousand beds of a garden (some small animals have about that number), differing greatly in exposure or stimulation, we can imagine that, although each bed gets a representation of all the different kinds of seeds, only a few will develop in each case. Under extraordinary circumstances, however, it might be possible to awaken in a particular set of beds a full representation of all the seeds, and it is something like this that occurs in regeneration. In some tissues the re-awakening is easy, as in the cambium of plants or the bodies of polyps and simple worms; in other cases it is impossible, as in the supremely differentiated nervous tissue of higher animals which cannot even replace its own worn-out elements. It is not difficult to understand that the re-growth should not always be perfect; thus a lobster, instead of growing an eye for an eye, may grow an antenna instead, and an earthworm that has lost its head may re-grow an anterior tail.

Particularly instructive, linking regenerative processes back to recapitulation, are two facts: (1) the restoration is sometimes effected by stages which are different from those of embryonic development, and (2) the final result, as in the case of a lizard's tail or an insect's foot, may be of a somewhat simpler pattern compared with the original—may indeed be of definitely ancestral type.

The wide-spread distribution of the regenerative capacity among organisms is to be thought of in connexion (a) with the continual occurrence of recuperative processes that tend towards making good the wear and tear of bodily structure, for regeneration is thus in a more thoroughgoing fashion; (b) with the frequent occurrence of asexual modes of multiplication, for it is impossible to draw a firm line between the development of a piece thrown off in the spasms of capture and the development of a piece separated off by more spontaneous autotomy. Many a starfish habitually surrenders an arm when that is seized by an enemy; as the creature has not a single nerve-ganglion in its body, there can be no question of calling its self-surrender deliberate; yet this reflex autotomy expresses the fact that the creature has organically learned the lesson that it is better that one member should perish than that the whole life should be lost. But there is at least one starfish which separates off arms as a mode of multiplication, as others do to effect escape.

6. Rejuvenescence.—It has been already mentioned that the process of re-growing a lost part, or of restoring a whole from a fragment, is frequently preceded by de-differentiation—a retreat preparatory to an advance. Thus regeneration is linked back to retrogression. But another fact of great significance has rewarded C. M. Child's prolonged study of Planarian worms: the process of reconstitution of a fragment separated off either naturally or artificially, or of a form greatly reduced by starvation, is preceded by a period of rejuvenescence. By rejuvenescence is here meant that the fragment or starveling shows a higher rate of metabolism than when it was part of the intact organism or was untampered with by starving. The rate of metabolism is gauged by the output of carbon-dioxide (measured by Tashiro's 'biometer') and by the change in susceptibility or resistance to certain poisons, such as cyanides. Similar exhibitions of rejuvenescence are discovered in the asexual multiplication of hydroids and some other relatively simple animals, and it seems very probable that senescence and natural death may be in this way indefinitely staved off. On Child's view the process of differentiation necessarily involves a retardation of the rate of life and a diminution of vigour, because of the establishment of complexities of structure in the colloidal substratum which forms the framework of the chemico-physical basis of life. This complexity of stable framework adds greatly to efficiency, but it also increases mortality. The very simple organism has practically perfect processes of rejuvenescence; in forms like the freshwater polyp rejuvenescence is never far behind senescence; in more complex forms there have to be special periods for rejuvenescence; in all the higher animals even this possibility is much restricted and senescence is inevitable. It may be that one of the several reasons why sexual reproduction by special germ-cells has replaced asexual reproduction (and has been added to it or kept along with it in cases, like Hydra, where it is far from being the main means of multiplication) is that it affords opportunity for re-organization or rejuvenescence at the very start of the individual life—thus lessening the risk of the organism being 'born old.'

Looking backwards over the various processes

briefly discussed in this article, we see the possibility of pathological variation or modification at every turn. (1) The degree of development depends in some measure on the fullness of appropriate nurture; the absence of certain stimuli in the nurture may inhibit the full expression of the inheritance. In man's case we know that this fortunately works both ways, for changes of nurture may hinder the opening of undesirable as well as promising buds. (2) The rehabilitation of a long latent ancestral character may spell mischief; it may be that some types of criminals are anachronisms of this sort. (3) Rudimentary organs often show a considerable range of variability, and a disturbance of balance may be caused by the undue prominence or activity of a structure which is normally dwindling away. (4) It seems important to recognize that a great part of what is called disease (apart from microbial disease) may be described as metabolic processes which are occurring out of place and out of time. What may be advantageous in one organism or organ or stage of life may be fatal in another. The involution or retrogression which besets the thymus is normal, but, if it besets the thyroid, it is likely to be fatal. The process which separates off the stag's antlers every year would be a serious necrosis of the bone if it occurred elsewhere. With what would in other cases be a pathological product of the kidneys the male stickleback weaves the sea-weed into a nest. The capacity which is normalized in one animal to effect regeneration may lead to a dangerous neoplasm in another.

7. Regression.—'Regression' is a term applied by Galton and Pearson to the tendency exhibited by the offspring of the extraordinary members of a stock to approximate towards the mean of that stock. It probably holds only in regard to blending characters, such as stature, and not in regard to Mendelian characters. It works both ways, levying a succession tax on the highly gifted and on those unusually defective. The mean height of the sons of a thousand fathers of 6 ft. will be 5 ft. 10.3 in., approaching the mean of the general population; the mean height of the sons of a thousand fathers of 5 ft. 6 in. will be 5 ft. 8.3 in., again approaching the mean of the general population of sons. The reason for the fact of filial regression is that the ancestry of any ordinary member of a human community is always a fair sample of the general population. Here again we have an illustration of the past living on in the present, the thread uniting the various subjects treated of in this article.

J. A. THOMSON.

RECEPTIVITY.—'Receptivity' is a technical term used by Kant and those influenced by his philosophy, and employed in one definitely restricted way. Kant always talks about the 'receptivity of impressions,' and uses this expression to describe the sensuous faculty of the human soul. Sense is to him a mere faculty of receiving passively what comes to the mind from a source outside of it; it is thus distinguished from understanding, which is a faculty in virtue of which the mind originates the concepts necessary for the scientific activity of thought.

The notion of sense being a receptive faculty is

ultimately derived from the Aristotelian philosophy. But the Aristotelian theory of the nature of the sensuous faculty differs markedly from the Kantian. According to Aristotle, sense is a faculty, and the sense-organ is an instrument, by which we receive in consciousness those characteristics which, taken together, constitute the form or knowable nature of material objects; but, while receptive, sense is at the same time discriminative, *i.e.*, it is able to distinguish the different sensuous qualities and to combine them (when they are compatible) in a single perception. Hence, according to Aristotle, sense manifests the characters both of receptivity and of spontaneity, features which Kant wished to assign to diverse faculties of the soul.

RECHABITES.—Although the very existence of the Rechabites as a clan or community distinct from, and yet at least to some extent incorporated in, Judah would have been unsuspected save for the narrative of Jer 35, it is evident from the language there used that Rechabite characteristics were well known at the end of the 7th cent. B.C. It was maintained by Jeremiah (²Jer.)—perhaps not altogether justly, inasmuch as the prophet did not make allowance for the Canaanite elements in Israel—that his own nation had shown a fickleness in religion the like of which could be seen in no other people; and, by way of contrast, he showed the loyalty of the Rechabites to ancestral custom. Although the literal meaning of Jer 35⁴ is perhaps not to be pressed, the natural inference from this statement is that the Rechabites were not very numerous, since 'the whole house' (by which phrase we should naturally understand at least the adult male members) were taken by Jeremiah into one of the chambers of the Temple. Thereupon, in response to an invitation to drink wine, the Rechabites are represented as saying:

'We will drink no wine: for Jonadab the son of Rechab our father commanded us, saying, Ye shall drink no wine, neither ye, nor your sons, for ever: neither shall ye build house, nor sow seed, nor plant vineyard, nor have any: but all your days ye shall dwell in tents; that ye may live many days in the land wherein ye sojourn. And we have obeyed the voice of Jonadab the son of Rechab our father in all that he charged us, to drink no wine all our days, we, our wives, our sons, nor our daughters; nor to build houses for us to dwell in: neither have we vineyard, nor field, nor seed: but we have dwelt in tents, and have obeyed, and done according to all that Jonadab our father commanded us.'

The 'Jonadab the son of Rechab' here referred to is evidently the same who is mentioned in 2 K 10¹⁵ as a supporter of Jehu in his attack on Baal-worship. From the fact that he is called by the Rechabites 'our father' it might be inferred that he was either the founder of a sect or gild or the eponymous ancestor of a clan. Such an inference is, however, inadmissible, since Jehonadab himself is described (2 K 10¹⁵) as 'son of Rechab'; it seems better, therefore, to understand the word 'father,' as in Jg 17¹⁰, as used of a religious teacher or law-giver. It is not improbable that it was in the days of Jehu that the primitive Decalogue setting forth the exclusive claims of Jahveh to the ritual worship of Israel was drawn up (see art. ISRAEL), and at the same time Jehonadab may have given to his own clan the rule of life which thenceforth for more than two centuries they held fast.

The term 'Rechabite' has frequently been regarded as equivalent to 'teetotaler,' but it is to be noted that abstinence from wine was but part of the rule which Jehonadab imposed upon his

people, the sum total of which was insistence on the continuance of a nomadic life and on the repudiation of all Canaanite civilization. Jeremiah did not offer the Rechabites bread, which, with the Chaldean army in occupation of the land, was perhaps scarcely to be obtained; but it may certainly be inferred from the Rechabites' refusal to cultivate land and to sow seed that they also abstained from cereal food, living in nomadic fashion on milk. The intense interest of the episode lies in the fact that the Rechabites, having no concern with agriculture, could have had no share in the great agricultural feasts—the only feasts made obligatory in the older documents of the Pentateuch (Ex 23^{14f}, 34^{18, 22}; cf. Dt 16¹⁻¹⁷)—and consequently no share in the sacrifices offered on the occasion of these feasts (Ex 23¹⁸ 34²⁶). In 2 K 10²³, indeed, Jehonadab is represented as accompanying Jehu when the latter went in to the temple of Baal 'to offer sacrifices and burnt offerings'; but, since these sacrifices were offered to Baal, whose worship Jehu was bent on destroying, no argument can be drawn from the incident as to Jehonadab's view of sacrifice, even if he really was associated with Jehu on this occasion.

The great prophets of the 8th and 7th centuries B.C. (see Am 5²¹⁻²², Hos 6⁸, Is 1¹¹⁻¹⁴, Mic 6⁸⁻⁹, Jer 7²¹⁻²²; cf. Dt 5²³) all use language which can scarcely be interpreted otherwise than as meaning that, according to the tradition to which the prophets confidently appeal, sacrifice was unknown in ancient Israelite religion; and, although it may be urged that those few passages can have little weight against the vast mass of testimony both of the Pentateuch and of the historical books, the wonder is, when we consider the dominance of Zadokite religion and its influence on the Hebrew Scriptures, not that we possess so few passages in denunciation of sacrifice, but rather that we possess any at all.

It is significant that the first prophet whose denunciation of sacrifice has come down to us is Amos, the sheep-breeder of Tekoa, *i.e.* a man whose manner of life, though he lived in a permanent dwelling, may be supposed in many respects to have approximated to the nomadic rather than to the agricultural life. Whether Amos, like the Rechabites, rejected wine is uncertain. He denounces the drinking of wine in the case of the Nazirites (2¹³), and he certainly disapproved of the probably excessive wine-drinking at Bethel (4¹); but the more natural interpretation of such passages as 2¹⁸ 4⁷ 5¹¹ is that he did not object to agriculture in itself; and the same is probably true of Hosea and the other pre-Exilic prophets.

But, although the Rechabites kept their nomadic customs down to the last days of the kingdom of Judah, yet even they, or at all events some of them, were finally compelled, at least to some extent, to abandon their ancestral rule; for in the days of Nehemiah (3¹⁴) a Rechabite, Malchijah by name, repaired a portion of the wall—a fact which implies that some members of the clan had adopted a fixed habitation. Doubtless in Israel proper the change from nomadic to agricultural life was accomplished only gradually, and was more rapid in some clans than in others. Probably, as the prejudice against Canaanite civilization was gradually broken down, certain elements more definitely associated with Canaanite religion would still be resisted for a considerable time. Thus Hosea, though he says that Jahweh has given the corn and the wine and the oil (2⁸), regards raisin cakes (3¹) as an element of heathenism.

One thing, however, is certain: what was possible for the Rechabites was possible for other tribes also. The unity of the nation which later

Hebrew writers ascribe to the period of the monarchy is not attested by the older documents. The genuine Israelites—*i.e.* the immigrant clans who subjected the Canaanites—brought in with them a monotheistic religion immeasurably superior to the nature-worship of Canaan and possessing neither sacrifice nor other barbarous rites. It is their voice that speaks in the noblest passages of prophecy and of the Psalter, and they are the true precursors of Jesus Christ.

LITERATURE.—See W. H. Bennett, art. 'Rechabites' in *HDB* and bibliography there given. R. H. KENNETT.

RECOGNITION.—1. Recognition is the psychological process by which an object presented in perception or imagination gives the impression of having already formed part of our experience. The term 'object' is here used to include anything from a sensory quality, colour, taste, odour, etc., to the contents of a novel or a philosophical system; the most frequent cases are, however, objects of perception, as persons, animals, buildings, scenes, melodies, etc. The impression of 'already experienced' may have any degree of circumstantiality; thus a face, a gesture, a foreign word, may appear vaguely familiar without any definite thought of the previous occasion or occasions on which it affected us, while an odour or a scene may call up with extreme vividness the exact date and all the important details of the earlier experience.

2. Recognition has really two distinct stages, the second of which frequently remains unrealized. There is first the 'sense of familiarity,' an immediate awareness that the presented object is not new to us; this sense may not be formulated in words, or in any cognitive terms, but may remain a mere feeling; practically it shows itself in our adaptation or adjustment to the object; during mental abstraction a key, *e.g.*, is grasped in a different way from a knife or a pair of scissors. Common words, everyday objects, frequently repeated sense-qualities, etc., rarely pass beyond this stage of immediate, direct, or indefinite recognition. The second stage is that in which associated ideas arise in the mind, the name of a person seen, the place where a former meeting took place, the topic of conversation, etc.; such memories circumstantiate the process of recognition, and verify it if doubtful. This is mediate or definite recognition—recognition in the strict sense of renewed cognition. It is obvious that, as a form of knowing, recognition may be true or false, correct or incorrect. An 'already experienced' may fail to be recognized, may not excite the sense of familiarity, or call up the associated ideas; a scene revisited after a term of years may impress us as quite unfamiliar; a professor of philosophy is said to have read an article in an encyclopædia with much approval, and to have been greatly surprised to find his own name at the end. Again, a 'new' object may give the sense of familiarity that belongs to one that is 'old' or already experienced; an event that is being enacted before our eyes appears as if it were the repetition of something we have already known, and we seem to anticipate the details that are to follow. A modified form of this error is when an imagined event, a tale read, an adventure described, or a dream is falsely recognized as a real event that has happened to oneself—the so-called 'pathological lying.' Experiments show also that the degree of subjective certainty or confidence has very little relation to the objective accuracy of the recognition; a correct judgment may be hesitant and uncertain, while a false recognition may have absolute confidence behind it.

3. The psychological problem which arises is

that of the analysis of the process of recognition, as it actually occurs, the conditions on which it depends, and the differences between its forms. The classical theories of recognition are those which emerged in the controversy between Höffding and Lehmann (see Literature below). According to Höffding, the typical form of recognition is the immediate; it represents the first stage beyond pure sensation towards ideation, a half-way or transition process, in which memory is involved, a 'tied' or 'implicate idea,' as opposed to the 'free idea' of the memory-image. When a stimulus which has already given rise to a sensation (of colour, sound, or the like) is repeated after an interval, the new sensation will be different from the old, because of the latter's previous occurrence. Further, Höffding holds that this modification takes place through the re-excitation of the earlier sensation and the fusion of this element with the new or direct presentation. The revival may not be a separate or conscious one, the fusion being between processes rather than products. If A represents the direct sensation, and a its image or indirect revival, then recognition is really a complex of $A + a_1 + a_2 + \text{etc.}$ Höffding prefers the formula $\left(\frac{A}{a}\right)$, where a represents the one or more past experiences called up by the direct process A and combining or fusing, subconsciously, with it. The theory was connected, inconsistently, it may be said, with the physiological assumption that, when a sensation is repeated or revived in memory, a similar modification takes place in the same part of the brain as the original process; each time it occurs, some trace is left, by which the change becomes easier with each successive repetition. Bain¹ had already ascribed to this supposed fact the effect of repetition in making any single impression *adherent*, i.e. more firmly impressed on the mind, more easily retained and recalled. The nerve tracks become more practicable the oftener they are traversed. 'A process,' as James says, 'fills its old bed in a different way from that in which it makes a new bed.'² Psychologically Bain infers only 'that a present occurrence of any object to the view recalls the total impression made by all the previous occurrences, and adds its own effect to that total.' Thus there is a constant reinstatement of past impressions, and a corresponding deepening of the present impression, as an experience is repeated. But for Höffding a sensation or perception acquires through this repetition a distinguishing mark—the mark or character of knownness, or familiarity, by which it is clearly distinguished from entirely new sensations, or new perceptions.

4. Lehmann's theory takes mediate recognition as the typical form, and association by contiguity as the process chiefly involved in it. When an object is first perceived, we associate with it some of its accompanying events or circumstances—with a person, e.g., the name, the actions, or the words; with a sense-quality, its name also, or its effect upon us, some determining mark, some 'head of classification.'³ On a second occasion, the object tends to call up, by contiguity association, in memory the associated name or mark; this, according to Lehmann, is recognition. When the ideas are distinct (date, scene, etc.), we have definite or circumstantial or explicit recognition; but, after frequent repetitions, an object may cease to call up definite associates; these remain below the threshold of consciousness, but are none the less active, and we have implicit or immediate or direct recognition, which is thus a reduced form of the first type. James states it clearly when,

referring to the recovery of a name which we have sought for some time, he says:

'It tingles, it trembles on the verge, but does not come. Just such a tingling and trembling of unrecovered associates is the penumbra of recognition that may surround any experience and make it seem familiar, though we know not why.'¹

5. Recent experimental work suggests that the process of recognition is much more complex and varied than either of the above theories implies, and that we learn to know a repeated object by different signs or marks, just as we learn to know a distant or a near, a beautiful or an ugly, object. The characters which we learn to use as signs of repetition, or of the 'already experienced,' vary for different materials, for different individuals, and for the same individual at different times and for different purposes. They are, e.g., (1) the facility or ease with which we perceive or notice or grasp the object, its clearness and definiteness; (2) the feeling of agreeableness or pleasure, which often accompanies this facility; (3) verbal or other determining marks attached to the object on its earlier occurrence, and recalled by 'association'; (4) expectation or anticipation of changes or effects of the object, which are in fact realized, etc. (5) But the principal mark arises from the fact that our organic and intellectual reaction to a repeated object is different in a very characteristic way from that to a totally or partially new one. In the latter case, if we are interested, we make an effort to appreciate the object, 'run the eyes over' the outstanding points, imitate a movement with our head or limbs, try to follow a sound with our inward voice; by this means we appropriate it, link it on to our self 'complex.' When it is repeated, the whole reaction, through the law of habit, runs off with little or no effort, and the attitude of appropriation is instinctively taken up. Where for any reason the self-feeling is absent or weak, or where reactions do not easily take place, as in illness or senility or in any temporary lack of attention, recognition fails; in extreme mental feebleness or degeneration the simplest everyday impressions may appear entirely new and strange, however often repeated. Conversely, in intense pathological self-absorption, the strangest and newest objects may give the illusion of 'the *déjà vu*.' In the former case recent events may be revived as memories, yet fail of recognition; recognition and reproduction are, in fact, distinct processes. Recognition, says Claparède, implies a previous act of synthesis, an attachment to the personality. When the impression or image is repeated, it is coloured by the self-quality, as it were, which it received from being taken up or assimilated into our consciousness.² There is accordingly a primary and immediate certainty, given by the immediate feeling or attitude of the self to the impression; this is either weakened or strengthened by the memories and associations that subsequently arise, which, if adequate, make the recognition into a definite or circumstantial one. False recognitions mostly depend on the instinctive confidence in the primary feeling, which may be misled by some partial similarity between the new and some old impression.

The very interesting experimental work on the subject of recognition is summarized in Katzaroff and other papers; see references in Literature below.

RECONCILIATION.—See FORGIVENESS (NT and Christian), SALVATION (Christian).

RECORDING ANGEL.—In all the early literatures of the world the angel is called upon to perform a motley variety of tasks. The universe was recognized to be the scene of a ceaseless divine activity. But it puzzled men to know how God, who was pure spirit and infinite, could come into actual contact with matter, which was impure, imperfect, and finite. Hence arose the notion of the angel, a kind of offshoot of the divine, a being semi-human and semi-divine, standing on a lower rung of divinity than the Deity, mingling freely with earthly creations and exercising over them an influence bearing the strongest resemblance to that which came directly from the Deity. The angel, in other words, bridged the yawning gulf between the world and God. It follows from this that, as the innumerable experiences of man during life and after death were subject to angelic influences, the latter had, in the imagination of early peoples, to be pigeon-holed into separate and independent departments of activity. Each angel had its own specialized task to see to, and each religion particularized those tasks in its own way. The idea of a recording angel charged with a peculiar task of its own and bearing a distinct name or series of names figures in Judaism, Christianity, and Muhammadanism. The function which it performs is, in the main, identical in all the three religious systems, but the details vary considerably.

In Judaism the work of the recording angel is that of keeping an account of the deeds of individuals and nations, in order to present the record at some future time before man's heavenly Maker. The presentation of this record may take place during the lifetime of the individual or nation, or, as is more often the case, after death; and upon this record depends either the bliss or the pain which is to be apportioned in the after life. In the OT there are three passages which form a basis for these ideas. In Mal 3¹⁵ it is said: 'Then they that feared the Lord spake one with another: and the Lord hearkened, and heard, and a book of remembrance was written before him, for them that feared the Lord, and that thought upon his name.' Jahweh hears what His righteous servants say and resolves to reward them at some future time for their steadfastness. The figure of speech is derived from the custom of Persian monarchs, who had the names of public benefactors inscribed in a book, in order that in due time they might be suitably rewarded.¹ In Ezk 9⁴ the man 'clothed in linen which had the writer's inkhorn by his side,' is bidden to 'go through the midst of the city, through the midst of Jerusalem, and set a mark upon the foreheads of the men that sigh and that cry for all the abominations that be done in the midst thereof.' This man 'clothed in linen' is one of the six angels sent to exact speedy punish-

ment upon the defiant city of Jerusalem. But the punishment must be discriminating. While the unrepenting are to be slain without mercy, the angel was to 'set a mark' on those who expressed sincere grief for their back-lidings and who dissociated themselves from the sinners. This mark was, presumably, to serve as a reference on the day when retribution would be meted out. The third passage is Dn 12¹: 'And at that time shall Michael stand up, . . . and there shall be a time of trouble . . . and at that time thy people shall be delivered, every one that shall be found written in the book.' When this is read in connexion with the succeeding verses, the underlying idea seems clearly that of some future divine judgment when the righteous classes and the wicked classes will each reap their deserts, and the record of 'who's who' will be found written in 'the book,' the angel Michael acting as recorder.

As R. H. Charles puts it, 'the book was "the book of life" . . . a register of the actual citizens of the theocratic community on earth . . . This book has thus become a register of the citizens of the coming kingdom of God, whether living or departed' ('Daniel,' in *Century Bible*, Edinburgh, n.d. [1913], p. 139).

A rabbi of the Mishnaic epoch, Akiba ben Joseph (A.D. c. 50-c. 132), summarized and elaborated all these OT conceptions of the account between man and his Maker (without, however, introducing the idea of the recording angel) in a remarkably striking parable, thus:

'Everything is given on pledge and a net is spread for all the living. The shop is open and the dealer gives credit; and the ledger lies open; and the hand writes; and whosoever wishes to borrow may come and borrow; but the collectors regularly make their daily round and exact payment from man whether he be content or not, and they have that whereon they can rely in their demand; and the judgment is a judgment of truth, and everything is prepared for the feast' (Mishnâh, *Abôth*, iii. 16).

The 'feast' refers to the leviathan, on the flesh of which, according to a frequent idea of the Talmud and Midrash, the righteous Israelites will regale themselves in the beyond.

The rich angelologies of the Jews and Christians (as well as of the Muhammadans, who borrowed largely from the OT and the rabbinic writings) built further on these OT references to a recording angel, and transferred the work of recording to some one or other angel bearing a special name, the Deity becoming merely the recipient of the record. In rabbinic theology and in the mysticism of the *Zôhâr* and mediæval Kabbālâh generally, the recording angel is kept particularly busy in one great department of activity—viz. prayer. Metatron (Gr. *μητράτωρ*, Lat. *metator*, 'guide') usually plays this rôle. According to a statement in Midrash *Tanhûmâ Genesis*,¹ as well as in the Slavonic *Book of Enoch*,² it is the angel Michael, originally the guardian-angel of Israel, who was transformed into Metatron, the angel 'whose name is like that of his Divine Master'³—a piece of doctrine which may possibly have influenced the Christian doctrine of the Logos. So impressive was the work of Metatron that a rabbi of the early 2nd cent. A.D., Elisha b. Abuyah, confessed to seeing this angel in the heavens and thus being led to believe that the cosmos was ruled by 'two powers.'⁴ Of course such belief was heresy. According to a Talmudic statement, Metatron bears the Tetragrammaton in himself. This was derived from Ex 23⁴, where it is said of the angel who would in the future be sent to prepare the way for the Israelites: 'Beware of him . . . for my name is in him.'

According to a passage in the *Zôhâr* (Midrash *Ha-Ne'el-am* on section *Hagîg-Sauah*), Metatron 'is appointed to take charge of the soul every day and to provide it with the necessary light

¹ Cf. Herod. iii. 140, v. 11, viii. 85.

¹ Ed. S. Buber, Wilna, 1885, p. 17.

² Xaiv. 6.

³ TR *Sanh.* 88b.

⁴ TB *Hagîgâh*, 15a.

from the Divine, according as he is commanded. It is he who is detailed to take the record in the graveyards from Dumah, the angel of death, and to show it to the Master. It is he who is destined to put the leaves into the bones that lie beneath the earth, to repair the bodies and bring them to a state of perfection in the absence of the soul which will be sent by God to its appointed place [i.e. the Holy Land where they will again be put into bodies, which have come thither through a process of terrestrial transmigration—a favourite idea of some rabbinic theologians].¹

The *Book of Jubilees*¹ speaks of Enoch as 'the heavenly scribe.' A similar description is applied to Metatron in T.B. *Ḥagigah*, 15a, where he is designated as 'he to whom authority is given to sit down and write the merits of Israel.'² In the Jerusalem Targum to Gn 5²⁴ 'And Enoch walked with God: and he was not; for God took him,' the rendering is 'And he called his name [i.e. Enoch's] Metatron, the great scribe.' In Targum *Jonathan* to Ex 24¹ 'And he said unto Moses, Come up unto the Lord,' the paraphrase runs 'And unto Moses, Michael the archangel of wisdom said, on the seventh day of the month, Come up unto the Lord'; while in *Ascensio Isaie*, ix. 21, it is Michael who is honoured with the name of heavenly scribe. From these various references one readily infers that Metatron, Enoch, and Michael were names given to angels who were pre-eminent in the realms of wisdom or scholarship, and who would, as such, be best qualified to act as 'scribes' or 'recorders' of men's deeds.

Passages in the Qur'ān bear out this view of a special 'scholarly' angel who writes down the record of men. In *sūrah* ii. the rôle is given to Gabriel, who was so great an adept in the work that the act of writing down the Qur'ān for Muhammad's benefit was actually ascribed to him. Man's work on earth and God's work in heaven were brought into touch with one another by the scholarly recording activities of Gabriel. In *sūrah* i. another view is propounded.

'When the two angels deputed to take account of a man's behaviour take account thereof; one sitting on the right hand, the other on the left: he uttereth not a word, but there is with him a watcher ready to note it.'

Two 'recording' angels seem to be in evidence here. The meaning seems to be that, although the dying man may refuse to speak, or be unable to do so, yet the two 'recording' angels can read his inmost thoughts and take complete account of them. Sale puts quite another construction on the text, which, however, seems very far-fetched and improbable.

Quoting from the native commentary of Al-Baidawi, Sale further tells of a Muhammadan tradition to the effect that 'the angel who notes a man's good actions has the command over him who notes his evil actions; and that when a man does a good action, the angel of the right hand writes it down ten times; and when he commits an ill action the same angel says to the angel of the left hand, Forbear setting it down for seven hours; peradventure he may pray, or may ask pardon' (note on *sūrah* i. in Sale's *Koran*, new ed., London, 1826, ii. 360).

The idea of the 'good' always preponderating over the 'evil' is taught abundantly in the rabbinic writings, as is also the idea of a respite ever being open to the condemned even at the eleventh hour, at the bar whether of human or of divine justice (see T.B. *Ta'anith*, 11a, where it is said that 'two ministering angels who accompany man, they give witness for him'). In the same passage in T.B. *Ta'anith* it is further said:

'When man goes to his everlasting home, all his works on earth are passed in review before him, and it is said to him, On such and such a day thou didst do such and such a deed! The man replies, Yes. Then it is said to him, Seal it [i.e. your evidence]. He seals it and thus admits the justice of the Divine decree.'

Here man after death becomes his own recording angel—obviously a higher and more philosophical view.

¹ iv. 23; also *II Enoch*, iii. 2.

² In the *Zohar* the two names are frequently put together thus, Metatron-Enoch.

Further references in rabbinical and apocalyptic literature are as follows:

In T.B. *Megillah*, 15b, the phrase in Est 6¹ about the sleepiness of the king is applied to God 'the king of the world,' who bids that 'the book of records of the Chronicles' be brought to Him. It is then found that Shimshai the scribe (see Ezr 4⁸) has erased the passage recording Mordecai's rescue of Ahasuerus, but Gabriel rewrites it 'for the merit of Israel.' Thus Gabriel becomes here a kind of national registrar. The *Testament of Abraham*, the *Book of Jubilees*, *Enoch*, the *Syriac Apocalypse of Baruch*, and 2 Esdras all speak of the day of the great judgment, when angels and men alike will be called before the bar of justice and the book in which the deeds of men are recorded will be opened. According to the *Testament of Abraham* (A. xii.), this book in which the merits and demerits are written is ten cubits in breadth and six in thickness (cf. Ezk 2^{9c}, Zec 5^{1c}). Each man will be surrounded by two angels, one writing down his merits and the other his demerits, while an archangel weighs the two kinds against each other in a balance. Those whose merits and demerits are equal remain in a middle state (corresponding to the purgatory of the Church) and the intercession of meritorious men, such as Abraham, saves them and brings them into paradise. The permanent recorder is Enoch, 'the teacher of heaven and earth, the scribe of righteousness,' and the other two angels are assistant recorders. This is probably the origin of the Qur'ān statement alluded to above.

The Pharisaic school of thought, as reflected in the Mishnāh, Talmud, and the Jewish liturgy generally, transferred a great deal of the eschatological connotations of the recording angel to man's temporal life on earth. Whilst admitting that man will be judged and his record taken in a hereafter, the rabbis taught that on the Jewish New Year's Day (Rōsh Ha-Shānāh, the first day of Tishri) the Books of Life and Death lie open before God, who as the Recorder *par excellence* looks through the records which He has put down against the name of each individual throughout the course of the year and then seals each one's destiny for the coming year. The mediæval Kabbālāh has amplified this doctrine with the addition of large angelological hierarchies into which man's soul enters on New Year's Day to hear its own favourable or unfavourable record from the mouth of hosts of recording angels. But the main trend of Jewish belief is in the direction of that simple but higher faith which holds that there is but one recording angel for or against man—God.

REDEMPTION.—In this article the question of the redemption of the first-born is discussed; the theological aspects of redemption are considered under SALVATION.

I. Introductory.—In the Pentateuch there are several references to the sacrifice of firstlings, and to the redemption of first-born sons and firstlings of unclean domestic animals. In E, 'The Book of the Covenant' (Ex 22^{29c}), first-born sons are to be given unto the Lord, also firstlings of oxen and sheep. According to J, every firstling male is to be set apart to the Lord and sacrificed. But the firstling of an ass is to be redeemed with a lamb, or, if it is not redeemed, its neck is to be broken. First-born sons are also to be redeemed, but the valuation is not fixed. This custom is connected with the deliverance from Egypt and the slaying of the first-born of man and beast there (Ex 13^{12c}; cf. 34^{19c}). In P all first-born of man and beast are to be sanctified to the Lord (Ex 13^{12c}). The firstling of an unclean beast is to be ransomed

'according to thine estimation' *plus* one-fifth more, or 'sold according to thy estimation' (Lv 27²⁶¹). Elsewhere in P the hallowing of the first-born of man and beast is associated, as in J, with the smiting of the Egyptian first-born, but the Levites are said to have been taken instead of the first-born of the Israelites or of those more than a month old, and their cattle instead of the other Israelites' firstlings. Twenty thousand Levites take the place of as many first-born Israelites numbered at the time, and the overplus of 273 first-born are redeemed by a money-payment of five shekels each to Aaron and his sons (Nu 3¹¹, 40¹²). In another passage from P the first-born of man and beast are made over to Aaron and his sons, but those of men, from a month old, are redeemed for five shekels. Firstlings of oxen, sheep, and goats are not redeemed; their blood is sprinkled on the altar, the fat burned, and the flesh eaten by the priests. The firstlings of unclean beasts are to be redeemed (Nu 18¹⁶). Lastly in Dt 15¹⁹ firstling males of flock and herd are sanctified to the Lord, and are to be eaten by the owner and his household in the place which the Lord shall choose. Such as are blemished may be eaten at home (cf. 12¹⁵, 17¹, 14²³).

The main differences in detail in these passages may be noticed first. (1) Eating the flesh of firstlings: in Dt. this is done by owner and household, in P by Aaron and his sons. These differing laws seem to 'reflect the usage of two different periods of the history.'¹ (2) The redemption of the first-born: in E nothing is said of the redemption of the first-born of men; in J their redemption value is left vague; in P it is fixed at five shekels; but again in P the origin of the Levites as a sacred class is referred back to a redemption of the existing first-born of men, the overplus being redeemed at five shekels. Here there is obviously a myth originating at a period when the redemption value of the first-born had become fixed. As to the cattle of the Levites being regarded as sacred instead of the firstlings of the other Israelites' cattle, which, according to Nu 18¹⁷, could not be redeemed, this may show that the myth belongs to a time when the legislation regarding firstlings had fallen into abeyance. (3) In E the 'giving' of the first-born of men to God is not connected, as in J and P, with the slaying of the first-born in Egypt. (4) Firstlings of unclean beasts: in J the firstling of an ass is to be redeemed; in P firstlings of unclean beasts, as if now other 'unclean' animals than the ass had been domesticated. In J and P the methods of valuation also differ.

We are thus confronted with legislation which varied from age to age, and which perhaps was no more than ideal at any given time. It also tended to be explained mythically, or fictitious reasons for the sanctity of the first-born were apt to be given.

2. Redemption of the firstling of the ass.—As the firstlings of domestic animals, like the first-fruits of the earth, were sacrificed or made over to God (see artt. *FIRSTFRUITS*, *FIRST-BORN*), those of the ass, a domestic animal, were His also. But asses and probably some other domestic animals were 'unclean,' i.e. unfit for sacrifice or for eating. Hence in their case arose the idea of redemption, the word used in Ex 13¹³, *pādāh*, being that which always was used with reference to redemption from death or slavery (cf. 1 S 14⁴⁵, Ps 49^{7, 15}). Another sacrificial animal was offered in its stead, or, if not so redeemed, it was killed, but not sacrificially; its neck was broken without shedding of blood, so that it could be of no further use to its owner. Later legislation permitted it to be redeemed at *plus* one-fifth of its value, or simply to be sold for the benefit of the sanctuary. In the

earlier legislation the breaking of the neck of the unredeemed animal shows that the firstling was regarded as itself sacrosanct, or tabu, whether it was sacrificed or not.

3. Redemption of the first-born child.—There is little doubt that some special sanctity attached to the first-born. He was the first gift of God after marriage. In a sense he was God's property. Or the blood of the kin flowed 'purest and strongest in him.'¹ Was he therefore sacrificed? That the Semites sacrificed children, and frequently the first-born, is certain, though whether all the first-born were once regularly sacrificed has not been confirmed.

The jar-buried infants found at sacred sites in Palestine cannot be proved to be first-born children. It has also been questioned whether they were sacrificial victims.²

The question of the redemption of the first-born by some rite or equivalent sacrifice or money-payment, which appears strictly as a Hebrew custom, is one which arose either (1) because of the inherent sanctity of the first-born or (2) because he ought to be sacrificed. Now the *regular* sacrifice of the first-born among the Hebrews in historic times is open to question. The references in the OT to sacrifices of children are frequently general (2 K 16¹ 21¹⁰ 23¹⁰; cf. Lv 18²¹, 'any of thy seed'). A son or daughter (not males exclusively, and not always the first-born) was sacrificed. Nor was this sacrifice, when called for, always performed in infancy. The king of Moab sacrificed his eldest son, who was thus not an infant (2 K 3²³), and so in the case of Isaac and of Jephthah's daughter. Thus even outside Israel the custom occurs not in infancy—a point not sufficiently noticed by writers on this subject—and only on occasion of some great calamity. That the Hebrews had such an occasional practice, or borrowed it, is not unlikely, and no more than this need be signified in Mi 6⁷, where 'thousands of rams' and 'ten thousands of rivers of oil' show that Micah is speaking hyperbolically. In Ezk 20²⁶ 'all that openeth the womb' is spoken of as sacrificed to Molech in Israel, as if the custom had become general. But, if general, it need only have been so upon certain necessary occasions, when, if human sacrifice was to occur, the first-born was chosen. As far as Israel was concerned, the practice in historic times was borrowed, whether in earlier times it had been more general or not. This is shown by the words of the prophets, who may be presumed to have known the facts.

Jeremiah and Ezekiel make this clear, but their words seem to show that the people, seeing these costly sacrifices among the Phœnicians, deemed that they were due also to God in time of disaster. The practice of redeeming the first-born was regarded as merely permissive. Occasion might arise when this permission must be disregarded. Jeremiah says that God never commanded such sacrifices (7³¹ 19⁵), and Ezekiel (20²⁶) regards the current interpretation of Ex 13¹² as a mistake—a pollution.

Further, special privileges attached to the first-born, showing that he was not sacrificed (Gn 25²³, Dt 21¹⁶; cf. 1 Ch 5¹ [disgracing the birth-right]); and the method in which Israel is spoken of as God's first-born (Ex 4²²; cf. Jer 31⁹ [Ephraim], Ps 89²⁷ [Messiah as God's first-born]) shows that the first-born was specially favoured, not sacrificed. The words of Micah (6⁷) and Ezekiel (20²⁶) belong to the period when the Israelites borrowed the custom from their neighbours. So, too, probably does the story of Isaac's sacrifice, in which the victim is commuted or redeemed by a ram—a far less spiritual thought than Micah's.

Why then was the first-born redeemed? (1) If the custom of sacrificing the first-born had once been general in early times, as perhaps the state-

¹ W. R. Smith, *Religion of the Semites*, London, 1894, p. 465; cf. Gn 49³, Dt 21¹⁷.

¹ S. R. Driver, *The Book of Exodus*, Cambridge, 1911, p. 105.

ment of the law in Ex 22²⁰ and the similarity of expressions in the case of the first-born and firstlings (Ex 22^{20f}, 34¹⁹) suggest, the redemption must be a softening of the practice in an age which had morally outgrown it and demanded a more humane custom. Yet that age must have been previous to that of Moses, since he, a first-born son,¹ was not sacrificed. The idea that the first-born was due to God still remained; hence he had to be redeemed, and, even when redeemed, he might still be sacrificed when sufficient occasion arose. This appears to underlie the story of Isaac, which may be a later tale explaining the origin of the redemption. Otherwise it was explained by the fact that, since God had slain the first-born of Egypt, therefore the first-born of Israel must be redeemed—a theological explanation in an age when the true rationale of the practice was forgotten.

J. G. Frazer assumes that not the first-born of Egypt were slain, but those of Israel in some sacrificial ritual by priestly executioners at Passover. This was afterwards commuted by the sacrifice of a lamb, its blood being smeared on the doorposts instead of that of the child. That a strong tradition of some tragic event occurring to the Israelites should thus be transformed is most unlikely. That event was some species of plague, not slaughter, and it is most unlikely that a joyous feast should originate in such general sacrifice of Israelite children.²

In the curious story in Ex 4^{24f}, if Zipporah's child was to be given as an offering in place of Moses, the circumcising of him would be a species of redemption. The story would thus be another method of accounting for the redemption of the first-born.³

(2) If, on the other hand, the practice of occasionally sacrificing first-born children arose through Israel's contact with peoples who regularly or occasionally followed this practice, it would be felt that the first-born was due to God, and, when not sacrificed, must be redeemed. The technical term for the Molech sacrifice was 'cause to pass over to Molech.' The same term is used in Ex 13¹², 'cause to pass over to Jahweh,' even when the redemption is insisted on.

(3) Again, apart altogether from sacrifice, if a special sacredness, 'a congenital holiness,'⁴ attached to the first-born, which resulted in his being regarded as God's property or as tabu, some act of removal of holiness or of tabu was necessary—the rite of redemption—before he could be considered as an ordinary mortal. The 'redemption' was a redemption from sanctity.

(4) Others, again, have supposed that in the redemption 'we are to see not a toning down of an ancient custom which had demanded human sacrifice, but only an expedient for extending the precept relating to firstlings so as to include men and non-sacrificial animals.'⁵ This is akin to W. R. Smith's view that, when the belief in the 'congenital holiness' of the first-born of men and animals came to mean that such holy things were set aside for sacrifice, the obvious unsuitability of human or unclean animal offerings led to their being redeemed.⁶ Wellhausen also regards the claim to the human first-born as merely 'a later generalization.'⁷

To sum up: the language regarding the first-born suggests an earlier custom of sacrifice; but the probability is that the legislation is late, and that the language is coloured either by that used of firstlings or by that used regarding actual sacrifices of the first-born among the Canaanites. Wellhausen and W. R. Smith reject the idea of the early general sacrifice of the Hebrew first-born. J. G. Frazer accepts it, but his evidence of similar

sacrifices of the first-born among other peoples needs sifting. Several instances refer not to sacrifice but to infanticide. Not all are supported by clear evidence, nor do all refer exclusively to the first-born.¹

4. Parallel ethnic practices. — The Hebrew custom finds an echo in folk-tales in which childless parents agree to give up their first-born to some one who offers to remove the wife's barrenness. These tales arose in some custom of dedication of first-born to a deity. In some such stories a gift or a substitute is offered instead—a suggestion of redemption.² It is also remarkable that Syriac women will vow an unborn child to a Muhammadan saint at his shrine, yet 'in that case the child is not slain, as may once have been the case, but is redeemed' by an offering.³ In Muhammadan custom the victim—a ram or goat sacrificed soon after the birth of a child—is called a ransom for the child.⁴ Reference may also be made to the May ritual described by Ovid, in which the house-father threw black beans over his shoulder to the ghosts, with the words nine times repeated, 'With these beans I redeem me and mine.'⁵ The custom of redemption, if it was actually redemption from sacrifice as illustrated in the story of Isaac, has parallels in ethnic myth and practice in which an animal takes the place of an earlier human victim, not necessarily a first-born. At the temple of Artemis Triclaria it had formerly been the custom to offer a beautiful youth and maiden, but in the time of Pausanias this sacrifice was commuted. Pausanias also mentions the offering of a goat to Dionysus at Potnia in place of an earlier youth.⁶ At Laodicea the annual stag sacrifice was believed to take the place of a former offering of a maiden.⁷ In Babylonia the rite in which an animal was slain for a sick man—its life for his life, its head, neck, breast for his head, neck, breast—suggests some species of commutation or substitution.⁸ When human sacrifices were prohibited among the Celts of Gaul, the Druids offered a victim symbolically, pretending to strike him, and drawing from him a little blood.⁹ In many quarters other commutations of human sacrifice occur, often with legends attached to them showing that they originated in more humane feelings. Frequently effigies of human beings are offered, as among the Villalis, Gonds, Chinese, Japanese, and Romans; or a coco-nut is offered because of its resemblance to a human head;¹⁰ or, again, an animal victim takes the place of a human, when people cannot afford the latter, as among the Tshis.¹¹

These correspond to commutations of animal sacrifices, or in general to the offering of a less for a more important object. For, as Servius says,

'The simulacrum is accepted in place of the real object; hence when certain animals, difficult to obtain, are demanded in sacrifice, images of them are made of bread or wax, and are received in their stead.'¹²

REDEMPTORISM.—See LIGUORI.

RED INDIANS.—See AMERICA.

REFORMATION.—The great upheaval which we call the Reformation was very much more than a religious rising of Teutonic Europe in the 16th century. We can trace its origin to the beginnings of monasticism and Northern Christianity, and watch the gathering of the storm all down the Middle Ages. The acute religious conflict lasted all through the 17th cent., and is separated by no sharp break from its secular consequence and counterpart, the great Liberal movement which began with the English Commonwealth and the American Revolution, and now seems passing into social reconstruction. The issues of the Reformation have broadened out, but in altered forms they are the living issues of our own day, for they raise the permanent questions of the society and the individual, authority and reason, slavery and freedom, religious, intellectual, political, and social. Nor was the Reformation purely Teutonic in its origin, though it has maintained itself chiefly among Teutonic peoples. Latins and Slavs were as restive as Teutons under the yoke of Rome. Even now Protestantism can claim Slavs on the shores of the Baltic; and in France it has always been strongest in the Latin south. Least of all was it a purely religious movement. It was the issue of a vast complex of forces, intellectual, political, and social as well as religious, acting in different ways and with constantly varying intensity in different countries. In England and Sweden its course was guided by kings, in Germany by princes, in France, Bohemia, and Poland by nobles, in the German cities and Switzerland by burghers. Its first political tendency was in England to despotism, in Germany and France to civil strife, in the United Provinces to freedom. At Geneva it set up a theocratic republic, in Germany and England it gave the Church an Erastian form. Thus its first results were of bewildering diversity. 'The variations of Protestantism' were real, though the Romish argument founded on them is frivolous. A great revolution takes more than one generation to bring ideas and institutions into harmony. Its early leaders have to pick their way through many stumbles. They see its meaning dimly and in part, and often the boldest of them, like Luther after the Peasants' War, shrink from what they had thought they saw. So the Reformers carried over more mediæval ideas than they knew, and their successors have ever since been slowly and often reluctantly throwing them off. The greatness of the Reformation is less in what was actually done—though that was great—than in the still greater work which it made possible. Almost all the fruitful thoughts of Europe for the last four centuries, even in Roman Catholic countries, are direct or indirect results of the Reformation.

Our work is threefold: (1) we have first to trace the causes of the Reformation, giving a short view of earlier attempts at reform, and of the new conditions which made it possible in the 16th cent.; (2) we must then indicate the deeper principles of the Reformation, and say something of their practical tendency; (3) lastly, we must give a comparative view of the different forms which it assumed, and point out some of the causes and consequences of this variety. It is not our purpose to narrate events or to enumerate details which are better left to particular treatises. If our picture of the mediæval Church appears to some too darkly coloured, it must be remembered that a statement of grievances is not the whole

truth, and is not here presented as the whole truth. On the other hand, the grievances were more real, more general, more scandalous, more integrally connected with the doctrine of the Church than its apologists are willing to admit, and often too outrageous and abominable to be more than hinted at in the more decent language of modern times. If the picture is dark, the background is darker still, for much of the worst must be left untold.

1. Causes of the Reformation.—The loose organization of the apostolic churches was shaped by the needs of the next generation into a uniform system of government by bishops, and this again was consolidated by the needs of the Christian Empire into a great confederation of churches which called itself the Holy Catholic Church, and claimed to be the sole dispenser of salvation. It was a grand system; but where was the layman? His royal priesthood was forgotten, and more and more his access to God was only through the ministrations of the Church.

Then came the monks. Their flight was from an evil world which a worldly Church had failed to overcome; but it was almost as much a flight from the Church itself. True, they were neither heretics nor schismatics, but the most zealous of churchmen, whose ascetic zeal put to shame the worldliness of the priests. Many a time the monks rushed in where bishops feared to tread. None the less, the principle of monasticism was ultimately subversive of the Church system. That principle was neither asceticism nor seclusion, for these were confessedly no more than means to an end. It was individualism. The man retired from the world, not only because the world was wicked, but also because the Church in the world could not give him what he wanted. 'Doubt makes the monk' was a German proverb. What he wanted was to save his soul, and to save it in his own way, because he had not found the priest's way satisfactory. Therefore he sought out for himself a monastery of like-minded men, and in its rule he found his freedom. However the priest might magnify his office, there must be a direct access to God without him. Else how could hermits be saints? Yet neither was the monastery essential, whatever help and comfort his fellows might give him (for in the Eternal's presence he must stand alone), nor was the asceticism essential; it was only the belief of the time, and might be abandoned if he ceased to find it the more excellent way. But, though priests and monks were often at variance, they never clearly saw that their conceptions of religion were radically different. The Church made peace by taking the monasteries into the system, and allowing them services of their own which did not require the administration of sacraments. But the two antagonistic principles were held together chiefly by the common belief of churchmen that asceticism is the higher life. If ever that belief came to be discredited, the individualism would not fail to seek expression outside the Church system. It is not accidental that so many of the Reformers, from Luther and Bucer downwards, had once been monks or friars.

Then came the conversion of the Northern peoples. They were docile enough on doctrine, whatever their practice might be, and showed no taste for heresy. They accepted the Church system as it came to them, and even helped a little to develop it, for they took very kindly to lurid stories of hell-fire, and thought it only natural to pay for their sins as they paid for their crimes. No doubt God would accept a *vergold*. Nevertheless, the fact remained that the system was not simply Christian, but Latin and sectarian,

shaped by Latin hands and saturated by Latin thought. The Northern peoples were as yet no more than children in the faith; but, when they grew to man's estate, they were not unlikely to throw off the Latin tutelage and shape their religion into Northern forms, perhaps equally sectarian.

The next great step was the Hildebrandine reformation and the rise of the mediæval papacy. If the pope could bring some order into the anarchy of feudalism and the scandalous confusion of the Church, he was welcome to set St. Peter's chair above the thrones of kings. The opposition of the emperors was not a Teutonic revolt: the Saxons always held with the pope. The imperialist literature of Germany and Italy, joined for a moment by Gerard of York in England, only disputed some of the papal claims, and scarcely touched the doctrine and system of the Church. Its power was finally broken by the fall of the Hohenstaufens, and its echoes died away with the Schoolmen of Ludwig IV. The last imperial coronation at Rome was performed in peace (1452), because Frederick III. was not worth a scuffle in the streets.

But long before that time the Hildebrandine dream of a righteous papacy governing the wicked world had faded into the light of common day. The higher the pope's power rose, the more his kingdom became a worldly kingdom, seeking worldly ends by worldly means. It was indeed a mighty world-power, with its thousands of priests in the parishes and chantries; with its armies of monks, Benedictine, Cluniac, Cistercian, recalling three great religious revivals; with its troops of friars prowling round the land; not to mention the vast numbers of dependents of the Church. Not half the inmates of a monastery were monks. It was a vast and ancient system, resting upon the twin strongholds of transubstantiation, which gave the priest a more than royal dignity, and auricular confession, which laid open to him every secret of private life, and above all upon the ancient horror of heresy. All sins might be forgiven, but the sin of heresy could not be forgiven, because it denied the only power which had authority on earth to forgive sins.

But the Church was full of scandals, moral, financial, and political; and these were the grievances which in the end compelled some to face the risk of heresy by questioning its doctrines. In the first place, the Hildebrandine reformation had failed to cleanse the Church. If celibacy was supposed to lift the priest above the mire of the world, auricular confession plunged him back into it, for the priest's ear became the sink of the parish. And the celibacy itself was full of dangers, on which we must not enlarge, for the grossness of the Middle Ages cannot be told in decent language. Suffice it that in practice the vow of 'chastity' commonly abolished nothing of marriage but God's holy ordinance. Many priests kept it faithfully, though often at the cost of struggles which hardened and demoralized them in other ways; but, unless all the evidence is false, a much larger number had *focariæ*, or did worse, and many of these were compelled by their flocks in their own interests to keep *focariæ*. Other temptations of a lonely priest settled among the rustics are obvious, and gave plenty of scandal to his neighbours.

Yet, after all, more offence was caused by the worldliness of the many than by the flagrant vice of not a few. The wealth of the Church was enormous. In Sweden it held two-thirds of the land, and perhaps one-third or two-fifths in England, where the accumulation had been checked by the Statute of Mortmain (1279). If

the bishops were generally modest in Italy, they were great lords in England, where the primate stood next to the sovereign, and the bishop of Durham ruled the Scottish border almost as a king. Still more magnificent was their state in Germany and Hungary. Men said that the donkeys and the women in the host of Christian of Mainz were more in number than Barbarossa's army. But this vast wealth was very unequally distributed. There were a few favoured pluralists, whose wealth was the envy of the rest and a scandal to the laity. One of these might hold perhaps half-a-score of church preferments and leave their duties undone, or done after a fashion by cheap hirelings, while he spent his time in the service of pope or king, or intriguing at their courts for new and more lucrative appointments. In England the bishoprics were commonly the reward of success in the king's business, from Flambard and Thomas to Morton and Wolsey; and in Germany it was much the same in Franconian and Hohenstaufen times. In the later Middle Ages we see a class of pure aristocrats, such as Courtenay and Arundel, Beaufort and Neville in England; and in Germany this was the prevailing type. The three clerical electors at the time of the Reformation were all nobles—Albert of Brandenburg, Hermann of Wied, Richard of Greiffenklau. The aristocratic character of the German hierarchy was not a novelty of the Reformation.

But large numbers of the priests were needy. Their endowments may have been sufficient, and were in some cases ample. But a great deal was 'appropriated' by the monks. A monastery took the endowments of a parish, and was supposed to provide for the cure of souls, perhaps only by sending a monk to say mass on Sundays. The Lateran Council of 1179 ordered them to provide resident vicars, and earnest churchmen of the next century managed at last to enforce this. The monastery took the great tithes of corn, and left the small tithes to the vicar. Thus many rich livings were reduced by 'appropriations' to poor curacies, while many more were impoverished by pensions granted on them by the popes. And a needy man is apt to be rapacious and ignorant. There could not be much respect for a priest who was forced to wrangle over petty dues, and could hardly say his old *mumpsimus*. He had some excuse for ignorance, but sometimes it was very dense.¹ Nor were his administrations edifying, for they were all in Latin, except parts of the marriage service. The mass was said in a low voice, and the people were not supposed to follow the service but to occupy themselves with their private devotions, and there were primers for such as were able to read. If the canonized emperor Heinrich II. could make a fool of his unlearned chaplain by erasing from the mass-book the first syllables of the prayer '*pro (fa) mulis et (fa) mulabus tuis*,' we may imagine what a rustic parish would do with Sir John Lacklatin or Sir John Mumblematins. We must go to Russia for a modern parallel to the mixture of superstitious dread of the priest's mysterious powers with good-natured contempt for his person.

The monasteries were in a similar state in the later Middle Ages. Some were rich, some very poor, many were burdened with debt, and all were impoverished by papal exactions. An abbot could scarcely get his election settled without spending perhaps two years' revenue on a journey to Rome, with fees and 'presents' to pope and cardinals. Besides this, the monasteries had outlived their

¹ There were priests in the diocese of Gloucester in 1551 who did not know who was the author of the Lord's Prayer, or where it was to be found.

usefulness. They spent little on the poor, and learning had found a more congenial home in the universities. The monks had long ceased to labour, and had become mere landlords. The houses had been half emptied by the Black Death, and had never recovered their numbers; some, indeed, were so decayed that they had to be suppressed for want of inmates. Pious founders had ceased to build new houses, and endowed colleges and chantries. Their moral condition was various. Some were well conducted, others as bad as bad could be, for here again the worst cases are sheltered by their very foulness. But the larger number were worldly rather than depraved, though they had more than occasional scandals. There was always an aristocratic flavour about the monasteries; and now the inmates of the richer houses lived very much as their neighbours did. They hunted and hawked, attended chapel by deputations in rotation, ate flesh, and were notorious lovers of good living. This was very far from the rigour of the monastic rule, and gave much occasion for blaspheming, but at all events it was not flagrant vice. The worst of the matter was not that flagrant vice was by no means rare, but that it was hardly ever seriously punished. The rule of the order was strict enough, but the abbot was often himself the worst offender in the way of evil living, embezzlement, and even murderous assault. The bishop was sometimes an offender likewise, often too busy with State affairs to look after his diocese; and the strongest and most earnest might well hesitate to take in hand a bad case, where he was likely to be met by a claim to exemption backed up with forged charters and entailing years of litigation at Rome, to be finally decided by bribery or by the fixed policy of the Church to smother scandals rather than amend them. At worst, a peccant priest might be removed to another parish, or an outrageous abbot induced to retire on a handsome pension.

The condition of the friars was very similar, but distinctly worse. Their beginnings were splendid, but within a century the tale was different. They evaded their corporate poverty by vesting the property of the order in trustees or the pope; and, when some of the Franciscans insisted that their poverty must be real, Pope John XXII. decided against them that Christ and His apostles had property, so that poverty is not necessary for the highest Christian life. This decision stultified the whole system of mendicancy, so that henceforth, while some of the most earnest seekers after God still became friars, others formed simpler societies of their own, and others again turned to mysticism or heresy. Meanwhile, the ordinary friar was little better than a vulgar mountebank, puffing his pardons and relics as impudently as any other quack of the market-place. Of all the churchmen the friar was the least respected.

Besides vice and worldliness, there was a third great scandal in the divisions of the Church. True, the Latins never sank into Irish anarchy, where a bishop would wander about the country living on his ordination fees, and a whole monastery would turn out, monks, servants, women, and all, for a pitched battle with the next house of holy men. But the quarrels were continual and bitter. Bishops and chapters wrangled and litigated for years together. Seculars and regulars had a standing feud, and the friars were a plague to both. If a parish priest refused absolution to some offender, the next friar was likely to sell it with pleasure. But the most repulsive quarrel of all was round a rich man's deathbed. If masses profited in purgatory, how could he better dispose of his worldly goods than in having masses said for his soul? And they were all eager in the work of

charity. So the quiet of the chamber of death was continually disturbed by an unseemly quarrel of rival orders, each struggling to get the dying man into its own habit as the one sure passport to heaven. The wicked world looked on with wonder and disgust.

The economic evils of the Church system were neither few nor trifling. The Church was a corporation which constantly acquired property and never lost it, except by fraudulent dilapidation and waste, so that in most countries it secured the larger part of the national wealth; and this was in itself an evil of the first magnitude. If the monks were easier landlords than the lay improprators who followed them, their lands were not so well cultivated. Then the number of the clergy was excessive. The parish priests alone may have been half as many as we have now for a much larger population; and to these we must add the chantry priests, the monks, the friars, the nuns, and the minor orders. It is true that they were not all withdrawn from the common work of life. In the 13th cent. they were still the literary men, the founders of schools, the writers of chronicles, and the teachers of agriculture; but now they had little to show but troops of lawyers. The charge that they were nothing but a burden on the land was too sweeping, but a burden they were, and a heavy burden. They did a good deal of trading too, partly in spiritual wares like relics, pardons, and masses for the dead, partly in worldly things in which they were forbidden to trade. Indeed, it was not good that the parish priest should be a money-lender or a tavern-keeper, as the bishops complain that he not uncommonly was. Another great economic evil arose from the teaching that good works are an expiation (in practice often a payment) for sins, for it made charity more indiscriminate than it might otherwise have been. The good work rested to the credit of the giver, and the unworthiness of the receiver was not his business. The type of this kind of charity is a Spanish archbishop of a couple of hundred years ago, who spent a princely revenue in daily doles to an army of beggars at his gate. Mediæval charity was not all of this sort, but a good deal of it was, so that the relief of distress was more or less balanced by a vast encouragement of idleness and imposture, especially when the great age of beggars began in the 15th century. Even more keenly felt than this was the similar working of Church festivals, which had been multiplied beyond all reason, and made a large part of the year useless for trade or agriculture, for no work was allowed on the day itself or after the noon of the day before it. Idleness was compulsory, but not soberness, for no occupation was provided beyond the morning mass. To the abundance of holy days we may partly ascribe the marked taste of the later Middle Ages for shows, pageants, miracle-plays, and the like. But there were worse things than these. Besides encouraging drinking, revelling, quarrelling, and vice of every sort, these festivals, frequent and irregular, were a formidable hindrance to habits of steady work. They not only made serious gaps in the work, but demoralized what remained of it. The grievance was serious in the 13th cent., and was made more urgent by the growth of trade and the exhaustion of the land in the 15th. How far the holy days were observed it is not easy to say; but these were the commands of the Church, and there are complaints enough to show that they were enforced.

Before we come to the political grievances, we must note that the fundamental error of the Latin Church was the twofold error of the Pharisees. It mistook the gospel for a law, and again mistook the office of law. In fact, our Lord lays down

principles, not laws, telling us always the spirit in which we ought to do things, never the things we ought to do, except the two sacraments. He seems to care absolutely nothing for good or bad actions, except as the signs of a good or bad heart. A good deal of manipulation was needed to turn the law of liberty into a law of commands like the Mosaic. Further, it is not the office of law to teach right and wrong generally—only to put certain right and wrong actions in black and white, so that the criminal offends wittingly, and his condemnation is just. This tendency to make the gospel a code of law worked mischief in two opposite directions. The natural man is always glad to compound for the weightier matters of judgment and mercy by obedience to works of law; and even the better sort of monk was likely to be very well pleased with himself when he could say, 'All these have I kept from my youth up.' On the other hand, if a code of law contains all that God commands, it cannot contain all that is well-pleasing to Him. Common people might be content with doing what God commands, but the higher life consisted in doing more, and thereby earning merit, which would be available for self and others. And these works of supererogation—these *consilia evangelica*—were reached by generalizing words referring to particular individuals or classes of men. Thus the command to the rich young man must be a counsel for all; and, if those who are able to receive it are blessed, they must be better than those who are not called to receive it. The result of all this was a double standard which misdirected the saints to a false ideal, debased the sinners with a low ideal, and turned both away from the vital question, 'What lack I yet?'

This conception of the gospel as a law necessarily implied a concrete and visible Holy Catholic Church confronting the world with a law of its own, which it had a divine right to enforce on all men without regard to the secular power, or, if necessary, in defiance of the secular power. That law was professedly spiritual; but the Church drew the limits of the spiritual, and drew them wide. Most things, indeed, have a spiritual side, so that there were few on which the Church had nothing to say. The protection of the Church covered all priests and men of religion, minor orders, and the hosts of dependents of the churches, and beyond these the weaker classes of the laity and those specially attached to the Church—the widow and the poor, the leper and the sanctuary man, the crusader, the pilgrim, and the palmer. The jurisdiction of the Church covered not only ordinary spiritual matters but the special cases of heresy and witchcraft, and things of a more secular nature like usury and marriage, and some purely secular things like wills. In addition to this, the Church claimed that its bishops must be independent, and not appointed by the kings. The Hildebrandine popes claimed for them freedom from their feudal duties, and Boniface VIII. forbade them to pay subsidies; but these attempts were failures. The Church also constantly interfered in matters of high policy, forbidding wars, reconciling wars, and not uncommonly stirring them up. If a king was disobedient, he must be rebuked, or in graver cases interdicted or excommunicated, and even deposed, and his kingdom given to another. The law of the Church was canon law, consisting of decisions of certain councils collected in the *Decretum* of Gratian, with additional decrees of successive popes, especially Gregory IX. and John XXII. It was a milder system than the civil law, so that many were anxious to claim its protection; but it was generally unpopular as being foreign, expensive, and dilatory. Henry

VIII.'s six years' divorce case is no extreme sample of its delays. Obstinacy was visited with excommunication, which in its milder forms made the offender a leper to his friends and cut him off from the Church, outside which there was no salvation. In graver cases the secular power was called on to imprison him indefinitely, or, if a heretic, to burn him; and the form of excommunication was an elaborate curse by all the saints on every act of his life. 'As these candles stink on earth, so may his soul stink in hell.'

Some of the things which seem to us encroachments on the secular power were very rightly undertaken by the Church in times when the secular power was weak. Wills, *e.g.*, almost necessarily came to the clerics when so few laymen could even read them. Marriage also needed some regulation in those gross and disorderly times, and the usurer was so unpopular that there could be no objection to any one who undertook to punish him. But on the whole the Church fulfilled its trust badly, even in the judgment of its friends. Its methods, to begin with, of anonymous accusation, concealment of charges, inquisitorial questioning, torture on suspicion, and indefinite imprisonment, were a terror to the innocent. The soundest Catholic ran a risk of the fire if somebody reported that he had eaten meat in Lent. Then the jurisdiction of the Church sheltered criminals wholesale. The criminous clerk must be judged by the spiritual court, which could not shed blood, and therefore had to remit an offender to the secular power when it wanted a heretic burned. Sanctuary also was a crying scandal, for it depended on the holiness of the place, so that it sheltered all comers without distinction, and did not even prevent them from issuing forth from sanctuary to commit new crimes. Holy places have always been chief haunts of unholy men, from the times of Diana of Ephesus to those of Our Lady of Mariæzell or Loreto. So great were the disorders that strong kings like Henry VII. put down some of the worst abuses before the Reformation. Nor was the Church more successful in dealing with other matters. Marriage, *e.g.*, was vainly consecrated by declaring it a sacrament, and effectually degraded by forbidding it to the clergy. In theory it was indissoluble, even for adultery; in practice it was continually annulled. So many and so various were the canonical impediments that no marriage was secure if any one had an interest in getting it dissolved—and could pay the fees. If other excuses failed, some forbidden relation could almost always be found within the seventh degree of kindred, affinity, or gossipred. All Henry VIII.'s marriages were faulty in canon law, except perhaps the last. But one mischief was mitigated by another. The Church sold dispensations for marriages forbidden by canon law, and supposed to be forbidden by the law of God. The case of Catharine of Aragon was not exceptional. This was one of the most lucrative of all the abuses of the Church, and one of those most deeply resented. Wills were in a similar state. The Church lawyers piled up mortuaries, probate fees, and other exactions till they set both rich and poor against them. Witchcraft was not a grievance, for all were agreed that dealings with the devil were the very worst of sins; but all that was called heresy was not equally heinous to the lay mind. If a man denied the faith, by all means let him be burned; and, if he disobeyed the Church, he might have punishment in due measure; but the Church had got into such a panic that it suspected heresy in every trifle, and brought the soundest Catholic into danger of savage persecution.

The majestic theory of the Catholic Church was

gathered round the pope. The vicar of Christ was supposed to be a father in God, guiding all the churches—all alike his children—in the way of righteousness and mercy; and for this purpose divine authority was given him to restrain the wickedness of kings, to smite the evil-doers of the earth, and to bring every soul into subjection to the apostolic see. Such was the dream of Gregory VII.; and it was at least a noble dream. But a dream it was; the facts were squalid. In the first place, given mediæval conditions of travel, St. Peter himself could not have guided all the churches from Rome or Avignon. No human genius was equal to this colossal task, especially when the righteous guidance had to be enforced by continual interference with almost every act of government. However well-disposed the pope might be, he was too far off, too ignorant of foreign peoples and their ways of thinking, and too dependent on the reports of interested advisers to govern wisely. Sometimes he did good service, as when the legates of Honorius III. helped William the Marshal to restore order in England, or when 15th cent. popes organized wars against the Turks, though their crusades were more often mischievous, like the Albigensian and the Hussite, and still more often they were pure and simple pretexts for exacting money. But the Latin Church of the Middle Ages was not organized with modern efficiency. To put it broadly, the pope can scarcely be said to have governed at all; he could not do much more than meddle, and seemed to meddle chiefly for the sake of filthy lucre. Four conflicting policies—of witnessing to the world, ruling the world, renouncing the world, and making gain of the world—could lead to nothing but confusion. The scandals and disorders caused by his interference were multitudinous and flagrant, notorious and in their own time undisputed. The nine cardinals who reported to Paul III. in 1537 were in entire agreement as to facts with the most violent of the Reformers. Their very first demand was that law should be observed as far as possible, and some limit put to the sale of exemptions, dispensations, and such-like breaches of law. In fact, the whole system was very much a system of extortion. Peter's pence dated early; and by the end of the 12th cent. papal taxation was enormously extended. There were heavy fees for almost every business in which the pope could interfere. Among the most offensive abuses were provisions, or papal nomination to preferments, often not yet vacant; reservations, by which the pope reserved to himself the right to fill such preferments or to grant pensions out of them; and annates, or firstfruits, invented by John XXII., or payment to the pope of the first year's revenue by every one receiving preferment. Provisions were politically important. It was an old custom in the 7th cent. that, if a bishop died at Rome, a successor was sent from Rome for the comfort of his flock. So, when Wighard died at Rome, Pope Vitalian sent Theodore of Tarsus to Canterbury. In later times this casual right was enormously extended. Not only bishoprics but other preferments were 'reserved' by the popes for nominees of their own, without regard to the rights of kings or other patrons; and papal nominees were commonly Italians, or French in the Avignon times. This system of reservations at last covered almost every preferment, and the strongest kings could scarcely resist it. Thus Nicolas III. refused Edward I.'s request for Burnell, and nominated Peckham to Canterbury. In the next century it was limited in England by the statutes of *Provisors* and *Præmunire*, and in France later by the Concordat of Bourges (1438). But the popes did not consider themselves bound by statutes, or even by their own concordats, and the kings often had

reasons of their own for conniving at papal encroachments.

In truth, the popes had put themselves in a false position, above the laws of God and man. The Renaissance popes broke solemn treaties and plotted assassinations at their convenience, and knew that they could do so with impunity. When they found resistance in the growing strength of nations, their foreign policy shrank back on Italy, and centred on the acquisition, by fair means or by foul, of territories for their nephews, so that each new pope had to begin the work afresh for a new set of nephews. Similarly their domestic policy was to turn everything into a source of revenue. Everything was on sale at Rome, from bishoprics and divorces downward. Jubilees were proclaimed; privileges, pardons, and the virtues of relics were sold wholesale all over Europe; and even the indulgences—the theory invented for them was purely academic—were no more than the latest development of a practical system of licences for every sin but heresy. 'God willeth not the death of a sinner, but rather that he should pay, and live.' Vanity Fair is the Rome of the Renaissance, drawn by an enemy, but drawn to the life, and in no way overdrawn.

Nor did the popes generally command personal respect. Some, indeed, were worthy men, and liberal patrons of learning and art, like Nicolas V. and Pius II. when he had put away the sins of his youth; but they were generally worldly, and in the Renaissance period they were mostly scandalous. What else was to be expected in a city where the harlots walked at noonday with a train of senators and clergy? We need not believe all the charges against John XXIII.; perhaps the Council of Constance did substantial justice when it suppressed the worst of them for decency's sake, and condemned him on the rest. Other condottieri may have been as bad, but they had not strayed into St. Peter's chair. So, too, some of the worst of the crimes ascribed to Alexander VI. seem to be society gossip; but the fact remains that he was a very bad man, and that the cardinals who chose him cannot have been much better. Such was the school from which the popes of the Renaissance came; and most of them worthily represented it.

At the end of the Middle Ages there was no dispute about the condition of the Church. From the bulls of the popes and the registers of the bishops to the allusions of the chroniclers and the lampoons of the profane, all the evidence of the time tells the same story of deep corruption without a hope of mending it. Two methods were imaginable. 'Heretics' might overthrow the Church system and replace it by something better; or reformers from within might clear away scandals and abuses. Both plans had been tried, and tried in vain. We need not ask whether the 'heretics' had anything better to offer, for they utterly failed to overthrow the Church system, or even to influence it—except in the reverse way, for terror of heresy hardened the Church to a savage cruelty which in the end turned every feeling of humanity against the persecutors. In fact, the 'heresies' bear the mark of reaction, and, like other reactions, the Reformation itself included, took over a good deal from the system that they were opposing. They all attacked the claims and the exactions of the priests, but each sect in its own way. The Cathari and Albigenses took over the asceticism of the time, but developed it in an anticlerical sense, and were therefore called Manichæans. The Poor Men of Lyons belonged to the same movement as the friars, and were preachers like the Dominicans, but soon showed a taste for Scripture which the Church could not tolerate. Most of the sects held that the unworthiness of the minister

invalidated his services, and the later 'heretics' had a new grievance in the refusal of the Cup to the laity. By far the deepest thinker among them was Wyclif, who not only started Lollardy in England, but gave the tone to 'heresy' in Bohemia, for Hus did little more than copy him. Wyclif began as a political controversialist, and gradually became a religious reformer of the boldest sort. His denunciations of the friars, and even of the pope, were only what many were thinking; and even his crowning enormity of denying transubstantiation as a philosophical absurdity—substance without accidents, and accidents without substance—was not the most formidable blow that he aimed at the Church. His translation of the Bible and the mission of Poor Priests to preach it made the complete suppression of the Lollards impossible. They appealed to the same religious instinct as the early friars, but turned it against the Church. But Wyclif's doctrines of 'dominion founded on grace' and 'no mesne lords in the kingdom of God' were a deadly offence, not only to the Church, but to the ruling class of nobles and landowners. Wyclif himself was not implicated in the Peasants' Rising of 1381, but some of his followers were in sympathy with the social unrest of the time. So the governing classes who urged Henry IV. to spoil the Church, as Henry VIII. spoiled it, were yet heartily agreed with the Church to put down heretics who were also social disturbers. So the House of Lancaster came in pledged to destroy heresy; and, if Henry IV. was not over-zealous in the cause, Henry V. was more active, and the gentleness of Henry VI. gave no relief to the Lollards. Still a remnant survived, a simple-minded, yea, forsooth, Puritanical folk, treasuring stray leaves of the forbidden Bible, and meeting secretly in the woods or the slums, till they were merged in the Reformation. There was more trouble in Bohemia. Crusade after crusade was preached against the Hussites, and each failed more disastrously than the last, till Frederick of Hohenzollern persuaded the Council of Basel to divide the heretics by conceding the Cup. They turned against each other; and after the victory of the moderates at Lepan (1484) Bohemia ceased to be the terror of Europe, though it did not cease to be troubled with heresy till it was brought fully under the yoke of the Hapsburgs and the Jesuits after the battle of the White Mountain in 1620. The German Peasants' War came in 1522, and was more barbarously suppressed than the English; but, instead of serfdom quietly dying out afterwards, it lasted till Napoleonic times, and in Mecklenburg till 1831. Its religious bearing was partly the same, for the Romanists of course laid the blame of social unrest on the disturbers of religion. But social movements had few supporters but extreme men and Anabaptists. Luther attacked them with unmeasured violence, and the Church in Lutheran States was even more closely allied to the governing classes than in England.

Reform from within was an equal failure. The efforts of individuals, and even of popes, were always defeated by the classes who had an interest in abuses. The successive monastic revivals had only partial and transitory effects, and even these had ceased to be possible since the decay of the friars. But could not the 'reform in head and members' be effected by the united wisdom of the bishops? The idea was in the air. Philip the Fair had appealed (perhaps not very seriously) from Boniface VIII. to a General Council, and in 1414, when two popes, and latterly three, had been dividing the allegiance of Christendom and cursing each other ever since 1378, a General Council met at Constance. When it had deposed John XXIII.,

it was faced by the question, 'Reform first, or unity?' It decided for unity, and allowed Martin V. to be elected. The mistake was fatal. The Council could deal with a scandalous pope, but a decent pope could deal with the Council. Reform was now impossible. Martin had only to make a few vague promises in separate concordats, contemptuously rejected by France and England. The Council of Basel (1431) took a bolder course. It made reforms, like the abolition of annates, and set the pope at defiance. But in the end Eugenius IV. was too strong for them, and the Council of Basel failed as completely as that of Constance. Men were inclined to think that, if the pope's rule was bad, the rule of the bishops was likely to be worse. After all, the Councils were too orthodox to touch the worst difficulty—that the abuses were not simply sins of individuals or miscarriages of administration, but logical, natural, and necessary results of the teaching of the Church. Only a reform of doctrine could reach the root of the matter; and that was the last thing that the bishops desired. They burned Hus in defiance of the emperor's safe-conduct, and made religious wars internecine by declaring that no faith was to be kept with heretics. The Council of Basel was forced by the exterminating Hussite wars to negotiate with the heretics; but it was as resolute as ever to allow no reform of doctrine. Therefore it failed, and with it vanished the last hope of real reform by a General Council. So by the end of the 15th cent. all were agreed that a drastic reform was urgently needed, but none could see how it might be made.

Something, however, had been done. In most countries particular abuses had been put down or limited by the civil power; and in Spain a real reformation—of a sort—had been carried out under Queen Isabella's guidance by Cardinal Ximenes, armed with the special powers conferred on the Spanish sovereigns by the bull of 1482. Ximenes aimed at the restoration of discipline, the removal of abuses, the encouragement of learning in the service of the Church, and the merciless extirpation of heresy. He succeeded in all—witness the Spain of the 17th century.

The dilemma was only too plain. The heretics wanted drastic changes, but could do nothing; the bishops would have no reform of doctrine, and could not carry even administrative changes against the pope's opposition. Had this been all, reform might never have got beyond epigrams in Italy and growlings in Transalpine lands. The forces which made the Reformation possible were growths of the later Middle Ages. First came the rise of nations. The tribal kingdoms of the early Middle Ages and the local feudalism which followed them might well be crowned with a Holy Roman Empire and a Holy Catholic Church. But first the Crusades, then the decay of feudalism, then the growth of commerce and general intercourse, had called forth a new sense of national unity, represented in France, in England, and latterly in Spain, by national kings who could rely on the support of national assemblies for the assertion of national rights, and not wanting where the kings were weaker or absent, as in Italy, Germany, and Scotland. The growth of nations in the 13th cent. may be measured by the failure of Boniface VIII. against Edward I. and Philip the Fair. The popes themselves weakened the imperial ideal by their contests with the emperors, the Catholic ideal by their astute negotiations with separate nations; and, now that the right divine of fallen emperors had come down to kings of nations, it was becoming possible to believe that the rights of the Catholic Church might be exercised by particular or national churches acting on their own discretion.

The intellectual position of the Church was not improved by the efforts of the Schoolmen to defend by reason a system based on an agnostic denial of the competence of reason in matters of religion. Thomas Aquinas got over the difficulty by sharply separating the kingdom of grace from the kingdom of nature, so that the two could have no contact. But this could not stand the subtle scepticism of Duns Scotus, and the decline of Scholasticism was marked by the Ass of Buridan and other barren logomachy. It gave, however, an impetus to study; and the first discovery was that the papal claims which appealed to the False Decretals and the Donation of Constantine were based on shameless forgeries. Then came the New Learning. We see first an age of enthusiastic collectors—none more zealous than Pope Nicolas V. Then came an age of Christian Platonism, in Italy, often passing into frank paganism. If Greece was risen from the dead, it was not yet with the NT in her hand. Some, indeed, of the scholars would as soon have worshipped Zeus as read the 'bad Greek' of the Gospels. In truth, the Renaissance was terribly wanting in moral earnestness till it reached more serious peoples across the Alps. German mysticism was a sign of discontent with Latin thought; and the New Learning found an eager welcome in new universities like Erfurt and Heidelberg. England was a little behind; but in 1498 Colet was lecturing on St. Paul's Epistles; and it was Colet more than any one who diverted Erasmus from the exclusive study of the classics to the NT and the Fathers. Erasmus' edition of the Greek Testament in 1516 marks an epoch; and the invention of printing gave it a currency which earlier translations could never have attained. Popes like Nicolas V. and Pius II. encouraged the New Learning; Julius II. was a liberal patron of its art; and Leo X. was its worthy representative. Yet it was fraught with danger to the Church system. It revealed a world which was not Latin; and the romance of the Crusades paled before that of the old world of Greece. For a thousand years Europe had been moving in the Latin orbit; now it broke loose like a comet deflected by some great planet into a new path. The old Latin thoughts and ideals were compared with the older thoughts and ideals of Greece, and found wanting. And the Greek thoughts were not simply other than the Latin, but directly contrary to them. The spirit of the Greek philosophy—the love of truth for its own sake—was utterly foreign to a Church which had no conception of truth but as a tradition of the Church or a form of justice to our neighbours, and therefore set no value on truth of thought. The moral contrast was as great as the intellectual. The text of the Latin Church was 'De contemptu mundi,' and the sermon was more often 'Dies irae' than 'Jerusalem the golden.' To the natural man the goodness of God is always too good to be true: 'I knew that thou wast a hard man.' So the same spirit of unbelief which turned the gospel of free forgiveness into a slavery of good works also refused the goodness of God in the common joys of life. When the saint renounced the gifts of God as he renounced the works of the devil, he fixed on them a brand of sin which no formal teaching could remove. They were tainted even for common men, as inconsistent with serious holiness. To men who had grown up in the Latin gloom the old Greek joy of life and sense of order and beauty in the world came like a burst of sunlight, like a message of goodness from the realm of truth. It might be that God 'giveth to all men freely, and upbraideth not.' Nor did the message of the Renaissance come alone. Feudalism was society organized for war; and, when quieter times followed its decay, there was more room for domestic

life, for commerce, for learning, and for worldly interests in general. Then came the question whether the world was really as bad as the Church made out. The friars had shown that the higher life could be lived among the people; the Church itself had declared that poverty is not essential; and it only remained for the Reformers to renounce the asceticism and strive to live as children of God in a world which after all is God's world, and not the devil's. And this brings us once again to the individualism of the Reformation.

2. Principles of the Reformation.—It would be a mistake to find the principles of the Reformation in the rejection of the pope or of transubstantiation, or even in appeal from Church authority to Scripture. All these are only inferences; the principle behind them is that the knowledge of God is direct and personal. Any man may help us with example and spiritual counsel, and the priest may minister to us the services of the Church; but in the end we must know God for ourselves. But this principle may be embodied in many forms. Mysticism is almost independent of history, and not even specifically Christian. But movements are commonly shaped by historical circumstances, as monasticism by the asceticism of the Middle Ages, the Reformation by the reaction from it.

Individualism implies the duty of the individual to judge of spiritual truth; and the Reformers invited men to see for themselves the untruth of the Roman Church. But they did not see that the principle was equally valid against their own churches. They merely limited to nations the mediæval idea of a visible corporation with no dissent allowed. Hence in theory they were as intolerant as the Romanists, though their practice was commonly less ferocious. There was no real advance when Germany came to a deadlock in 1555, upon the principle, 'Cujus regio, ejus religio'; and a similar deadlock is marked in France by the Edict of Nantes in 1598. These were only political compromises which ended civil wars. The real struggle for toleration was decided for Germany in 1648 by the Peace of Westphalia, for England by the Act of 1689, for France only by the Edict of 1787.

But, if the individual is to judge, by what standard is he to judge? Scripture or tradition? If Scripture must be interpreted by tradition, it is resolved into isolated texts which mean whatever the Church may choose to say they mean, and the whole system rests on nothing more spiritual than an unreasoning assent to an unverified historical process. So the Reformers appealed to Scripture as a rational whole, to be interpreted by sound learning. In this appeal they are unanimous. Thus the Westminster Confession:

'The whole counsel of God, concerning all things necessary for his own glory, man's salvation, faith, and life, is either expressly set down in scripture, or by good and necessary consequence may be deduced from scripture: unto which nothing may be added, whether by new revelations of the Spirit, or traditions of men' (ch. 1).

Yet here, too, the Reformers hardly saw the depth of their own teaching. Calvin indeed, their one great systematic genius, expressly says that 'the word, *however conveyed to us*, is a mirror in which faith may behold God'; but that age could not see clearly that God speaks, not in Scripture only, but in nature, history, and life. Rome was right in looking to history for a revelation, but she merely interpreted Scripture by tradition, instead of seeing all history illuminated by the living Word of whom Scripture speaks. Moreover, the Reformers carried over from the Middle Ages the conception of revelation as a code of law. This blinded them to the progress of revelation, as if everything contained in Scripture were not only

divine, but equally divine. Luther indeed saw clearly that what speaks most of Christ is most divine, so that the Epistle of James is 'a right strawy Epistle' compared with that to the Galatians; and Calvin was too good a scholar to ignore the doubts about certain books of the NT. But to their successors inspiration became more and more mechanical, till Buxtorf took over from the rabbis the inerrancy of the text. The worst offenders were some of the English Puritans, who held that Scripture is a complete rule of conduct, so that no command is lawful without its express warrant. Hence the sarcasm, that the Holy Spirit had remembered the basons, and forgotten the archbishops; or, in more sober form, God is not the legislator of His Church, unless He has prescribed its government. This caused much straining of texts, and often led to great absurdities, as when the Puritans objected to square caps on round heads, and Laud replied by proving from Scripture that heads are square (Lv 19²⁷). 'Ye shall not round the corners of your heads'. One of the worst mistakes was about Sunday. The Reformers saw that it was more than a feast of the Church like All Souls or Corpus Christi; yet neither Luther nor the English Reformers nor even Calvin identified it with the Sabbath. But the tendency to find in Scripture a code of law led naturally to the rigid Pharisaism of the Puritan Sabbath. The best excuse for it is the formal services and noisy games—themselves an inheritance from the Middle Ages—of an English Sunday under Elizabeth and the early Stuarts. It must be noted that, when the Puritans had not got scent of Antichrist, their scruples were commonly definite objections to definite things which in their times ministered to vice. In the stage, e.g., there is a steep descent from Shakespeare to Massinger, and again from Massinger to Dryden and other foul creatures of the Restoration. So against bear-baiting they entered the same plea of humanity as we should. They had very little of the ascetic's vague dread of the pleasure generally, as though every creature of God were bad, and to be refused.

The appeal to Scripture had far-reaching consequences. Whatever was contrary to Scripture must be reformed; and in some cases omission is prohibition. Thus transubstantiation is sufficiently refuted by the single argument that it cannot be proved by Scripture, and the silence of Scripture about prayers for the dead is significant.

Sooner or later the Reformers always came to the conclusion that the first great practical evil was the authority of the pope. On this they were all agreed, though Melancthon added to the Schmalkald Articles a note of his own, that, if the pope would allow the gospel to be preached, his authority might be accepted for the sake of peace and unity, but *humano jure* only. This, however, was an extreme concession which gave great offence, for the rest were much more disposed to call him Antichrist and the Man of Sin. We must note Melancthon's condition—'if he will allow the gospel to be preached'—because it shows that the objection was at bottom practical. The papacy was contrary to Scripture, not simply because there were sundry texts against it, but chiefly because it was the centre of a system which had been shown by experience to make void the righteousness of God revealed in Scripture. Justification was by faith (which Luther defined as trust in God), and by faith only, whereas the whole system ruled by the pope was an elaborate scheme for setting up a righteousness of our own which was not of faith. The sacraments were not simply signs or means of grace, but channels which conveyed it. The Church gave spiritual

life to the infant in baptism, nourished it with the Eucharist, consecrated it with matrimony or orders, renewed it in penance, and finally sealed it with extreme unction. And sacraments had their efficacy *ex opere operato*—from the due (*rîte*) performance of the ceremonial with intention on the priest's part. They conveyed grace 'always and to all who do not put a bar in the way (non ponentibus obicem).' The Council of Trent nowhere expressly tells us what constituted a bar, though we may safely say that unconfessed mortal sin was a bar; but, if baptism conveys grace 'always and to all' infants 'who have no faith,' it is clear that want of faith is not a bar. The faith of the parents or of the Church is not the faith of the person concerned, and is therefore in this connexion irrelevant. Thus the whole sacramental system was involved in the primitive confusion of matter and spirit, magic and religion. Moreover, to put it in another way, the message of the gospel is one of free forgiveness—not that forgiveness will be given some day on conditions, but that in Christ it is already given to all that will by faith receive it. 'By grace ye are saved, through faith.' Faith—trust in God—is necessary for salvation, and sufficient for salvation. Works are the outward signs, but only the outward signs, of a good or a bad heart, and in and for themselves have no value before God. But the Church sought justification by works. Baptism indeed carried free forgiveness of past sins; but, if a man sinned after baptism, as he always did, he would have to earn forgiveness by good works and penances, and, if those were insufficient, he would have to pay the balance in purgatory, where accurate accounts were kept of sins and compensations for sins. But certain sins called mortal needed confession to a priest and absolution, if the sacraments necessary to salvation were not to be refused by the Church. Thus attention was concentrated on sins instead of sin, and on sins not as the signs of an evil heart—the particular answers that it gives to particular temptations—but as so many separate debts to God, which had to be paid or compounded for. Instead of repentance—the new heart—the Church required good works and penances. Penitentials—such and such penances for such and such sins, irrespective of motives and circumstances—date back early in the Middle Ages, and commutations became common after the rise of the papacy. A pilgrimage was meritorious, and a crusade atoned for all sins. The next step was that others might be paid to do the pilgrimage or to go on the crusade; and at last money was frankly accepted instead of good works. Further, a debt was cancelled in Roman law by payment, whoever paid it; so a vast system arose of vicarious satisfaction through the merits of the saints—a new application of the *communio sanctorum*. The climax of this was the traffic in indulgences (*q.v.*), which was the occasion for Luther's protest. The theory of these may be left to the canonists: in practice they were certainly understood by sellers and sinners alike as a public sale of licences for sins.

This is what made the Church system intolerable to so many persons of serious religion. Some, indeed, were content to pass lightly over its bad sides, many thought reform hopeless, a few took refuge in the detachment of mysticism; but many again were stirred to action. Their objection was not simply that the papal claims were unfounded, or that the Church was full of scandals, or that this or that doctrine was untrue, but that the system as a whole was a practical hindrance and not a help to devotion. Luther himself was a model of ascetic piety till he found in practice that, in St. Paul's words, it was of no value,

tending only to the full satisfaction of the carnal nature. And to this conclusion the more earnest Reformers always came. The Church stood not simply in error, but in deadly antagonism to the living power of Christ. It had returned to the principles of Pharisaism, and made the Saviour's work of none effect. 'If righteousness come by law, then Christ died in vain' (Gal 2²¹).

3. **Outward forms of the Reformation.**—Form being superficial, classification by form is apt to be superficial too. Apparently similar principles may issue historically in different forms, while apparently similar forms may conceal different principles. But form is the outward and visible sign which the world understands, and it always expresses a principle, though not always the deepest, so that we shall find it convenient to use the familiar classification of the Reformed Churches as Lutheran, English, and Reformed, meaning by the last the Zwinglian and Calvinistic Churches of the Continent and Scotland. Only we must not take for granted that their deeper affinities are precisely what their outward forms may seem to indicate. Each of them in different ways came nearer than the others to Latin thought; and, if the Calvinists bore the brunt of battle with Rome, it does not follow that their deeper principles were more unlike the Latin. The importance of the English Church and the difference of its government require for it an independent place alongside of the Lutheran and Reformed Churches. The doctrine, however, laid down especially in the Articles, is entirely that of the Reformed Churches, and was fully recognized as such on both sides, though predestination is taught in such general terms as do not exclude Arminianism. It is simply said that man 'is very far gone (quam longissime) from original righteousness,' and there is nothing about reprobation and irresistible grace. Thus it takes off the edges of the stricter Calvinistic doctrine. In addition to these three branches and their offshoots, we have the Arminian reaction from Calvinism, while Moravians and Quakers form an appendix of mysticism, and we cannot entirely ignore Socinians and Deists, though they pushed some principles of the Reformation into a denial of its fundamental doctrines.

On some great doctrines all the Reformed Churches were agreed; and these we shall review before we come to their differences. They were agreed that the revelation of salvation through Christ is contained in the Bible to the exclusion of tradition, and that the meaning of Scripture is determined by reason and scholarship, and not by any Church authority. Every Church must of necessity declare the terms of its own communion, but there is no infallible authority declaring truth. The chief exceptions are the Socinians, who limited the authoritative revelation to the NT, and the English Carolines, who spoke much of antiquity and general councils. In this, however, they had no intention of setting up tradition in the Romish way as a continuous inspiration which practically superseded Scripture; they were only giving to times of 'primitive purity' a weight which others thought excessive. The Reformed Churches were also agreed, except the outliers, in the full orthodox doctrine of the Trinity and the Incarnation. The only peculiarity is the Lutheran *Communicatio idiomatum*. Theories of a Real Presence consistent with a reception which is not 'only after a heavenly and spiritual manner' have before them the difficulty that the divine element of Christ is not carnally pressed with the teeth, while the human is not present everywhere, and 'the flesh profiteth nothing.' Rome calls transubstantiation a mystery, and leaves it a contradic-

tion of reason; but the Lutherans had to reconcile their consubstantiation with reason, and did it with their peculiar doctrine of the Incarnation, that the properties of the divine nature (ubiquity in particular) were communicated to the human. This is practically Monophysite, and carries the important consequence that the Body and Blood of Christ are verily and indeed taken and received, not only by the faithful, but by all who eat and drink in the Supper of the Lord. With this exception, they are generally agreed on the sacraments, accepting Baptism and the Lord's Supper, and denying the sacramental character of Confirmation, Orders, Matrimony, Penance, and Extreme Unction, though Penance has a somewhat ambiguous position with the Lutherans. They all have their solemn rites of marriage and ordination, and all endeavoured for a long time to keep up a disciplinary system of penance for gross scandals. But they entirely abolished extreme unction, and the confirmation of the Lutherans and the English has little more than the name in common with the Romish sacrament. The Calvinists have generally replaced it with some form of admission to full membership.

The Reformed Churches are further agreed that the work of Christ upon the Cross is complete and final, in the sense that there can be no more sacrifice for sin or priests to offer it, and also that no good works of ours can have merit or in any way contribute to salvation. Of the whole Church system there is nothing that they denounce more fiercely than the doctrine that the Mass is a true propitiatory sacrifice for the sins of the living and the dead. Thus, when the Council of Trent anathematized those who called the sacrifice of the Mass blasphemous, the English Church replied in deliberate and direct defiance that such sacrifices 'were blasphemous fables and dangerous deceits.' With the sacrifice went the sacrificing priest. The minister of Christ was restored to his true dignity and office, to preach the Word and offer with his people the higher sacrifice of praise and thanksgiving—'with them,' not 'for them,' for all the Reformed Churches use the vulgar tongue, and invite the people to take their part in the services. And, if the work of Christ upon the Cross is complete, then, as the Augsburg Confession points out, nothing can be added to it by any good works of our own. All that we can do is to receive it and be thankful. In other words, justification is God's act for Christ's sake, and the faith by which alone we can receive it is its result and not its cause. And, if faith itself is not a merit which claims reward from God, still less are good works, which are no more than the natural expression of faith before men. Least of all is it possible to acquire merit by doing more than God commands. Any such teaching directly contradicts the plain words of Christ.

The most conspicuous cause of the differences among the Reformed Churches was the action of the secular power. That action was entirely favourable only in Scandinavia. The favour of the princes in N. Germany and of the cities in the south-west was partly balanced by the hostility of the emperor, and in England there were two reactions before the Reformation was settled by Elizabeth. The secular power was hostile in Scotland, France, the Netherlands, Bohemia, and Poland; and in Spain and Italy it suppressed the Reformation without much difficulty. For the other countries there were long struggles, but in the end the Reformation was finally defeated in France, Bohemia, and Poland; in the United Provinces and Scotland it prevailed. Where the princes favoured it, they commonly favoured it—and shaped it—for political ends; where they were

hostile, it took its own course. Thus England would certainly have declared for Puritanism if Elizabeth had not seen political advantage in a show of Lutheranism. Few, indeed, of the sovereigns had much personal zeal for the Reformation—Edward VI. of England and Christian III. of Denmark excepted. In England and Scandinavia the Reformation was substantially a revolt of the laity, headed by the king, against the overgrown wealth of the Church and the vexatious claims of the priests; and this could not be carried through without a great reform of doctrine, for the pope's authority barred the way, and could not be overthrown without laying the whole Church system in ruins. In England, at least in London and the eastern counties, there was a party for doctrinal reform under Henry VIII., and similarly in Denmark and Sweden; but in Norway, where the scandals were fewer, there was less discontent with the Church; and in Iceland the new faith had to be established by violence. The Reformation was a popular movement in Germany and the United Provinces, and also in Scotland, where the scandals of the Church were especially flagrant. In England and Scandinavia the victory was gradual. Though Mary Tudor had made Romanism impossible, England became definitely Protestant only in the course of Elizabeth's long reign, and the issue was not beyond a doubt till the deposition of James II. In Sweden the Augsburg Confession was not formally adopted till 1593; and even now the Church is 'Evangelical'; but the nation had become thoroughly Lutheran when Sigismund was deposed in 1599 for bringing in a Polish army to restore the old religion. The danger was like that which faced England in 1688, and it was dealt with by similar laws. All holders of office were to be Lutherans, and only a Lutheran was to have any claim to the crown, such claim being forfeited if he married a papist. The marriage of John III. with Catherine Sagello caused nearly the same evils as that of Charles I. with Henrietta Maria—a more or less Romanizing father and an avowed papist son, and a policy directly contrary to the best interests of the nation, a policy which nothing but a lawless despotism could have carried out.

Princes and nobles had long coveted the wealth of the Church; and under cover of the Reformation they were able to plunder it at leisure. The magnificence of the bishops might well have been cut down, though some of them, like Alcock and Merton in England, were princely benefactors; and men of serious religion were generally agreed that the wealth of the monasteries might be turned to better uses; but the actual plundering was shameless. Neither the suppression of religious houses, nor their suppression by the secular power, nor the use of their revenues for secular purposes, was a novelty of the Reformation. The pope himself abolished the Templars in 1312, and many houses came to an end or were amalgamated with others for want of inmates after the Black Death. In England the alien priories were granted to Henry V. in 1415, and their wealth was partly used for the French war, though some of it remained for Henry VI.'s foundations of Eton and King's College. In fact, it was the habit of founders like Alcock and Wolsey to secure the revenues of some decayed houses. The only novelty of the Reformation was the extent of the suppressions and the undisguised rapacity of princes and nobles.

In Germany the great sees were filled by nobles, and in the later Middle Ages became something like apanages of the princely houses; and such they remained till the general secularization of

1802. Thus the sees of Osnabrück and Minden were commonly held by younger sons of Brunswick and Brandenburg, and Köln itself was given to cadets of the Wittelsbachs from 1583 to 1761. But in the reformed states the sovereign rights of sees were abolished, and the titular bishops were laymen and lived as laymen. The case was similar with the monasteries. The Duke of York, son of George III., was bishop of Osnabrück from his infancy till 1802, the commentator Bengel was abbot of Alpirspach, and a sister of Frederick II. closed the long line of abbesses of Quedlinburg. In some cases, however, the bishops were abolished.

In Sweden Gustavus Vasa could plead dire necessity; and the Recess of Westerås (1527) placed in his hands the whole property of the Church. He took the castles of the bishops and some of their estates. The monasteries were partly taken by the king, partly granted to the nobles, and those founded since 1454 were resumed by the heirs of the founders. But there was no violence. Monks and nuns were free to stay or leave; and one or two houses struggled on till 1595. In Denmark the estates of the bishops were given to Christian III. in 1536, but the royal power was not strengthened as in Sweden and England. The gain fell to the nobles, as in Scotland.

In England the monasteries fell first. They were granted to the Crown, the smaller houses in 1536, the larger in 1539. Some of the property was used for six new bishoprics and other foundations, or for the defence of the realm; but the larger part was granted or sold on easy terms to men in favour at court. Thus a new nobility was formed, pledged to the new order of things. But the monasteries had appropriated the tithes of many parishes on condition of providing for the services; and this right and this obligation came to the new owners. So far then the parishes lost nothing; and, if the new impropiators were laymen who frankly treated the tithes and advowsons as private property, they did no more than the monks had done before them. It was the same with the chantries, which became meaningless when it was declared by the Ten Articles of 1536 that masses cannot deliver souls from purgatory, and were suppressed in 1547. The parishes, however, lost much by the suppression of pilgrimages, relics, and other lucrative superstitions; and the churches were sadly defaced, and sometimes brought into a ruinous condition by the rough removal, especially in 1559, of images, roods, and other monuments of superstition. The bishoprics fared worst of all. Under Somerset and Northumberland, and again under Elizabeth, every vacancy was an excuse for spoliation, and the new bishop was not admitted till he had given up manors, perhaps receiving a poor compensation for them. Most of Elizabeth's bishops died in debt to the Crown, and left their families destitute; and the process was stopped only by the Act of 1604, which disabled bishops from making such exchanges with the Crown. But the spoliation was not all the work of Protestants; something must be allowed for the systematic dilapidations of the Marian bishops before they were deprived in 1559. They left Salisbury, for instance, in a beggarly state. 'This Capon hath devoured all,' said Jewel.

Coming now to the differences of the Reformed Churches, we note first that, though Lutherans, English, and Calvinists were in general agreement on the three great doctrines of justification, predestination, and the supremacy of Scripture, yet each of them laid the stress differently from the others. The Lutherans made justification by faith the *articulus stantis aut cadentis ecclesie*, while the Calvinists gathered their conceptions of right

belief round predestination and election. The English Church made no such distinctive doctrine avowedly central, but the central place was practically held by the supremacy of Scripture. Now this means that Lutheranism was essentially conservative. It removed practical hindrances to true religion—and they were many—but had no special interest in further changes. Luther's was the genius of vivid insight, not of systematic thought, so that he changed only when and so far as he was obliged to change. The English Church was conservative too, but more logical and systematic; and by its emphatic disavowal of any reception in the Lord's Supper which is not 'only after an heavenly and spiritual manner' it was enabled to deal more boldly with the Mass and the ceremonies generally. Calvinism stands apart from the others, for the individualism which to them was fundamental was to the Calvinists only an inference from their really fundamental doctrine of the absolute sovereignty of God. On that doctrine their whole system was moulded, and everything that seemed to conflict with it was ruthlessly swept away. The older the error, the more dangerous it was; and the more innocent the 'rags of popery' seemed, the more they were to be suspected. Hence the Calvinists were much less conservative than the Lutherans or the English. If the old system went about to establish the righteousness of man against the sovereign grace of God, as it undoubtedly did, they were disposed to count it not only false in principle, but bad in all its details. The farther from Rome, the nearer to Christ.

These different ways of thinking were reflected in the different forms of Church government which always seem the chief things to the natural man. In the Church of the Middle Ages there were priests to offer sacrifice for the living and the dead, and these priests were ordained by bishops, who were themselves consecrated by other bishops who were supposed to trace their spiritual descent in an unbroken succession to the apostles. Thus ordination, consecration, and apostolic succession (three legal questions) were vital. The Reformed Churches all abolished sacrificing priests, but all (except the Quakers) had a regular ministry, and all but the Socinians and some outliers required for it a regular call by the lawful authority of the Church, usually with admission by prayer and laying on of hands—for edification and solemnity, not as impressing any sacramental or indelible character. But here again Calvinism stands apart. To the Lutherans and the English Church government was a matter which every Church must determine for itself. No form of government and no ceremony of worship is officially held to be ordained of God. However ancient or edifying it may be, it is still only an ordinance of men, which may by men be altered or abolished. So they used their discretion in various manners. Luther's insistence on the universal priesthood implied the sanctity of the State, so that the civil ruler was the natural representative and ruler of the Church also. Thus Lutheran churches have commonly been Erastian, seldom giving serious trouble to princes who did not try to force them into Romanism or Calvinism. The old services and ceremonies (e.g., altar, vestments, etc.) they generally retained, only translating them into the vulgar tongue, and removing or explaining superstitions and excrescences. As regards Episcopacy, they had no objection of principle to it. The Confession of Augsburg says:

'It is not our object to have the bishops deprived of their authority. The one thing we ask is that they will allow the Gospel to be purely preached, and relax a few observances which cannot be kept without sin' (pt. ii. § 7).

But, when the bishops refused, the results were various. In Germany the spiritual office was abolished, and the princes took over the general government of their churches. The bishops had consistory courts where lawyers and divines sat together; and these, with extensions and modifications, became the chief subordinate authorities. In Denmark the bishops were equally intractable, and played a great part in the civil war after the death of Frederick I. So, as soon as Christian III. had captured Copenhagen in 1536, he arrested the bishops, and set them free only after their jurisdiction had been abolished by the National Assembly and the goods of the Church given up to the king. Then Christian appointed seven superintendents to work under himself as *summus episcopus*, and these were consecrated, not by bishops, but by Luther's friend Bugenhagen, and soon took the title of bishops. There was no consistory. Sweden was more conservative. There again the bishops were intractable, but Gustavus Vasa mastered the Church once for all at the Riksdag of Westerås in 1527; and Brask of Linköping, the champion of the old order, left the country in despair. The vast estates of the bishops, the chapters, and the monasteries were placed at the king's disposal. But the change was gentle and gradual: there were no martyrs on either side. The Mass was translated into Swedish and the ceremonies were explained. Unction, e.g., was only a symbol of the inward unction by the Spirit. The forms of Church government were very little changed. The old bishops were gradually replaced by Lutherans, chosen by the clergy and consecrated by other bishops. Even the apostolic succession seems to have been preserved (though this is disputed) by the unwilling hands of Petrus Magni of Westerås, though the Swedish Church leaves its spiritual value an open question. There was no central consistory—Gustavus Adolphus tried in vain to establish one—but parish priests are appointed by the bishops, and all dignitaries must have the king's approval.

The English Reformation took generally the same course as the Swedish, though the changes and the reactions were much more violent. The Tudors were stronger than the Vasas, and the antagonisms between Papalists and Nationalists, and between Catholics and Reformers, were much sharper than in Sweden. The English Church was Erastian because it was national, and therefore fitly represented by the civil power, and because further the dangerous political situation after the separation from Rome induced the English people to give Henry VIII. a practical dictatorship. Thus the strong monarchy of the Tudors was raised to its height by the Reformation. Henry VIII. mastered the Church once for all at the 'Submission of the Clergy' in 1532. The king was acknowledged as Head of the Church—Supreme Head; convocation was not to make or even to discuss any new canon without the king's permission, and, if the election of bishops remained with the chapters, they could elect none but the king's nominees. The king's supremacy was not exercised through a consistory, but in a harsher form by Cromwell as Vicar-general. Elizabeth took the less offensive title of 'Supreme Governor,' though she claimed the same powers as her father, and exercised them through the Court of High Commission (not fully organized till 1583), which was substantially a central consistory. She carefully preserved not only the rite of consecration but the apostolic succession. She may have cared for it as little as Gustavus Vasa, but its political value was evident, especially when it suited her to pose like a Lutheran prince prescribing the religion of his subjects according to the Peace of Augsburg.

Thus the English Church has it as a matter of fact, but has nowhere officially declared it to have any spiritual value. Indeed, it was not supposed to have any before the rise of the Carolines, which is commonly dated from Bancroft's sermon in 1589. There is no mention even of Episcopacy in the English definition (Art. 19) of the Church; and, though no one has been allowed since 1662 to minister without episcopal ordination, this is given simply as a domestic rule 'in the Church of England,' and passes no censure on churches which otherwise ordain. In Church government then the English were as conservative as the Swedes; in public worship they took a bolder line. The various books and the local uses were consolidated into the single national Book of Common Prayer in English for congregational use. The services were generally simplified, and the excessive number of the ceremonies was much reduced. Morning and Evening Prayer in 1549 contained little that was not in the Hours, and the Marriage Service is even now nearly what it was in the Middle Ages, nor was the Mass itself entirely changed. It was translated and much simplified; but it was still said by a priest in a vestment at an altar, and still provided for private confession and absolution. Its doctrine was upon the whole a spiritual Presence, but it was quite consistent with consubstantiation, though Gardiner needed a good deal of special pleading to get transubstantiation into it. But in 1552 the Prayer-Book was 'godly perused' and revised. Invocation of saints and prayers for the dead were entirely removed. The 'Service of the Lord's Supper or Holy Communion' was now to be said by a priest or minister in a surplice at the Holy Table. It provided for spiritual help and ghostly counsel, but individual confession was limited to the visitation of the sick, and even there was neither private nor compulsory. Moreover, the whole structure of the service was changed for the deliberate purpose of disavowing every sort of Presence that is not purely spiritual. Every passage quoted by Gardiner was altered. The Canon of the Mass was broken up into three parts. The prayer for the whole state of Christ's Church was limited to the living, the prayer of consecration was brought close to the administration in order to prevent 'eucharistic adoration,' and the oblation of the elements was turned into an oblation of 'ourselves, our souls and bodies' after the elements had been consumed. Thus in public worship the English made greater changes than the Swedes.

It will be noted that in N. Germany, in Sweden, and in England the new churches were or soon became national, not simply as independent of Rome, but as true expressions of national character. Luther was so intensely German that his influence continued to dominate the North, even after the inroad of Calvinism in the latter half of the 16th century. In Sweden the new religion owed its consolidation to the services of Gustavus Vasa, the reaction against John III. and Sigismund, and the work of the great kings of the 17th century. Dissenters were always very few, and even now they are less than one per cent. In England the transition was during the peace of Elizabeth. A nation which in 1558 was hardly more than disgusted with the fires of Smithfield had become firmly Protestant when it confronted Spain in 1585, and never wavered afterwards. Even the Carolines (except a few creatures of Charles I.) were heartily opposed to Rome. But from the beginnings of Christianity in England there was a cleavage of religious thought and feeling. The side which was always dominant, except in the time of the Civil War, preferred the regular and stately services of a national Church. The other,

represented in successive ages by friars, Lollards, Puritans, and Dissenters, leaned to the freer ministrations and looser order of local congregations. The Reformers endeavoured, and for a moment successfully, to bring the whole nation into a single Church. That hope was wrecked by the tyranny of Bancroft and Laud; and, if the tyranny of the Commonwealth made the Church thoroughly popular, the tyranny of the Restoration shut out men who stood for one whole side of the religious life of England. It condemned the Church to be a sect, yet a sect in which the other side is not forgotten. That it is the most national of the sects is shown at once by its powerful influence on English Dissenters and by its conspicuous failure to win the Celts of Wales and Cornwall.

Unlike the Lutheran and the English Churches were the Reformed. One marked historic difference is that they had the secular power against them everywhere but in the cities of the south-west—roughly, from Frankfurt and Lindau to Geneva. Where that power was friendly, they were guided and controlled by burghers instead of princes; where it was hostile, they had to form their churches as the early Christians did, according to their own conceptions of doctrine and expediency. As the Romish sacerdotalism created an aristocracy of priests who alone could dispense the necessary means of grace, so the Calvinistic doctrine of predestination created an aristocracy of the elect, for whom alone Christ died, who alone received saving grace and alone properly constituted the Church. This aristocracy was created not by some visible rite of ordination, but by God's eternal counsel secret to us, so that it could not form a visible class in the Church. The chief of sinners might be of the elect, and an apparent saint might prove a reprobate. So, while the distinction of priest and layman was denied, the acknowledged difference of elect and reprobate had to be ignored in the organization of the churches. Calvinism is indeed an inspiring creed—that God has foreknown *me* from all eternity, and sent me forth to do in His strength and not my own the work predestinated for me before the foundation of the world. It is the creed of the strong, as asceticism is the creed of the weak, when neither the one nor the other can rise to the higher faith, that Christ died for all men, and not in vain. It is only a half-truth, and, like other forms of the opinion of necessity, it must be treated in practice as if the limitation were false. As every Calvinist in his right mind believes himself to be elect like the boy in the English Catechism, he must presume that his neighbours also are elect, though he believes that some of them are not. It was like our own very necessary convention that our neighbours are honourable men, though we know that there are knaves among them. Only, a knave can sometimes be found out, a reprobate never. Hence a Reformed Church was in theory a democracy, with all spiritual authority deriving from the people. This principle was extended to civil authority by the English Independents in 1647, though the Commonwealth could not carry it out. It prevailed in America, where it was favoured by colonial conditions, and from America it was brought back to France, and became the basic principle of the Liberal movement of the last century. This principle would seem to require a free Church independent of the State; and to this ideal the Reformed doctrine pointed almost as clearly as the Romish. But the condition of freedom is persecution. The State cannot refuse to decide questions of Church property for any sect which is tolerated, and cannot decide them without judicial interpretations of its confessions and deeds of settlement. Hence the Reformed Churches

became subject to the State the moment they had mastered it. The burghers of Zürich or Amsterdam or the Lords of the Congregation in Scotland might be the stoutest of Protestants; but they were determined to keep the ministers in their place, and allow no such clerical rule as that from which the Reformation had delivered them. They had no objection of principle—the Germans have none now, and the English had none then—to what we should consider a most vexatious interference with private life. They were used to it. Every town was full of sumptuary laws and minute regulations on all sorts of subjects, and a few more or less made little difference. But there was more than this. Calvin's high estimate of the Lord's Supper and of the primitive Church led him to demand the restoration of the primitive discipline and its enforcement by the secular power; and in this the Reformed Churches generally, including the English, were more or less inclined to agree with him. They had some reason. Public morals were in a dreadful state, and this was keenly felt, now that the new preaching had roused the public conscience, which the mediæval Church had so debauched with formal righteousness and easy payments for sin that the foulest crimes passed with no more censure than in the old pagan times. The new discipline was hideously severe and did infinite mischief; but it was hardly more severe than the old would have been, if the Church had not preferred to make a traffic in sin. It was at least impartial. Magnates and even ministers had to do their public penance like other sinners. Neither the ministers of Geneva, nor the Scottish Kirk, nor the High Commission in England showed any respect of persons. None the less the system hardened the saints with formalism and spiritual pride, and drove the sinners to hypocrisy or despair. It was long before the Reformed Churches could shake off the belief taken over from the Middle Ages that it was their duty to punish sin as sin with spiritual censures enforced by temporal penalties. But laymen were jealous of this dangerous power of excommunication, and moderate churchmen like Bullinger disowned it. In German Switzerland it was not allowed at all; in French Switzerland (even in Geneva) and in Scotland it was not entrusted to purely clerical authorities. In England the frequency of excommunication and its misuses for secular offences were a standing grievance against the early Stuarts; and the endeavour of the Presbyterians to introduce the Scottish discipline was foiled by the lawyers, the Independents, and the nation generally.

On the other hand, there was a doctrine which often partly counteracted the natural dependence of a dominant sect upon the State. The holiness of the Church was nowhere more of a living truth than in the Reformed Churches, for they believed as firmly as any Romanist that it was ordained of Christ and guided by His Holy Spirit. Eternal predestination was a still mightier inspiration than the august tradition claimed by Rome, and there was no double standard of priests or monks to shelter common sinners from its fullest claims. So the ministers could stand up as boldly as any popes or bishops against wickedness in high places, and they did so with a courage which, though not wanting, was less often seen in the more courtly Lutheran and English Churches. The Reformed had much more trial of persecution than the Lutherans, for the Peace of Augsburg left them alone to fight the hardest of the battle against the treachery of the savage Catholic revival. Small wonder if their zeal was often fierce and narrow, quarrelsome and overscrupulous. But they are not fully represented by such extremists as Puritans, Covenanters, and Camisards, who were

more or less demoralized by Stuart or Bourbon tyranny. If we look to more peaceful churches like those of Zürich or Strassburg, or even Geneva, or to the early stages of the Reformation in Scotland, we shall find greater moderation. Calvin himself charged the English Liturgy of 1552 with nothing worse than *tolerabiles ineptias*, and the Scots used one like it (with ceremonies omitted and some freedom to the minister) till they were disgusted with all forms of prayer by the attempt of Laud and Charles to force an English form upon them. Bucer and even Laski urged Hooper in 1550 not to refuse the episcopal vestments, and in Elizabeth's time Bullinger and Gualter gave plain counsel to the Puritans. The surplice, they said, was not used at Zürich, and they did not like it; but the queen's enforcement of it was no reason for giving up their ministry.

In one direction the Reformed Churches far excelled the rest. The appeal to Scripture made the study of Scripture a duty for all according to their powers; so that instruction in religion had to be both deeper and more general than heretofore. The Reformers were conspicuously learned men. Luther himself was the greatest of German teachers; Cranmer and Jewel were above comparison with their opponents; and Calvin was not only the best patristic scholar of his time, but the greatest commentator since Augustine. However they may have erred, it was not for want of diligent and faithful study of Scripture with all helps thereunto then attainable. And this learning they sought to spread among the people. They translated the Bible, urged all to read it, and shaped the services for instruction as well as for devotion. The English Reformers did what they could, but were hindered by the rapacity of the nobles, who were much more inclined to plunder the old schools than to found new, and, moreover, saw no need of education for the lower classes. The Lutherans were less thorough in this as in other matters, and soon lost themselves in a jungle of controversies. The Calvinists did better. Geneva under Calvin and Beza was the centre of Protestant learning, and the village schools established by Knox and Melville gave Scotland such a system of general education as England has reached only in our own time.

4. Results of the Reformation.—We are now in a position to survey the Reformation as a whole, and form some estimates of its results. Shortly, national Churches replaced the catholic Church, Scripture became the standard instead of tradition, and the individual gradually gained first religious, then civil, liberty. This was a revolution, and the greatest since the rise of Christianity, so that it called forth the most violent opposition, and was the occasion for enormous evils—the savage persecutions and wars of religion, the desolation of the Netherlands and Germany, and a long severance of the comity of Europe, north and south. Strict Romanists and strict Protestants were never heartily allied till 1686, and the embers of religious hatred are not yet quenched. Even now the pope visibly prefers infidel Germany to heretic England. To the Reformation we owe further the religious divisions of N. Europe, the multitudinous sects of England and America, involving scandals without end to the unbelievers, and also the whole school of rationalists from Deism and the *Aufklärung* to the latest extravagances of the Germans and their imitators. To the Reformation again we owe the Tridentine reaction which (with some reform of scandals) consolidated the mediæval system into a firm barrier against all freedom in S. Europe. The age of the Jesuits and the Inquisition was brought to an end in the 18th cent. by the philosophic despots and the French Revolution, only to

be followed by something lower still. If there was much honest ignorance in the Middle Ages, there is much organized falsehood now.

Of all these evils the Reformation was the occasion, and of some the cause; and to these we may add the mischief done in the suppression of the monasteries and in the corruption of the upper classes by the plunder of the Church, the mischiefs caused by the too great subservience of the Lutheran and English Churches to the State. We now look at the other side. The abolition of a mischievous and sometimes unfriendly foreign authority gave the nations freedom to develop themselves, and made better order possible in both Church and State. What were scandals in the 18th cent. were matters of course in the 15th. National character became stronger and more earnest, and gained a new sense of duty from the new responsibility laid on every man when the new teaching abolished auricular confession, swept away a vast amount of superstition, and trading on superstition, and removed the poison from family life by its emphatic rejection of the ascetic ideal; and all this was summed up in a rational worship constantly challenging comparison with an open Bible.

Yet all this was but the prelude of the mighty evolution. The depth of meaning in the principles of the Reformation was reached slowly and through many conflicts, and is not exhausted yet. The Reformers were men of their own time, and took over from the Middle Ages many beliefs inconsistent with their own principles. They took over the old imperial conception of God as a despot in heaven, the old view of the gospel as a law of commands, the old belief in a rigid visible Church which could allow no dissent, and the old reliance on a penitential discipline enforced by the State. All these are finally inconsistent with the individualism of the Reformation. A God who calls on us to judge the righteous judgment cannot be despotic, so that despotism and slavery on earth stand condemned. A gospel of free forgiveness—in technical language, justification by faith—cannot allow a visible Church with no salvation outside it. If freedom from Rome did not at once bring freedom in religion, it made the coming of that freedom certain by throwing back on every man the burden of seeking for truth from which the Church had relieved him. And freedom in the highest sphere carried freedom in the lower, sometimes even for countries which rejected the Reformation as well as Rome. The supremacy of conscience proclaimed by the Reformation meant freedom first for heterodoxy. Persecution on a large scale was made impossible in Germany by the Peace of Westphalia, in England by the Revolution, in France by Voltaire and the Constituent Assembly. But it meant also political freedom, and the growth of freedom is bringing the whole conception of government into better accord with the divine ideal of goodness and unselfishness. All Protestant states except retrograde Germany are seeking justice, and the Catholic states nearly in proportion to their independence of Rome. The freedom won for criticism and science has been the occasion for many excesses; but the broad result emerging is confusion to the twin powers of agnosticism inside and outside the Christian Church. Above all, the free appeal to history has shown that the gospel is vaster and more varied, freer and more loving, than our fathers knew. The Reformation opened the way to a vision of God; and the vision of God is the inspiration of men.

LITERATURE.—[Dr. Gwatkin had finished this article, but had not added the literature, before his death. The following list has been prepared by the Editors.]

The writings of the Reformers and the works of leading Church historians may be consulted for the history proper of

the Reformation. Exhaustive lists of authorities will be found in the bibliographies attached to *The Cambridge Modern History*, i.-iii., Cambridge, 1902-04. In vol. i., *The Renaissance*, the section by W. Barry, describing 'Catholic Europe,' may be referred to, and that by H. C. Lea, on 'The Eve of the Reformation,' is also valuable. Vol. ii., *The Reformation*, gives the history of the movement in the different countries of Europe. Vol. iii., entitled *The Wars of Religion*, deals with those international and other conflicts which owe their origin to the Reformation.

Among books in which the ethical and other principles involved in the Reformation are outlined may be mentioned: C. Beard, *The Reformation in its Relation to Modern Thought* (H.E.), London, 1883; A. E. Berger, *Die Kulturaufgaben der Reformation*, Berlin, 1908; F. von Bezold, *Gesch. der deutschen Reformation*, do. 1890; G. Bonet-Maury, *Les Précurseurs de la Réforme et de la liberté de conscience*, Paris, 1904; Lord Bryce, *The Holy Roman Empire*, new and revised ed., London, 1904; M. Creighton, *Hist. of the Papacy from the Great Schism to the Sack of Rome*, new ed., 6 vols., do. 1901; A. Harnack, *Hist. of Dogma*, Eng. tr., from 3rd German ed., do. 1894-99, vol. vii.; P. Imbart de la Tour, *Les Origines de la Réforme*, 2 vols., Paris, 1905-09; J. Janssen, *Gesch. des deutschen Volkes seit dem Ausgang des Mittelalters*¹²⁻¹⁶, 8 vols., Freiburg im Br., 1891-04, Eng. tr., 16 vols., London, 1896-1910; J. Kostlin, *Martin Luther: sein Leben und seine Schriften*, ed. G. Kawerau, 2 vols., Berlin, 1903; T. M. Lindsay, *A Hist. of the Reformation*, 2 vols., Edinburgh, 1906; Luther, *First Principles of the Reformation* (the Ninety-five Theses and Three Primary Works of Luther), tr. and ed. with introd., H. Wace and C. A. Buchheim, London, 1883; A. O. Meyer, *Studien zur Vorgesch. der Reformation*, Munich, 1903; L. von Ranke, *Deutsche Gesch. im Zeitalter der Reformation*, 6 vols., Berlin, 1839-47, Eng. tr., 3 vols. (no more published), London, 1845-47; E. Troeltsch, 'Protestantisches Christentum und Kirche der Neuzeit,' in *Kultur der Gegenwart*, i. iv. 1., Leipzig, 1905; C. Ullmann, *Reformatoren vor der Reformation*, 2 vols., Gotha, 1886, Eng. tr., Edinburgh, 1874-77; H. B. Workman, *The Dawn of the Reformation*, London, 1901-02.

The Roman Catholic view of the Reformation, its causes and its consequences, is set forth in the following: H. S. Denifle, *Luther und Luthertum in der ersten Entwicklung*, 2 vols., Mainz, 1904-09; F. A. Gasquet, *The Eve of the Reformation*, London, 1905; H. Grisar, *Luther*, tr. E. M. Lamond, ed. L. Cappelletti, 6 vols., do. 1913-17; L. von Pastor, *Gesch. der Papste seit dem Ausgang des Mittelalters*, 6 vols., Freiburg im Br., 1886-1913, Eng. tr., 12 vols., London, 1891-1912.

REFORMED CHURCH IN AMERICA.—I. The name and its meaning.—At first the churches of this body were addressed as 'the Reformed Dutch Churches in New York and New Jersey.' In 1789 the title, 'the Reformed Dutch Churches in North America,' was given. The minutes of Synod at the adoption of the Constitution use the term, 'the Dutch Reformed Church in North America.' But the name on the title-page of the first edition of the Constitution, printed in 1793, is 'the Reformed Dutch Church in the United States of America.' The same title appears on the second edition of 1815. In subsequent editions it is 'the Reformed Dutch Church of North America.' The act of incorporation of the Synod in 1819 gives the name as 'the Reformed Protestant Dutch Church.' In these terms the history and geographical position of the Church are outlined. It was 'Protestant' in contrast with Roman Catholicism. It was 'Reformed' because it belonged to the school of Calvin rather than to that of Luther. It was 'Dutch' because Holland was the country of its origin. The expressions 'America,' 'North America,' and 'United States' give the country of its development. In process of time the title was considered cumbersome, and the word 'Dutch' inappropriate, since the membership had become thoroughly American. In 1867 the name was therefore changed to 'the Reformed Church in America.'

2. History.—(a) *Period of the Dutch domination (1623-64).*—To the Dutch West India Company, chartered in 1621, was committed the government of the Dutch colony on the banks of the Hudson, called New Netherland. The policy of this company was to foster the Reformed religion in the Dutch colonial possessions. Therefore in 1623 the company sent Sebastian Jansen Krol, a comforter of the sick, to New Netherland. He conducted services according to the rites of the Church of Holland.

Because the office of the company for New Netherland was in Amsterdam, the Classis of Amsterdam, by the decree of 1624, took charge of the religious work of the colony. The first Dutch pastor, Jonas Michaelius, was sent out in 1628. In April of that year he organized a church of 50 members in New Amsterdam. Peter Minuit, the governor, was an elder in this church. This was the beginning of Presbyterian church government in America. The church thus formed became the mother church of the denomination. It has had a continuous, recorded history from that day to this. With ample endowment and ten church buildings, it conducts a great work in the metropolis of the Western world. Its school is probably the oldest educational institution in the United States.

Under the Dutch West India Company the Reformed Church was the Established Church of the colony. Other sects were tolerated, although Governor Stuyvesant showed personal hostility to them. Thirteen churches were founded, and sixteen ministers served during this period. Seven of these were on duty at the time of the surrender to the English in 1664.

(b) *Period of struggle for civil independence (1664-1737).*—By the terms of surrender the Dutch Church was assured of freedom. But the change of Government was a severe blow to it. Financial support from the State soon ceased. The Church owed civil allegiance to the English Government and ecclesiastical allegiance to the Classis of Amsterdam. The combination was fruitful of misunderstandings. Few people came from Holland, but many English poured into the colony. Within the first twelve years after the surrender only one Dutch minister arrived. In 1676 only three Dutch ministers were in the country. The English governors obeyed the letter of the treaty granting freedom to the Dutch Church, but there was a tendency for the Church to become a mere organ of the civil power. Several incidents during the first generation of English rule taught the Reformed Church to be on its guard against encroachments on its liberties.

The Revolution in England in 1688 produced the Leisler tragedy in New York. This made a sad division in the Dutch Church, in which the populace was on the side of Leisler and the ministers and higher classes on the side of the Government. Governor Fletcher took advantage of this condition to advance the Episcopal Church at the expense of the Dutch. At his request the Ministry Act was passed by the Assembly in 1693. This Act provided for the support by taxation of 'a good, sufficient, Protestant minister' in each of the four southern counties of the province. The Dutch members of Assembly did not intend by this Act to establish the Episcopal Church, but Fletcher and several of his successors affected to consider the English Church established thereby, and much friction resulted. The Dutch Church of New York City, taking alarm, obtained a charter for itself in 1696. By this the rights and liberties of that individual church were secured. It was therefore able to lend effective moral support in the struggle to other churches. The majority of the Dutch ministers stood their ground in all the

tedious disputes with the governors, but a few surrendered their ecclesiastical independence from motives of personal ambition.

In the fight against a State Establishment the Dutch Church as a whole was at an advantage compared with other denominations. It was a National Church, not classed with 'Dissenters,' able to appeal to the treaty rights of 1664. While no 'Dissenting' church could obtain a charter before the Revolutionary War, several Dutch churches secured this coveted privilege. The Dutch Church therefore won the victory in its contest with the royal governors. By the third decade of the 18th cent. the theoretical liberty of the earlier time had become actual.

During these years the Church was growing. The natural increase of the Dutch population was great. Religious persecution drove French Huguenots and German Palatines to America. These united with the Reformed Church and became an important element in its life. By 1737 the thirteen churches of 1664 had become 65, and the seven ministers had become nineteen. There was need for more ministers, but to obtain them from Holland was difficult. It had always been contrary to the policy of the Classis of Amsterdam to allow American ordinations. They grudgingly permitted a few with the understanding that they were not to become precedents.

(c) *Period of struggle for ecclesiastical independence (1737-92).*—Under the leadership of Theodorus Jacobus Frelinghuysen the religious movement known as 'the Great Awakening' took a strong hold of the Dutch Church. This increased the desire for more ministers and loosened still further the weakening bond which held the Church to the Classis of Amsterdam. Frelinghuysen proposed that an institution to train young men for the ministry should be founded, and the churches organized into an Assembly to ordain them and perform other functions of an independent Church. In the year 1737 a plan for such an Assembly or Coetus was sent to Holland for approval. The Classis of Amsterdam doubted the wisdom and ability of the American Church. They thought it better for them to unite with the Germans and Presbyterians. This plan came to naught. With the precedent of other American churches becoming independent before their eyes, after long delay, in 1747, they granted permission for the Dutch Church in America to form a Coetus. But this privilege was bound with such restrictions that it was practically worthless. Ordinations were allowed only by special permission, and appeals to Holland were granted. For six years this Coetus led an ineffectual life, and then in 1754 issued a declaration of independence. This offended some of the more conservative ministers, who seceded under the leadership of Domine Ritzema, senior minister of the Dutch Church of New York City.

The members of the new Classis or Coetus possessed energy and piety. They professed reverence to the Classis of Amsterdam, but took their own independent course. They ordained, when they thought proper, young men for service in the Dutch churches of America, and made strenuous efforts to found a college for the education of ministerial candidates. This they accomplished in 1766, when Queen's College, afterwards Rutgers, obtained a charter. The seceded ministers called themselves 'the Conferentie.' They were a minority in number, but possessed the weight of age and scholarship. They professed to be the legitimate successors of the old Coetus, and they retained the records of that body. They emphasized their subordination to the Classis of Amsterdam and were free in their criticisms of the Coetus brethren.

Yet they realized the necessity of theological education, and Domine Ritzema evolved the plan of a Dutch Divinity professorship in the newly-organized King's College, in New York City. The plan was adopted, but the chair was never occupied. In 1764 the Conferentie organized themselves into an 'Assembly subordinate to the Classis of Amsterdam.' The next year by special permission they ordained one young man.

The Classis of Amsterdam did not understand conditions in America. At first they favoured the Conferentie, but in time they perceived that the freedom usurped by the Coetus was necessary to the life of the American Church. John Henry Livingston, sometimes called 'the father of the Reformed Church,' was influential in enlightening them. A well-informed American, he studied theology at the University of Utrecht in 1765-70. He took every opportunity to explain conditions in the American Church to members of the Classis of Amsterdam. On Livingston's return to America he became pastor in New York City, and the next year (1771) under his influence a peace conference was held. At this a plan of union, proposed by the Classis of Amsterdam, was presented. Both parties were tired of strife, and peace was obtained with surprising ease. The freedom desired by the Coetus was secured, and the feelings of the Conferentie were soothed by the adoption of names not connected with the old disagreements. An organization, called a 'general body,' was formed with power to ordain, and five 'special bodies' were grouped under it. The Church, now acknowledged independent, was about to enter upon a full ecclesiastical and religious life.

But the clouds of the Revolutionary War were gathering, and the Reformed Church was directly in the track of the storm. The losses of the Church during that upheaval were great. Much property was destroyed and congregations were scattered. Within New York City a handful of Dutch Tories held service during its occupation by the British, although their pastors and most of their brethren had fled.

At the return of peace in 1783 the Church rapidly arose from its ruins. In 1784 the independent names of Synod and Classis were assumed without further regard to conservative feelings. The same year Livingston was chosen professor of Theology in connexion with his New York pastorate. In 1788 a committee was appointed to translate the standards of doctrine, liturgy, and the rules of order of the Dutch Church into English. They were to revise such statements as did not suit the free conditions in America. This was accomplished in 1792, and the next year the work was issued. Thus the organization of the independent Church was completed and the Church began its national life. Letters between the mother Church in Holland and the daughter Church in America were occasionally sent for about a score of years, but the custom gradually fell into disuse.

During the colonial period about 150 churches were organized, and about 150 ministers served in the Dutch Church.

(d) *Period of the independent American Church (1792-1916).*—The life of the Reformed Church in America during the years of its national existence has been similar to that of other Presbyterian bodies within the United States. The English language is generally used, and the membership has been drawn from Evangelical Christians of every name. It is not uncommon in the cities to find that the members of an individual Reformed church trace their ecclesiastical ancestry to a dozen different sources. The general public does not distinguish it from its Presbyterian neighbours.

In 1846 the Reformed Church received a stream

of emigration from Holland which increased its numbers, and caused the flavour of the Dutch Reformation to prolong its life in the Middle West. The Church had always been strong in New York and New Jersey. These immigrants founded about 200 churches in the region of which Chicago is the centre, and have extended their influence to the Pacific coast.

There have been a few secessions from the Reformed Church. In 1822 Solomon Froeligh and four suspended ministers, being more conservative in doctrine than their brethren, organized 'the True Reformed Dutch Church.' This became extinct in 1890. In 1882 another secession of certain Hollanders in the west took place. They were displeased because the Synod would not take action against Freemasonry. They joined with others to form 'the Christian Reformed Church.'

The Reformed Church in America has always been interested in missionary effort. In the generation succeeding the Revolutionary War the church of New York City received constant appeals for aid from weak churches. To these she seldom turned a deaf ear. Several Domestic Mission Societies were organized at different times, and the Board of Domestic Missions of the Church was born in 1831. Its chief work is to aid feeble churches and to organize new ones in proper places. Many of the strong churches of the denomination have received aid from it in their infancy. The first year of its existence its income was \$5,400. In the year 1915 it received \$197,555.55.

Foreign missionary work has received unusual attention. The first society for this purpose was organized in 1796. From 1826 to 1832 the Reformed Church worked in union with the American Board of Commissioners for Foreign Missions. From 1832 to 1857 its relation with that board was that of co-operation. Since 1857 the Reformed Church has conducted its foreign mission work independently but with hearty co-operation with other Churches in the foreign field. The receipts of this board in 1915 were \$300,752.51. The board at present maintains five missions, viz. Amoy, China, 1842; Arcot, India, 1853; N. Japan, 1859; S. Japan, 1859; Arabia, originally an independent mission, 1889, but adopted by the board in 1894. The women of the Church also maintain foreign and domestic mission boards.

Other boards of the Church are: the Board of Direction, which has charge of the property of the Synod; the Board of Education, which aids young men studying for the ministry and assists in the support of certain educational institutions; the Board of Publication and Bible Work; the Disabled Ministers' Fund and the Widows' Fund.

In 1915 there were reported 718 churches with 126,847 communicant members, served by 750 ministers.

3. *The doctrine and polity of the Reformed Church in America.*—The Constitution of the Netherlands Reformed Church, decreed by the Synod of Dort (1618-19), was formally adopted by the Reformed Church in America in 1771. That Constitution then contained the following elements: the Belgic Confession of Faith, the Heidelberg Catechism and the compendium of the same, the liturgy, the canons of the Synod of Dort, and the rules of Church government.

The standards of doctrine have remained unchanged, but the Church has been little troubled with heresy. It has been conservatively progressive in the interpretation of these standards. The Constitution and the liturgy have been revised in 1833, 1874, and 1916. Certain portions of the liturgy are optional. Some of these have fallen into general disuse. But certain portions are required; they are generally admired and perhaps

are the most distinguishing feature in the services of the Reformed Church.

The form of government is of the Presbyterian type, first proposed by Calvin and adopted by the Netherlands churches in 1568. It requires four classes of officers in the church: ministers, teachers (of theology), elders, and deacons.

The unit of government is the Consistory ruling the individual church. A group of churches forms a Classis. Of this body the ministers and an elder representing each church are members. In 1915 there were 37 Classes in the Reformed Church of America. Above the Classis is the Particular Synod, of which there are four. The General Synod is the supreme court. It has held regular annual sessions since 1812. It was incorporated in 1819.

While loving its own doctrine and method, the Reformed Church has always been charitable towards other views and methods, and ready to labour hand in hand with every other denomination of Evangelical Christians.

4. Educational institutions. — The Reformed Church has always insisted upon an educated ministry. Its institutions of learning are as follows: (1) Rutgers College, New Brunswick, N.J., 1766; its name was changed from Queen's to Rutgers in 1825; it is the State college of New Jersey and since 1865 is no longer under the control of the General Synod; (2) the Theological Seminary, New Brunswick, N.J., 1784; this is perhaps the oldest institution of its kind in the United States; it has been located at New Brunswick, N.J., since 1810, when Livingston, who had been both pastor in New York and professor of Theology, resigned from his pastorate and removed to New Brunswick to devote his entire time to teaching; (3) Hope College and the Western Theological Seminary, 1866, both located at Holland, Michigan. Besides these the Church has several schools of lower grade in America and important institutions upon its mission fields.

CHARLES E. CORWIN.

REFORMED CHURCH IN THE UNITED STATES.—This religious denomination, which was formerly known as 'the German Reformed Church,' is derived from the Reformed Churches of Germany and Switzerland. In government it holds to the Presbyterian system. Its confession of faith is the Heidelberg Catechism. It developed 'the Mercersburg Theology,' one of the phases of American theological thought.

Individual members of the Reformed Church emigrated to America early in the 17th century. Peter Minuit, the leader of the Swedish colony which in 1638 settled on the banks of the Delaware, had been a ruling elder of one of the Reformed churches of the German city of Wesel. Among the Hollanders who founded New York there were not a few Germans, but these generally identified themselves with the Reformed Dutch churches. In the southern colonies there were German and

French Reformed among the earliest settlers. Wherever Episcopahans or Presbyterians had occupied the field, they rarely attempted a separate organization. In Pennsylvania Reformed families are known to have settled before the arrival of William Penn.

About 1709 German Reformed people began to arrive in America in great numbers. Most of these were natives of the Palatinate on the Rhine or of neighbouring provinces, though there were also many Swiss. The principal cause of this extensive migration was no doubt a desire on the part of the immigrants to better their worldly condition. In the Palatinate great distress was directly or indirectly the result of the French wars which had devastated the land. Even after peace had been declared there was no immediate improvement. Finally came the terrible winter of 1708-09, which greatly increased the distress. It was reported that Queen Anne had invited the suffering Palatines to emigrate to the British colonies.

'Then,' says F. Loher, 'men looked into each other's faces and said: "Let us go to America, and if we perish, we perish."'¹

The condition of Switzerland was hardly more encouraging than that of the Rhine country. The people complained that great numbers of foreign refugees had crowded into Switzerland; and, as many of these were skilled labourers, they unintentionally deprived the natives of their means of subsistence. As early as 1663 Peter Fabian, of Bern, sent out by the English Carolina Company, visited Carolina in the hope of establishing a settlement, but he does not appear to have been successful. In 1710 Christoph von Graffenried and Michell, natives of Bern and sailing from England, founded Newbern, in N. Carolina. About 1730 the stream of Swiss immigration turned northward, and in E. Pennsylvania the Swiss became especially numerous. There were no doubt some of them among the Palatines who went from Amsterdam to London in 1709; but the Swiss generally sailed directly from Rotterdam to America, and purchased land soon after they reached their destination.

The estimates of the extent of the German and Swiss immigration to America in the 18th cent. differ. Isolated settlements were founded here and there from Canada to Georgia, and for a long time there was little communication between them. Theodor Poesche, a careful authority, puts the number in America before the Revolution of 1776 at 200,000, A. B. Faust² at 225,000. About the middle of the 18th cent. there may have been 30,000 members of the German Reformed Church in Pennsylvania alone, but it is evident that nothing like that number was gathered into congregations. It was, however, in that province that the Germans were most numerous, and it is there that we find the beginnings of a general organization of the Reformed Churches.

The history of this denomination may be comprehended in five periods.

1. 1709-46: Isolated congregations. — This period is characterized by the founding of congregations and the beginning of missionary activity. The earlier portion is very obscure. Religious services were held in private houses, or sometimes in the open air. In the absence of regular ministers, sermons were read by schoolmasters or other intelligent laymen. Among the best known of these schoolmasters was Thomas Schley, the ancestor of Admiral Winfield Scott Schley and the founder of Frederick City, Md. He was singled out by Schlatter as the best teacher he had found

¹ *Gesch. und Zustände der Deutschen in Amerika*, Leipzig, 1855, 2 Gottingen, 1855, p. 42.

² *The German Element in the United States*, i. 285.

in America, edifying 'the congregation on every Lord's Day by means of singing and reading God's Word and printed sermons.'

John Frederick Haeger (1684-1722) was the earliest missionary. He was ordained by the bishop of London on 20th Dec. 1709, at the solicitation of the Society for the Propagation of the Gospel in Foreign Parts, 'for service among the Palatines, New York.' He laboured in the settlements on the Hudson and began to build a church, but did not live to complete it. His father, John Henry Haeger, an ordained minister who had been rector of the Latin school at Siegen, in Nassau-Dillenberg, followed him to America in 1714, and became pastor in Virginia at a village, named Germanna, which had been built by certain miners who had been brought over by Governor Spotswood.

In Pennsylvania the earliest missionary labour appears to have been performed by a Hollander. At Neshaminy, in Bucks county, there was a Reformed Dutch church—the only one in the province—and from its records it appears that its pastor, Paulus Van Vleecq, on 29th May 1710, visited the (German) settlement at Skippach, where he baptized several children, and on 4th June of the same year ordained elders and deacons at White Marsh. These were probably the earliest German Reformed churches in Pennsylvania, though it is possible that some sort of organization may have been almost simultaneously established at Germantown and Falkner Swamp.

Samuel Guldin (1664-1745) was a Swiss minister who arrived in Pennsylvania in 1710. He had been associate pastor of the cathedral church at Bern, but was removed from his charge for Pietism. In America he seems to have lived in retirement, though he preached occasionally in Germantown. He published three small volumes, treating principally of his unhappy European experiences.

In 1725 the congregations at Falkner Swamp, Skippach, and White Marsh, after seeking in vain for a regular minister, extended a call to John Philip Boehm, who had previously served as their 'reader.' His ministry proved successful, and, after communications with the Classis of Amsterdam, he was ordained in 1729 by Dutch ministers of New York. John Philip Boehm (1683-1749), whose indefatigable activity and great importance for the Reformed Church in the U.S. have been recently established by W. J. Hinke,¹ had been a parochial teacher at Worms, and came to America about 1720. He prepared for his congregations a constitution, which was approved by the synods of Holland and was long regarded as a model. He was the author of several vigorous controversial pamphlets and founded many congregations, his missionary journeys extending from the Delaware river almost to the Susquehanna. Profoundly impressed by the helpless condition of the churches of Pennsylvania, he appealed for aid to the synods of Holland, and it was greatly by his influence that the European churches were awakened to a sense of their duty towards their brethren beyond the sea.

In 1727 George Michael Weiss (1700-63), an ordained minister, arrived at Philadelphia. He had been commissioned by the Ober-Consistorium of Heidelberg to accompany 400 Palatines to America as their leader and guide. In the year of his arrival he organized the Reformed Church of Philadelphia. In 1730 he accompanied Jacob Reiff on a journey to Europe, to collect money and books for several destitute churches, returning to America the following year. He subsequently served a charge in the province of New York, but finally returned to Pennsylvania.

¹ *Letters and Reports of the Rev. John Philip Boehm.*

John Peter Miller (1710-96) and John Bartholomew Rieger (1707-69), both natives of the Palatinate, arrived in 1730. After serving in the Reformed Church for several years, Miller joined the Seventh-day Baptists and became the head of a monastic institution at Ephrata. Rieger subsequently studied medicine, and, though he was at times active in the work of the Church, was in later years best known as a physician.

The name of John Henry Goetschius (1718-74) frequently appears in early congregational records. His father, Mauritz Goetschius, who had previously been pastor at Saletz, in the canton of Zürich, Switzerland, came to America in 1735, accompanied by his family. He died not long after landing in Philadelphia, and his son, John Henry, soon afterwards began to preach with great acceptance, though he was only seventeen years old. In 1736 he claimed to be pastor of twelve congregations. In later years he became an eminent minister in the Reformed Dutch Church. His brother-in-law, John Conrad Wirtz, also became a minister, and is regarded as the founder of the Reformed Church in the city of York, Pennsylvania.

In 1742 several Reformed ministers joined with Count Zinzendorf in the organization of the 'Congregation of God in the Spirit.' It was proposed to unite the German denominations (Lutheran, Reformed, and Moravian) in a higher unity without destroying their identity. Until 1748 this organization laboured earnestly, especially among the Reformed and Lutherans, but the movement finally proved unsuccessful, and most of its adherents identified themselves with the Moravians. The most eminent of the Reformed ministers who belonged to the 'Congregation' were Henry Antes, John Bechtel, Christian H. Rauch, Jacob Lischy, and John Brandmiller.

2. 1746-93: Denominational organization.—The leading event of this period was the founding of the 'Coetus,' by Michael Schlatter, in 1747. For eighteen years the Church of Holland had been directly interested in the German churches of Pennsylvania; but nothing had been done to secure a general organization. It was believed that the American churches were not ready for the establishment of an independent Synod; and it was, therefore, suggested that an advisory body, composed of ministers and delegated elders, should as soon as possible be organized. This body was to be known as the 'Coetus,' or 'Convention'—a term which was first applied by John à Lasco to a weekly conference of ministers which he established in 1544 at Emden, in Germany.

There were certain difficulties which may at first have appeared almost insurmountable. The Germans of Pennsylvania were not of Dutch speech or nationality; they had not been trained to acknowledge the national Confessions of the Netherlands, and it would have required much labour to bring them into full accord with their new ecclesiastical relations. A man was needed who could speak the language of both nationalities, who was willing to be the confidential agent of the Dutch Synods, and might serve as a personal link between the Old World and the New. There was, therefore, great rejoicing when a young Swiss minister appeared and offered to undertake the work.

Michael Schlatter (1716-90), a native of St. Gall, belonged to a prominent family and was thoroughly educated. Having spent a part of his youth in Holland, he was familiar with the language of that country. After his ordination to the ministry he preached for several years in his native country; but, having heard of the necessities of the American churches, he went to Holland and was commissioned by the synods of Holland to undertake the work of organizing them. Nine days after receiv-

ing his commission he set sail for America, where he arrived on 1st Aug. 1746. In his American work he manifested extraordinary energy and perseverance. He made extensive missionary journeys, organized thirteen pastoral charges, and convened the first Coetus in Philadelphia on 29th Sept. 1747, with four ministers and 28 elders in attendance. The ministers, besides Schlatter, were Boehm, Weiss, and Rieger. From this time the Coetus met annually, its proceedings being sent to Holland for revision and approval.

In 1751 and 1754 Schlatter visited Europe in the interest of the American churches. His first mission proved remarkably successful. In one year he wrote and published his *Appeal*, attended many conferences in Holland, Germany, and Switzerland, induced six young ministers to accompany him on his return to America, and collected £12,000, the interest of which was to be applied to the destitute churches of Pennsylvania and schools. The ministers who accompanied Schlatter to America were Philip William Otterbein, John Jacob Wissler, John Waldschmidt, Theodore Frankenfeld, Henry William Stoy, and John Casper Rubel.

Schlatter's enthusiasm proved contagious, and David Thomson, pastor of the English church at Amsterdam, went to England to plead for the establishment of schools among the Germans of Pennsylvania. He was very successful, and it is said that the king gave a personal contribution of £1000. A number of so-called 'Charity schools' were founded in Pennsylvania, and Schlatter was made superintendent of this educational movement, a position which he filled till 1756. He was for some years a chaplain in the Royal American Regiment of infantry, and subsequently lived in retirement near Philadelphia.

The Coetus increased slowly. 'The fathers' in Holland sent a number of missionaries, who had, almost without exception, been well educated in German universities. They refused, however, to grant to the American body the privilege of conferring the rite of ordination, and this led to frequent disagreements. A considerable number of ministers failed to become members of Coetus.

Among the most prominent members of Coetus were the following: J. Conrad Steiner (1707-62), author of several volumes of sermons; Philip William Otterbein (1726-1813), pastor in Baltimore, who, under the influence of the Methodist revival, founded religious societies from which the denomination of 'the United Brethren in Christ' was developed; J. Daniel Gros (1737-1812), professor in Columbia College, New York, and author of an important philosophical work (in English); C. D. Weyberg and William Hendel, two ministers who united, in 1787, with several Lutheran pastors in founding at Lancaster, Pennsylvania, Franklin College, so named in honour of Benjamin Franklin, who was the largest individual contributor to its endowment.

The leading independent minister was John Joachim Zubly (1724-81), of Savannah, Georgia, an author, and elected in 1775 a member of the Continental Congress. In 1787 the Reformed ministers of S. Carolina joined with several Lutheran ministers in forming a union which received the double name of 'Corpus Evangelicum' and 'Unio Ecclesiastica.' This movement is interesting principally from the fact that it anticipated the Prussian Church union of 1817 in some important particulars.

During this period the Coetus remained warmly attached to the Church of Holland. In 1770 an attempt to unite the German and Dutch Reformed elements in a General Synod was defeated by the Germans on the ground of gratitude to 'the

fathers' in Holland and particularly to the Classis of Amsterdam. In the war of the Revolution, when communication with Europe was much interrupted, the American churches learned to depend upon their own resources. In 1792 the Coetus abandoned the custom of sending its minutes to Holland for revision. The period of dependence was at an end and the Coetus by its own act became an independent Synod.

3. 1793-1820: The independent denominational organization.—About twenty ministers united in the organization of the Synod which met at Lancaster, Pa., in 1793. The condition of the Church at that time could hardly be called encouraging. Congregations had grown numerous, but were apathetic. The pioneers had passed away, and the younger ministers were imperfectly educated. No provision had been made for higher education, and the number of candidates for the ministry was small, so that extensive districts were left without pastors. Important congregations called pastors, without much discrimination, from other denominations, and the people were in danger of being alienated from the faith of their fathers. The introduction of the English language was resisted by the older generation and led to serious conflict. Pastors generally laid stress on catechetical instruction, but the establishment of Sunday schools was viewed with suspicion, as were all so-called Methodist methods. The faith of the people was mainly traditional, and the prevailing theology was that of the Cocceian or Federalistic school. The Church, however, grew by natural increase, and a new and brighter era was ahead of it.

4. 1820-63: Consolidation and development, educational institutions and liturgical worship.—At the beginning of this period the number of ministers had increased to 70, and it was found difficult to bring them together at synodical meetings. It was, therefore, determined to divide the Synod into eight Classes, which held their earliest meetings in 1820. From this time onwards the Synod was a delegative body chosen by the Classes. The Classis of Ohio, on account of the Synod's refusal to grant to the Classes the privilege of conferring the rite of ordination, became in 1823 a separate body, known as the 'Synod of Ohio.' In this position it remained until the organization of the General Synod in 1863. Heidelberg College at Tiffin, Ohio, was founded in 1850. In 1820 a plan was adopted for the establishment of a Theological Seminary, which was opened at Carlisle, Pa., 1825, with Lewis Mayer as the first professor of Theology. Mayer wrote *A History of the Reformed Church* and valuable monographs.

In 1825 James R. Reily, one of the zealous friends of the Seminary, visited Germany to solicit contributions towards an enterprise that was so intimately related to the welfare of emigrants from the fatherland. He secured a good library and a considerable sum of money. Among the most liberal contributors was His Majesty Frederick III. of Prussia. In 1829 the Seminary was removed to York, Pa., and in 1837 to Mercersburg, Pa. Two years before (1835), this small town, afterwards to become famous, was made the seat of Marshall College.

Frederick Augustus Rauch (1806-41), the first president of Marshall College and associate professor in the Theological Seminary, had served a short time as professor extraordinary at Giessen, in Germany, and had just been appointed a full professor at Heidelberg when, on account of political troubles, he was compelled to leave his fatherland. He had been a favourite pupil of the great eclectic philosopher, Carl Daub, and, though he was recognized as a Hegelian, many elements of his thinking were derived from Schelling and

others of his great contemporaries. In theology he was orthodox, and he had been ordained to the ministry. At Mercersburg he wrote his *Psychology* (New York, 1846) and had begun a treatise on æsthetics, when he died suddenly on 2nd March 1841.

In 1839 Mayer retired from his professorship, and in 1840 John Williamson Nevin was elected his successor. He was at that time professor in the (Presbyterian) Western Theological Seminary at Pittsburgh, Pa., and was already known as an earnest student of German philosophy and theology.

Nevin was born in Franklin county, Pennsylvania, on 20th Feb. 1803, and died at Lancaster on 6th June 1886. He graduated at Union College, New York, and studied theology at Princeton. Before going to Pittsburgh he had been assistant teacher of theology at Princeton, and had published his *Summary of Biblical Antiquities* (Philadelphia, 1828). In accepting the invitation to Mercersburg he was convinced that he was called to perform an important task, and his transition to the Reformed Church was fully approved by his Presbyterian associates. For many years Nevin was the head of the institution at Mercersburg. The books which he wrote, though few in number, had great influence in his denomination. His tract *The Anxious Bench* (Chambersburg, Pa., 1843) aroused wide attention, and his book *The Mystical Presence* (Philadelphia, 1846) presented the real spiritual presence in the Lord's Supper. He was a profound thinker and a powerful controversial theologian. From 1849 to 1853 he edited the *Mercersburg Review*, and most of his theological articles appeared in that periodical.

In 1843 the Synod, convened at Lebanon, Pa., elected F. W. Krummacker, of Elberfeld, Prussia, to become Rauch's successor at Mercersburg. Benjamin S. Schneek and Theodore L. Hoffeditz went to Germany to present the call, and their visit attracted much attention in Berlin and other cities. When Krummacker declined the call, the attention of the commissioners was diverted by Neander, Tholuck, Julius Müller, and Krummacker to Philip Schaff (1819-93), who was at that time a *privatdozent* in the University of Berlin. On this recommendation Schaff was elected professor of Theology at Winchester, Va., on 19th Oct. 1843, and came to America the following year.

Schaff's inaugural address, *The Principle of Protestantism*, published with an Introduction by Nevin (Chambersburg, Pa., 1845), defended the doctrine of historical development, a theory at that time considered dangerous by many German Reformed ministers. For this reason and on account of alleged Roman Catholic tendencies, the inaugural was made the ground of a charge of heresy. Schaff was tried before the Synod and acquitted by a practically unanimous vote.

Through the teachings of Nevin and Schaff Mercersburg became widely known as the seat of the 'Mercersburg Theology.' Misrepresented as a Romanizing movement in sympathy with the Tractarianism of Oxford, it really was strongly Protestant, but stood for a high view of the Church and her ordinances and not for any peculiar system of divinity. Stress was laid upon the liturgical element in worship, the real spiritual presence of Christ in the Lord's Supper, and the importance of the early Church Fathers. Nevin's articles on 'Early Christianity' and on 'Cyprian' in the *Mercersburg Review* (1851, 1852) helped to increase the unrest which Schaff's inaugural had stirred up.

Schaff was active in literary labour as well as in the class room. He stated his views of historical development in *What is Church History?* (Phila-

delphia, 1846), and published his *History of the Apostolic Church* (first in German, Mercersburg, 1851,² Leipzig, 1854, Eng. tr., New York, 1853) and his *History of the Christian Church, I.A.D.-600 A.D.* (2 vols., New York, 1853-67), a German *Hymn-book* (1859) still used in the worship of the German Reformed and Presbyterian Churches of the United States, and other works. Nevin resigned his professorship in 1851, subsequently becoming president of Franklin and Marshall College, the chief literary institution of the Church. Schaff remained in Mercersburg till 1863.

Influenced by the example of these teachers, many younger men engaged in literary work and became prominent as authors and Church leaders—H. A. Bomberger, E. V. Gerhart, Henry Harbaugh, Thomas C. Porter, George W. Willard, and Jeremiah I. Good. In 1851 Catawba College was founded at Newton, N. Carolina. In 1853 Marshall College was removed to Lancaster and consolidated with Franklin under the title of Franklin and Marshall College. In 1871 the Theological Seminary was removed from Mercersburg to Lancaster, where both institutions have since been successfully conducted. During this period also the Church was greatly disturbed over the preparation and use of a Liturgy, Schaff being one of the leaders in the preparation of the book (Philadelphia, 1857).

Missionary work in the West was successful, especially among the Germans. In 1860 a colony of emigrants from Lippe-Detmold founded the Mission House at Franklin, Wis., which has become an important centre of missionary activity.

5. 1863-1918: The peaceful growth of the Church.—The year 1863 was distinguished by the tercentenary celebration of the Heidelberg Catechism. There were several largely attended conventions, at which essays were read which were afterwards published in English and German in the *Tercentenary Monument* (Chambersburg and Philadelphia, 1863). A memorial edition of the Heidelberg Catechism in three languages was also published (*The Heidelberg Catechism in German, Latin, and English*, with Introd. by J. W. Nevin, New York, 1863, Bonn, 1864, and *Der Heidelberger Catechismus, nach der ersten Ausgabe von 1563, etc.*, Philadelphia, 1863, rev. ed. 1866).

In the same year the General Synod was organized by the union of the Eastern and Western Synods. During their long separation these bodies had developed local peculiarities, and there were disagreements on the general subject of cultus. As early as 1847 a Liturgical Committee had been appointed by the Eastern Synod, and several proposed orders of service were published. During the heated controversy over the subject Ursinus College was founded, in 1869, by Bomberger. In 1879 the controversy was concluded by the appointment of a Peace Commission, which also prepared the order of worship now generally used. There is no disposition to abridge the freedom of worship, and the use of the Liturgy is not compulsory.

The Reformed Church is connected with the 'Alliance of Reformed Churches holding to the Presbyterian System,' and is greatly interested in the establishment of a closer federation. There have been several efforts for an organic union with the Reformed Church in America (Dutch) (*q.v.*), but these have hitherto proved unsuccessful, principally on account of a difference in doctrinal standards. A movement for the union of the Church with the Presbyterian Church in the U.S. of America came to an end in 1915; 220 presbyteries had voted in favour, but the majority of the Classes was against it. In 1869 the foreign patril adjective, 'German,' was removed from the official

title of the Church. In spite of difficulties and trials, the Reformed Church in the United States has greatly increased in numbers and influence. In 1916 there were, in connexion with the General Synod, 9 district synods, 1213 ministers, 1759 congregations, and 320,459 communicants, with contributions for congregational purposes of \$2,201,545 and for benevolence \$680,450. There are missions in Japan and China, with 6 schools. Of the synods 6 are prevalently English, and 3 wholly English. There are 15 theological seminaries and colleges, and 26 recognized periodicals. Five orphan homes and a deaconess home are maintained.

The Reformed Church is sincerely attached to its ancient standards, but also believes in the principle of progress. Its theology is Christocentric—an attitude which has found elaborate and systematic expression in E. V. Gerhart's *Institutes of the Christian Religion* (2 vols., New York, 1891-94, with Introd. by Philip Schaff). Religious services are conducted according to the general order of the Church year. Confirmation is practised, not as a sacrament but as an appropriate rite attendant upon admission to the Church. Its attitude towards other Christian denominations is fraternal.

JOSEPH HENRY DUBBS.

REFORMED EPISCOPAL CHURCH AND FREE CHURCH OF ENGLAND.—The Free Church of England, and, as its title indicates, the Reformed Episcopal Church in the United Kingdom, otherwise called the Reformed Church of England, claim, each separately, to possess the historic episcopate, indirectly from Canterbury, to which the old-fashioned, unemotional English Churchman, in his cautious self-guard and conservative ecclesiasticism, attaches supreme importance. In the Reformed Episcopal Church three orders of ministers are recognized: bishops, priests (i.e. presbyters), and deacons. The Free Church of England, in its published Declaration of Principles, says:

'Guided by the New Testament and by the ecclesiastical polity of the Primitive Church, this Church recognizes only two Orders of Ministers, Presbyters and Deacons.'

Nevertheless, the first order is divided into two offices, i.e. bishops and presbyters. The attitude of both the Churches is very clearly expressed about their view of episcopacy. The Reformed Episcopal Church says:

'This Church recognizes and adheres to Episcopacy, not as of Divine right, but as a very ancient and desirable form of Church polity.'

The Free Church of England expresses the same belief in similar words and adds:

'But for the avoidance of any possible misunderstanding, it hereby emphatically declares its repudiation of the Romish dogma of Apostolical Succession in the Ministry as involving the transmission of spiritual powers.'

Both of the Churches in similar terms condemn and reject the following 'erroneous and strange doctrines as contrary to God's Word':

'First.—That the Church of Christ exists only in one order or form of ecclesiastical polity.'

Second.—That Christian ministers are "priests" in another sense than that in which all believers are a "royal priesthood."

How the Free Church of England came to be possessed of the historic episcopate, of which the founders never dreamt, must now be told. We are dealing with the history and polity of the Free Church of England before that of the Reformed Episcopal Church in England because of the two Protestant Episcopal Churches outside the Established Church the former was the first founded. In fact, the latter grew out of the former, withdrawals having quietly taken place from the Free Church of England on the question raised by Churchmen in the religious press concerning the historic episcopacy. Four of those who thus seceded, one of whom had been episcopally consecrated as a bishop in the Free Church of England, became subsequently bishops in the Reformed Episcopal Church. As three out of these four seceders had been at one time Congregational ministers, it may fairly be assumed that none of them was personally hampered by any deep conviction that, in order to secure valid orders, the 'laying on of hands' must be by a bishop in the historical succession, but that they took the important step because they thought that by so doing they would better meet the objections of rigid Church people to a purely elective episcopacy.

1. The Free Church of England.—The Free Church of England is a Protestant Episcopal Church, which, as regards orders, doctrine, and worship, takes outside the Established Church a position similar to that of the Evangelical party within. The Oxford Movement (*q.v.*), as it is generally called, which, according to Cardinal Newman, was started on 14th July 1833, in order to arouse the clergy of the Church of England from the cold, apathetic condition into which they had fallen, led to the formation of the Free Church of England, as an effective antidote to the advanced sacerdotal teaching of the pioneers of the ritualistic campaign—the eminent clergymen of the Church of England who had dived deeply into early Patristic teaching and pre-Reformation practices—and the materialistic exaggerations of their immediate successors, who did not possess the scholarship, sanity, or personal piety of such men as Keble, Pusey, Ward, and Faber, but who far surpassed them in zeal.

For a decade there had been simmering among the loyal Evangelical clergy an opinion, which gradually deepened and widened in larger and in even outside circles, that something effective should be done to counteract the rapidly spreading sacerdotal movement. In 1843 matters were brought to a head, and precipitated the formation of the Free Church of England.

The see of Exeter was presided over by Henry Phillpotts, who was a strong High Churchman, a strenuous controversialist; and, holding Cyprianic views as to the Divine authority of the episcopal office, to which he did not hesitate to give effect in his diocese, he was at times in serious conflict with one or another of his clergy. In Church history (1847) he is well known by his attempt to stretch ecclesiastical law by imposing an unheard-of test upon George Cornelius Gorham, a third wrangler and a Fellow of Queen's College, Cambridge, before instituting him to the vicarage of Brampford-Speke, Exeter, to which he had been appointed by Lord Chancellor Cottenham. James Shore had for ten years been the esteemed minister of Bridgetown Chapel-of-Ease. A new vicar, on coming into residence, informed him that his nomination to the Episcopal chapel could not be renewed; and the bishop withdrew his licence and declined to state his reasons for so doing. The Duke of Somerset, on being memorialized by 800 members

of the congregation, decided to re-open it, but this time without the bishop's licence. Shore wrote formally, and, as he thought, legally, resigning his position in the Church of England; and on 14th April 1844 he again preached in the chapel to his old well-beloved congregation; but this time as a clergyman in the Free Church of England. The bishop of Exeter, believing as a High Churchman in the indelibility of Holy Orders, because, when they are conferred, a special spiritual grace, mysteriously handed down from the apostles, is *ex opere operato* then imparted by the ordaining bishop, which can only be sinned away by the recipient, promptly instituted proceedings against Shore. The law, as it then stood, was in the bishop's favour. Notwithstanding this, Shore again preached at Spa Fields Chapel on 9th March 1849; and, when he came down from the pulpit, he was arrested by two officers of the ecclesiastical court for non-payment of the bishop's costs. Hereupon Thomas E. Thoresby, the minister of Spa Fields Chapel, London, inserted an advertisement in the *Times*, calling for a meeting at Exeter Hall 'to confer as to the best means of altering the law under which the Rev. James Shore had been committed; and of effecting his immediate liberation.' At that meeting 5000 men were present, and one of the speakers significantly declared 'that by God's help there would be a Church in which the Bishops would not be able to play such pranks.' It was Thoresby who thus spoke, and from henceforth he devoted his sound judgment, strong intellectual powers, and scholarly attainments to the establishment of the Free Church of England. Advice was sought, friends were consulted, and the draft of a plan, which he discovered among the documents in the possession of the Countess of Huntingdon (but which the Countess did not live to execute), formed the basis of a constitution, or deed poll, which was submitted to some of the leading Evangelical clergymen and ministers of the Connexion inviting suggestions, improvements, and criticisms, in order to secure as thorough and complete a Church polity as possible, moulded strictly upon NT authority. Fourteen years of the prime of his life did Thoresby give to the work which he had taken in hand and on which he had set his heart. The plan took definite shape in the year 1863, when at the annual conference of the Countess of Huntingdon's Connexion (*q.v.*), held on 24th June at Spa Fields Chapel, the 'Free Church of England' was formally organized and duly inaugurated by the passing of a resolution setting forth the position of the Connexion and the reasons which led to the adoption of the title of 'The Free Church of England.' The long preamble to the resolution, after alluding to the circumstances under which the Countess of Huntingdon's Connexion came into existence, goes on to say:

'Whereas by a solemn statement made by the Countess's devisees, the Connexion was declared to be essentially in the main, as to its doctrine and liturgy, one with the Church of England; and as to its government, whilst allowing the distinctness and separate government of the several congregations, was held to be Presbyterian and Episcopal: and whereas the congregations in the Connexion have, for the most part, borne a distinctive character inasmuch as they have used with slight modifications the Liturgy of the Church of England, and in their general action have been subject to a general guidance of Presbyters, under the guidance of a President Bishop: and whereas in the public mind of Great Britain, there is a demand for the sound doctrine expressed in the general sense of the Thirty-nine Articles of the Church of England, to be held in connexion with a Revised Liturgy of the Book of Common Prayer: and whereas the Connexion cannot change either its form or name; and the trusts contained in the several deeds upon which the existing Chapels are settled cannot be altered without a vesting order from the Court of Chancery or the Charity Commissioners, etc.: it is therefore resolved by the Conference, for the perpetuation and development of the principles on which the Connexion is founded, that it is highly expedient from this time that any new Churches, and Congrega-

tions gathered in them, shall be known as "The Free Church of England," holding the Doctrines, and governed by the Laws, Regulations, and Declarations hereinafter stated.'

The laws, etc., here referred to formed the constitution of the Free Church of England, and were finally embodied in a deed poll, which was duly registered in the High Court of Chancery on 31st Aug. 1863.

Largely in consequence of the action of the bishop of Exeter in pursuing Shore from one ecclesiastical court to another, incurring ruinous costs which it was quite impossible for Shore to discharge, and then imprisoning him for not paying them, the Free Church of England spread, and new churches in different parts of England were opened—among others, St. James's Free Church of England, Grosvenor Place, Exeter, and Christ Church, Portland Street, Ilfracombe, the congregation of which had as its minister Benjamin Price, who was at one time a member of the Countess of Huntingdon's Connexion, and who subsequently became the first bishop of the Free Church of England.

For three years in succession Price had held the high office of president of the Countess of Huntingdon's Connexion, and in that capacity had acted as its representative at ordinations and similar functions. But, as it was considered by the members of the conference to be simply a distinguished office, no service of consecration was held or deemed to be desirable. But the president of the Connexion was also at the same time *ipso facto* the bishop of the Free Church of England, and among the members themselves the demand grew that the head of the Church should bear a more thoroughly ecclesiastical title than 'president'—one which would convey to outsiders the idea of episcopacy. This internal desire found expression when, in 1868, St. John's Church, Tottington, Bury, Lancashire, was opened, and public announcement was made that it would be consecrated by the Rev. Benjamin Price, 'Bishop Primus' of the Free Church of England. On that eventful occasion the title was used for the first time—against Price's knowledge or desire, it is true. It was felt that the term 'president' did not appeal to Church-people, whereas 'bishop' was thoroughly understood by 'the man in the street.' The anomalous position in which Price found himself was this, that as executive officer he had to perform episcopal duties, without having been consecrated 'by men who have public authority given to them' to do so. Many evangelical clergymen, nevertheless, became warmly attached to the new movement; and their adhesion gave it a more distinctly Church character. This was emphasized by the following manifesto, which in 1873 was signed by over 50 influential clergymen:

1.—We, the undersigned Clergymen of the Church of England, hereby declare our solemn conviction that it is essential to maintain the distinctive Protestant character of our Church.

2.—We have noticed with alarm the tendency of the late "Bennett Judgment" to lower that character, and to establish a compromise unworthy of our old Reformers and their traditions. The adoption of the principle that what our formularies do not in express terms condemn, they must be considered to allow, points to the conclusion that those who hold the doctrines of Rome have only to disguise them in sophistical subtleties and non-natural language in order to make their position tenable. We consider this a state of things fraught with dangerous consequences to the Church at large.

3.—We hold firmly that Romish errors, against which some of the Articles of the Church of England most emphatically protest, may not on any account be sanctioned.

4.—We lament exceedingly that Romish and Ritualistic practices and doctrines have made sensible progress of late years, in spite of all efforts which have been put forth to check them.

5.—We regard it as indispensable that objectionable passages in the Book of Common Prayer, which have been found to promote such practices and doctrines, should be removed.

6.—We look in vain for any sign of Liturgical Revision by authority in the Established Church.

7.—We have, therefore, determined, at this grave crisis, to express an open sympathy with those kindred Church bodies in England and Ireland which have made Revision of the Prayer-book a leading question. We allude to the Disestablished Church of Ireland and to the Free Church of England. Without pledging ourselves to the details of their respective arrangements, we shall be glad henceforth to act in friendly co-operation with both these bodies for the repression of Ritualism.

8.—We unhesitatingly approve the union of Church and State, and do not advocate secession; but we cannot ignore the fact that some Clergymen have determined otherwise; and unless some decisive step be taken to maintain the Protestant principles of the Reformation, we fear that many of the Laity may practically fall away from our Church, as sheep without a shepherd.

The above declaration was drawn up by Edward Vesey Bligh, son of the Earl of Darnley and vicar of Birling, Kent.

As the movement spread, it became more imperative that Price should be consecrated, according to Church order, with the accompaniment of 'laying on of hands,' according to apostolic custom. In March 1874 the Free Church of England made a friendly suggestion to the Reformed Episcopal Church of America, which had lately been organized, that the two Churches, inasmuch as their principles and doctrines were identical, should be united. The proposition was warmly entertained, and a federative union was arranged—the bishops and clergy of either Church to be eligible to attend and vote at all meetings. One of the bishops of the American Church, Edward Cridge, of British Columbia, an Englishman, and at one time a dean in the Church of England, came to England to visit his friends; and, at the special request of the Reformed Church of America, supplied that which seemed to orthodox Church people to be lacking in the episcopacy of the Free Church of England by publicly consecrating Bishop Price, by prayer and the 'laying on of hands,' to his sacred office. In time this union was allowed to lapse, and the Free Church of England is not now affiliated with any American Church.

The Free Church of England is free (1) to go into any parish to preach the gospel, although, as a matter of practice, she does not do so, unless invited; (2) to use the Book of Common Prayer, from which passages which are interpreted to confer 'absolving and retaining' powers on the clergy have been expunged; (3) from State control, under which ecclesiastical questions are surrounded with restrictions and difficulties; (4) to hold communion with other denominations, on the ground that the Church of Christ is one. 'Multi illi unum corpus sumus in Christo' (Ro 12⁵).

In its uncompromising Protestantism the Church denies (1) that the Church of Christ exists only in one order or form of ecclesiastical polity; (2) that Christian ministers are 'priests' in another sense than that in which all believers are a 'royal priesthood'; (3) that the Lord's Table is an altar on which the oblation of the Body and Blood of Christ is offered anew to the Father; (4) that the presence of Christ in the Lord's Supper is a presence in the elements of bread and wine; and (5) that regeneration is inseparably connected with Holy Baptism.

2. The Reformed Episcopal Church in the United Kingdom, otherwise called the Reformed Church of England.—The earliest settlers in the United States of America (Virginia) in 1607 were members of the Church of England, and therefore naturally desirous of having a bishop in canonical Church order for ordinations, confirmations, etc.; but their applications for the privilege were courteously declined, or postponed, by the English archbishops. In 1784, however, their wish was partly met by the consecration at Aberdeen of Samuel Seabury, rector of St. Peter's, New York, by three bishops of the Episcopal Church of Scot-

land (Robert Kilmour, Arthur Petrie, and John Skinner). The colonists thus had a bishop of their own; but nevertheless they were not completely satisfied. A renewed request of the descendants of the first English emigrants, that a colonial clergyman, whom they might elect, should be consecrated, so that the union with the old country might be strengthened and the Church creed of their fathers followed by their children's children, was favourably entertained; and on 4th Feb. 1787 the archbishop of Canterbury (John Moore), assisted by the archbishop of York (William Markham) and the bishops of Bath and Wells (Charles Moss) and Peterborough (John Hinchliffe), consecrated in his chapel at Lambeth Palace, first William White, of Pennsylvania, and immediately afterwards Samuel Provost, of New York, as bishops. Three years later (19th Sept. 1790) James Madison, president of William and Mary College, Virginia, was consecrated at Lambeth by the archbishop of Canterbury (John Moore), assisted by the bishops of London (B. Porteous) and Rochester (J. Thomas). The first episcopal consecration in America took place on 17th Sept. 1792, when Thomas John Claggett was consecrated in New York bishop of Maryland, by bishops White, Provost, Seabury, and Madison. The co-operation of Seabury invested this consecration with prime importance, as it joined the two sources of orders, the Scottish and English, in the Protestant Episcopal Church of America. On 15th Nov. 1866 George David Cummins, rector of Trinity Church, Chicago, was consecrated at Christ Church, Louisville, by the presiding bishop, John Henry Hopkins, of Vermont (who was assisted by six other bishops of the American Church), and appointed suffragan bishop of Kentucky. In the autumn of 1873 the Evangelical Alliance held in New York its annual Convention, which was terminated by a united communion service in the Presbyterian Church in Madison Square, in which Bishop Cummins, the dean of Canterbury (R. Payne Smith), and Canon Fremantle took prominent part. The bishop of Zanzibar (W. G. Tozer) and other extremists vehemently denounced these eminent clergymen, and charged them with infringing ecclesiastical law in participating in the sacrament of the Lord's Supper administered in a Non-conformist church. Keenly sensitive to the attacks made on him through the public press, and alarmed at the spread of ritualistic innovations in his own diocese, which, with the limitations imposed upon him as a suffragan bishop, he was unable to stem, he resigned on 10th Nov. 1873 his position in the Protestant Episcopal Church of America; and three weeks afterwards organized the 'Reformed Episcopal Church of America.' On 14th Dec. 1873 he consecrated Charles Edward Cheney as a bishop in the new Church; and on 24th Feb. 1874 he consecrated William R. Nicholson to the same high office, both at Kentucky. Generally speaking, these Church incidents would hardly have passing interest, and the record of them might be considered merely trifling; but to a Church claiming to possess the historic episcopate they are of supreme consequence.

Information concerning the inauguration of the Reformed Episcopal Church of America reached England through the usual channels, and led to a missionary movement on similar Church lines in this country, under the charge of T. Huband Gregg, formerly vicar of E. Harborne, Birmingham; in the following year a General Synod for Great Britain and Ireland was formed, with the right of self-government. In 1894 it was re-organized with P. X. Eldridge as presiding bishop; and 'Constitutions and Canons' were drawn up and agreed upon.

No good purpose would be served by reviving memories of the objections made as to 'form of service' at the consecration of Bishop Cummins, and 'intention' and other trivialities, which marred the discussions in the first instance; suffice it to say that the Reformed Episcopal Church of Great Britain, although it possesses, equally with the Church of England, all that, from the extreme Churchman's point of view, is necessary for valid episcopal orders, yet in strongest terms repudiates the teaching that the sacraments of Holy Baptism and the Lord's Supper are mechanically operative as channels of spiritual grace, when administered by a 'priest' 'lawfully called' and 'episcopally ordained.' It declares for three orders of ministry, *i.e.* bishops, presbyters, and deacons, but fully recognizes that the ministry of the Word and sacraments of Nonconformist Churches is of equal value with that of the Episcopal. It was founded to maintain the Evangelical principles of the Protestant Reformation; the Holy Scriptures form its sole rule of faith and practice; the Book of Common Prayer being used at divine service, it is liturgical in its worship; the government, although episcopal, is vested in a General Synod, composed of bishops and presbyters, together with two lay representatives from each of the affiliated congregations; it is a refuge for members of the Established Church who are distressed by unauthorized ritual in their parish churches; and, being free from State patronage and control, it is legally able to hold fellowship with all Evangelical Churches, and delights to do so.

REGALIA.—The word 'regalia' is not found in classical Latin bearing its present meaning. We meet with it, however, in the 12th cent. in the work of the monkish chronicler, William of Malmesbury, *de Gestis Regum Anglorum*,¹ in which, after describing the coronation of Emperor Henry V. by Pope Paschal II., he says that after the ceremony the pope laid aside his *sacerdotalia* and the emperor his *regalia*. In English the words 'regale' and 'regalia' at first bore the meaning of royal prerogatives. The word 'regale' in particular was used of the privileges enjoyed for centuries by the kings of France of receiving the revenues of vacant sees and abbacies and of presenting to benefices which were dependent on them. By the 17th cent. the modern significance had already become attached to the word 'regalia,' while the singular 'regale' had fallen into desuetude. The articles which have formed a part of insignia of kingship in all the different stages of human culture have of course varied enormously in character, and it would be impossible within the scope of an article like the present to attempt to state the significance of each of them. This article is therefore restricted to a brief discussion of their religious symbolism and magical attributes in general. The term 'regalia' will not, however, be limited exclusively to objects worn and carried by kings, but will be extended to cover such material objects as

confer upon their possessors the right to the throne.

1. Royal fetishes.—More than twenty years ago J. G. Frazer, in his *Lectures on the Early History of the Kingship*, called attention to the sacred character of the kingly office among primitive, semi-civilized, and, in a lesser degree, civilized peoples; and he inferred that, if it could be traced to its ultimate origins, it would be found to be identical with that of the priest, shaman, or medicine-man.¹ In its main outlines this hypothesis appears to be irrefragable. We must then expect to find among primitive peoples a resemblance between the royal insignia and the magical apparatus of the medicine-man. In this quest we are not disappointed, for we find that among the Malays the magician possesses insignia analogous to the regalia, both in fact bearing the same name (*kabésaran*).² In the Northern New Hebrides, according to R. H. Codrington, chieftainship is not in theory hereditary, but becomes so in practice, as a chief hands on to his son his charms and magic stones, containing the *mana* on which the chieftainship depends.³ The dependence of the royal authority on the possession of certain fetishes is found in its most extreme form in S.E. Asia and the Malay Archipelago. In S. Celebes it is said actually to reside in the regalia.

'In short,' says Frazer, 'the regalia reign, and the princes are merely their representatives. Hence whoever happens to possess the regalia is regarded by the people as their lawful king. For example, if a deposed monarch contrives to keep the regalia, his former subjects remain loyal to him in their hearts, and look upon his successor as a usurper who is to be obeyed only in so far as he can exact obedience by force. And on the other hand, in an insurrection the first aim of the rebels is to seize the regalia, for if they can only make themselves masters of them, the authority of the sovereign is gone. In short, the regalia are here fetishes, which confer a title to the throne and control the fate of the kingdom. Houses are built for them to dwell in, as if they were living creatures; furniture, weapons, and even lands are assigned to them. Like the ark of God, they are carried with the army to battle, and on various occasions the people propitiate them, as if they were gods, by prayer and sacrifice and by smearing them with blood. Some of them serve as instruments of divination, or are brought forth in times of public disaster for the purpose of staying the evil, whatever it may be. For example, when plague is rife among men or beasts, or when there is a prospect of dearth, the Boongneese bring out the regalia, smear them with buffalo's blood, and carry them about. For the most part these fetishes are heirlooms of which the origin is forgotten; some of them are said to have fallen from heaven. Popular tradition traces the foundation of the oldest states to the discovery or acquisition of one of these miraculous objects—it may be a stone, a piece of wood, a fruit, a weapon, or what not, of a peculiar shape or colour. Often the original regalia have disappeared in course of time, but their place is taken by the various articles of property which were bestowed on them, and to which the people have transferred their pious allegiance.'⁴

In Loowoo, on the south coast of the Celebes, two toy cannon, and in Bima a sacred brown horse, formed part of the regalia. Among the Malays the regalia are of the nature of talismans on which the safety of the State depends, and are clearly bound up with the sanctity of the king.

'Not only is the king's person considered sacred, but the sanctity of his body is believed to communicate itself to his regalia, and to slay those who break the royal taboos. Thus it is firmly believed that any one who seriously offends the royal person, who touches (even for a moment) or who imitates (even with the king's permission) the chief objects of the regalia, or who wrongfully makes use of any of the insignia or privileges of royalty, will be *kéna daulat*, *i.e.* struck dead, by a quasi-electric discharge of that Divine Power which the Malays suppose to reside in the king's person, and which is called "Daulat" or "Royal Sanctity."⁵

Similar tabus on the wearing of royal robes are found in various parts of the world. In Japan any one who wore the emperor's clothes without his leave was supposed to suffer from swellings all over the body.⁶ Similarly, in Fiji, disease is

supposed to result from wearing a chief's clothes. Among the Baganda so sacred were the king's clothes that, when he renewed them at the ceremonies which were held for the prolongation of his life, he deposited the old ones in a shrine of the god Mukasa.¹

The articles comprising the regalia of Malay kings are of a very miscellaneous character. In Malacca they were a book of genealogical descent, a code of laws, a vest, and some weapons, among which there was generally a spear. In Perak and Selangor the regalia consisted largely of instruments of music.

The regalia of the 'fire-king' and the 'water-king' in Cambodia—two mysterious individuals whose authority is of a purely spiritual character—are talismans, which would lose their efficacy if they were to leave the family, and for this reason the office is hereditary. One of these talismans is a magic sword. If it were drawn from its scabbard, awful cosmic catastrophes would ensue.² The king of Cambodia, who occupies the position of temporal ruler within the country, sends an annual gift to the 'fire-king' of rich stuffs to wrap up the magic sword.³

Royal and public talismans were well known in the ancient world. The most famous instance of a public talisman is of course the Palladium, an archaic wooden image of Athene on which the safety of the city of Troy was supposed to depend.

In antiquity the Scythian kings treasured as sacred a plough, a yoke, a battle-axe, and a cup, all of gold, which were said to have fallen from heaven; they offered great sacrifices to these sacred things at an annual festival; and if the man in charge of them fell asleep under the open sky, it was believed that he would die within the year. The sceptre of king Agamemnon, or what passed for such, was worshipped as a god at Chaeronea; a man acted as priest of the sceptre for a year at a time, and sacrifices were offered to it daily. The golden lamb of Mycenae, on the possession of which, according to legend, the two rivals Atreus and Thyestes based their claim to the throne, may have been a royal talisman of this sort.⁴

It is said that in Japan the imperial crown was formerly a sort of palladium. In an account written about two centuries ago by Engelbrecht Kaempfer, physician to the Dutch embassy at the emperor's court, we read:

'In ancient times, he (the Emperor) was obliged to sit on the throne for some hours every morning, with the imperial crown on his head, but to sit altogether like a statue, without stirring either hands or feet, head or eyes, nor indeed any part of his body, because, by this means, it was thought that he could preserve peace and tranquillity in his empire; for if, unfortunately, he turned himself on one side or the other, or if he looked a good while towards any part of his dominions, it was apprehended that war, famine, fire, or some other great misfortune was near at hand to desolate the country. But it having been afterwards discovered, that the imperial crown was the palladium, which by its immobility could preserve peace in the empire, it was thought expedient to deliver his imperial person, consecrated only to idleness and pleasures, from this burdensome duty, and therefore the crown is at present placed on the throne for some hours every morning.'⁵

The Mogul emperors, who were never crowned, used at times to sit with a crown suspended over their heads.⁶ A native historian of India in the 15th cent. narrates the prevalence of a somewhat similar idea in that country, where the throne rather than its occupant was the chief object of veneration.

'It is a singular custom in Bengal, that there is little hereditary descent in succession to the sovereignty. There is a throne allotted for the king; there is, in like manner, a seat or station assigned for each of the Amirs, Wasirs and Mansabdars. It is that throne and these stations alone which engage the reverence of the people of Bengal. A set of dependants, servants and attendants are annexed to each of these situations. When the king wishes to dismiss or appoint any person, whoever is placed in the seat of the one dismissed is immediately attended and obeyed by the whole establishment of dependants, servants

and retainers annexed to the seat which he occupies. Nay, this rule obtains even as to the throne itself. Whoever kills the king and succeeds in placing himself on the throne is immediately acknowledged as king. . . . The people of Bengal say, "We are faithful to the throne; whoever fills the throne, we are obedient and true to it."⁷

The Egyptian kings also claimed a divine character, being incarnations of Horus and Set.⁸ They claimed to hold their authority directly from heaven.

'The sacred character of the royal house extended also to its insignia and attributes. The various crowns especially appear as sacred objects, which themselves possess divine powers, and the principal functionary in charge of the royal jewellery serves it in the character of priest.'⁹

The crowns of the two kingdoms possessed a mystical character, the white crown, which was the symbol of the king's dominion over the upper kingdom, being identified with the vulture-goddess Nekhbet, and the red crown, which symbolized his dominion over the lower kingdom, being identified with the serpent-goddess Buto. In other parts of Africa the regalia also possess a fetishistic character. Among the Yorubas, a people of the west coast, the royal crown is believed to be the residence of a spirit which requires propitiation. A few years ago the king of Ife sacrificed five sheep to it.⁴ The throne is a fetish among the Ashantis and sacrifices are offered to it, while among the Hos, an Ewe-speaking tribe in Togoland, the king's proper throne is quite small and is bound with magic cords and kept wrapped up in a sheep's skin.⁵

The ideas underlying these facts are of course quite foreign to modern and even mediæval Europe. Nevertheless we may perhaps find dim reflexions of them in the mysterious atmosphere of sanctity which has attached itself to the two most celebrated crowns of Europe—the holy Crown of St. Stephen, and the Iron Crown of Lombardy. The former, which is compounded of two crowns, one sent by Pope Sylvester II. to St. Stephen, the first king of Hungary, in A.D. 1000, and the other sent by the Byzantine emperor, Michael Ducas, to King Geisa in 1073, has throughout Hungarian history been a kind of national palladium, the kingdom itself being known as the 'Lands of the Sacred Crown,' and a Hungarian magnate as 'membrum sacræ coronæ.'⁶ When it was returned to Presburg in 1790 by Joseph II., who six years earlier had caused it to be removed to Vienna, it was received with the greatest joy, triumphal arches being erected in its honour. It occupies a position distinct from the king, who cannot exercise his constitutional prerogatives before his coronation, and, if he should die before the ceremony, his name is struck off from the roll of kings. Though less famous than the Crown of St. Stephen, the Iron Crown of Lombardy, which is kept at Monza, is received with royal honours on the rare occasions on which it appears in public. After the coronation of Charles V. it was not used again till the time of Napoleon I. On its way to Milan Cathedral for his coronation it was accompanied by an escort of the Old Guard, and a salvo of artillery was fired in its honour. Similarly on its way to Rome to accompany the funeral cortège of Victor Emmanuel II., in 1878, it was received with royal honours on its journey through Italy, on which it was escorted by the cathedral chapter and the municipal council of Monza.

2. Relics of dead kings as regalia.—Corporeal portions of deceased rulers often form the most important article of royal insignia. Since the

⁶ A. Vambéry, *Hungary* (Story of the Nations), London, 1897, p. 374.

king is the repository of the *mana*, or 'luck,' of his people, it is necessary that there should be a kind of psychic continuity which must not be broken by the death of a ruler. In S. Celebes portions of the bodies of deceased rajahs actually confer the right to the throne.

'Among the Sakalavas of southern Madagascar a vertebra of the neck, a nail, and a lock of hair of a deceased king are placed in a crocodile's tooth and carefully kept along with the similar relics of his predecessors in a house set apart for the purpose. The possession of these relics constitutes the right to the throne. A legitimate heir who should be deprived of them would lose all his authority over the people, and on the contrary a usurper who should make himself master of the relics would be acknowledged king without dispute. It has sometimes happened that a relation of the reigning monarch has stolen the crocodile teeth with their precious contents, and then had himself proclaimed king.'¹

When a king of the Panebian Lybians died, his head was cut off, covered with gold, and deposited in a sanctuary. It is the custom among the Masai for a chief to remove the skull of his predecessor's body a year after burial, and to secrete it, at the same time offering a sacrifice and a libation. The possession of the skull is understood to confirm his authority.

'When the Alake or king of Abeokuta in West Africa dies, the principal men decapitate his body, and placing the head in a large earthen vessel deliver it to the new sovereign; it becomes his fetish and he is bound to pay it honours. Similarly, when the Jaga, or king of Cassange, in Angola, has departed this life, an official extracts a tooth from the deceased monarch and presents it to his successor, who deposits it along with the teeth of former kings in a box, which is the sole property of the crown and without which no Jaga can legitimately exercise the regal power.'²

It is said that among the Guanches of the Canary Islands the femur of the dead king constituted an important part of the regalia, and that the oath of allegiance taken by the chiefs to the new ruler was sworn upon it. Frazer believes that through the corporeal relic the soul of his predecessor is transferred to the new ruler. A somewhat different theory has been maintained by Westermarck, who believes that it is not the soul of the dead ruler which becomes transferred, but his *mana*, or holiness. The sultan of Morocco is enabled to transfer to another his *baraka*, or sanctity.³

3. Election of a king by means of the royal insignia.—In view of the great sanctity of the kingly office in the lower stages of culture, and the belief that the luck of the people is bound up with its holder, it is of course of vital necessity that he who is most suitable should be elected to fill it. In order to obtain supernatural ratification for the choice of a king, divination has often been resorted to; sometimes the actual symbols of royalty themselves serve as a medium, and sometimes a particular object is kept for this purpose, which may not improperly, therefore, be termed a part of the regalia. This practice, though reflecting a very primitive phase of thought, has remained in vogue even among peoples who have attained to a considerable measure of civilization.

In an old Transylvanian *Marchen*, when the people assembled to choose a new ruler, they placed the crown upon a hillock, from whence it rose, floated into the air, and descended on the head of the future monarch.

Another interesting example is found in ancient India.

It is said that in Benares, when a king died, four lotus-coloured horses were yoked to a festive carriage, on which were displayed the five emblems of royalty (sword, parasol, diadem, slipper, and fan). This was sent out of a gate of the city, and a priest bade it proceed to him who had sufficient merit to rule the kingdom.⁴

The Lia Fail, as the stone on which the early kings of Leinster were crowned was called, which legend has identified with the English Coronation

Stone brought by Edward I. from Scone, is said to have recognized the destined king by roaring when he stood upon it. It seems not impossible that similar animistic or animatistic beliefs may have once been attached to the 'King's Stone' at Kingston-on-Thames on which the Anglo-Saxon kings were crowned, and to the Coronation Stone of the kings of Sweden at Upsala. A curious story of the power of a sacred stone to determine the succession to the throne is related of a certain Scythian tribe.

When a king died, a tribal assembly met on the banks of the river Tanais to determine on a successor to the throne. In the river was a stone like a crystal, resembling in shape a man wearing a crown. Whoever was able to find it and produce it in the assembly became king.¹

The following story from Africa shows the prevalence of similar ideas in that continent:

'When Dagaia, the King of Karagwe, on the western shore of Lake Victoria Nyanza, died, he left behind him three sons, any of whom was eligible to the throne. The officers of state put before them a small mystic drum. It was of trifling weight but, being loaded with charms, no one could lift it, save he to whom the ancestral spirits were inclined as the successor.'²

4. Symbols of kingship.—As soon as social distinctions began to reveal themselves in human society—which was of course at a very early stage in its evolution—they would quite naturally be indicated by the wearing of certain ornaments. Interments of the Palæolithic Age show the widespread use of teeth and shells for decorative purposes, but it is impossible to draw any certain inferences from them as to the wearer's rank. Among the remains of the Bronze and Early Iron Ages in Europe we find torcs, rings, and bracelets of gold as well as those of baser metals, and we may perhaps assume with some degree of safety that they were made for the chiefs. We know, of course, very little of the dress of the pre-historic peoples of Europe, though a few fragments of woven stuff have been found among the remains of the lake-dwellings (*q.v.*) of Switzerland. Probably the costume of chiefs differed little from that of ordinary persons, apart from their more solid ornaments. A royal costume may indicate that its wearer is the representative of a god. Naramsin carried two horns on his helmet, signifying his divine character.³

'The vestments of early kings of England,' says J. R. Planché, 'on state occasions do not appear to have differed from their ordinary apparel, unless occasionally the materials may have been more costly.'⁴

In some parts of the world a certain colour is emblematic of royalty. Among the Malays the royal colour is yellow, the privilege of wearing which is shared by the magician. In ancient Persia the Great King wore a robe of purple. This colour was adopted by the Macedonian kings after the conquests of Alexander the Great. Purple was also a royal colour among the Etruscans. The *paludamentum* of the Roman emperor, a military mantle analogous to the Greek *χλαμύς*, was of purple, and the expression *sumere purpuram* became equivalent to mounting the throne, while the anniversary of the emperor's accession was called *natalis purpuree*.

At the present day an ornamented club, a girdle of feathers in the Pacific, a string of boar's teeth in New Guinea, throughout S. Asia the umbrella, and in Ashanti a gold axe, are insignia of chieftainship. A small battle-axe was also carried by high officials in ancient Egypt.⁵ Among European peoples they usually include the following ornaments: crown, sceptre or staff, sword, and ring. The regalia may gradually acquire a special

sanctity as the relics of some kingly saint or national hero. Thus the ancient regalia of England, which were destroyed under the Commonwealth in 1649,¹ were venerated as relics of St. Edward, by whom they were believed to have been worn. The regalia of Hungary are regarded as relics of St. Stephen. The imperial and French regalia were to some extent relics of Charlemagne.

The English regalia consist of St. Edward's crown, the imperial crown, the sceptre with the dove, the sceptre with the cross, St. Edward's staff, the orb, the gold spurs, the sword of State, and the second and third swords, and the curtana, or sword of mercy. The regalia of the Holy Roman Empire consisted of Charlemagne's crown, his dalmatic embroidered with large crowns, the golden apple or globe, Charlemagne's sword, his golden sceptre, the imperial cloak embroidered with eagles, the buskins, gloves, and the hereditary crown of Rudolf II. The French regalia included the crown said to have been given by Pope Leo III. to Charlemagne, Charlemagne's sword, called 'Joyeuse,' a sceptre six feet high, the hand of justice, and Charlemagne's spurs, vestments, dalmatic, tunic, buskins or sandals, and mantle. The Scottish regalia included a crown, sceptre, and sword.² It seems to have been the custom for the English kings to be buried in their coronation robes, as was shown at the opening of Edward I.'s tomb in 1774. Owing to this practice, there existed, of course, no hereditary royal robes in England as in some other countries.

The most important regalia of the khalifas were the supposed relics of the Prophet—his striped cloak (*burdah*), his ring, his staff, and his sword.³ They are said to have been dug up in A.H. 132, and to have been brought to Constantinople in the reign of Selim I. (1512-21), who on his conquest of Egypt forced the last of the Abbāsid khalifas to make over his rights to him. There seems, however, little chance that they are genuine, as, even supposing that the story of their being dug up is true, they would probably have perished when Baghdad was taken by the Mongols in A.D. 1258. As the origin and symbolism of the crown have already been dealt with,⁴ they need not be discussed here, but something may be said of some of the other more prominent insignia of royalty.

5. The sceptre.—John Selden, in his *Titles of Honor*,⁵ says:

'For the Scepter, some testimonies make it an ancient Ensigne of a King than the Crown or Diadem is. Justin (or rather Trogus Pompeius) seems to denote that the old Kings of Rome had any Diadems, but that instead of them they earned Scepters. So I conceive him in those words spoken of the age of those Kings, "Per ea adhuc tempora reges hastas pro Diademate habebant, quas Græci SCEPTRA dixerunt." For their Diadems, enough already. But it is most clear that both in prophetic and holy writers the scepter is much ancienter (as it was attributed to a King) than either Crown or Diadem.'

It is probable that the ancestor of the sceptre is far older than even Selden imagined. Possibly it is to be found as early as the old Stone Age. A shaft of reindeer's horn perforated at its broader end by one or more cylindrical holes has been found in certain Aurignacian and Lower Magdalenian deposits in France. In its later form it is decorated with incised designs. Gabriel de Mortillet, believing it to be a ceremonial object, gave it the question-begging name of *baton de commandement*.⁶ Among the chiefs and medicine-men of the Plains Indians of N. America carved batons

served as emblems of authority. Their use was forbidden to ordinary persons.⁷ More recently the resemblance of the *baton de commandement* to the arrow-straightener of the Eskimo has been pointed out.⁸ Neither in Greek nor in Latin is the word 'sceptre' (*σκήπτρον*, *scipio*) used exclusively of a royal emblem, and from this we may infer that in origin it did not differ from other staffs, but that in very early days a common implement was put to a ceremonial use. The *σκήπτρον* was a staff used in Greece by old men; the *scipio* was a wand carried by magistrates in Rome. Mommsen⁹ regards the story related by Livy of the senator M. Papirius striking the Gaul with his sceptre as unhistorical. That a staff was an emblem of kingly rank during the monarchical period we know from the well-known expression of Homer, *σκηπτουχοὶ βασιλῆες*.⁴ The *σκήπτρον* was handed down from father to son. At Rome the augur's baton, or *lituus*, was a stick curved like a shepherd's crook at the upper end. The *lituus* with which Romulus is said to have divided the city into regions was believed to have been miraculously preserved at the burning of Rome by the Gauls in 390 B.C. The *lituus* was probably of Etruscan,⁵ and therefore ultimately of Asiatic, origin. The Hittite priest-king is represented carrying a reversed *lituus*. A crook was also part of the insignia of the Egyptian kings.⁶ Pliny uses *lituus* as synonymous with *scipio*.⁷ The magistrate appeared in the triumphal car in the *processus consularis* at the games, bearing in his hand an eagle-tipped sceptre of ivory.

This, however, was an emblem of apotheosis, and unlike the other "ornamenta triumphalia," was never worn on other occasions during the life of the triumphator, nor was it carried at his funeral.⁸

On Etruscan and other coins Zeus holds an eagle-tipped sceptre, and on Cilician coins of the 4th cent. B.C. Baal Tars (Sandas) is also represented holding one. The ivory sceptre tipped with an eagle which was carried by the early kings of Rome is regarded by Cook as symbolizing the fact that the holder was an incarnation of Jupiter.⁹ All the Achaean chiefs had sceptres. Mention has already been made of the fact that Agamemnon's sceptre was worshipped at Chæronea. Nestor reminds Agamemnon that he bears the sceptre of Zeus in his capacity as judge.¹⁰ This appears to have been an oaken staff or spear (*δῆρυ*) of great sanctity. Cook believes that the royal sceptre which conferred the right of judgment was a conventionalized form of the oak of Zeus.¹¹

The god whom the Chæroneans honour most is the sceptre which Homer says Hephaestus made for Zeus, and Zeus gave to Hermes, and Hermes to Pelops, and Pelops bequeathed to Atreus, and Atreus to Thyestes, from whom Agamemnon had it. This sceptre they worship, naming it a spear; and that there is something divine about it is proved especially by the distinction it confers on its owners. The Chæroneans say that it was found on the borders of their territory and of Panopeus in Phocis, and that the Phocians found gold along with it, but that they themselves were glad to get the sceptre instead of the gold. I am persuaded it was brought to Phocis by Electra, daughter of Agamemnon. There is no public temple built for it, but the man who acts as priest keeps the sceptre in his house for the year; and sacrifices are offered to it daily, and a table is set beside it covered with all sorts of flesh and cakes.¹²

The veneration of staffs is world-wide. Hector and Priam raise their sceptres while taking an oath.¹³ Achilles also swears by a herald's staff.¹⁴

¹ In concluding a treaty the Romans took a sceptre and a flint from the temple of Jupiter Feretrius; they swore by the sceptre and "struck (concluded) the treaty" with the flint.¹

The war-clubs of celebrated warriors, *anava*, in Samoa were venerated by their families. It was regarded as indispensable to success in battle to perform certain rites in their honour.² A Mexican merchant carried a smooth black stick representing the god *Yacatecutli*, who was believed to protect him on his journey.³

⁴ In Aneitum, New Hebrides, South Pacific, there used to be a sacred staff, made of iron-wood, rather longer and thicker than an ordinary walking-stick. It had been kept for ages in the family of medicine-men, and was regarded as the representative of the god. When the priest was sent for to see a sick person, he took the stick with him, and leaning on it harangued the patient, whose eyes always brightened at the sight of the stick.⁴

In the OT the word 'sceptre' is frequently used as a synonym for royalty.⁵ The Hebrew *shēbet* may stand either for a short ornamental sceptre, such as Assyrian kings are sometimes represented as having, or for a long staff.⁶ The Roman emperors adopted the *sceptrum eburneum* of the triumphant general. When the empire became Christian, a cross was often substituted for an eagle. In some countries two sceptres came into use at an early period. In a 9th cent. English Coronation Order, which is said to be a copy of the Pontifical of Egbert, archbishop of York, 732-766, a sceptre (*sceptrum*) and a staff (*baculum*) are mentioned.⁷ The word *baculus*, *baculum*, was not applied to staffs of a ceremonial character in Rome,⁸ but merely to ordinary ones. The Coronation Order of Ethelred II. mentions a sceptre (*sceptrum*) and a rod (*virga*).⁹ Ethelred II. is the first English king on whose coins a sceptre is represented. Since the time of Richard I. the two sceptres have borne a cross and a dove respectively. The sceptre with the dove was a reminiscence of the peaceful part of the Confessor's reign after the expulsion of the Danes.¹⁰ Of the French sceptres one bore a *fleur-de-lys*, and the other a hand in the act of blessing. The latter was known as the *main de justice*. It was put into the left hand of the king. The human hand as an amulet was widely used throughout the Mediterranean, and in the same region an outstretched human hand is often painted on houses as a protection against the evil eye. A bronze relief at Copenhagen represents Zeus-Sabazios in Phrygian costume, holding in his right hand a pine-cone and in his left a sceptre tipped with a votive hand.¹¹ In early Christian art a hand was a symbol representing God the Father. As to the cause of the duplication of the sceptre, Lord Bute makes the following plausible suggestion:

¹² This may possibly have arisen from the words, "Thy rod and thy staff, they comfort me," in Psalm xxiii., which was treated as a Regal Psalm on account of the passage "Thou hast anointed mine head with oil," and was additionally appropriate in the Latin, from commencing, "Dominus regit me" as an acknowledgment of the Divine Sovereignty over earthly Princes.¹²

¹³ In the English Coronation Orders the sceptre is especially the sign of regal power, while the rod is more the ensign of the paternal authority of the sovereign.¹³

6. The orb.—

'As the Scepter,' says Selden, 'is the ornament of the right hand, so in the left the Globe or Mound, with the Crosse Infixt, in Statues and Pictures (and in some Coronations) of Kings, is a singular Ensign of Royall dignitie. The severall times where-in the solemn use of this in severall kingdoms began, is not so easily found, nor perhaps worth the inquirie. It shall suffice here to shew how it began in the Empire, whence the use of it was by example taken into all or most of other kingdoms of Christendom. That which we name a Globe or Mound here is also sometimes called an Apple, sometimes a Ball, and it is observed by learned men that it was frequent in the state of Rome before the Emperors were Christian to have both among their Ensigns in the field and in their monies the Ball or Globe, the beginning whereof ISIDORE also referres to AUGUSTUS PILAM, saith he, IN SIGNA CONSTITUISSA FERTUR AUGUSTUS, PROPTER NATIONES Sibi IN CUNO ORBE SUBJECTAS UT MALUS FIGURAM ORBE OSTENDERET. Thus some copies have it, and not MAGIS FIGURAM etc. as we usually read here.'¹

At the imperial coronations the orb was carried by the Counts Palatine of the Rhine, under the name of *pomum imperiale*.² The apple was sacred to Aphrodite, and is a token of love in S.E. Europe at the present day, but does not appear to have been a token of kingship in the ancient world. In its origin, however, the orb appears to have symbolized the vault of heaven. Zeus is frequently represented with a blue orbis, or globe. A coin of Caracalla represents Jupiter Capitolinus holding a globe in his right hand and a sceptre in his left.³ Sometimes a globe rests beside the god's feet.⁴ From being a symbol of the sky-god the globe becomes one of the imperial insignia. Imperial coins of the 3rd and 4th centuries show the emperors holding a globe.

'These representations imply on the one hand that the emperor has stepped into the shoes of Jupiter, and on the other hand that his duties descend in unbroken succession from occupant to occupant of the imperial seat. . . . Frequently from the time of Commodus to that of Diocletian we find Jupiter delegating the globe to his human representative.'⁵

Both in Roman mosaics and in Pompeian paintings the globe is coloured blue or bluish-green, which indicates that it signified sky rather than earth. It is uncertain whether the cross was first added to the globe by Constantine or by Valentinian I.⁶ Julian the Apostate replaced it by a figure of victory. Under the name of *globus cruciger* it was a part of the Byzantine regalia. Though the orb formed a part of the regalia of the Holy Roman Empire and of England, it was not used in France. In the English coronation ceremonial it is treated as a symbol of the dominion of Christ over the world. On placing the orb in the sovereign's right hand, the archbishop addresses him in an exhortation containing these words:

'When you see this orb set under a cross, remember that the whole world is subject to the power and Empire of Christ our Redeemer.'

7. The sword.—The symbolism of the sword is of course self-explanatory. The girding of the new monarch with a sword is a practically universal feature of coronation ceremonies. It is a reminiscence of the days when the king was not merely the titular but the actual war-chief of his people. So intimate a part have weapons played in the religion of a warlike people that deities have been worshipped under their forms. A spear kept in the Regia was worshipped as an image of Mars; the Scythians sacrificed sheep and horses to an iron sword, and the war-god of the Alans was worshipped as a naked sword stuck in the ground.⁷

Indeed, in the case of the sultans of Turkey, the girding on of the sword of Osman in the celebrated mosque of Eyub on the Golden Horn is the formal ceremony of inauguration. At the coronation of the king of Hungary an impressive ceremony is connected with the sword of St. Stephen. After the coronation the king rides on his charger to a

mound made of earth brought from all the provinces of the kingdom and waves his sword towards the four points of the compass, indicating his determination to defend his kingdom against surrounding foes. The tendency of the various royal ornaments to become multiplied is also apparent in the case of the sword. No fewer than five swords now form part of the English regalia: (1) the sword of State which is carried before the king on various occasions; (2) a small sword which is substituted for it during the coronation ceremony, and with which he is ceremonially girded; (3) the sword of spiritual justice; (4) the sword of temporal justice; (5) the *cuitana*, i.e. 'shortened' sword, or sword of mercy, which is blunted at the end by the removal of the point. Such swords were in ancient times carried by heralds. A similar idea is found in Japan, where certain officials such as doctors wore in their garments a wooden ornament resembling a short sword.¹

8. Bracelets and rings.—It is not unlikely that bracelets, anklets, and rings may have at one time been amulets, and have participated in the inevitable tendency of amulets to degenerate into ornaments. As emblems of kingship bracelets seem to have been more prevalent in the East than in the West. They were worn by the kings of Persia, and also formed part of the royal insignia of Saul, whose bracelets were, after his death, brought to David by an Amalekite.² They were formerly in use in England, and a pair belonging to the regalia was ordered to be destroyed under the Commonwealth. They have not been used in England since that date.³ The use of the ring is, however, almost universal. Though at an early period it may have been an amulet, yet before degenerating into a mere ornament it passed through a period of usefulness as a signet. The Spartan magistrates had a public signet with which they sealed everything that had to be sealed.⁴ That rings were royal ornaments from an early period we know from the curious legends surrounding the rings of Minos and of Polykrates, tyrant of Samos. In Rome the gold ring was often conferred as a military distinction. The *jus anuli aurei* limited its use. The emperor's ring was a kind of State seal. In the *Liber Regalis*, which represents the fullest development of the mediæval English coronation ritual, the ring is referred to as 'Catholice fidei signaculum.'⁵ In Europe the ceremonial use of rings is of course most familiar in connexion with betrothal and marriage. The coronation ring symbolizes the marriage of the monarch to his people, just as the episcopal ring symbolizes the marriage of the bishop to his see. The English coronation ring is indeed sometimes called the wedding-ring of England.⁶ The doge of Venice used to cast a ring into the Adriatic, symbolizing the marriage of the city to the sea. The ceremony was called *spozalizio del mar* ('the wedding of the sea'), and was celebrated annually on Ascension Day.

A curious legend attaches to St. Edward's ring. It is said that he once bestowed it upon an old man. Some years later two English pilgrims in the Holy Land met the old man, who restored it to them, revealing himself as St. John the Evangelist, and bade them return it to the king. There is also a superstition that the closer the ring fits the king's finger, the more loved will he be, and the longer will be his reign.⁷ Royal rings have served various symbolic purposes. Alexander the Great on his death-bed bestowed his ring upon Perdikkas, as symbol of his intention to entrust the government

of the empire to him. The Anglo-Saxon king Offa is said to have appointed his successor by sending him his ring.¹ The bestowal of the royal ring may symbolize a pledge, as in the case of Elizabeth's gift to Essex, or it may symbolize a royal command. In the book of Esther Ahasuerus gives his ring to Haman as a warrant for massacring the Jews. Adrian IV. confirmed Henry II. on the throne of Ireland by sending him a gold ring. Mary Queen of Scots, by sending her ring, pardoned two burgesses who were about to be hanged.²

9. The umbrella.—Throughout Asia and parts of Africa the umbrella is one of the most important insignia of royalty. It is or has been in use among the Malays, in Burma, Siam, India, and among the Seljuk sultans and the Mogul emperors.³ An umbrella is shown on the reverse of a coin of Herod Agrippa I. It also forms part of the regalia in Madagascar. In one of the *Jātaka* tales a prince who wishes to dispossess his brother of the throne says, 'Give the royal umbrella up to me, or give battle.'⁴ In 1855 the king of Burma, addressing the governor-general of India, spoke of himself as 'the monarch who reigns over the great umbrella-wearing chiefs of the Eastern Countries.' It seems most probable that the ceremonial character of the umbrella is due to the tabu which prevents certain sacred persons from being exposed to the sun's rays, and is a counterpart to the very common tabu which prevents their feet from touching the earth. The Mikado and the high-priest of the Zapotecs of Mexico were forbidden to expose themselves to the rays of the sun. Pope Alexander III. accorded to Ziani, doge of Venice, the right of having a canopy or umbrella carried over him as a symbol of sovereign power.

Umbrellas appear to have been sometimes used in ritual for the purpose of preventing the sunlight from falling on sacred persons or things. . . . At an Athenian festival called *Scira* the priestess of Athena, the priest of Poseidon, and the priest of the Sun walked from the Acropolis under the shade of a huge white umbrella.⁵

10. Investiture with the regalia.—Whether a monarchy is elective or hereditary, it is usual for some ceremony to be held for the purpose of inaugurating a new reign. This ceremony usually takes the form of investing the sovereign with the royal insignia. The inauguration of the king of Tahiti consisted of his being ceremonially invested with a sacred girdle of red feathers in the presence of the image of the god Oro. By means of this ceremony he was formally initiated into divine rank. After describing the girdle, the officiating priest would say, 'Parent this of you, O King.'⁶

Among the Baganda, when the period of mourning for the dead monarch was over, the new ruler and his consort were ceremonially divested of their bark clothes and invested with new ones. This ceremony was called 'confirming the king in his kingdom.'⁷ In Madagascar the object of the inauguration ceremony was to secure for the king the quality of *hasina*, an intrinsic supernatural virtue, which renders an object good or efficacious.⁸ For this purpose the new ruler mounted a sacred stone, and exclaimed, 'Masina, Masina, masina v'aho?' The assembled people replied, 'Masina.' These words van Gennep translates, 'Have I acquired the powers of *hasina*? Am I holy?'⁹ Among the Ba-Thonga the inauguration of a new

chief is a purely military affair, and no religious ceremony takes place.¹

The coronation of the Egyptian kings was supposed to take place in heaven. In a description of the coronation of Rameses III. we read :

'Then my father Amon-Re, Lord of Gods, Re-Atum, and Ptah, beautiful of face, crowned me as Lord of the Two Lands on the throne of him who begat me; I received the office of my father with joy; I was crowned with the atef-crown bearing the uraeus; I assumed the double-plumed diadem like Tatenen. I sat upon the throne of Harakhte. I was clad in the regalia, like Atum.'²

Another inscription speaks of Rameses III. assuming the regalia of Horus and Set.³

The inauguration ceremony of a new emperor of Japan consists in the ceremonial taking possession of the three chief articles of the regalia. The principal one is a sacred sword which is called Kusanagi no Tsungi.

'This sword (so legend goes) was found by Susa-no-o in the tail of an eight-headed serpent, which he intoxicated with "sake" and then slew. Having been brought down from heaven many centuries ago by the first ancestor of the Mikados, it came into the possession of Yamato-take, and assisted that prince in the conquest of Eastern Japan. This treasure is never shown, but a great festival is held in its honour on June 21st.'⁴

The two others are a mirror and a jewel. They are kept at Kyoto and the inauguration takes place there, after the period of mourning for the dead ruler is over.

In Europe, with the exception of Hungary, to which reference has already been made, a coronation ceremony has usually served rather to ratify the election of a king than actually to create one. Before set forms came into use, it was often of a more or less spontaneous character. When Julian the Apostate was proclaimed emperor at Paris in 360, a standard-bearer named Mauus took off the torc which he was wearing, and placed it upon the head of the newly-elected ruler.⁵ The earliest known account of a coronation in Great Britain is that of King Aidan by St. Columba, which is found in St. Adamnan's life of the saint.

Throughout the Middle Ages the position of the Church was that of witness to a contract between ruler and people at the crowning of a king. The *Pontificale Romanum* provides a special Mass for the coronation of the king. The Church presents the newly-elected monarch with his investiture.

One of the bishops who are presenting the king to the metropolitan says, 'Reverendissime Pater, postulat Sancta Mater Ecclesia Catholica ut praesentem egregium militem ad dignitatem Regiam sublevetis.' The metropolitan asks, 'Scitis esse dignum, et utilem ad hanc dignitatem?' The bishop replies, 'Et novimus, et credimus, eum esse dignum, utilem Ecclesiae Dei, et ad regimen hujus Regni.'⁶

W. Stubbs's view of the ceremony is as follows :

'The ceremony was understood as bestowing the divine ratification on the election that had preceded it, and as typifying rather than conveying the spiritual gifts for which prayer was made. That it was regarded as conveying any spiritual character or any special ecclesiastical prerogative there is nothing to show; rather from the faculty with which crowned kings could be set aside and new ones put in their place without any objection on the part of the bishops, the exact contrary may be inferred.'⁷

The same view is taken by the French writer Menin, who says that in his own day (reign of Louis xv.) kings were recognized independently of all ceremony of investiture. No formal recognition of the king, however, is found in the French coronation ritual.

'Le sacre des Rois,' he says, 'est une ratification publique du droit qu'ils ont de succéder à la couronne de leurs ancêtres, et une confirmation du premier acte qui les a mis en possession du

Trône; c'est une espèce d'alliance spirituelle du Roy avec son Royaume qu'il épouse, pour ainsi dire, qu'il s'engage de maintenir, de défendre, et de protéger, en même temps que sa Royaume, par la voix des peuples, lui promet solennellement fidélité et obéissance.'¹

Nevertheless a wide-spread belief seems to have grown up in the Middle Ages that the anointing of kings was of a sacramental nature, conferring a mark or character on the soul of the recipient. At all events a king was widely held to possess a quasi-sacerdotal character. The emperor was permitted to read the Gospel at his coronation Mass, and the French king to communicate under both kinds at his coronation. These facts led to the conviction that an anointed and uncrowned prince was no true king. The French kings until the 12th cent. began their reign on the day of their coronation.² 'Le Roi dormoit,' said the old chroniclers, speaking of the period before a coronation. This belief had not completely died out even in the 19th century. Renan mentions the fact that some Bretons held that Louis Philippe, who had been neither anointed nor crowned, had no more right to exercise the functions of a king than any one who was unordained would have to exercise those of the priesthood.³

Precedent for the crowning of a prince during the lifetime of his father was found in the crowning and anointing of Solomon by order of David, and was frequently resorted to in order to ensure the stability of a dynasty. The survival of a coronation ceremony in Europe at the present day is not necessarily associated with the possession of great monarchical prerogatives. The German Emperor and the Emperor of Austria⁴ are not crowned, though the 'hereditary presidents' of England and Norway are. In Spain the coronation ceremony has been discontinued. In England its discontinuance was seriously discussed at the accession of William IV. In most of the monarchies founded in the 19th cent., such as Italy, Belgium, Greece, it has never been introduced, and the king merely takes an oath to observe the Constitution. One of the oldest coronation ceremonies in Europe is the crowning of the pope, who is crowned by the youngest cardinal-deacon with the tiara or triple crown, an ornament ultimately derived from the *camelaucum*, a head-dress worn by high Byzantine officials. It is not a liturgical ornament, and the papal coronation has no religious significance.

No definite rules can be laid down with regard to the crowning of queens-consort. In England, if the king is married at the time of his coronation, the ceremony has usually been performed, and sometimes it has been performed separately if he married afterwards. In France it was usually omitted, and, if performed, it generally took place at St. Denys and not at Rheims with the king. The coronation of a queen-consort merely typifies her participation in the royal dignity. Sometimes this is indicated in the coronation ritual; the king of Hungary holds the Crown of St. Stephen for a time on the right shoulder of the queen during the coronation ceremony, and the Tsar of Russia used to touch the Tsarina on the forehead with his crown before crowning her.

When a ruler has abdicated voluntarily and without pressure, he has often symbolized this act by publicly laying aside the royal insignia. Diocletian divested himself of the purple at Nicomedia in 305 in the presence of his assembled troops,⁵ and in more recent times the eccentric Queen Christina of Sweden laid aside her crown in the presence of the Swedish senate.

REGENERATION.—Through all theology and religion there runs a clear antithesis between outwardness and inwardness. In theology this shows itself in the opposition between transcendence and immanence, anthropomorphism and animism. It asks, Is God a glorified man or an indwelling potency? Does He operate on Nature from without or from within? Should we concentrate our thought and faith on Jesus as the risen Lord, the ascended Mediator; or on Christ as Spirit, operating in His Church and in us as believers? Sometimes the contrasts are accentuated, and the opposing views are polemically controverted; sometimes men are content to accept both as the two poles of an unsolved antinomy. A similar antithesis occurs also as to the nature of religion, causing men to ask, Is religion doing or being? Is the vital matter what a man does or what a man is? Ought my great concern to be, What am I to do? or, What ought I to become? *E.g.*, as to the nature of sin, it is disputed whether sin is transgression of a commandment moral or ceremonial, or is perversity and pollution. Again, as regards reconciliation with God, the two queries arise: Is this effected by having sin pardoned, or by having perversity rectified and pollution cleansed? Is the favour of God to be secured by righteously obeying the precepts of His law or by being inwardly changed and sanctified by a Power other and higher than we? Further, is this change to be studied as manifesting itself in outward life and conduct, or as a spiritual and psychological phenomenon? In the former case we are engaged with the subject of conversion, in the latter with that of regeneration.

1. OT conception.—Kirsopp Lake considers the antithesis between outwardness and inwardness to be characteristic severally of the Jew and the Greek. The Jew asked, What am I to do? He required a code of life and action to tell him definitely what to do. The Greek asked not, What am I to do? but, What am I to be? He wished to become something different. What distressed him was the feeling that his very being was corrupt, and he wanted a religion that would help him to become a new being.¹ There are just two criticisms which one would like to make on this: (1) instead of the word 'Greek,' the word 'Hellenist' would be more accurate—the orientalised Greek; and (2) it is unfair to the Jews to suggest that they were not sensible of the inwardness of religion. Both views find expression in the Jewish Scriptures. It is true that outwardness is prominent in the OT. We have much external morality and external observance of ceremonial requirements. Sin is often disobedience to God's statutes and precepts. Restoration to divine favour is secured by sacrifices offered in accordance with a meticulous ritual. But this is not the only conception of sin that meets us in the OT. Sin is also disorder. It is *מָוֶה*, 'desolation,' 'chaos.' It

is *מָוֶה*, 'restless agitation.' It is defilement, making men unfit to commune with God. It is *אָבִימָה*, 'abomination.' It is *רָקָה*, that from which men flee, because it is abhorrent; and as such it needs an internal remedy—a remedy which man himself cannot administer. There is a distinct vein of OT teaching which is very pronounced as to man's inability to cleanse himself (Jer 13²³, Pr 20⁹). Man's will is powerless to effect the needed change. Something must be done in man and for man, which divine intervention alone can accomplish (Is 6⁶, Ps 51⁶, Job 9² 15¹⁴⁻¹⁶). This is apparent from the way in which the best of men plead for divine help and cleansing (Ps 25¹¹⁻¹² 41⁴ 6²), and from the way in which God promises to render the needed help (Jer 22²² 33⁸, Ezk 36²⁵). Sin is not something to be merely pardoned, atoned for, taken away, or forgotten. So long as the propensity to sin remained, the OT saint groaned under its tyranny and pollution. He cried for cleansing (Ps 51²) and for healing (41⁴). But even this could not satisfy him. He longed for thorough renovation. Regarding the heart as the seat of the collective energies of the personal life, and conscious that this is depraved and that sin has thus banefully affected the very formative sources of character, he cries, 'Create in me a clean heart, O God; and renew a steadfast spirit within me' (51¹⁰). Saul was 'turned into another man,' and 'God gave him another heart' (1 S 10⁶⁻⁸), but, alas! he fell away; and so the Psalmist prays that the clean heart, imparted by a new creation, might, by constant renewal, be kept 'steadfast.'

2. The Greek word and its synonyms.—The word 'regeneration' occurs twice in the NT, in either case for the same Greek word *παλιγγενεσία* = *ἡ πάλιν γένεσις* (√ *γίνομαι*), a becoming new again, a reconstitution. The Greek word which would most accurately represent the ideas that we associate with regeneration would be *ἀναγέννησις* (√ *γεννάω*); but this does not occur in NT, though the verb is found in 1 P 1⁸. The word *παλιγγενεσία* first appears in Greek literature to represent the great Stoic conception of world-cycles, according to which the present world will come to an end by conflagration—to be followed, however, by a renovation or reconstruction, a *παλιγγενεσία* of everything just as it now is. Then, after a definite period, will come another conflagration and reconstitution, and so on—the period between one catastrophe and another being termed a 'great year,' a *περίοδος*. Hence Marcus Aurelius¹ speaks of 'a periodic *παλιγγενεσία* of the universe.' Being a high-sounding phrase, it was used hyperbolically to denote any extraordinary change; as when Cicero² describes his restoration to rank and favour after exile as '*παλιγγενεσίαν* nostram'; and when Philo speaks of the birth of Seth as the *παλιγγενεσία* of Abel,³ and of the sons of Noah as 'founders of a *παλιγγενεσία*,'⁴ since they were 'pioneers (*ἀρχηγῆται*) of the second period of the world'; so Josephus⁵ speaks of the restoration of the Jews after the Exile as a *παλιγγενεσία*. With a nearer approach to the original Stoic meaning, Matthew (19²⁸) describes the new heavens and the new earth, to which Christians (2 P 3¹³) and Jews (Is 65¹⁷; *En. lxxii. 1*; *Jud. i. 29*) were looking forward, in these words: 'In the *παλιγγενεσία*, when the Son of man shall sit on the throne of his glory, ye which have followed me shall sit,' etc. The second NT occurrence of our word is in Tit 3⁵, where *παλιγγενεσία* has an ethical or religious sense: 'According to his mercy he saved us, through the washing [marg. 'laver'] of regeneration, and the renewing of the Holy Ghost.'

⁵ *Ant. xi. liii. 4.*

¹ *The Earlier Epistles of St. Paul*, London, 1911, p. 430 f., *The Stewardship of Faith*, do. 1915, p. 38 f.

Other Greek words with kindred meaning found in NT are: (1) *γεννάω*, 'beget' (Mt 12¹⁶, Ac 7²⁺) and also 'bear children' (Mt 19¹², Gal 4²⁴, Jn 16²¹⁺). In a religious sense it occurs in 1 Co 4¹⁵ 'I begat you'; Phil 10¹⁰ 'whom I begat in my bonds.' In 1 Jn the perf. pass. occurs eight times, and in RV is uniformly translated 'be begotten,' though in five of these instances AV has 'be born'—e.g., 'Every one that loveth is begotten of God' (4⁷); 'Every one that believeth that Jesus is the Christ is begotten of God' (5¹); but in the eight occurrences in Jn 3⁸ RV everywhere retains 'be born.' (2) *ἀναγεννάω* (*ἀνά* is repetitive), 'beget again or anew'; 1 P 1³ 'Blessed be God . . . who begat us again . . . by the resurrection of Jesus Christ.' The noun *ἀναγέννησις* is not found in NT, but is found in Philo¹ of the rebirth of the physical world. (3) *ζωοποιέω*, 'make alive,' 'quicken'; Eph 2⁵ 'God . . . quickened us, together with Christ, when we were dead in trespasses.' (4) *ἀποκτείνω*, 'give birth'; often in an abnormal manner: Ja 1¹⁵ 'Sin bringeth forth death'; 1¹⁸ 'He having so willed, brought us forth [or 'gave us birth'] by the word of truth.' (5) *ἀνακαίνω*, 'make new again.' This verb, in NT, refers not to the initial quickening, but to the maintaining of the state of newness, 'keep new,' or 'renovate' (Ro 12², Col 3¹⁰).

3. **Cognate ideas and metaphors.**—It is verbally difficult to translate emotions into words; and to very many of the early Christians who had previously been steeped in sin the change which took place when they entered on the Christian life was so radical and so thorough that it demanded many modes of expression. Such an experience can be expressed only in figures; and 'regeneration' is but one of many metaphors occurring in the NT, all of which are designed to express the fact that, before any man can enjoy the favour of God, a profound change must be wrought in him, which God alone can effect. The early Christians were so amazed at the change in disposition and character which had suddenly come over them that they framed all sorts of theories to account for it, describing their new experience in terms and preconceptions of their own age.²

A. **Repentance.**—The simplest metaphors meet us in the Synoptic Gospels. (a) Emphasis is laid on repentance (Mt 4¹⁷ 11²⁰, Lk 13³). The Aramaic word for 'repentance,' *תשובה*, is derived from *שוב*, 'to turn' (cf. Mt 18³); and hence we may safely affirm that the repentance (*g.v.*) which Jesus insisted on was a practical one—turning the back on one's former life.

(b) 'Becoming as a little child' (Mt 18³).—The context discloses what our Lord intended by this. It is the abandonment of pride and ambitious self-seeking, the attainment of meekness, lowliness, and dependence on a father's love, that Jesus desiderated in His disciples. The need of divine grace for the attainment of this great ethical change is not so much explicitly taught as implied in the importance attached to prayer.

(c) The quickening effect of the divine Word and the need for co-operation between the human and the divine are taught very clearly in the Parable of the Sower. 'The seed is the word of God' (Lk 8¹¹); but three of the four kinds of soil are unproductive; there is only one which is so far receptive of seed as to yield the fruit of a new life within the natural heart of man.

B. **Impartation of a new life.**—The Fourth Gospel takes the three great ideas, life, light, and speech, and expresses the activities of Jesus Christ, the Son of God, and also the religious experiences of believers, under one or other of these categories. Jesus says: 'I came that they might have life' (10¹⁰); 'My sheep . . . follow me, and I give to them eternal life' (10²⁷); 'My words 'are spirit, and are life' (6⁶³); 'He that believeth on the Son hath eternal life' (3³⁶); 'In him was life, and the life was the light of men' (1⁴).

C. **New birth.**—This appears under two aspects, both contained in the word *γεννάω*: (1) the origina-

tion of life—begetting; and (2) the emergence into a new mode of being and into new relations—birth.

(1) In 1 Jn the perf. pass. *γεννησθαι*, indicating an initial definite act abiding permanently in its consequences, implies the impartation of a new life-germ, which develops in likeness to God, its veritable Father and fountal source. The same thought is presented in 1 P 1³ 'Blessed be God who begat us again unto a living hope.'

(2) In Jn 3, though both perf. and aor. are used, it is generally recognized that the metaphor is that of birth; not quickening or impregnation, but emergence into a new world—a new atmosphere, a new environment, and new objects of interest. This is clearly implied in the words of Nicodemus, when, in reply to Christ's statement, 'Ye must be born again,' he crudely asks, 'Can a man enter a second time into his mother's womb and be born?' (3⁴). Similarly we interpret 3⁵ *ἐάν τις γεννηθῇ ἐξ ὕδατος καὶ πνεύματος*, 'Except a man shall have been born [not 'begotten,' as though the water had a vivifying effect upon him, but 'born'] out of [or from] water¹ and the Spirit' (water and Spirit being the elements out of which the neophyte emerges). The reference probably is to the words of John the Baptist in Mt 3¹¹ 'I indeed baptize you in water . . . but he shall baptize [or 'immerse'] you in the Holy Ghost.' The context implies that Nicodemus was a disciple of John, and Jn 3⁵ inculcates the lesson of Mt 3¹¹ that immersion in water and emergence from water are not enough; there is needed also an immersion in the Holy Spirit, from which one may emerge a new man, as one newly born emerges from his mother's womb into a new world. The same metaphor occurs in Ja 1¹⁸, where J. B. Mayor² is no doubt correct in saying that the verb *ἀποκτείνω* is 'properly used of the mother'—'Having so willed, he gave us birth.'

D. **A new creature** (*καὶ κτίσις*).—It has been objected that regeneration is not prominent in Paul's teaching; but it would be rash to maintain that he ignored the doctrine of regeneration because he does not use the same metaphor as occurs in John, Peter, and James—indeed, when Paul says, in 2 Co 5¹⁷ 'If any man be in union-with Christ, he is a new creature,' he is not far away from the same similitude. He is moving in the circle of OT ideas which find expression in Ezekiel: 'I will put a new spirit within you'; 'and I will take away the stony heart out of your flesh, and I will give you an heart of flesh' (11¹⁹ 36²⁶). Again, the Apostle says, 'We are his workmanship, created in Christ Jesus for good works' (Eph 2¹⁰), which evidently implies that such a radical change takes place in a Christian as to be comparable to a creation, that this creation is possible only in union with Christ, that God develops the new creation, and that the grand purpose of it all is practical and ethical. Similarly in Col 3¹⁰ and Eph 4²⁴ 'the new man,' i.e. the new self, is stated to be a divine creation, which, in the one case, is 'being renewed in accordance with the image of its Creator,' and, in the other case, is said to be in harmony with God (*κατὰ θεόν*), 'created in righteousness and holiness of truth.' Some would render *καὶ κτίσις* in

¹ Lake (*Inaugural Address at Leiden*, 27th Jan. 1904) and F. C. Burkitt (*Evangelion Da-Mepharveshe*, Cambridge, 1904, ii. 809 f.) advocate that *ἐξ ὕδατος* should be treated as 'an interpretative gloss,' because it is sometimes omitted in the Fathers; but a consultation of the 36 variants in which 3⁵ is quoted in the early Fathers, given in A. Resch, *Paralleltexte zu Johannes*, Leipzig, 1897, p. 73 ff., seems to dispose of this theory; for, though there are several instances in which both 'water' and 'Spirit' are omitted, and several in which 'the Spirit' is omitted, there is not one citation from the Fathers in which 'the Spirit' is inserted and 'water' omitted.

² *The Epistle of St. James*², London, 1897, p. 59.

¹ *De Incorr. Mundi*, 3 (Mangey, ii. 480).

² Cf. T. R. Glover, *The Conflict of Religions in the Early Roman Empire*, London, 1909, p. 150 ff.

2 Co 5¹⁷ 'there is a new creation' (as RVm), implying that man's entire outlook on earth and heaven, man, and God seems changed. Many Christians have testified that, when the spiritual nature is no longer enfeebled and diseased by sin, they seemed to be in a new world. The new life enters also into the larger world of spirit, recognizes its kinship with spiritual forces, feels a companionship with all that is holy and true, and sees God in everything.¹ This is very true and very beautiful, but probably RV represents Paul's thought best, as also in Gal 6¹⁵ 'Neither is circumcision anything, nor uncircumcision, but a new creature.'

E. *A change of clothing.*—This metaphor, though significant, is not fully adequate. Clothing is external; regeneration is internal, psychical, vital. Life only can illustrate life. Vital processes can alone fittingly represent it. Our best similitudes must therefore be drawn from botany or zoology. Character, as others know it, is compared to clothing in Eph 4²²⁻²⁴: 'Put off the old man which is corrupt . . . and put on the new man'; Col 2¹¹ speaks of 'the putting off of the body of the flesh,' and Col 3⁸ reads: 'Ye have put off the old man with his doings, and have put on the new man, which is being renewed,' etc.

F. *A passage from death to life.*—In 5²⁴ reads: 'He that heareth my word and believeth on him that sent me . . . hath passed from death unto life,' Eph 2¹: 'You did he quicken [cause to live] when ye were dead.' These texts are sometimes taken to imply the instantaneousness of the new birth and the absolute deadness and insensibility of the human soul, as well as man's native incapacity for goodness and godliness; and thus they present difficulties equally to the scientist and to the theologian. Many theologians feel obliged, however, by the general trend of Scripture to regard the 'deadness' here spoken of as relative rather than absolute, and to consider man's spiritual nature as diseased and inert rather than literally dead; while the scientist, who objects to admitting anything instantaneous and unprepared for, in any grade of life, organic or psychical, explains the apparent suddenness of the change in man's religious life by the hypothesis of the subliminal self. The new life at first is inchoate, working in the region of subconsciousness; and then, more or less suddenly, there is often a time of spasmodic volitional and emotional tempest, which comes as a great surprise, but which has really been quietly prepared for in that part of our nature where racial and inherited tendencies lie buried beneath the threshold of consciousness.² Paul was kicking against the goads of spiritual conviction for some time before his so-called conversion at Damascus.

G. *Burial and resurrection.*—This figure is similar to the above and occurs in the well-known passages Ro 6³ and Col 2¹².

All these metaphors are, of course, very valuable and carry us a certain distance in the way of elucidation; but scholars are unanimous in admitting that there is an inner fact which defies analysis and description. The universal Christian consciousness is ready to say of the change: 'It is "not of ourselves: it is the gift of God,"³ but the *modus operandi* is inscrutable.

¹ After analysis, says B. Jowett, 'there remains something which eludes criticism.'³ 'The nature of regeneration,' says Hodge, 'is not explained in the Bible further than the account therein given of its author, God; its subject, the whole soul;

and its effects. . . . Its metaphysical nature is left a mystery.'¹ W. James bears the same testimony. No one 'can explain fully how particular experiences are able to change one's centre of gravity so decisively.' We speak of "motor efficacy," but such talk is only circumlocution; for whence the sudden motor efficacy?'² So Starbuck: 'Who can tell what really happens in one's consciousness when one turns seriously into communion with one's deeper self?' 'What happens below the threshold of consciousness must, in the nature of the case, evade analysis.'³

4. Nature of the change.—(1) *The change is new.*

—All are agreed as to its newness.

'As a new divine Principle,' says I. A. Dorner, 'the Holy Spirit creates, although not substantially new faculties, a new volition, knowledge, feeling—a new self-consciousness. In brief, He produces a new person.'⁴ 'All things are new,' says Horace Bushnell, 'Life proceeds from a new centre. The Bible is a new book. Duties are new. The very world itself is revealed in new beauty and joy to the mind.'⁵ And of course Hodge is in thorough agreement here, as he says, 'This new life, therefore, manifests itself in new views of God, of Christ, of sin, of holiness, of the world, of the gospel, and of the life to come.'⁶

(2) *The change expressed in terms of metaphysics.*

—The Puritans expressed themselves very largely in terms of Aristotelian metaphysics.

Stephen Charnock († 1680), whose discourses on regeneration were for many years the great authority on our subject, defines regeneration as a 'powerful change, wrought in the soul by the efficacious working of the Holy Spirit, wherein a vital principle, a new habit, the law of God and a divine nature are put into and framed in the heart enabling it to act holily and pleasingly to God.'⁷ The distinctions drawn are very subtle, if not conflicting. We note that 'a divine nature is put into the heart'; and yet on p. 93 Charnock assures us that regeneration is 'not an addition to nature,' or a 'change in the substance of the soul.' 'As in the cure of a man, health is not added to the disease; but the disease is expelled and another form and habit set in its place. Add what you will (we are told), without introducing another form, it will be of no more efficacy than flowers and perfumes strewed on a dead carcase can restore it to life and remove the rottenness.' We learn, then, that, though regeneration is 'not an addition to nature,' and 'the new creation gives no new faculties,' yet 'a vital principle is put into the heart' and 'a new form is introduced.' In regeneration there are 'no new faculties,' says a Princeton divine, 'but there are new principles';⁸ and from him we obtain a definition of the word 'principle,' which we seek in vain in Charnock. He defines it as 'that foundation which is laid in nature, either old or new, for any particular kind or manner of exercise of the faculties of the soul.' In other words, a 'principle' is 'a new foundation laid in the nature of the soul, for a new kind of exercise of the same faculty of understanding.'

(3) *The change expressed in terms of psychology.*

—The great spiritual change which, when viewed causally and subjectively, is called regeneration and, when viewed in its manifest results in life and character, is called conversion (*g.v.*) is a psychical fact and therefore can be expressed in terms of psychology. Metaphysics is ambitious to treat of the soul as an immaterial entity, possessed of substance and faculties, form and principles. Psychology pursues the humbler path of analyzing consciousness and interrogating experience.

E.g., E. F. Scott describes regeneration thus: 'It is like another and higher will sustaining ours, and gradually subduing the whole nature to itself—till the natural life becomes "spiritual" life.'⁹ E. Reuss describes it as 'an abdication of our own individuality, allowing the Holy Spirit to evoke a complete metamorphosis of our human nature.'¹⁰ J. Strachan speaks of it as 'practically . . . a new life which turns all the forces of one's being into a new channel. All the energies that formerly made a man a sinner are now employed to make him a saint.'¹¹ 'Such sudden and radical changes in a man's life' as those of Paul, says Percy Gardner, 'may often be led up to by many experiences and thoughts. But these often culminate in what may be called a violent spiritual and emotional tempest, which shakes the whole being to its utmost depths.'¹² Starbuck

says of conversion (though what he says is much more true of regeneration) that it is 'the birth of new powers.' It is 'as if there had been the liberation of fresh energy, or as if new streams had flowed into consciousness.' It is 'life on a higher plane.' 'It is a process of *realising the possibilities of growth*; of making a draft on the latent energies . . . which might otherwise have lain dormant always.'¹

The psychological expression of regeneration may well be subdivided as follows:

(a) *In terms of personality*.—'The new personality is formed,' says Dörner, 'in inner resemblance to the second Adam, on the same family type, so to speak.'² 'Grace and freedom meet,' says H. Martensen, and 'a new personality is established, a copy of the divine and human personality of Christ.'³ So J. Vernon Bartlett: 'A new personality arises from the new union of the will and the higher element dependent on and akin to the Divine: the man lives anew with a fresh type of moral life—that being dominant which before was subject, and *vice versa*.'⁴ And A. C. Headlam: 'St Paul . . . thought of the Spirit as a beneficent Divine personality . . . inspiring our higher nature, giving us a new personality, a new power, a new life.'⁵ Putting the matter more scientifically, James says: 'What is attained is often an altogether new level of spiritual vitality, a relatively heroic level, in which impossible things have become possible, and new energies and endurance are shown. The personality is changed; the man is born anew.'⁶ So Starbuck teaches us that in adolescence, with its ferment and unrest, there are indications, when the influences of the Spirit of God which enlightens every man are not violated, that 'a personality is forming beneath that has capacity for self-direction and independent insight.' We thus witness 'the birth of selfhood, the awakening of a self-conscious personality.'⁷

(b) *Unification*.—'Every man,' says Percy Gardner, 'finds himself a human being of mixed tendencies.'⁸ 'We are each of us,' says G. Steven, 'as it were composed of many "selves." What we need is 'the unifying of the self or personality,' which was probably in the mind of the Psalmist, when he prayed, 'Unite my heart to fear Thy name.'⁹ So Frank Granger: 'The unity of the soul is thus something to be reached after and found both within God and within itself.' 'The soul is not there to begin with, but must be gained.'¹⁰ Accordingly, we find that James, who devotes a chapter of his great work to 'The Divided Self,' says that 'to find religion is only one out of many ways of reaching unity';¹¹ and defines regeneration as 'the process, gradual or sudden, by which a self, hitherto divided, and consciously wrong inferior and unhappy, becomes unified and consciously right superior and happy, in consequence of its firmer hold upon religious realities.'¹² Paul describes his experience of the divided self in Ro 7, and Augustine, who in so many ways duplicated Paul's experience, says, 'Thou didst gather me again out of my dissipation, wherein I was torn piecemeal; while turning away from Thy unity, I lost myself in many things.'¹³

(4) *The change expressed in terms of physiology*.—There seems to be a parallelism between cerebral and psychical processes, but modern psychologists have long abandoned the attempt of David Hartley and his school to maintain that mental acts can ever be adequately described, much less explained, as brain currents or vibrations, or indeed by any physical terms. While aware of the inadequacy of physiology, it seems a fascination to some of our scientific theologians to throw their account of mental acts and states into physiological terms.

E.g., Starbuck says: 'What happens below the threshold of consciousness must, in the nature of the case, evade analysis. It tends to fill in the chasm in our knowledge, however, to explain it in terms of the nervous system and its functionings.'¹⁴ And again: 'If we turn to our crude analogy of nerve cells and connections . . . we may get a definite picture, at whatever cost of accuracy.'¹⁵ Accordingly, we find him describing 'the phenomena' which 'cluster about the birth of a new self' as 'the organisation of nerve elements about a new centre.'¹⁶ In another passage he says that it 'seems entirely accurate' to speak of one who had experienced the 'awakening of new powers and activities' as 'born of the Spirit,' but he immediately adds: 'It is as if brain areas which had lain dormant had now suddenly come into activity—as if their stored-up energy had been liberated, and now began to function.'¹⁷ Starbuck insists strongly that conversion is an adolescent phenomenon; that the periods of physical and mental maturity are the periods when the vast majority of conversions occur. In these periods

'the life-forces tend upward toward the higher brain centres,'¹ and biologically the new birth is 'coming to live on the highest level of the nervous system.'² James describes the new birth 'symbolically' thus: that a 'new centre of personal energy has been subconsciously incubated';³ and Lake attaches so much importance to the theory of a subliminal self that he considers that the really serious controversy of the future will be to determine whether religion is merely 'communion of man with his own subliminal consciousness, which he does not recognize as his own, but hypostatizes as some one exterior to himself.'⁴

5. *The efficient cause of regeneration*.—(1) *The power of the Spirit*.—The teaching of the NT is emphatic that man needs a drastic inward change as a condition of salvation (Mt 18³, Jn 3³), and in the Acts and Epistles it is everywhere implied that the primitive Christians had experienced such a change (1 Co 6¹¹, Eph 2⁵, Col 1¹³, 1 Jn 2²⁰). It is equally clear that man is unable to effect this change by himself. There is need of the inworking of a power other and holier than himself. This power is the Holy Spirit. The NT teaches that man is to a greater or less degree controlled by an evil spirit (Ac 5³, 2 Co 4⁴, 1 P 5⁸, 1 Jn 3³); but over against man in his sin and weakness there stands a Divine Spirit, endowed with creative energy; and into hearts which are opened to receive Him He enters, vivifies latent faculties, and supports men in the struggle of life. Christians in all ages have testified that they were changed. Another will controls their will. A new light illumines everything. A new force controls their emotions, stimulating the higher, repressing the lower. 'Old things are passed away; behold, they are become new.'⁵ (2 Co 5¹⁷). God gives the Spirit (2 Co 1²², 1 Th 4⁸, Gal 3³, Ph 1¹⁹); man receives the Spirit (Ro 8¹⁰). The Spirit dwells in man (1 Co 3¹⁶)—not that there are two entities, the human spirit and the divine, existing side by side; but that the Divine Spirit energizes, dynamizes the human spirit, ennobling, dignifying, purifying it. As A. Sabatier expresses it,

'The Spirit of God identifies itself with the human Me into which it enters and whose life it becomes. If we may so speak, it is individualized in the new moral personality which it creates.'⁶

When we come to inquire more minutely what is the divine power which the Christian receives, we find some indefiniteness. There are three terms which are used in NT interchangeably—'Christ,' 'the Spirit of Christ,' and 'the Holy Spirit.' The same verbs are used with each, and the same functions are ascribed to each (cf. Ro 8⁹, 2 Co 3¹⁷, Gal 2²⁰ 4⁶, Jn 14¹⁶ 20²², 1 P 1¹¹). But does identity of function necessarily imply identity of person or agent? That is a question much discussed. There are not a few scholars who maintain that the 'Holy Spirit' of the Christian dispensation is the spiritual, ascended Christ; e.g., A. Tholuck⁷ and Reuss⁸ both maintained that the Holy Spirit in the NT is not a self distinct from Christ, but is Christ Himself glorified into a spirit, or the spiritual presence and manifestation of Christ to His disciples after His departure from earth. Franz Delitzsch also maintained that all communications of the Spirit, since the Ascension, are effected through the Spirit of the Son of Man.⁹ G. A. Deissmann says:

'The living Christ is the Spirit . . . "The last Adam became a life-giving Spirit."¹⁰

Other scholars express themselves more cautiously. E.g., R. O. Moberly says: 'The Holy Ghost is, to us, immedi-

ately, the Spirit of the Incarnate Christ. . . . To us, He is the Spirit of God through, and as, being first, for us, the Spirit of the Christ.¹ So E. F. Scott says: 'Practically, the Spirit is to Paul the power of Jesus acting on believers',² and R. J. Drummond, while maintaining that 'it would not be true to say that the Spirit is simply the spiritual presence of the Exalted Christ,' yet, after quoting Christ's words, 'I will send,' 'I will come,' admits that 'the presence of one is practically the presence of the other.'³

The important matter is to insist that, since the resurrection and ascension of Christ, there has been a *new potency on the earth*. Whether we seek to explain the matter metaphysically, in terms of the Church's Creeds, or, more wisely, are content to leave it unexplained, the truth is that the Spirit, which, under the Christian dispensation, regenerates and sanctifies believers, is endowed with the properties of the God-man. At Pentecost, and ever since, the Church has been animated by a new power—not the power of the Logos, but a theanthropic power, the power of the glorified Christ. 'The Holy Spirit was not yet, because Jesus was not yet glorified' (Jn 7³⁹). The Holy Spirit of the Christian dispensation has the value of the ascended Christ, and has become in the Church a new moral, religious, personal force—the efficiency of Him who 'became in all things like unto his brethren' that we may be 'transformed into his image.' To quote from Dörner:

'The Spirit of God is the *πνεῦμα Χριστοῦ*.⁴ As the Spirit of Christ, He carries in Himself the power to diffuse the divine-human life . . . In fixed historical continuity, the divine-human personal unity . . . is employed for the purpose of propagating the life of the God-man. . . . Through the Holy Spirit, as the Spirit of Christ, humanity is led back to God, appropriated by Christ's theanthropic life; and this is the Church.'⁵

(2) *Human co-efficients*.—The co-efficients of regeneration, on the human side, are repentance and faith.

(a) *Repentance*.—It has been an error on the part of some Calvinists to maintain that at the time of regeneration man is passive or perhaps even antagonistic. It is very true that no man can come to Christ 'except the Father draw him'; that God always takes the initiative in man's salvation; that 'we love him because he first loved us.' But, before the new birth can be effectuated, there must be a period of unrest and self-dissatisfaction. It is not the first touch of the Spirit upon a sinful soul that regenerates. There are preparatory dealings of God with the soul. Christian experience often testifies to convictions, pleadings, drawings, remorse, and self-accusation, which may perhaps be compared to birth-pangs preceding the new birth. There are, it is true, many cases all down the history of the Church in which the new birth seems to occur very abruptly and suddenly, but the modern mind distrusts the sudden and catastrophic in all departments of life. Accordingly, the modern method of accounting for apparently sudden conversions is to assume that in such cases there is a much richer, inherited subliminal self than in others, and that the upheavals of unrest and remorse have been long taking place beneath the threshold of consciousness. Most modern psychologists⁶ very properly raise a protest against the procedure of some denominations which seem to recognize the sudden, remorseful, spasmodic type of conversion as the only genuine one. They do this on the ground that such experiences are entirely a matter of temperament and that some constitutions are incapable of developing spasmodically.

(b) *Faith* is the second antecedent to the new

birth (Eph 3¹⁷, Ro 8¹⁰, Gal 2²⁰)—faith in its double meaning of (1) appropriation of a message and trust in the person whom it declares; and (2) self-surrender to a power other and purer than we, which seeks to control our life (see art. FAITH [Christian]). (1) It may be quite true that there are ethnic phenomena which resemble conversion, but Christian regeneration can be effected only by contact with Christ—on the divine side, dynamically, by the operation of the Spirit of the God-man upon the heart of man, and on the human side by hearing of Christ and by trusting and loving Him. Regeneration is conditioned by personal trust in Jesus as Saviour. Every true Christian can say, 'For me to live is Christ.' (2) Self-surrender finds an important place in all religious psychology. It is compared to 'relaxation of effort' on the verge of discovery, when, after hours or days of research, the solution comes unexpectedly, perhaps immediately after awaking from sleep. Many of Starbuck's cases confessed that, after long and weary efforts to conquer sin and to secure, with the much-coveted suddenness, a sense of pardon and regeneration, they found themselves obliged to desist from the wrestling and struggle, and to yield themselves up into Christ's hands. When the surrender is made, then often the new birth—the emergence from darkness to light, from bondage to freedom—takes place.¹

6. *Subsidiary causes*.—(1) *The word*.—Divines often call this 'the instrumental cause.' The efficacy of the written or spoken word as the expression of the mind and heart and will of God is often taught in Scripture. When we read that 'man does not live by bread alone, but [is endowed with a life which is nourished] by every word that proceedeth out of the mouth of God' (Dt 8⁴), when we read that 'the word of God is living and powerful' (He 4¹²), when Jesus says, 'My words are spirit and they are life' (Jn 6⁶³), and when Paul reminds the Corinthians that 'in Christ Jesus' he had 'begotten' them 'through the gospel' (1 Co 4¹⁵), we cannot escape the conviction that a 'word' was believed to be endowed with potency. Certainly the rabbis held this view; and, when they read in the story of Creation that God said 'Let light be,' and light was, they considered that the very words were a *vera causa*, operating in the physical realm, and effectuating 'that whereunto they were sent' (Is 55¹¹), as we read in Is 9⁸, 'Jehovah sent a word into Jacob and it alighted upon Israel,' and as in Zec 5⁴ we read of 'a curse' that should 'enter a house and consume its timbers and its stones.' In a similar manner the causality of a divine word is taught in the NT, where we read that we are 'begotten again . . . through the word of God' (1 P 1²³), that 'God gave us birth through the word of truth' (Ja 1¹⁸), that 'the word of the message worketh in those who believe' (1 Th 2¹³), and that the gospel is 'God's *δύναμις*' (Ro 1¹⁶). Evidently the 'word' is conceived as having the efficacy to regenerate and sanctify; and, when those of us who have listened to the recital of Christian experience recall how often the decision for Christ—the entrance into joy and liberty—is traced to the effect of some divine word, embodied in some hymn or passage of Scripture, we cannot but feel that there was some ground for the peculiarly Semitic conception of the potency of a word.

(2) *Thoughts or beliefs*.—The psychology of religion strongly emphasizes that thoughts are forces, that one phase of regeneration is enlightenment, and that ideas have psychical, if not indeed physical, potency.

⁴ Cf. Ro 8⁹, Gal 4⁶.

⁵ iv. 160 f.

⁶ James, *Varieties*, p. 236; Granger, p. 77; Coe, p. 213; Starbuck, p. 173.

'Every idea that is relevant to our condition moves us,' says Steven;¹ and James dwells on 'the regenerative influence of optimistic thinking' and on the 'doctrine that thoughts are forces', maintaining that 'one gets by one's thinking reinforcements from elsewhere for the realization of one's desires; and the great point in the conduct of life is to get the heavenly forces on one's side by opening one's mind to their influx.'²

Undoubtedly thoughts are forces, whether they originate from our own cogitations or from suggestion by others, though persons differ very widely as to their impressionableness to suggestion. Hypnosis is just the focusing of suggestion. We may not enlarge on this; but it enables us to realize how efficacious it is to centre the thoughts on God, to have a firm belief in His wrath or His love, His goodness or His severity, during the period which elapses between the time when the soul is quickened by the Divine Spirit and the time when, more or less suddenly and joyously, the soul enters into the liberty of the sons of God.

7. *Ethnic and Jewish parallels.*—(1) *Hindu.*—In ancient India there were three castes of Aryans—the Brāhmins, the Ksatriyas, and the Vaisyas—who were believed to have the spiritual capacity for being 'twice-born.' The second birth was foreshadowed in the sacred ceremony of initiation, known as *upanayana*, which took place at various ages between eight and sixteen, according to caste. The boy was brought to his *guru* (spiritual preceptor), and, after a prayer in ancient Sanskrit, he was invested with the sacred cord, which consisted of three slender cotton threads—white, to typify purity—and tied in one place by a sacred knot. The cord was placed over the left shoulder and under the right arm and worn perpetually. It was of no use unless blessed by Brāhmins, consecrated by the recitation of Vedic texts, and sprinkled with holy water. The ceremony was accompanied by the ten-times-repeated prayer, 'Let us meditate on the excellent glory of the Divine Vivifier [i.e. Regenerator].' After this act of investiture the novitiate commenced his study of the Vedas, and by and by, according to his period of study, he became qualified to teach and expound the Vedas, to recite prayers, and to take part in religious services and sacrifices. The disciple was taught to revere his *guru* very profoundly; indeed, in the *Institutes of Manu* it is enjoined:

'Of the two, the one who gives natural birth and the one who gives knowledge of the whole Veda, the latter is the more venerable father, since the second or divine birth ensures life, not only in this world but hereafter eternally' (ii. 140). 'The twice-born man who shall have passed the period of his studentship, shall ascend after death to the most exalted of regions and no more again spring to birth in this lower world' (ii. 249).³

(2) *Jewish.*—Judaism at a very early period applied to its proselytes the ideas of birth and creation, as we see from Ps 87, 'Behold Philistia and Tyre; this one was born there,' and 102¹⁸, 'A people that shall be created shall praise Jahweh.'

Similarly in *Brēshith Rabbāh*, xxxix. 14, on Gn 12⁵, R. Eleazar ben Zimra says: 'If all who come into the world were met together to create one fly, they could not impart to it life: but he who induces a man to become a proselyte is as if he created him.' *Shir R. l.* 3 says: 'Every one who gathers one creature under the wings of the Shekinah is as if he created and formed him'; vii. 2 reads: 'The house of my mother'—i.e. Sinai. R. Barachin said: 'Why do they call mount Sinai my mother? Because there Israelites were made, infants a day old.' *Babli Nē'arā*, n. 11, teaches that a man ought to reverence his teacher more than his father: 'His father only brought him into this world. His teacher who taught him wisdom brings him into the life of the world to come' (cf. above, [1]). *Yēhāmōth*, 62a: 'The stranger who is proselytized is like a child who is newly born, because he must break away from his former teachers and principles, customs and habits, as well as from the ties of kinship. It is expected of him that he will lay aside his vicious habits and comport himself as if he were born that very day.'⁴

Philo often dwells on the necessity of a radical change before a man can secure the favour of God. He employs the figure of regeneration in a more psychical way than the Palestinian Jews and contemplates the change as a profound religious experience.

'What length of time could ever transform the harlotry of a soul trained in early and habitual incontinence? No time could do this, but God alone, to whom all things are possible; even those which among us are impossible.'¹ 'I have learned to appreciate my own nothingness (*ōddēvriav*) and to gaze at the indescribable summits of thy munificence and then I recognize myself to be "dust and ashes" or something worse. . . . I am so elementally-changed (*ἀπεστροφωμένος*) that I do not even seem to exist.'² Again, 'How could the soul ever have known God, if He had not breathed into it and touched it *κατὰ δύναμιν*?'³ 'Who is it that sows good seed in human souls but him who is the Father of existing things, the unbegotten God who begets all things?'⁴ Our next quotation reminds us of the 'once-born' man of W. James, whom Philo calls *αὐτομάθης*. 'Every self-taught man is one who does not grow better by struggle and conflict, but from the outset found Wisdom ready prepared for him, showered down on him from above.' Of such men Philo says further on: 'The *αὐτομάθης γένος* is something new, surpassing description and really (*ὁντως*) divine, subsisting not by human conception but by inspired frenzy.'⁵ And once more he says: 'If a divine thought (*ἐννοια*) enters the *διάνοια* of man, it at once blesses it and heals all its diseases.'⁶

(3) *Stoicism.*—Stoicism had before NT times become a religion quite as much as a philosophy, announcing its ability to free men from the domination of evil and to bring them into union with the divine. It appealed strongly to the sturdy Roman character and had a deep influence on the best men in the early Roman Empire. S. Dill speaks of Seneca as 'the earliest and most powerful apostle of a great moral revival,' and as 'one of the few heathen moralists who warm moral teaching with the emotion of modern religion.'⁷ Seneca speaks of multitudes stretching out hands for moral help; and there is evidence that he himself was seized with a passion to win souls to goodness and truth, and seriously regarded it as his mission to form or reform human lives. He taught clearly that 'no mind is good without God.'

"God comes to men, nay! nearer still! he comes *into* men. . . . Divine seeds are sown in human bodies"⁸ and will grow into likeness to their origin if rightly cultivated.⁹ God is within us, inspiring good resolves and giving strength in temptation. God is without us, bestowing on us His gifts and chastising us in His wisdom.

Many Stoics taught a doctrine of instantaneous regeneration. Goodness is brought about not by addition, but by a thorough change. There may be a progress from folly and wickedness in the direction of wisdom, but the actual passage from one to the other must be momentary and instantaneous. It may be a long preparation, but it is followed by a change (*μεταβολή*), sudden and complete. Just as a drowning man¹⁰ may be rising for some time towards the surface, but his experience when he emerges into the air is totally different from that which he passed through while rising, and must be instantaneous, so the final step in which a man suddenly finds himself transformed is different in kind from all the steps that have gone before. Cicero says of himself: 'I consider myself not merely to be amended but transfigured';¹¹ and Stoicism claimed many indisputable instances of men who had experienced a thorough and sudden change of character, as, e.g., Polemon, the dissolute son of a wealthy Athenian who was thoroughly changed by listening to a discourse by Xenocrates.¹²

(4) *The mystery-religions.*—In the 6th cent. B.C. a remarkable wave of religion swept over Greece, the cause of which was largely personal, being due

⁵ Glover, p. 61.

to the influence of such men as Pindar, Hesiod, and perhaps Orpheus—men who were at once poets and prophets. The period was marked by (1) a more serious appreciation of right and wrong; (2) a yearning to know what awaits the righteous and the wicked after death, and a conviction that the wrongs of this life will be righted hereafter; (3) a deeper sense of the turpitude of sin and its defiling influence; (4) a growing belief in henotheism; and (5) a longing for fellowship with God. All this was accompanied by a disposition to give to religious beliefs a visual, scenic form and dramatic representation. Foreign rites and ceremonies were appropriated, old rustic symbols and mystic plays—in fact anything that could evoke intense religious feeling. Into these weird symbols men read new meanings, and used them to mediate a crude sense of communion with the divine—everything appealing quite as much to their highly-sensitized organisms as to their psychical or moral nature. Men in the distant past were far more truly 'children of Nature' than we are; and they experienced real pain and joy in the changes of the seasons, bemoaning the apparent death of vegetal life and indulging in ecstatic revels at the return of spring. They were keenly sensitive to the parabolic significance of Nature. Their life was *en rapport* with the life of Nature. Their soul was believed to be a fragment of the great World-Soul. The annual renovation of Nature in springtime fostered two anticipations: (1) that, as Nature puts on her beautiful attire in spring, after months of ugliness and deformity, so there must be a possibility, if one could only enter into thorough unison with the World-Soul, of renovating, cleansing, and beautifying the human soul, of whose pollution they were so painfully conscious; (2) that, as Nature lives again yearly after apparent death, so it must be possible for the human soul to undergo some processes which shall render it incorruptible and secure for it a glorious immortality. During the two centuries before and after Christ this movement spread and deepened immensely, gradually orientalizing Roman paganism and acclimatizing Phrygian, Egyptian, and Persian divinities and ceremonies, in every great centre of the empire. Everywhere there was found a deep sense of the pollution of sin and a longing for immortality; and in consequence there was a readiness to submit to any crude, pre-historic ceremony, resuscitated with new symbolism, in the frenzied longing to be inwardly changed, to become a child again, and to be made fit hereafter to dwell with God.¹ These ceremonies were the mysteries (*μυστήρια*).

(a) *The Eleusinian mysteries*, as held in Athens, furnished the grandest artistic display and scenic ornamentation. The great object of mystic contemplation was an ear of corn. There were ablutions in salt, fumigation with sulphur, and smearing with clay or with blood—all done with the intense desire to cleanse the soul. There were scenic representations of events in the history of Demeter and Persephone, on which the mystics gazed with wild, frenzied stare, in the hope that the experiences of the risen Persephone might be reproduced in their soul. Speaking of the illustrations, Tertullian says:

'The nations ascribe to their idols the same power of imbuing water with the self-same efficacy as we do. . . . At the Eleu-

sinian mysteries, men are baptized, and they assume that the effect of this is their regeneration and the remission of the penalties due to their perjuries.'²

(b) *Egyptian*.—In this religion Osiris was slain and dismembered by Set, and his limbs were concealed all over the world. The limbs were sought and found by Isis and her son Horus, and were reconstructed, and Osiris received a new life, divine and eternal. The one absorbing desire of his worshippers was to become partakers, in a mystical, spiritual sense, of the new life of Osiris.³

In the great Parisian magic papyrus published by Carl Wessely, we read of a mystic who has been allowed access to the divinity Set, and who is instructed by the mystagogue to address the divinity thus: 'O mighty Typhon, sceptre-bearer and ruler of the upper kingdom. . . . I am thy soldier. . . . I fling myself before thee. . . . energize me (*ἐνεργήσω*), I implore thee.' Having done this, he is bidden to put on white raiment, and to say to the god: 'I am united with thee in a sacred form. I am energized by thy sacred name. I have met the effluence of thy good gifts,' and he is assured that he has obtained a god-like nature (*θεοῦ φύσεως*) which has been effected by the union with god. Another prays: 'Come into me, O Hermes, as children are in the mother's womb'; and in another passage we read, 'Come into the soul of this child that it may be fashioned (*τυποῦσθαι*) after thy immortal form in thy powerful imperishable light'.⁴

Lucius Apuleius, who wrote about A.D. 130, humorously describes his metamorphosis into an ass, from which condition he was delivered by the priest of Isis, and was initiated at Cenchreae into the mysteries of Isis. He describes the day of his initiation as his sacred birthday. He says that on that day he penetrated to the boundaries of death and trod the threshold of Proserpine.⁵ He compares this to 'a voluntary death' and his restoration to life to 'a salvation vouchsafed in answer to prayer'. He is certain that through the goddess Isis he has been in a manner born again ('quodam modo renatus') and placed again on the course of a new salvation.

The Hermetic literature.—Reitzenstein, in his work *Poimandres* (Leipzig, 1904), publishes and copiously edits a strange compilation of eighteen sacred documents made about A.D. 300 by an Egyptian priest. The Greek fragments are of various ages and belong to several religious communities; but the type of religion presented is generally Hellenized Egyptian. Among them is a remarkable dialogue between Hermes and his son Tat on the subject of regeneration (*παλιγγενεσία*).

The son reminds his father that he once said that no man can attain to *σωτηρία* unless he is born again and looses himself from this world of seeming. Tat says that he has done this, and begs to be instructed as to the doctrine (*λόγος*) of regeneration. Hermes replies: 'It cannot be taught. God causes it to grow in human hearts. The event is a begetting. God's will begets. Those begotten are reborn; they are sons of God.' Tat still presses his father to reveal more. He seeks to have a description of the new nature, and asks: 'He who is born, of what sort is he? for that which is born will be another and will have no share in the noetic being which is in me.' The father can only reply that such knowledge is not taught, but, when God wills, He can cause it to come to mind. But the son asks again: 'Do you mean that I who am by nature descended from my father am another's son? Explain to me the manner (*τρόπος*) of the regeneration.' Hermes can give little light as to the method; but the results of the change are remarkable. Form loses its outline, and magnitude loses its dimensions. The mind cognizes; no longer do the senses perceive. The injunction is: 'Nullify the perceptions of the body and the birth of Deity will take place in thee'.⁶

(c) *Phrygian*.—The Phrygians elaborated their conception of psychical regeneration from the myth of Attis, the devotee of Cybele, who bled himself to death under a pine-tree for his imagined unfaithfulness to his goddess and was restored to life by the Earth-Mother. Men weary of earthly life and of sin yearned for a thorough change—a death, a burial, a new life. Under the influence, probably, of Mazdaëism, according to which a mystic bull is the originator of creation and resurrection, the old custom of devouring the bull, and thus receiving the strength of the bull into themselves to renew their physical energy, underwent a

sublimation of meaning, and was used as a means of acquiring eternal regeneration of the soul. They appropriated the blood-bath, in which the novitiate descended into a grave over which were boards, and on them a bull was slain. The man underneath received on his naked person, and into all the orifices of his body, the warm blood, under the belief that his sins were thereby cleansed and his nature regenerated.¹ For some time the fiction of the new birth was kept up by feeding the mystic on milk and tending him as a babe (*ὡς περ ἀναγεννόμενον*).

(d) *Mithraism*.—Mithraism (*q.v.*) employed, and probably initiated, the bath of blood, and on many tombstones, even of Roman patricians, there are found the words 'in aeternum renatus,' indicating that they believed themselves regenerated by the Mithraic ceremony. Albrecht Dieterich has published a papyrus which he believes to be a liturgy of Mithraism. Its opening prayer is very striking:

'O! first genesis of my genesis! First spirit of the spirit which is in me! First water of the water which is in me! . . . May it please thee to translate me, who am trammelled by the nature which underlies me, to an immortal genesis . . . that I may be born again (*ἀναγεννηθῶ*) in my mind; that I may be initiated and the sacred Spirit may breathe on me. Though I was born a mortal from a mortal mother . . . having been sanctified by sacred ceremonies, I am about to gaze with immortal eyes on the immortal *Æon*.²

When all is over, he says to Helios, lord of heaven and earth:

'I have been born again by thee—one, out of so many myriads, I am immortalized in this hour'

8. *Metaphors common to NT and the mysteries*.—The researches of late years, and especially the discovery of papyri, have disclosed that many technical NT words are also found in the vocabulary of the mysteries. In NT times the mysteries were very popular, not only the national ones, but also those of a more private character, held in halls or private houses; and almost every respectable man was a member in one or other of these mysteries.³ The ceremonies were kept secret, but the results claimed to be effectuated thereby were no secret; and Paul could not live in an intellectual centre like Tarsus without becoming familiar with the technical phrases of the mystery-religions. And, though we admit that Paul was antipathetic to them, and though it be true, as A. Jacoby maintains,⁴ that the keenest struggle of Christianity was with the mystery-religions, yet we need not be surprised that Paul should borrow metaphors from them; for he often derives metaphors from the athletic games against which Christians showed vehement opposition in later years. Early Christianity did not invent a religious vocabulary; almost all its terms were in vogue at the time. The professed aim of the mysteries was *σωτηρία*, to secure union with God and eternal life. Regeneration is the central theme in the Mithraic liturgy, in the Isis ceremonies described by Apuleius, and in the conversation between Hermes and Tat. Hence many of the pagans who listened to Paul and Silas were members of mystic brotherhoods; and, 'when this new group of travelling preachers from the East proclaimed the promise of *σωτηρία* and the assurance of life eternal, their message was bound to appeal to such an audience.'⁵ The early Christians used familiar terms and metaphors, but infused a vastly higher meaning into them. We proceed now briefly to show how the metaphors of the NT concerning regeneration are found, though not with the same significance,

in the mysteries (the sections are the same as in § 3 above).

A. '*The seed is the word*' (Lk 8¹¹; cf. 1 P 1²⁸, Ja 1¹⁸).—In the Hermetic literature it is taught that 'regeneration is the end and aim of all revelation.' While Tat, in silent devotion, sits listening to the instruction of his father Hermes concerning the divine potencies, these potencies manifestly enter into him and form his new 'I';¹ and it is taught that the reader of the book recording the conversation between Hermes and Tat might also be regenerated, under the grace of God; but a translation of the book would not have the same effect.² Tat asks his father of what sort of mother he was regenerated, or of what sort of seed, and receives the answer: 'The will of God is the sower, and the seed is the true Good.'³

B. *Impartation of life*.—As we have seen, there was a deep longing for immortality in the period from 600 B.C. onwards, and the popularity of the mysteries was chiefly due to the fact that they claimed to confer life and joy hereafter. The gods worshipped in the mysteries were those who, like Osiris, Attis, and Kore, died and lived again; and, while gazing at vivid spectacular displays of their sufferings, death, and rebirth, accompanied by mournful addresses, listened to with sobbings and wailings and self-mutilations, the *μύσται* strove frantically to become partakers in the sufferings and death of the gods, that they might become partakers in their glorious life. In the mysteries of Attis, when the worshippers have almost spent themselves in sympathetic grief over the sad death of Attis, the priest chants in low tones:

'Be of good cheer, O mystics, since the god has been rescued from death, there is *σωτηρία* for you from your toils.'

Similarly it is said of one who has become mystically united to Osiris:

'As truly as Osiris lives, shall he live. As truly as Osiris is not dead, shall he not die.'⁴

C. *New birth*.—It is extremely probable that the words *παλιγγενεσία* and *ἀναγέννησις*, to describe the change which the *μύσται* claimed to have undergone, are pre-Christian. It was believed that the initiations and the sympathetic dramas causally produced this state of regeneration. Of course, we need scarcely remark that the *παλιγγενεσία* was vastly different from that of the NT. In the mysteries the phenomena were hyperphysical, due to sensuous excitement, akin to that of the *fagur* in India, or the prophets of Baal. In the NT the change was supremely ethical (1 Co 6¹¹). In some cases, it may be, the result of the mysteries was morally elevating, but that was not their primary intent. They were designed to evoke a sensuous religiousness—to appeal to the feelings and to foster the condition in which men and women of neurotic temperament see visions and dream dreams. They encouraged manticism as distinct from prophecy. The church at Corinth was in danger of reverting to a 'mystery.' It is doubtful whether those who claimed *ἀναγέννησις* through Attis and Isis lived on a much higher moral level than their neighbours.

D. *A new man or a new creature*.—There is everywhere in the mysteries the notion that the soul, as a highly attenuated material entity, undergoes some change. This is emphasized when, as in the Mithraic liturgy, the word *μεταγεννησθαι* is used instead of the other synonyms. We find constantly the idea of union (*συνουσία*) of the divine with the human, cleansing, ennobling, and transfiguring it. Osiris, Attis, Adonis were men. They died as men; they rose as gods. If men unite themselves with them, 'receive them,' 'put

them on,' they are thereby deified. They become sons of God.¹ Yet in one place we have a sort of Nestorian conception—*συνάφεια* rather than *σύγκρισις*—when Tat asks whether the inborn son of God is himself or another, and prays for Hermes to come into him 'as children are in the mother's womb.'²

E. *A change of clothing*.—Here we meet with the conception that the soul cannot be changed while in the body. It must first be 'out of the body.' The soul wanders through the heavens, and receives a new *μορφή* before it returns. The soul of one who is admitted to the mysteries of Isis travels through the twelve houses of the zodiac and in each puts on a different garment—twelve different transmigrations. He returns to earth wearing an Olympian garment, stands before the assembled mystics, and is revered as a god.³ So in the cult of Mithra the soul of the mystic is born again by means of wandering through the heavens. Arrived there, he calls out for his own heavenly body, which God has formed for him in the world of light, and wears it for a time; but he must lay it aside when he returns to earth, and put on the garment of his earthly body.⁴

F. *A passage from death to life*.—Development is quite a modern conception. It was simpler to the ancients to conceive of transition, as death followed by life. Even yet we can speak of the death of the old year and the birth of the new. The great change to which the initiates to the mysteries laid claim was often represented as a death, followed by a changed life. When the initiation was being celebrated, it was usual for the *μύσται* to simulate death, from which they were aroused by the call of the *μυσταγωγός*. Apuleius, describing his own initiation, says: 'I went to the confines of death. I trod the threshold of Proserpine.' Among some savage tribes youths were beaten till they were unconscious, that they might enter on a new life; and for a time they were expected to behave as babes.⁵

G. *Burial and resurrection*.—This, of course, is a very similar metaphor. Burial was designed to emphasize the reality of the death. In the cult of Attis a pine-tree was felled, and the trunk adorned with garlands and solemnly buried. The mystics waited for Attis, who had died again in his sacred tree; they gashed themselves and sprinkled their blood on the altar. Next night they assembled in the temple, simulating death, and a light and the resurrected pine-tree were brought in, while the priest moved round among the prostrate *μύσται*, informing them that the god had been rescued from death, and besmearing their throats with oil that they might sing the praises of the risen god.⁶ Dieterich, speaking of the customs of some uncivilized peoples, says:

'The adepts are besmeared with chalk or mud; then suddenly cleansed and assume a new name. They are buried and then fetched up out of the grave. They are beaten almost to death and then brought back to life.'⁷

Proclus (fl. A.D. 450), in his work on the *Theology of Plato*, iv. 9, says:

'What is most wonderful of all is that the priests command the body to be buried, except the head, in the most sacred of all the ceremonies.'⁸

It is certain that in the mysteries all the effects were believed to follow magically rather than ethically. The ceremony produced the results irrespective of the ethical condition of the novitiate. Physical contact with the water regenerated the soul. The words uttered by the priest were

believed to have a magical effect on the soul. The burial and besmearing with clay or mud, followed by restoration to life, were held to produce in the votary a psychical death, burial, and new birth. The new birth produced a sense of union with God, compared with marriage to the god or having him as a guest in the soul. All was in the realm of feeling, and left the moral nature of most men untouched.

9. *Connexion between regeneration and baptism*.—The subject of Paul's teaching as to the significance of baptism has been a burning question during the past decade. The disputants fall into three classes:

(1) Those who believe that baptism (which in this case is restricted to believers) is nothing more than (a) a symbol of a spiritual union which already exists between Christ and the believer; (β) a declaration of allegiance to Jesus as Master and Lord; (γ) a public avowal of faith in God the Father, Jesus Christ the Redeemer, and the Holy Spirit the Sanctifier.¹

(2) (a) Those who hold the sacramentarian view that baptism remits all sin, original and actual; that it bestows regenerating grace and endows the soul with the germs of the Christian virtues (for this view see art. BAPTISM, vol. II. pp. 390-400).

(b) There are some modern scholars who, trained in the rigour of modern exegetical methods, claim, in the light chiefly of recent research in the mystery-religions, that in his doctrine of baptism the apostle Paul was inconsistent with himself and with the rest of the NT; that he was indeed a sacramentalist; and that, while demolishing with one hand the efficacy of Jewish rites and ceremonies, he was with the other building up a doctrine of the mechanical efficacy of baptism, which was quite incongruous with his ordinary teaching.

'The latest exegetical phase,' says F. Rendtorff, 'is this, that with a frame of mind thoroughly disinclined to sacramental conceptions, so many feel themselves historically bound to ascribe such views to Paul. Such men as Gunkel, Heitmüller, and H. J. Holtzmann maintain that Paul held such views and that he derived them not from the OT nor from Jesus Christ, but from the trend of thought in ethnic religions current in his time.'² E.g., W. Heitmüller says: 'Baptism, in Paul, is throughout a sacramental act, which works not *ex opere operantis*, but *ex opere operato*, in the Catholic sense. Its operation is not conditioned by the faith of the recipient or the administrator. Of course, faith is pre-supposed in the candidate. Only those who believed sought baptism, and yet, notwithstanding the mode of the operation baptism is not thought of in an ethico-psychological manner, but in a purely sacramental manner.'³ H. Gunkel has laboured at the Osiris cult, and he expresses himself thus 'In baptism (so Paul teaches) the believer is joined to Christ. Baptism is the symbol of dying and being buried. He who allows himself to be baptized into Christ experiences thereby the death of Christ. He comes out of the water, as one who has died, but been roused to a new life. He has put on Christ: that which happened to Christ on the cross completes itself again in the case of individuals.'⁴ Percy Gardner writes in the same strain: 'St Paul's view of baptism is distinctive. He speaks of burial with Christ in baptism, and of being baptized into the death of Christ, and of rising with him from the dead. . . . In his own way, he transforms the rite of baptism, not into a thaumaturgic process, but into a spiritual experience of a mystic intensity. To him baptism does not merely mean repentance for sin, and attempt at a purified life; it was burial with Christ and rising again with him; it was incorporation into the earthly [heavenly] body of Christ, and becoming a new creature. There can be little doubt that in this matter, as in others, Paul innovates by grafting upon a Jewish rite a deeper meaning, of which the germs lay in the Pagan Mysteries.'⁵ So Kirsopp Lake, after quoting Ro 6 and Gal 3²⁷, says: 'Baptism is here clearly indicated as effecting the union with Christ. . . . Baptism is, for St Paul and his readers, universally and unquestioningly accepted as a "mystery" or sacrament which works *ex opere operato*; and

¹ This is the view usually held by Baptists and is represented in A. H. Strong's *Systematic Theology*, 3 vols., Philadelphia, 1907-09, T. Armitage, *A Hist. of the Baptists*, New York, 1890, *passim*; and T. G. Rooke, *Doctrine and Hist. of Christian Baptism*, London, 1894, ch. 11. etc.

from the unhesitating manner in which St. Paul uses this fact as a basis for argument, as if it were a point on which Christian opinion did not vary, it would seem as though this sacramental teaching is central in the primitive Christianity to which the Roman Empire began to be converted.¹

(3) It can hardly be doubted that Paul had some acquaintance with the mystery-religions, and that he intentionally used metaphors there in use; but there are many scholars, equally eminent with those named above, who cannot believe that the Apostle could be so illogical as to embitter his life for years by denying the efficacy of Jewish rites and ceremonies to secure salvation, and at the same time set up an external ordinance like baptism as having the efficacy to regenerate the souls of men.

Deissmann, *et al.*, says: 'It is not correct to say that Paul considered baptism to mediate our access to Christ. There are passages, as Gal 3²⁷, which, read aloof from their context, might be thus interpreted, but it is more correct to say that baptism is not the restoration to fellowship, but the sealing of our fellowship with Christ. With Paul himself it was not baptism which was the deciding-point, but the Christophany at Damascus. He was sent not to baptize, but to preach the Gospel.'² Rendtorff maintains that 'the ground presupposition of all that Paul says on baptismal experiences is faith. Not that Paul always mentions faith, as the *causa medians*, but he does so frequently in express words, as in Gal 3²⁶, Ro 6⁴. The whole baptismal experience of Ro 6 culminates in the eminently ethical thought: "that we may walk in newness of life." This cannot refer to a natural physical-hyperphysical new creation, analogous perhaps to the Mithra magical liturgy with its *ambrosia*. It can only imply the restoration of a new religious-ethical life.' Quoting Col 2¹³, he insists that 'the efficacy of the baptism rests on and consists in the forgiveness of sins.'³ Clemen steadily opposes the attribution of sacramentarian views to the Apostle. He admits that the implications of 1 Co 15²⁰ are magical, but denies that the text represents Paul's own views. As to Ro 6 and Col 2¹³, he contends that the operation of baptism is based on the significance of the death of Christ. There is with the Apostle no reference to a sacrament. 'Certainly with him, union with the Lord, the receiving of the Holy Spirit, the renewal of life and the blotting out of sin are realities of religious experience. . . . This conversion comes to expression in baptism which is a symbol not only of what is to happen but also of what has happened already.'⁴ There is much force also in the argument of J. C. Lambert when he maintains that from Ro 3²⁸⁻³¹ the Apostle asserts and reasserts his fundamental doctrine of justification by faith, then in 6³ he abruptly introduces baptism, for the first and only time in the Epistle, and consequently 'it seems impossible, on the ground of this single reference to baptism in the course of his longest and most doctrinal Epistle, to set aside his cardinal thought that in the principle of faith itself there lies the whole potency of salvation.'⁵ Later he says: 'The precise point which he wished to enforce was the intimacy of the union which faith brings about between the believer and the Lord.' Baptism suggests a being buried with Christ. 'But a burial is not a death: it is only a public certification and sealing of death. And, in like manner, baptism is not a dying with Christ, but rather a sealing of that death in Him and with Him which is immediately brought about by faith.'⁶ The same view is ably defended by H. A. Kennedy, in *Essays* viii. iv. [1912], and in his work on *St. Paul and the Mystery-Religions*, ch. vi.

It remains now to examine what sort of constructive criticism the last-named scholars have to offer, having disposed of the other two views, for, of course, in repudiating sacramentalism, they are equally pronounced in their conviction that the statements in Paul's Epistles as to baptism, such as Gal 3²⁷, Tit 3⁵, imply more than that baptism is merely a symbol of spiritual facts. (1) It clears the air considerably that they all agree that all the persons whose baptism is recorded in the NT had avowed repentance and faith in Jesus as Christ and Lord before they were baptized.⁷ (2) They agree that a candid exegesis of the passages in which Paul speaks of baptism obliges us to admit that he believed that in baptism 'something happens.' The believer 'puts on Christ'; he 'dies to sin,' he 'is raised to new-

ness of life.' Paul was exhorted to 'be baptized and wash away his sins.' Christ 'cleansed' the Church 'by the laver of water by means of the word' (Eph 5²⁶). Clearly the early Christians were taught to expect that in their baptism they would receive some influx of spiritual power—some rich spiritual blessing. Lambert expresses it as 'a marked accession of spiritual life and power.'¹ Kennedy speaks of 'a wonderful spiritual quickening; a new enhancing of the power and grasp of faith.'² (3) They draw a very proper and vital distinction between 'cause' and 'occasion.' They do not believe that the literal act of baptism—contact with the water, or the utterance of the formula—in any sense causes these spiritual blessings; but they do believe that Paul taught that it was a divine appointment that those who obeyed their Lord by making a public confession of Him in baptism should receive therein a rich spiritual reward.

Et al., Clemen, speaking on Gal 3²⁷, says: 'Baptism as such is not the cause of the "putting on Christ" . . . for 3²⁸ says, "Ye are all sons of God through faith": accordingly baptism can only be the occasion on which one confesses his sins, not a sacrament';³ and Lambert is equally explicit: 'it was not with the baptismal water that men were sealed, but with the Holy Spirit of promise. Baptism was the occasion of the sealing, rather than the sealing itself. . . . Even this sealing of the Spirit is not a creative but a declarative act.'⁴

Baptism was not the cause of spiritual gifts, but the occasion of their bestowal. Baptism does not literally wash away sin, but NT believers were taught to expect a consciousness of pardon and a full sense of sin forgiven in connexion with their baptism. Nor does baptism regenerate in a causal sense, but NT baptism was normally the occasion of the bestowal of the gifts of the Holy Spirit—so much so that Paul was astonished that it was possible for any disciples who had been baptized not to have received them (Ac 19⁸). Regarding Jesus as their great Exemplar and His baptism as the type of, and authority for, Christian baptism, it was natural that they should expect somewhat similar spiritual blessings to be conferred on them to those which were conferred on Him.

LITERATURE.—This has been sufficiently indicated by the numerous quotations throughout the article.

J. T. MARSHALL.

REINCARNATION.—See TRANSMIGRATION, SOUL.

RELATIONS (Buddhist).—Buddhist philosophy has from the outset resolved all 'things,' all 'states' of matter and mind, into a flux of 'happenings.' That which happens is a series in the flux of transient, even momentary, complexes of elemental factors, determined and determining, according to the fivefold law of cosmic order (*niyama*). And these complex happenings are determined and determining, both as to their constituent factors and also as to other happenings, in a variety of ways that we should express by the term 'relations.' The Buddhist term is *paccaya* (Skr. *pratyaya*). Etymologically the word is nearly parallel to 'relation' (*paccaya*=*pati*= 're,' and *ay*, causative of *i*, 'to go or come,' in place of *latus*, 'borne'). A greater discrepancy, however, lies in the causal emphasis of the Pāli term, which is lacking in our word. The commentators emphasize this: '*paccaya* means because-of-that it-makes-to-come.' The prefix (*pati*) is here given the added force of *pativaca*.⁵ It is true that one of the most recent discussions of the notion of cause⁶ expresses 'the general scheme of a causal law' in terms of relations. But this is only one among

⁶ In Bertrand Russell, *Our Knowledge of the External World*, London, 1914, p. 216 ff.

the inevitable, if unconscious, approximations of modern European 'philosophies of change' to Buddhist ideas.

Another characteristically Buddhist definition of relations, beside that given above, is to assign them a place among the marks or characters of things (i.e. events) in general. Thus all things (except the philosophic Nibbāna) have (a) the three marks of impermanence, liability to suffering, and soullessness; (b) the threefold mark of the conditioned: genesis or birth, cessation or decay and death, and a relatively static point or interval between; and lastly, (c) the marks of causation, viz. relations, or correlation.

The third group of marks was developed under 24 heads in the last of the analytical works in the *Abhidhamma Piṭaka* of the canon, called the *Paṭṭhāna*, also 'the Great Book'.¹ They are the most—one may say the only—distinctively constructive contribution to Buddhist philosophy in those six analytical books. The 24 heads are developed at great length in application to the material and mental facts of experience. The commentary, ascribed to Buddhaghosa, adds some useful explanatory matter, especially in its insistence on the necessity of regarding the correlation, or *paccayatā*, in every one of the 24 modes as an 'assisting agency' (*upakāra*):

'Where one *dhamma*² by its arising or persisting is a helper to another *dhamma*, that first-named is the (causally) relating *dhamma* to the last-named.'

It is impossible to say how soon after the closing of the canon, how long before Buddhaghosa's date, this aspect was evolved. But it is of the greatest importance to an understanding of the Buddhist philosophy of change, and it has remained a key-note in that tradition to the present day. Thus Ledi expands it as follows:

'Just as an heir normally inherits the property of his deceased parent, so does a succeeding unit of consciousness inherit all the energy, the functions, the impressions of the expired unit.'³

The same is believed with regard to material units. And the legacy itself came, in later works, to be spoken of as a force, *vim*, influence of the *paccaya*, or causally relating term, viz. the *paccaya-satti*.⁴ Thus:

'In the exposition of the *Paṭṭhāna* relations there are three main features to be carefully noted, i.e.:

- (i) the relating thing (*paccayadhamma*),
- (ii) the related thing (*paccayuppannadhamma*),
- (iii) the distinctive function (or influence) of the relation (*paccaya-satti-viśeṣa*).⁵

The 24 *paccayas*, under the title *Paccaya-sangaha* ('Compendium or Category of Relations, or Causation'), occupy the eighth part of the standard manual, entitled *Abhidhammattha-sangaha*. This work (in which *-satti* does not occur) dates from the 9th, 10th, or 11th cent. A.D., and is translated in *The Compendium of Philosophy*. The author, Anuruddha of Ceylon, begins his exposition thus:

'Now let me tell e'en as is fit how such
And such a state of things⁶ related stands
To other states conditioned like itself.'

and proceeds:

'In the category of relations we have two schemata—"the law of happening by way of cause" and the system of correlation.'⁸

Coming in due course to the second, he writes:

'The system comprises the following relations:

- | | |
|--------------------------|-------------------------|
| (1) condition | (6) co-existence |
| (2) object | (7) reciprocity |
| (3) dominance | (8) dependence |
| (4) contiguity | (9) sufficing condition |
| (5) immediate contiguity | (10) antecedence |

¹ *Paṭṭhāna* means 'predominant cause': hence a specific form of *paccaya*.

² State, thing, presentation, phenomenon.

³ *JPTS*, 1915-16, p. 37.

⁴ S. Z. Aung, *Compendium of Philosophy*, p. 42.

⁵ From a letter by Dr. Ledi to the writer

⁶ *Dhammā*.

⁷ *Paṭṭhāna-samuppāda-nayo*.

⁸ *Paṭṭhāna-nayo*.

- | | |
|--------------------------|-------------------|
| (11) consequence | (18) means, way |
| (12) habitual recurrence | (19) association |
| (13) action | (20) dissociation |
| (14) result | (21) presence |
| (15) support | (22) absence |
| (16) control | (23) abeyance |
| (17) <i>phāna</i> | (24) continuance. |

(1) is *hetu*, one of several synonyms for causal antecedent, or condition, in general; it is technically reserved for the six moral 'roots' (*mūla*) of personal character: appetite, enmity, ignorance or dullness, and their opposites, disinterestedness, amity, intelligence. (2) is object of consciousness, viz. five objects of the five senses, and one of intellect, namely, impressions and ideas. (3) refers to an overruling factor in consciousness at any given moment: intention, energy, volitional apperception, intellectual investigation. Of (4), (5), the latter applies to a sequence in time so apparently indivisible as that of mental states or moments. By (6) 'co-nascence,' or simultaneous and co-inheing genesis, is meant. In (7) both terms of the relation are mutually relating and related. (9) differs from (8) only as indicating a cause or group of conditions effective enough to bring about immediately a given result. (12)=repetition so as to form a habit.¹ (13), *kamma*, is the relation between an act of will and its result. (14) is literally ripeness, maturity; causally conceived, it is a relation of effortlessness.² (15) implies mental or material nutriment. (16) refers to the influence of psycho-physical, mental, and moral faculties or controlling powers. (17) is concentrated energy physical and mental. (18) is thought or conduct under the aspect of a shaped course of procedure towards an end. (22), positively regarded, implies 'opportunity for a successor to arise.'³ So for (23).

In comparing these groups with corresponding lists in European philosophy, we notice coincidences and discrepancies. The familiar relation of 'resemblance' is wanting, and one of its modes: 'equality, inequality.'⁴ As explanation it may be suggested that (a) the Buddhist list claims to give not all, but only the most important, relations;⁵ (b) resemblance is not so much an objectively valid relation as an impression of a dual or plural object on a subject, hence it is a species of (2); (c) resemblance, even if objectively valid, is not a causal relation, an 'assisting agency,' as is every *paccaya*. A. (this holds good as to 'equality.'

Two other relations—'subject-attribute,' 'container-content'⁶—indicate a standpoint that is opposed to orthodox Buddhist philosophy, viz. the positing of a substance or agent. It may be said in rejoinder that the second class of relations—'object'—involves a subject. This is true for our philosophic tradition and idiom, but not for those of Buddhism. *Arammaṇa* (object) involves no correlate of metaphysical import, such as we are entangled with, in 'subject.' The ever-changing 'object' is regarded as the thing-which-relates (*paccaya*); the ever-changing mental aggregates are the thing-related (*paccayuppanna*).⁷ The only constant factor is the concept of the specific relation.⁸

LITERATURE.—The *Tika-paṭṭhāna* and *Commentary on the Paṭṭhāna* will shortly be published by the Pali Text Society; *The Compendium of Philosophy*, tr. and ed. S. Z. Aung and C. A. F. RELICS (Primitive and Western).—In the art. **CANNIBALISM** (vol. iii. p. 197 f.) it has been shown that by eating the dead or part of them the eater acquires their souls or their qualities, and thus obtains power over the soul or is united to it. It is not necessary to eat the whole man; to eat part is enough, because of the principle involved in sympathetic magic that the whole is contained in the part, or that the influence working in the whole works also in the part, although separate from it. On analogous grounds the dead man's soul or his powers or qualities may work from his body or from any fragment of it, from his clothes, or from any object or part of any object with which he has once been in contact. Any one who wears or carries these, who touches them, who prays to them, or who uses them in a variety of other ways, benefits by his action. The soul or power of the dead man is so far subject to him, or at all events aids him in varying ways. This is the explanation of the use and cult of relics, which of course are valued in proportion to the extent of the power, strength, miraculous gifts, or saintliness of the person to whom they originally belonged, as well as of the love or respect in which he was held. The supernatural virtues of relics, originating in such beliefs as have been referred to, may be traced through a series of examples in all religions and in all degrees of civilization, beginning with the lowest savages.

1. **Relics in savage life.**—(a) Just as enemies are eaten to obtain their qualities, so their kidney or caul fat, as a special seat of life, is abstracted and used as a lubricant for the body—a common custom among Australian tribes.¹ Similarly, relics of a dead enemy are sometimes worn for protection. In E. Africa, if enemies can unearth the body of a dead warrior, parts of it are used as charms—eyebrows, nose, little finger or toe, pudenda, etc. These are reduced to ashes, and, when not used in tatuing or mixed with food, they are sewn up in a bag and worn round the neck.² Among W. African tribes also parts of an enemy's body or sometimes of an ancestor are used in making a fetish—part of the brain to give wisdom, of the heart courage, the eye influence. A spirit is supposed to be lured by these to reside in the fetish.³ The Temimberese wear the vertebrae of an enemy round the neck as a charm in war-time.⁴ Men of Mowat, New Guinea, after slaying a great warrior, wear his penis in order to increase their strength.⁵ Another method is to attach the relic to the arms, etc., used in battle. Thus in Mexico, if any one could secure the middle finger of the left hand and the hair of a woman dying in childbirth, he tied these on his shield to make him brave and fierce and to blind his enemies.⁶ Rubbing weapons with part of a dead man's body to give them his strength and skill is sometimes practised also, as among the Konias (piece of dead whaler used) and Aleuts.⁷

(b) With many tribes magical rites are performed with part of a dead man's body—e.g., in healing, in rain-making, as love-charms, to keep off thieves, to rob a man of his strength. In one such instance practised in Queensland, where an enemy is flayed and his skin used to cover a sick man,⁸ there is analogy to the use of a dead man's clothing or part of it as a relic in more civilized regions.

Reference may here be made to the so-called 'hand of glory' used to produce sleep or inanition.¹ Other parts besides the hand were also used—e.g., the skull to make one invisible like the ghost who owned it (Blackfoot Indians).² Another instance is found in the use of the pointing-stick or bone among Australian tribes to cause death. The bone is 'sung' and curses are pronounced while it is pointed in the direction of the victim. The most powerful form is made out of the femur or fibula of a dead man among the Gnanji and other tribes in the Gulf region. These tribes also attach the radius of a dead man to a spear when setting out to avenge his death. The spear cannot fail then to go straight and slay the murderer.³ Analogous to this is the use in the Melanesian area of arrows tipped with human bone. These are much dreaded. After incantations are said over them, they acquire *mana*, or the ghost works through them. The danger of these arrows is proportionate to the power of the dead man whose bones are used.⁴

(c) The practice of head-hunting and scalp-taking, in which undoubtedly the purpose was to gain power over the ghost (the head being a seat of the soul), illustrates these various uses of relics of the dead, and shows that the relics are vehicles of spirit-power, things through which the ghost still acts. Another illustration of the connexion of spirit and relic is found in a group of folk-tales in which a man, having stolen a skull from a churchyard, is haunted by the ghost until he returns it.⁵

(d) The custom of the widow carrying her husband's skull as a relic or amulet, and the widespread practice of preserving heads of relatives or ancestors for cult or magical purposes have been described in the art. **HEAD** (5 [f], [g]); cf. also **DEATH AND DISPOSAL OF THE DEAD** (Introductory), XXI. 5; **CHARMS AND AMULETS** (Mexican and Mayan), (1). The whole body is sometimes preserved as a relic. Herodotus relates this of the Ichthyophagi (Macrobioi), who offered sacrifices to the body for a year, afterwards removing it to another place.⁷ So with the Kurnai the mummified corpse is carried about by the family, and later placed in a hollow tree.⁸ Among some W. African tribes all the bones of father or mother are dried and kept in a wooden chest, for which a small house is provided, and to which son or daughter goes to hold communion with the spirit.⁹ For other instances of preservation of the corpse in the family dwelling, with accompanying rites, see *ERE* iv. 418* (Australia), 423* (Tahiti, Muong of Tongking, Baoulé of W. Africa, Yumbos of S. America, Gilbert Islanders). In some instances the wife or nearest relative carries about the bones after they have been exhumed (Woodlark Islanders, Mosquito Indians; also ashes of the cremated body, Taculhes).¹⁰ So among the Abipones the bones of medicine-men were carried about by the tribe in their wanderings.¹¹ Among the Andamanese necklaces are made of a child's bones (also of an adult's) and distributed among the relatives. The bones cure diseases and shield from attacks of evil spirits, through the intervention of the ghost, who is pleased by the respect paid to his memory.¹²

(e) Separate parts of the body are sometimes regarded as sacred.

(1) *Finger and toe*.—First joints of these, along with the nails, part of the lobe of the ear, and a lock of hair, are used to form a family fetish with which the spirits of the dead are associated. Fresh relics are added to the fetish as new relatives die. It descends by inheritance (Benga of W Africa).¹ Finger-bones (also sometimes skulls or teeth) of important men are preserved in a shrine at the village in the Solomon Islands. The ghost haunts these relics.²

(2) The *aim-bone* is a sacred relic among the Mara, Anula, and other N Australian tribes. After a year it is given to the messenger who summons to the final burial rites. The messenger carrying the relic is himself sacred, and, when he shows it to the tribesmen, they must begin their journey to the scene of the rites.³

(3) *Hair and teeth*.—These are used as amulets by the family priest in praying to the dead at places other than that where the skulls are stored.⁴ In Florida, Solomon Islands, in the private cult of a ghost, the worshipper wears as a relic a lock of hair or a tooth of the helpful ghost when fighting; at other times it is kept in the house.⁵ So also in the Loyalty Islands priests, when praying, tied to their foreheads or arms relics consisting of teeth, hair, or nails of ancestors. To these magical power was ascribed.⁶

(4) The *jaw-bones* are sometimes an important relic. They are carried by the Andaman widow along with the skull,⁷ and among the Kirwina (New Guinea) the widow suspends the jaw-bones, ornamented with beads, from her neck.⁸ But the most striking use of the jaw-bones as a relic is found among the Baganda, who preserve those of kings as a precious heirloom, along with their umbilical cord, in temples, guarded by hereditary custodians. The ghost was believed to cling to them and to give help when they were duly honoured. Jaw-bones of very ancient kings were thus treasured.⁹ This is undoubtedly connected with the idea that a king's or hero's body or head is a talisman upon which the safety of the tribe or state depends. They are carefully guarded lest they should be removed and disaster follow.¹⁰

(f) In savage custom certain articles are sometimes connected with the mythic life of gods and spirits, and may be regarded as relics. Of these the *churinga* of the Arunta and other Central Australian tribes form an example. Each one was associated in the Acheringa (*q.v.*) period with a totemic ancestor and remained on earth as the abode of his spirit when his body entered the ground. Such *churinga* and those associated with reborn spirits are carefully preserved in sacred store-houses, or *ernatublunga*. They are much venerated and are used in various sacred ceremonies. When ill, a man may send for a *churinga* of his totem, scrape off a little of it, and drink it in water, thus absorbing part of the essence of the stone endowed with attributes of the spirit. Besides being associated with ancestors, the *churinga* have 'feelings' which can be soothed by rubbing them with red ochre. The store-houses are sometimes solemnly visited, just as shrines with relics are elsewhere.¹¹ The Melanesian hero Qat left behind him the stump of a tree that he had cut down for a canoe, and men who cut down trees for canoes sacrifice at this stump for the preservation and power of these vessels.¹² Among the Creek Indians a powerful charm carried by war-parties consists of parts of the horns of a mythic snake; these preserve from wounds.¹³ In other instances stones may be regarded as members of a divinity or supernatural being, or sacred places or instruments are thought to have been instituted or handed over to men by them, or sacred musical instruments represent a god or contain his voice.¹⁴

(g) In all parts of the world, both in the higher and in the lower culture, marks on rocks or hills are regarded as foot- or hand-prints of spirits, gods, or demons, and are in a sense their relics, which are sometimes regarded with veneration. Examples of this are found not only in savage, but also in classical, Teutonic, Celtic, Semitic, Hindu, Buddhist, and Christian folk-lore. Where divinities are mythically supposed to drive about in vehicles of one kind or another, and where their worshippers set the image of a divinity in a cart or chariot and drive it about for ritual or magical reasons, such a vehicle would be regarded also as a relic of the god himself—his property, once used by him as it is now used for his image. Examples of this ritual use occur in Teutonic religion,¹ as well as in Roman, Celtic, and Hindu cults.²

2. Greek.—(a) The cult of relics in Greece was inseparably connected with that of heroes, mythical or real, as that in turn was linked on to the worship of ancestral ghosts. The remains of the hero usually rested in the agora, and over them was erected the *ἡρώον*, a kind of chapel, but sometimes the grave or *ἡρώον* was in the temple of a divinity. The cult at the *ἡρώον* was a cult paid to the hero's relics quite as much as to the hero himself, though these relics were generally not visible. Their presence within a town or district was a guarantee of safety. Sometimes not even parts of the hero's remains were visible. The head of Orpheus was buried in Lesbos or in Smyrna,³ and the head of one of the Korybantes was buried at the foot of Olympus.⁴ The supposed relics of Orpheus at Libethra were never to see the sun, or the city would be destroyed by a boar. When they were exposed, the river Sys (boar) came down in flood and overthrew it.⁵ Nothing further need be said regarding the cult of heroes whose relics rested in a grave (see art. HEROES AND HERO-GODS [Greek and Roman]). There are occasional instances of bodily relics not buried in graves but otherwise preserved. The skin of Marsyas was suspended in the city of Celæne—by Apollo, according to the myth.⁶ The alleged shoulder-blade of Pelops was preserved in a bronze coffer in the temple of Zeus at Elis, after having been found by the fisher Damarmenos in the sea and identified by an oracle.⁷ The bones of Tantalus were kept in a bronze vessel at Argos, over against the grave of Pelasgos.⁸ The bones of Orpheus rested in a hydria on a pillar at Dion in Macedonia.⁹ The hair of Medusa was preserved in a hydria at Tegea.¹⁰ At the festival of Europa in Crete, where she was revered as Hellotis, her bones were carried in a great crown of myrtle.¹¹

(b) When a hero died abroad, his remains were brought with pomp to the place of intended sepulture. From every city through which the remains passed priests, magistrates, and citizens thronged to meet them, or citizens were deputed to follow in mourning. Trophies, crowns, and armour were offered, chaplets were sent to adorn the urn, and finally the most honourable burial was given to the hero. Examples of this are found in the pages of Plutarch.¹² The possession of a hero's relics was important for the safety of a town or state; hence such relics were often eagerly sought for in times of danger, even when they were already possessed and honoured by another town or district. Generally an oracle

announced that it was necessary to obtain these relics and told in oracular fashion where they were to be found, as the place of sepulture was often kept secret by the owners. Sometimes the actual discovery of their position was the result of a prodigy, as when Cinion, seeing an eagle tearing at the ground with beak and talons, was inspired to dig there, and so found the bones of Theseus. Opposition was often offered to their removal; hence they had to be taken by force or by fraud; and sometimes the hero himself resented the removal of his relics. Once obtained, they were brought with great reverence, the citizens met them with processions and sacrifices, they were duly buried, and a shrine was erected over the spot. A festival day was annually or oftener held in their honour. Many examples of this occur even in the case of the relics of mythic heroes, and probably they originated as a means of explaining local cults.

Plutarch describes at some length the translation of the relics of Theseus from Scyros to Athens.¹ Herodotus tells how an oracle made known to the Lacedaemonians that they would never conquer the Tegeans until they had obtained from the Tegean territory the bones of Orestes, which were further said to lie where two winds by hard compulsion blew and stroke answered to stroke. This proved to be a blacksmith's forge—the bellows being the winds. The smith had found there a coffin seven cubits long containing a body of equal length. Having obtained the relics, the Lacedaemonians were now always superior to the Tegeans.² Other instances occur in Pausanias, who says, e.g., that during a plague at Orchomenus the Pythian priestess announced that the only remedy was to bring back the bones of Hesiod from Naupactus. A crowd would show them the place of burial; it perched on a rock, and the bones were there found in a cleft.³

(c) In numerous instances different regions claimed to possess the relics or bones of the same hero, who had thus more graves or shrines than one. In all these particulars there is a close resemblance to the data of the Christian relic cult, but one usual aspect of that cult is lacking—the translation of part of the bodily relics instead of the whole. This occurs only in the case of the mythic shoulder-blade of Pelops.

(d) Frequently where very large bones—probably fossil bones of large animals—were discovered, they were assumed to be those of heroes of the past, who were thought to have been of gigantic size. The Syrians, having found such bones in the bed of the Orontes, were informed by an oracle that they were those of a hero.⁴ The bones of Orestes were seven cubits long, according to Herodotus.⁵

Huge bones, alleged to be those of the giants, were also shown in temples—e.g., those of Hopladamos in the temple of Asclepius at Megalopolis, and those of Geryon among the Thebans.⁶

(e) Besides bones, other relics of heroes were preserved and honoured. Among these weapons were conspicuous—the spear of Achilles in the temple of Athene at Phaselis, the sword of Memnon in the temple of Æsculapius at Nicomedia, the shield of Pyrrhus over the door of the sanctuary of Demeter where his death took place.⁷ Of other relics, the lyre of Orpheus was preserved in more than one temple, the flute of Marsyas in the temple of Apollo at Sicyon, the sceptre of Agamemnon in Cheronea, the sandals of Helen in the temple of Athene at Iapygia, at Cyzicus the stone which served as anchor to the Argonauts, as well as their ship and those of Agamemnon, Æneas, and Theseus in other places.⁸ Elsewhere chariots, thrones, necklaces, and other things belonging to the mythic personages of antiquity were shown.⁹

Other curious relics were the egg of Leda and the remains of the clay with which Prometheus had made man.¹ These relics were shown to admiring travellers and pilgrims, but there is little known of any cult of them. The sceptre of Agamemnon was much revered at Cheronea, and daily offerings were made to it.²

(f) Animal relics were also preserved—e.g., the teeth of the boar of Erymanthus, the skin and teeth of the Calydonian boar, the bones of the monster to which Andromeda was exposed, and the like.³

(g) As has been seen, the possession of a hero's relics gave safety or victory to a city or district. They also promoted fruitfulness and fertility, warded off pestilence and famine, or caused rain to fall in time of drought. Many other wonders were related of them. Legends of their healing powers existed, and in many instances the sick were carried to tombs of heroes in order to be cured there by their power.⁴

3. Egyptian.—In Egypt the careful preservation of the mummy shows great reverence for the dead, but hardly amounts to relic-worship, as there was little actual cult of the dead, save in so far as the dead man was identified with Osiris. The cult of relics was largely associated with the worship of Osiris and with myths of his death or dismemberment. The burial-places of Osiris or of his members are mentioned in texts giving lists of 'the graves of Osiris.' The lists vary, and in some instances one member occurs as a relic in two or more places—numerous legs, the head at Abydos and at Memphis. Thus the honour of possessing some of the members was claimed by more than one city. These sanctuaries in Greco-Roman times were forty-two in number, each with its central shrine or Serapeum.

The Serapeums were so called by the Greeks 'without regard to the distinction between the tomb of a dead bull which had become an Osiris and the sepulchre of the god-man Osiris himself.' But to the Egyptians they were the sanctuaries of Osiris, of him who dwells in the Underworld.⁵

Abydos owed its importance to its possession of the head, and its symbol was a coffer containing it, surmounted by two plumes. But from the XIIIth to the XVIIth dynasty the whole body was also supposed to be buried there, and an early royal tomb was regarded as that of Osiris. It became an important holy place, to which numerous pilgrimages were made, and burial near his relics was considered most advantageous. At Busiris was the backbone or 'pillar' of Osiris, the *dad*, kept there as a sacred relic. It had been discovered at Mendes and brought to Busiris.⁶ Lucian also mentions the hair of Isis as an important relic preserved in Egypt.⁷ Herodotus refers to a curious myth current in the Theban district regarding Perseus. Here the Chemnitæ had a temple in his honour, and here he sometimes appeared. A sandal worn by him was sometimes found after his visit. It was two cubits long, and its presence denoted prosperity for Egypt.⁸ As in Greece, large bones were shown as those of giants.⁹

4. Celtic.—The Celtic cult of human heads and the myths respecting them show analogies with savage custom, and the presence of a hero's head in any given territory seems to have been regarded as a guarantee of safety against enemies and evil

influences,¹ just as in classical and Christian belief about relics of hero or saint. Mythical relics of divinities seem to be referred to in a passage of the Rennes *Dindsenchas*, where the remarkable things in the Brug of Mac Ind Oc are enumerated. Among these are the monument of Dagda, the rampart of the Morrigan, the bed of Dagda, the two paps of the Morrigan, the comb and casket of Dagda's wife, the stone wall of Oengus, and many tombs and cairns of divine or heroic personages.² Certain things belonging to the Tuatha Dé Danann are also of the nature of mythical relics. The stone of Fal was brought out of Falias and used to roar under every king who would take the realm of Ireland. This is supposed to be identical with the present coronation stone. Out of Gorias came the unconquerable spear which Lugh had, and out of Findias the equally unconquerable sword of Nuada. Out of Murias came Dagda's miraculous cauldron. Possibly actual weapons, etc., in Ireland were thus connected with the gods as their relics,³ like the *churinga* of ancestral spirits among the Arunta (§ 1 [f]).

5. Christian.—(a) *Origins of the cult.*—The early Christian use of relics, like the use of relics everywhere, may be traced to affection, which makes the survivors cling to the mortal remains of a relative or visit the place of sepulture, and to the instinctive reverence for or curiosity concerning any notable person. Added to this in the case of the early Christians was the desire to shield the remains from the malice of persecutors, while the belief in the resurrection and in the body of the living as a temple of the Holy Spirit naturally increased the reverence paid to the dead. It was also believed that spirits of saints hovered near their tombs and, later, the shrines where their relics were preserved⁴—a primitive survival which aided the reverence paid to body, relic, or tomb. Feelings of reverence for the martyr's body easily passed over to anything which had been in contact with him. In the case of the living, this principle is seen at work already in Ac 19¹². As to dead martyrs, an early example of the preservation of relics occurs in the case of Ignatius.

After he was eaten by the beasts, only his larger bones remained. These were carried to Antioch and there placed in a napkin, 'as an inestimable treasure left to the church by the grace which was in the martyr.'⁵

Another early instance is found in the reverence paid to a martyr's blood.

Prudentius tells how the witnesses of the martyrdom of St. Vincent (A.D. 304) dipped their linen vests in his blood, so that it might be a safeguard to their homes for generations.⁶ This custom existed in still earlier years—e.g., in the case of the martyrdom of St. Cyprian (A.D. 258)—and is often referred to in the *Acta* of the martyrs.

The extraordinary reverence shown in the matter of burial, care of the grave, and in the cult which went on there, especially on the anniversary of a martyr's passion, all aided the growth of the relic-cult. The Eucharist was celebrated at the tomb, often on the stone slabs which covered the body (see art. ALTAR [Christian]).

An early instance of this is found in the case of St. Polycarp. 'Taking up his bones, more precious than the richest jewels and tried above gold, we placed them where it was fitting. There, assembled as we shall have opportunity, with joy and gladness, we shall be permitted by the Lord to celebrate the anniversary of his martyrdom.'⁷

We can hardly doubt that the cult at the martyr's tomb, if it was not an actual continuation of the pagan hero-cult, was influenced by it.⁸

⁸ H. Delehaye, *The Legends of the Saints*, Eng. tr., London, 1907, p. 165, maintains that the relic cultus is an outcome not

Theodoret says that the Lord has substituted martyrs for heroes, and that churches were built over their tombs or relics just as temples were erected over tombs of heroes.¹ But, while the remains of the pagan hero generally rested in the grave and were not seen by the worshippers, the development in the Christian cultus was to a reverence of relics in reliquaries and to an occasional visible exhibition of the same.² Among Greeks and Romans reverence for the dead forbade the dividing of their remains, and severe laws existed against violation of tombs and bodies. These laws continued in force under the earlier Christian emperors. The prejudice against dividing the remains of the dead continued active in the Western Church, but both there and in the East the desire to possess the bodies of martyrs led to large sums being paid for them and to disputes concerning their ownership. But in the Eastern Church the division of a martyr's remains into relics began to prevail at a comparatively early period. Graves were rifled and bones stolen, and a traffic was begun in these, though the use of such relics was apparently a private one, as in the case of Lucilla (p. 654^a). At what time precisely the dismemberment of bodies of saints began is uncertain. Possibly the practice was aided by the fact that, where martyrs were burned, nothing but a few bones and ashes remained, which might be regarded differently from a complete corpse or skeleton. But that it was already in vogue in the 4th cent. is shown by the law of Theodosius,³ forbidding the translation of a dead body already buried, the selling (or dismembering?) ['*nemo martyrem distrahit*'] or buying of a martyr's remains. A law of Valentinian III. speaks of bishops and clergy who were guilty of robbing graves, apparently for the purpose of obtaining relics. St. Augustine already speaks of pretended monks who went about selling relics of martyrs, if indeed they were martyrs, and refers to scandalous abuses in connexion with the cult.⁴ Even in A.D. 593 Pope Gregory the Great was amazed at the Eastern custom of disturbing the remains of saints, and, when the empress Constantina asked him to send her the head of St. Paul for a new church to his memory, he refused, saying that he could not divide the bodies of the saints, and pointed to the danger of invading their tombs. It was not the Roman custom to do this. He therefore sent her a cloth which had been in contact with the body and had the same miraculous powers.⁵

Influences from the Jewish or Hebrew side are not discernible in the Christian relic-cult. Among the Hebrews any actual cult of relics of the dead was hindered by the idea of uncleanness which attached to a dead body (Nu 19¹¹) and by the disgrace which attended lack of burial. Joseph's body, after embalming (a custom which is here Egyptian, not Hebrew), was by his direction carried up from Egypt to Palestine and there buried; but, though it would naturally be treated with reverence, there is not the least evidence of a relic-cult here (Gn 50²⁵, Ex 13¹⁹, Jos 24²⁹). The pot of manna and Aaron's rod within the Ark of the Covenant were not worshipful relics, but in the one case a memorial of God's mercy, in the other 'a token against the children of rebellion' (Ex 16³⁸, Nu 17¹⁰, He 9⁴). The 'brazen serpent that Moses had made' appears as an object of worship down to

of hero-worship, but of reverence for the martyr. There was a logical and parallel development of the two cults, without interdependence—the natural outcome of an identical state of mind under similar conditions' (p. 167).

Hezekiah's day, but was destroyed by him. In all likelihood it was the image of an adopted serpent-cult rather than a relic (2 K 18¹).

(b) *Growth of the cult in early times.*—Apart from the usual cult of a martyr at his tomb and the celebration of the Eucharist there, or the building of a shrine or church over the tomb, the use of separate relics was at first a private custom rather than a practice officially recognized. This is suggested in the statement made in the account of St. Polycarp's martyrdom¹ that care was taken by the Roman authorities to prevent the least part of his body being taken, although *many desired to do this* and to be made partakers of his holy flesh. The Roman governor, at the suggestion of the Jews, pretended that the Christians might forsake the worship of the Crucified and begin to worship this Polycarp. The *Acta* of St. Fructuosus and his two deacons tell how the brethren collected the ashes and divided them. But he appeared in a vision to some of them and bade them restore and bury them in one place.² At the beginning of the 4th cent. Optatus tells how Lucilla, a Donatist, was accustomed, before receiving the Eucharist, to kiss a relic of a supposed martyr which she had procured, and for this she was rebuked by Cecilian, archdeacon of Carthage.³ In the time of Diocletian a Roman lady, Aglae, sent her favourite steward to the East with gold and aromatics to obtain relics of the martyrs. The evidence of St. Augustine to the traffic in relics is also important as a witness to the private practice. But there is no doubt that the cult of actual bodily relics, as well as dust from the shrine, and cloths which had been in contact with a martyr's body, was becoming general in the 4th cent., by which time St. Cyril of Jerusalem († 386) also speaks of the wood of the Cross as distributed piecemeal to all the world in his day.⁴ The growing cult is also proved by the desire of the pagans to prevent it—e.g., in the case of St. Polycarp, perhaps also in that of the martyrs of Lyons, whose ashes were thrown into the river that no fragment (*ελψανον*) might remain to give hope of resurrection, and in the refusal of sepulture to martyrs in the Diocletian persecution, lest the survivors should gain courage in worshipping those whom they regarded as gods.⁵ References in the *Fathers* to the cult at tombs show how easily that could develop into a cult of separate relics.

Gregory of Nyssa says that to touch the tomb is a blessing, and, if it be permitted to carry off dust which has settled on it, this is a great gift. As for touching the remains themselves, only those who have done so know how desirable it is and how worthy a recompense of prayer.⁶ St. Chrysostom describes how the faithful gathered in crowds round the martyrs' tombs, and he praises the power of the sacred remains. Not only their bodies, but also their vestments are objects of homage.⁷

The custom of dividing the remains of a martyr is certainly found in the East in the latter half of the 4th century. It, as well as the translation of the body, was now promoted for ecclesiastical and political reasons; e.g., the enriching of Constantinople with innumerable relics from other parts gave it a high standing as against the old capital of the West. Eastern Christians liberally shared their relics with others as an honour to the martyr and a widening of his circle of admirers, while it also flattered their own pride. The custom was common among the Christians of Egypt, and Chrysostom refers to it.⁸ The church of Sinope presented many places with relics of Phocas.⁹ Basil tells how the church of Sebaste gave relics of its forty martyrs to other districts.¹⁰ Paulinus of Nola placed in the church which he founded there

(c. 400) relics of various apostolic martyrs, including also some of those of St. Nazarius sent by St. Ambrose.¹

As has been seen, the division of bodily relics was hardly known in classical Greece, or, where separate parts of a hero existed, they were still within a grave. Yet already in the East separate relics of Buddha were known and revered, his bones, after cremation, having been divided among eight clans or individuals, and mounds erected over them. Buddhist influences on the growing custom of dividing the remains of a saint may be regarded as remotely possible.

Theologians soon began to recognize the cult of relics and to supply reasons for it. They referred to such passages as 2 K 13²⁷, Sir 48³⁴, and Ac 5¹⁵ 19¹² in support of the practice. The bodies of saints, formerly temples of the Holy Spirit, were now as worthy of reverence as their souls;² or, as their bodies were instruments which God had used and which were destined to share in future bliss, this suggested continued reverence to them.³ Their bodies were endued with mystic power (*δύναμις*), or grace (*χάρις πνευματική*), and so also were their graves,⁴ and this power was as much in the parts as in the whole. 'When the body is divided, the grace remains undivided.'⁵ He who touched the bones of a martyr received a share of the sanctification (*ἀγιασμός*) from the grace dwelling in them.⁶ This power was already inherent in saints while alive, as their alleged miracles showed, and it was even then apt to overflow upon other objects, which could produce wonderful effects also (Ac 5¹⁵ 19¹²). If, then, argues Chrysostom, clothes, handkerchiefs, and even the shadow of saints on earth had wrought such miracles, a blessing is certainly derived from the relics of saints by those who devoutly touch them. The relic, as containing supernatural grace or power, was like a spring which overflows and never grows dry, or like a light always sending out beams, but never losing the power of shining, and this power passes over to all persons or things brought into contact with the relic.⁷ These views, apart from their theological aspect, differ little from the theory implicit in savage magic, as far as that concerns the use of relics.

Lucius points out that the power in the relic forms a kind of ponderable stuff, and gives as an example the overflowing of oil in a lamp or vessel near a martyr's tomb, as if something material had passed into it from the remains. Such oil had miraculous virtues equalling those of the relic.⁸

A clear distinction was drawn, however, between worship paid to God and reverence to the relics of a saint. This was already recognized in the case of St. Polycarp's relics. Christians worshipped (*σεβασθαι, προσκυνεῖν*) Jesus Christ, but loved (*ἀγαπᾶμεν*) the martyrs and their relics; they did not worship Polycarp, as the pagans avowed.⁹ 'We honour the martyrs,' says St. Augustine, 'but do not worship (*colamus*) them.'¹⁰ St. Jerome, in contending against Vigilantius for the use of relics, maintains that relics are not worshipped, but honoured. 'We honour (*honoramus*) the relics of the martyrs, that we may worship (*adoremus*) Him whose martyrs they are.'¹¹ Popular practice probably went farther; and even now, in the opinion of leading Roman Catholic theologians, the supreme worship of *latria* may be accorded to relics of the Cross, the nails, the garments of the Saviour.

the bodily remains of a holy person—the whole of these or any part of them, even the most minute (*tantillae reliquiae*, in the phrase of St. Gregory of Nazianzus).¹ In later theology a division as far as rank was concerned was made between different parts of the body as relics. *Reliquiae insignes* include the whole body, or its chief parts—head, arm, leg; *reliquiae non insignes* include other parts, and these are again divided into *notabiles* (hand, foot) and *exiguæ* (teeth, fingers).² As already mentioned, the blood of a martyr was also a sacred relic, and the *Acta* describe how it was collected in napkins, sponges, etc., which were preserved as talismans. But anything which had been possessed by, or had been in contact with or in proximity to, a holy person or his relics might in turn become a relic. Among these were his books, his instruments of torture, his garments, of which St. Chrysostom says:

'How great is the power of the saints. For the homage of Christians is directed not only to their words and bodies, but also to their vestments.'³

Earth and dust from graves, coffins, and shrines; oil from lamps hanging there; pieces of cloth (*brandea*) laid for a time upon them, were all as efficacious as the remains themselves, as far as miraculous power was concerned. Flowers which had touched a relic were also revered. Many names were in use for *reliquiae* besides the general term—e.g., *exuviae*, *busta*, *beneficia*, *lipsana*, *insignia*, *cumeres*, *pignora* or *aenia sanctorum*, etc.

A change similar to that of the elements in consecration was supposed to have taken place in pieces of cloth after contact with the relic. Pope Gregory the Great is said to have shown this to some sceptical Greeks; he cut such a piece of cloth, and blood flowed from it.⁴

Among other relics those associated with our Lord naturally occupied a high place, although in most cases (like many other relics) they were fictitious. The alleged discovery of the Cross was accompanied by a miracle, and a few years later the holy wood of the Cross had almost filled the whole world.⁵ Paulinus says that the part of it kept at Jerusalem gave off fragments of itself without diminishing, having imbibed this power from the blood of that Flesh which underwent death, but saw not corruption.⁶

Calvin jeers at the quantity of wood in the relics of the Cross, so much that three hundred men could not carry them. But G. Rohault de Fleury maintains that existing relics would measure 5,000,000 cubic millimetres, whereas the whole Cross contained at least 180,000,000—an ingenious calculation. But was the 'true' Cross that on which our Lord was crucified? Honorat Niquet, writing of the multiplication of the wood of the Cross, assimilates the latter to the Body of Christ in the Eucharist.⁷

The alleged letter of Christ to Abgarus preserved Edessa frequently from attack in the 4th century. The pillar to which our Lord was bound, the crown of thorns, the spear, sponge, and reed, the linen clothes, the stone of the sepulchre, and earth from the sepulchre or from the Holy Land, even our Lord's footprints, were all relics from the 4th cent. onwards, and are referred to in pilgrim itineraries and other writings. Later known relics are the much-multiplied *sudarium*, the boards of the manger in the church of S. Maria Maggiore in Rome brought from Bethlehem in the 7th cent. by Pope Theodorus, and the Holy Coat of Trèves, existing also at about twenty other towns. The nails of the Cross, found with it by St. Helena, became also much multiplied. Many nails, however, are said merely to contain filings of the originals, though they are usually alleged to be genuine.

⁷ *Truhus sanctae crucis*, new ed., Antwerp, 1870, vol. i, ch. 25.

Dust and earth from Palestine were most efficacious against demons, and were brought thence in large quantities and sold at high prices.¹ Some relics of the Passion and the like may at first have been part of the properties used in liturgical mystery-plays.

Relics of the Virgin are mentioned from the 6th and 7th centuries onwards. Among the early relics were a stone on which she had rested on her journey to Bethlehem, the pitcher and bucket which had been near her at the time of the Annunciation, and the stool on which she then sat, articles of her clothing, her girdle, and her headband.² These and the like were to be seen in Jerusalem, Constantinople, and other Eastern cities. But even at this period relics of the Virgin were known in Western churches or in the possession of private individuals.³ Probably the legend of the Assumption prevented the existence of actual bodily relics, though a lock of her hair was treasured by Charlemagne, and her milk was a favourite relic all over Western Europe.

Innumerable relics of the Apostles came into existence as the cult increased, and at first none were so popular as the chains which had bound St. Peter and St. Paul. Chrysostom mentions St. Paul's chains, and in the 6th cent. they existed at Rome.⁴ Those of St. Peter were given to the empress Eudoxia on her visit to Jerusalem in 439, and one of them was presented by her to her daughter, wife of Valentinian III., at Rome, who built the church of S. Pietro in Vincoli in its honour. Filings from these chains enclosed in keys or crosses were greatly valued, and Pope Gregory the Great was accustomed to send keys containing them as gifts.⁵

(d) *Abuses of the relic-cult.*—Many of these relics were fabulous, but, as the reverence for them increased, it was natural that innumerable new ones should be brought to light. The inventories in churches and references in religious literature during the Middle Ages show the extent and the absurdity of the cult. Relics of the patriarchs and saints of the OT became common from the 4th and 5th centuries onwards. Their graves and places connected with their lives were pointed out without hesitation, and are mentioned in itineraries⁶—e.g., the rock smitten by Moses, the cave of Elijah, the place where David composed the Psalms. Among relics were Moses' rod and the horns attributed to him, parts of the burning bush, the bones of Isaac, hairs of Noah's beard, fragments of the Ark, soot from the furnace of the Three Children, portions of manna, Job's dung-heap, feathers from Gabriel's wings, and St. Michael's buckler. Equally absurd were the breath of St. Joseph, the Virgin's milk, our Lord's tears,⁷ sweat, blood, tooth, even the *præputium Christi* (in several churches),⁸ the wood of the three tabernacles which St. Peter proposed to make, and the corner-stone rejected by the builders! In vain were laws passed regulating the cult. The passion for relics became greater still, and the trade in them increased as the centuries passed. From at least the 4th cent. many burial-places of Scriptural and ecclesiastical saints and of martyrs were alleged to have been discovered by means of dreams and visions, in which the dead man appeared and revealed the

place of sepulture in order that a *martyrium* might be built or due honour paid to him. Dream discovery of a saint's remains still occurs now and then.¹ Fraudulent persons early took advantage of this and produced bodies of alleged martyrs. On the other hand, the ghost of a thief whose tomb was honoured as a martyr's appeared to St. Martin at his prayer and avowed his real character and crimes.² Pilgrims to the East and to the holy places returned with such relics as water from the Jordan and earth from the Sepulchre, or with false relics imposed upon them in return for large payments. At a later period the Crusades, especially after the sack of Constantinople, gave an immense impetus to the traffic in relics, by bringing them from the East and by multiplying in the West relics already known in the East. Demand created an extensive supply, and traffic in relics became one of the greatest scandals of the pre-Reformation period, while imposture was freely practised upon credulous and ignorant people.³ Although prohibitions were issued by 12th and 13th cent. councils, bishops sometimes permitted the existence of avowedly false relics, on the ground that to undeceive the people was not expedient—an argument still in use. Theft of famous relics was not uncommon and was soon regarded as praiseworthy—e.g., when the people of one district or the members of one monastery wished to gain possession of a relic from another.⁴ Hesychius stole the body of St. Hilarion after his death in Cyprus in 371, and carried it to Palestine, but the Cypriotes maintained that his spirit remained with them. Stolen relics still worked miracles. In other cases actual combats for the possession of relics took place, as when the people of Tours and Poitiers fought for the body of St. Martin.⁵ The desire for relics, and for the marvellous in connexion with them, led also to the reduplication or multiplication of the same relic in different places—numerous bodies, heads, legs, etc., of the same saint; many holy shrouds, coats, and the like; innumerable thorns from the crown of thorns, and pieces of the Cross. Indeed scarcely any relic did not exist in duplicate or more.⁶ Credulity and pious fraud, as well as intentional imposture, were responsible for many of these, though theologians sometimes explained them by a miraculous multiplication through divine intervention.⁷ Others maintain that each relic is only part of a whole, conventionally described as entire, or that similar relics are those of different saints of the same name. These explanations do not cover all the cases, nor even the more important of them. Many relics, again, were admitted to be facsimiles of an original, and, having been brought into contact with it, are now possessed of all its miraculous virtues.

Some attempt was made by authority to distinguish false relics from true. The 5th Council of Carthage (A.D. 398) ordered bishops to remove altars raised over relics without authentic proof. Individual saints imposed tests, or notable ecclesi-

astics like Pope Gregory the Great¹ insisted upon the assurance of authenticity. Hence arose the custom of testing relics. Those possessed by Arians and found in Arian churches were subjected to the ordeal by fire by order of the Spanish Council of Cæsar Augustus in 592. This custom was common in later centuries, and liturgical forms were used in connexion with the test.² Before the 15th cent. the traffic in relics was forbidden, as well as the showing of them outside a reliquary and the stealing of them. No new relics were to be venerated without due authority, and bishops were to prevent fictions and false documents about relics from being circulated.³ Where the cult was so deeply rooted, and where relics, whether true or false, had already wrought miracles, not even the highest authority could destroy popular belief in them. But, as their abuse was one of the grievances of the Reformers, the Council of Trent tried to regulate some of its more notorious aspects—their superstitious use, the association of filthy lucre with them, and the degradation of the visitation of relics into revels—while no new miracles were to be acknowledged or new relics recognized unless the bishop of the diocese had taken cognizance of and approved them.

(c) *Relics in churches.*—The custom of building a chapel over a martyr's body gave rise in the time of Constantine to that of building churches over tombs of great apostles or martyrs. From the middle of the 4th cent. it also became customary to build a church in memory of a martyr and to bring to it his relics, or to place such relics in an existing church. This gave rise to continual translation of relics. The translation, whether of whole or of partial remains, was effected with great reverence and pomp. It first occurred in the East, an early example being that of the remains of SS. Andrew, Luke, and Timothy to Constantinople. The Westerns for some time shrank from meddling with bodies, once they were buried, although the remains of St. Stephen are found first at Calama and then at Hippo in St. Augustine's time, and even in 593 Pope Gregory the Great wonders much at the Eastern custom.⁴ Even when the West accepted the custom, certain restrictions were imposed; e.g., the sanction of the prince or bishop and permission of a sacred synod had to be obtained, as a council of Metz (813) appointed. In general, translation came to be preceded by miraculous circumstances attending the discovery of remains. When they were brought to the place appointed for them, crowds of all ranks came to welcome them and to accompany the procession with lamps and candles. The relics were enclosed in costly wrappings or in precious receptacles. Similar joyous scenes marked their passage through towns on the way. Usually the day was marked by a yearly commemoration besides the day of the saint. An early example of the manner of translation—that of the body of Phocas to Constantinople—is given by St. Chrysostom,⁵ while a recent instance is that of the remains of St. Aureliana from the Catacombs of Rome to Cincinnati in 1870.

As the custom spread, the idea arose that no church was complete without relics. Traces of this are found in the 4th cent.,⁶ and soon relics were carefully sought for to place in new churches. Where none could be obtained nearer, application was made to Rome in the 7th and later centuries, and a cloth (*brandeum*) consecrated by being held

over the relics of SS. Peter and Paul was sent. Old churches were also supplied with relics. Consecration of a church with relics under the altar was made obligatory by the 2nd Council of Nicaea (787). As the altar had previously been built over the body, so now relics were placed under it, or in a cavity within it. There was also a reference to the 'souls underneath the altar' of Rev 6⁹. Both in the Eastern and in Roman Catholic churches the consecration of a church is attended by the solemn placing of relics in the altar. The cavity in the altar is known as the *sepulchrum*, *loculus*, or *confessio*; and in the Latin Church it must contain relics of two or, since 1906, one martyr.¹

In the Eastern Church *antiminsia*, or corporals, consecrated at the dedication of a church, are used, but several may be hallowed at the same time. Relics are pounded up with a fragrant gum; oil is poured over them by the bishop, and, distilling on to the corporals, is supposed to give them all the virtue of the relics. The Eucharist must be celebrated on them for seven days, after which they are sent forth as they are wanted. In use this corporal is spread out on the altar at the beginning of the liturgy. It is practically a portable altar.²

Relics were sometimes placed at doors of churches, where the faithful kissed them, and in various parts of the architecture of the building, and were also contained in precious reliquaries, in cupboards on the left or right of the altar, or in sacristies. They were also carried in processions, and were exhibited to the faithful, who were blessed with them, generally on a specific day. Numerous pilgrims flocked to the place for this purpose. Booklets which described the relics, and also aided the pilgrims to follow the ceremonies at their public exhibition, were for sale, and contained instructions as to the indulgences to be obtained.

Receptacles of relics, or reliquaries, had a variety of names (*arca*, *capsa*, *capsella*, *psalidula*, *sanctuarium*, *scrinium*, *theca*) and were made of different materials—wood, metal, bone, ivory, glass. Many of them were richly ornate. Their form was equally various. Some were made to imitate a church, house, ship, tower, or sarcophagus. Some had the form of a cross, others of a statuette, a bust, or a medallion. Still others were shaped to resemble their contents—foot, head, etc. Besides reliquaries for use in churches, a smaller kind was made for carrying on the person.

(f) *Customs in connexion with relics.*—Relics being so sacred and powerful, an early custom arose of taking oaths upon them. As prescribed by Dagobert in 630, the compurgators placed their hands on the *capsa* containing the relic. The accused put his hands above theirs, asking God so to help him and the relics under the hands which he holds that he may not incur guilt in the matter of which he is questioned.³ Another custom was that of obtaining a saint's advice by laying on the altar where his relics were a letter with a blank sheet for the answer, which was sometimes given in writing, sometimes not at all.⁴ There is some analogy here with modern methods of spirit-writing. The assistance of saints was also thought to be obtained at ecclesiastical councils by the presence of their relics.⁵ While at first burial near a martyr's grave was avoided, it soon became a matter of strong desire to be interred near the relics of a saint or martyr. St. Augustine wrote a treatise in support of the practice.⁶

(g) *Relics and miracles.*—The veneration of relics soon led to the belief in them as powerful to work miracles. Being associated with the spirit of a

dead saint or filled with his supernatural grace, they were naturally supposed to possess such miraculous powers as he had possessed in his lifetime. A comparatively early instance of this, but one which shows that the belief was already strongly grounded, is found in St. Augustine's account of the relics of St. Stephen first at Calama and then at Hippo. He mentions as many as seventy accounts of such miracles already written within two years after the coming of the relics. He describes the miracles as countless, and gives cases of the cure of blindness and other diseases even through flowers which had come into contact with the relics, of cures of gout, fistula, stone, and broken limbs, and of restoration of the dead to life. Augustine's theory is that the martyrs died for the faith of Christ and can now ask these benefits from Him. The miracles attest the faith which preaches the resurrection of the flesh to eternal life, whether God acts directly, producing effects in time, or by His servants, perhaps using their spirits as He uses men who are still in the body, or by means of angels—at the prayer of the martyrs. Augustine also refers to miracles wrought through relics as common in his time—e.g., through those of Protasius and Gervasius.¹ Other early instances are the miracles ascribed to the relics of St. Cyprian by Gregory Nazianzen,² and those recorded by St. Gregory of Tours, especially in connexion with the relics of St. Martin or with dust from the tomb of the martyrs of Lyons.³ He also tells how a nail of the Cross thrown into the Adriatic by Queen Rade-gund made it safe ever after for navigators. Pope Gregory the Great, whose veneration for relics was extreme, cites many miracles by means of relics in his *Epistles*. Where relics were possessed by churches and wrought miracles, it became common in the 5th cent. to hang up models of limbs which had been cured—a practice continued long after. At the translation of relics miracles were matters of frequent occurrence, as well as at their exhibition, and at the shrines of famous saints. From the 6th cent. onwards, with increasing force during the later Middle Ages, the credulity of the people increased, and miracles by means of relics, genuine or false, or by means of articles in contact with them, or at the shrines which contained them, were multiplied and were frequently of the most absurd nature. Not only were the sick healed, the blind given sight, the dead raised, and demons tormented or chased away, but relics cured or kept off poison, had power over storms, thunder, rain or floods, gave victory when carried in battle, or kept enemies at a distance,⁴ overcame robbers, and supplied succour of every kind. See also art. CHARMS AND AMULETS (Christian), vol. iii. p. 427^b.

While miracle-working relics in any given church or monastery were usually welcomed as a source of revenue from the crowds which flocked there, these crowds were sometimes a source of annoyance to the course of monastic life.⁵

Relics were worn on the person as amulets from early times, usually hanging in a case from the neck or in rings. They warded off evil through the union of the wearer with the saint whose relics were worn. Warriors placed them in the hilts of their swords; kings wore them in their crowns and regalia, or parts of crowns were themselves made of most sacred relics—e.g., the fillet of the iron crown of Lombardy from one of the nails of the Cross. St. Thomas Aquinas discusses the propriety of wearing relics round the neck as a protection, and approves of the practice, provided ostentation and superstition be avoided.⁶ This opinion was challenged by other theologians.

(h) *Opposition to the cult of relics.*—Cultured pagans taunted the Christians with the cult of the relics of martyrs—men 'hateful to gods and men'—and Julian inveighs with scorn against the practices in connexion with the tombs and relics of martyrs and the worship of the wood of the Cross. While some of the leaders of Christian thought protested against the extravagances of the cult, most of them admitted its value. Protests arose, however, from time to time against the whole practice. Vigilantius, a Spanish presbyter, wrote against the cult and its superstitions, and describes it as idolatry and insanity. His work is known only from the violent reply of St. Jerome, who maintains that the souls of martyrs hover round their relics, but that Christians neither worship nor adore but only venerate relics of martyrs, in order the better to adore the martyrs' God¹—a statement hardly true of the popular attitude. In connexion with the iconoclastic controversy, the emperor Constantine Copronymus desired the abolition of the cult of relics, though the iconoclasts generally had no objection to them. Many relics were thrown into the sea, and popular feeling was aroused by the loss of such as had been highly valued. At a later date, in the West, Claude, bishop of Turin (c. 817), desired to see religion freed from superstition, and inveighed against the use of relics, intercession of saints, and pilgrimages to their shrines, while he caused the destruction of relics in his diocese. He was condemned by a local synod. In his work, *de Pignioribus Sanctorum*, Guibert, abbot of Nogent († 1124), attacked the worship of saints and relics, and its many anomalies and absurdities—e.g., reduplication of relics—and, in particular, he proved the imposture of the tooth of Christ, alleged to be possessed by the monks of St. Medard.² Among the mediæval mystic groups faith in relics was sometimes set aside, though not by all. The pantheistic mystics of the 13th cent. scoffed at the reverence paid to the bones of martyrs.³ Individual Reformers (e.g., Wyclif) and reforming groups before the Reformation (Waldenses and Lollards) were opposed to all practices connected with relics, and the Reformers themselves indignantly repudiated their use. Calvin wrote a *Traité des reliques*, in which he pours contempt upon them and those who believe in them. The Thirty-Nine Articles of the Church of England describe the Roman doctrine concerning them as 'a fond thing, vainly invented' (art. 22), and the Second Book of Homilies (1563) is still more emphatic. Since the 16th cent. the use of relics has been abandoned in all Reformed churches. Nevertheless, so strong is the instinctive feeling of reverence for anything pertaining to a great man that various things belonging to famous divines—letters, books, apparel, furniture, and the like—are carefully treasured, and are objects of interest and of some degree of reverence by both Protestant and Catholic admirers. Further, in all Protestant and Roman Catholic countries relics of interesting personages of the past, apart from saints, are often treasured with every sign of interest and respect.

The modern Roman Catholic doctrine of relics is based on that of the earlier theologians already cited, and is set forth by the Council of Trent. The bodies of saints and martyrs were the temples of the Holy Spirit and members of Christ, and will be raised to eternal life. Therefore the faithful should venerate them. Through them benefits are bestowed on men by God. Hence those who deny the power of relics and the folly of the veneration of them are to be condemned. Reference is also made by the Catechism of Trent to such passages as Ac 5:15 19, 2 K 13:21, Sir 48:14. J. H. Newman finds in the view which Christianity takes of matter as susceptible of grace, and in the

fact that matter as well as spirit recovered through the Incarnation, Atonement, and Resurrection what it had lost as a result of the Fall, a sufficient reason for the sanctity of relics.¹ Although modern Roman Catholic theologians deprecate the extravagances of the relic-cult, they find some justification, e.g., for keeping up that of doubtful relics in the scandal which might be given to ignorant minds long accustomed to regard them with devotion, if they were removed. Whether relics are authentic or fictitious, if the prayer made before them is sincere, that is all that matters.²

6. *Conclusion.*—Although reverence for the remains of the dead or the treasuring of some of their more personal belongings is natural and instinctive, the preservation of these remains in whole or in part for veneration, or as incentives to greater faithfulness and goodness, or as reminders of the example offered by the lives of their whilom owners, is a forcing of that instinct beyond its legitimate place. There is not a little that is barbaric in the dividing up into larger or smaller fragments of the mortal remains of a saint and disseminating them over a wide area even for purposes of veneration. The admitted great uncertainty which surrounds any relic, the certainty of impudent fraud in the case of many, the gross superstitions and abuses to which they have given rise and which have attended the cult from early times, far outweigh any positive good which they may ever have done.

There are some curious likenesses between the classical and the Christian cult of relics. Circumstances attending the discovery and translation of relics, the rivalry of different places for them, fighting for or theft of them, falsifying and reduplication, the respect shown to them, the miracles and prodigies associated with them, the safety expected from them, are instances of these.³ But, while the influence of the pagan cult of relics upon the origin of the Christian cult may be affirmed, most of these likenesses owe their existence to similar results following from similar conditions, rather than to influence from the pagan side. There is also the fundamental difference already noted—viz. that pagan relics of heroes were almost invariably enclosed in a tomb, were not divided up, and were not visible, while those of saints were at an early date dismembered, enclosed in reliquaries, and made visible to the faithful.

RELICS (Eastern).—The worship, adoration, or veneration of relics is widely diffused in Asia, and is not wholly confined to the adherents of any one religion, although chiefly practised by Buddhists. The Tridentine definition of relics as comprising '(1) the bodies of the saints, or portions of them, (2) such objects as the saints made use of during their lives, or as were used at their martyr-

dom,¹ applies to non-Christian Asiatic usage. Class (1) is known to the Buddhists as *śarīrīka*, 'body-relics,' while class (2) is termed *paribhogika*, 'objects used,' the term 'used' being understood in a wide sense as connoting 'closely connected with.'

In Asia relic-worship rests on the same foundations as in Europe. The relics may be venerated simply as memorials of the sainted dead, serving, like images, as points of attachment for the reverence and devotion of the pious; or they may be regarded as intrinsically possessing magical powers which enable them to work miracles. The treasuring of relics as memorials or souvenirs of the dead is a natural exhibition of emotion to which no objection can be taken, but, when the relics are believed to possess intrinsic magical properties, the veneration of them passes into rank superstition, open to every kind of abuse and fraud. The transition from the sentimental to the superstitious veneration of relics invariably takes place in all countries, so that the innocent sentiment is forgotten while the superstition develops a vast mythology. The Buddhists further hold that the honouring of relics is an act of the highest merit, conferring much personal benefit on the worshipper. In this article we propose to give a sketch of the most prominent features of relic-worship as practised in Asia throughout the ages by the followers of non-Christian religions.

1. **Buddhism.**—The Buddhist cult from the earliest age of Buddhism, as it is known to us from the most ancient remains and documents until the present day, has always been characterized by the prominence of relic-worship. The practice is older even than the historical religion of Gautama Buddha, and may be traced back to the time of the half-mythical 'former Buddhas' about whom so little has been ascertained. A great tower, or *stūpa*, a few miles from Srāvastī enshrined the relics of Kāśyapa Buddha, the predecessor of Gautama. The relics comprised his entire body. That statement seems to indicate that in the remote times when Kāśyapa lived burial rather than cremation was the approved method for disposing of the remains of a notable saint.² The erection of the *stūpa* was ascribed to Aśoka, but his building must have been raised on the site of a more ancient memorial.

A footprint reputed to be that of Kāśyapa Buddha was venerated at a place to the west of the Indus.³ Hiuen Tsiang saw a miraculous image of the same 'former Buddha' to the north-west of the Bodhi-tree. The pilgrims also note the commemoration of the birth-places of Krakuchanda and Kanakamuni (Konāgamana), the other semi-historical 'former Buddhas,' who preceded Kāśyapa. Aśoka, in or about 255 B.C., enlarged for the second time the *stūpa* of the last-named saint, and almost certainly that building must have contained relics of his body. Other notices of a similar kind exist. The inference is reasonable that relic-worship had been established as an element in the cult of the 'former Buddhas' centuries before the appearance of Gautama Buddha in the world. The religion of the 'former Buddhas,' whatever it was, seems to have arisen in the sub-Himalayan plain lying to the north of the modern Bastī District in the United Provinces. The origin of Buddhist relic-worship, consequently, may be assigned to the same region.

Relic-worship as practised by the followers of Gautama Buddha began with the proceedings connected with his funeral, when the relics of his

burnt body were collected by the Brāhman named Drona and distributed among eight 'kings.' Drona himself retained the vessel in which the fragments were gathered together, while another Brāhman took the embers from the pyre as his share of the sacred spoil. Ten famous monuments were erected accordingly over the relics thus obtained, and in due course each appears to have become the centre of an important group of religious establishments. The story of the distribution of the relics, as told originally in the *Mahāparinibbāna Sutta*⁴ and retold in a multitude of other books, need not be repeated here.

The fragments of bone deposited with extreme reverence in the early *stūpa* at Piprāwā on the Bastī-Nepāl frontier by the Śākya of Kapilavastu may represent one of the original eight shares. Relic-worship clearly must have been a well-established practice long before the death of Gautama Buddha. From the time of that event (c. 483 B.C.) until now it has always been one of the most prominent features of the external Buddhist cult, closely associated in India, Ceylon, and Burma with all holy localities and places of pilgrimage, and consequently with the development of religious art in every form. Buddhists believe that their Master himself directed the veneration of his relics as a pious duty. Whether he did so or not, the supposed duty has been zealously performed.

The four canine teeth, the two collar-bones, and the frontal bone of Buddha were termed the 'seven great relics.' The other fragments, which were numerous, were believed to comprise grains no bigger than a mustard seed.⁵ The relics so collected were gradually dispersed all over the Buddhist world, the dispersal being associated by legend with the name of Aśoka. Some of the pieces, genuine or supposititious as the case may be, have become the subject of long histories, among which the story of the tooth-relic in Ceylon is the most famous. The reputed hairs and nail-parings of Buddha, which have supplied many reliquaries, are venerated as fervently as the relics believed to have come from his funeral pyre. The *paribhogika* relics, or objects in some way connected closely with the person of Buddha, command similar reverence. The Buddhist passion for relic-worship is so ardent that anything said to be a relic is certain to secure much popular attention, without serious criticism of its genuineness. The relics need not be either those of Buddha himself or objects associated with him personally; fragments of the bodies of the saints and things used by or connected with them are valued almost as highly. The Tibetans carry their interest in relics of recently deceased or even living Lāmas to a disgusting extreme.⁶

The smaller objects of veneration naturally were enclosed in suitable reliquaries or caskets, which were made of various materials, including among others soapstone or steatite, rock-crystal, bronze, silver, and gold. Many examples have been discovered in India, Ceylon, and elsewhere. Three specially notable examples may be mentioned. The earliest known specimen appears to be the steatite reliquary found in the extremely ancient Piprāwā *stūpa*, erected probably soon after the death of Buddha. There is reason to believe that the fragments of bone in that casket were genuine relics of Gautama Buddha, and that they were enshrined not long after his decease by his Śākya clansmen; but absolute proof of the genuineness of the relics is necessarily unobtainable, and the

⁶ L. A. Waddell, *Lhasa and its Mysteries*, London, 1905, p. 397.

date of the monument is the subject of differences of opinion.¹ The reliquary, with a crystal bowl and other vessels, stood on the bottom of a massive coffer measuring 4 ft. 4 in. by 2 ft. 8½ in. by 2 ft. 2½ in. constructed with perfect skill from a single block of fine sandstone. Another exceptionally interesting reliquary is the gold casket from a *stūpa* at Bimārān between Kābul and Jalālābād, enriched with Hellenistic repoussé figures. A third is the Kaniška casket made of an alloy of copper and found in the ruins of the great *stūpa* at Peshāwar.²

The pious people who deposited relics in carefully-prepared, costly receptacles usually honoured the precious fragments by placing with them a multitude of objects of intrinsic or artistic value, including jewellery of various kinds. All the known examples of ancient Indian jewellery seem to come from such honorific deposits. The workmanship both in metals and in gems is of high quality. We are thus indebted to relic-worship for the greater part of such knowledge as we possess concerning the jeweller's art in ancient India.

Relics, whether *śarīrika* or *paribhogika*, were usually secured against accidents by burial in a *stūpa* (*thūpa*, 'tope', 'dagoba'), which in its early Indian form was a low solid cupola of massive masonry, with a relic-chamber in the interior, ordinarily placed near the base. Such buildings, although not so difficult to enter as the Egyptian pyramids, were sufficiently impenetrable to offer no small degree of security. Some ancient monuments of the kind preserve their secret inviolate to this day, some were despoiled ages ago, and others have yielded their treasures to keen archaeologists in recent times. Although *stūpas* were built occasionally merely as memorial towers to mark sacred spots, and in that case contained no internal chamber, most of them in ancient times were erected specially for the purpose of enshrining in safety highly venerated relics of either Buddha or his saints. The modern *chorten* (*q.v.*), the equivalent of the *stūpa* in Tibet, rarely contains relics.

The story of the *stūpa* as an architectural form, beginning with the low solid hemisphere of Piprāwā and ending with the slender Chinese pagoda, is a long one. That long development would never have taken place but for the cult of relics. Most of the important groups of early Buddhist sacred buildings, especially in India and Ceylon, comprising monasteries, temples, and structures of many other kinds, were formed round a relic *stūpa* as the nucleus; and in that way the worship of relics may be described with approximate accuracy as being the foundation of the art of architecture in its application to the special purposes of Buddhist religion and public worship. Reginald Farrer justly observes:

'It is thanks to the cult of relics that Ceylon possesses such a store of ancient shrines. And the tremendous artistic impetus that the competition of shrine-building aroused was of inestimable service to national activities, to the consolidation and centralization of the Cinghalese Kingdom.'³

The same cause operated more or less in other countries of Asia in the same way; just as in Europe the cathedrals at Gloucester and many other places were built from the proceeds of the offerings of pilgrims visiting the enshrined relics of reputed saints and martyrs.

The *stūpas* erected in Buddhist countries to provide safe custody and permanent honour for relics include some of the largest buildings in the world. The most considerable structures of the

kind still standing probably are those to be found in Ceylon and Burma. The ancient *stūpa* at Anurādhapura in Ceylon, commonly, although inaccurately, called the Jetavanāma, stands on a stone platform nearly 8 acres in extent, and is still 251 ft. high. The Shwé Dagōn pagoda at Rangoon, a more modern building, 368 ft. high in its existing form,¹ is reputed to contain within its mass eight hairs of Gautama Buddha, as well as the bathing-garment of Kāśyapa, the water-dipper of Konāgamana, and the staff of Krakuchanda—*i.e.* articles used by the three latest of the 'former Buddhas.'

Among the destroyed *stūpas*, one of the greatest was the famous monument at Peshāwar constructed c. A.D. 100 by Kaniška (*q.v.*). The relic-casket excavated from its foundations has been referred to above.

The gigantic monument at Boro Budūr in Java is essentially a *stūpa*, but there is no record of its erection or of the relics which may lie hidden somewhere in its recesses.

Buddhist public worship in India and Ceylon during the early days centred in the relic-*stūpas*, which formed the goals of innumerable pilgrimages. Kings emulated one another in the lavishness of the ceremonial with which the relics were first enshrined and then from time to time exhibited to the faithful. The best descriptions of such ceremonies are those given repeatedly in the *Mahāvamsa*, a monastic chronicle of Ceylon, written about the 5th century A.D.

Ch. xix. relates how the site of the Mahāvihāra was consecrated in the presence of an enormous international assemblage of monks, including deputations from the foreign lands designated as Pallavabhogga (? Persia) and 'Alasanda the city of the Yonas,' probably meaning Alexandria in Egypt. Ch. xxx. is devoted to an exposition of the glories of the spacious relic-chamber, and ch. xxxi. describes fully the enshrining of the relics and the many miracles accompanying the act. The theory governing the proceedings is frankly stated at the end of ch. xxx in these words:

'If the wise man who is adorned with the good gifts of faith, has done homage to the blessed (Buddha) the supremely venerable, the highest of the world, who is freed from darkness, while he was yet living, and then to his relics, that were dispersed abroad by him who had in view the salvation of mankind; and if he then understands—"heaven is equal merit"—then indeed will he reverence the relics of the Sage even as the blessed (Buddha himself) in his lifetime.'²

The same intense belief in the efficacy of relics still prevails; and, when occasion arises, as on the presentation of the Piprāwā relics to the king of Siam, the sacred objects are welcomed with extreme enthusiasm, although the splendour of the ancient ceremonial in Ceylon may not be emulated.

In A.D. 1763 certain pagodas at Shwebo in Burma were dedicated by the four queens of the reigning monarch. At the close of 1902, thieves having rifled the contents of one of the buildings, the local authorities decided to open the other pagodas and remove the treasures enshrined in them to a place of safety. A silver scroll, forming part of the deposit and then taken out, records the motives which influenced one of the royal ladies to erect her pagoda.

'Finally,' she observes, 'by virtue of the merit acquired by me through building this pagoda, in which the relics of Buddha are enshrined, may I enjoy such happiness and prosperity as cannot be disturbed and detracted from in every form of existence counting from the present one till the attainment of Nirvāṇa, and, like Visākhā and Queen Anoja, may I attain Nirvāṇa, without the necessity of further transmigration, at the feet of the coming Buddha An Metteyya.' In the preceding sentences Her Majesty had invoked similar benefits for the king, the members of the royal family, the ministers and officials, and had prayed that 'the spirits of the pagodas, trees, the earth, and the sky, together with the ogres, *ghouls*, and ghosts, who inhabit the declivities of the earth,' might share in her merit and keep constant watch and ward over her pagoda.³

The document affords interesting and conclusive proof that the modern practice of relic-worship in

Buddhist countries is turned to extremely practical purposes. The relics are regarded as an excellent and profitable investment. It is clear that in the Shwebo case no trouble whatever was taken to verify the alleged relics, because another scroll in one of the adjoining pagodas declares that the relics of Buddha consisted of 3001 large pieces, with the same number of small pieces, besides a multitude of other fragments still more minute—which is manifestly incredible. The so-called relics were placed in an amber bowl of great value, which was enclosed in a miniature pagoda made of silver, gold, and glass. The miscellaneous objects deposited in the relic-chambers as honorific and protective additions by the queens include an extraordinary variety of things, hundreds in number, and duly catalogued in the accompanying inscriptions. Besides many jewels and articles of gold and silver, the collection comprises copper or brass models of war-boats, cannon, and arms of various kinds. The figures of soldiers, horses, and elephants, with the miniature guns and weapons, were intended to protect the relics.

Thirty-four years later (1797) P. Hiram Cox, the British Resident at Rangoon, was allowed to inspect the collection prepared for deposit in another new pagoda, the relic-chamber of which measured no less than 61½ ft. square on the inside. The objects deposited, although not quite so varied in character as those collected by the queens, were numerous and included the strange item, 'one of Dr. Priestley's machines for impregnating water with fixed air.' Ancient honorific deposits were ordinarily restricted to jewellery—using that term in a wide sense—and coins, including specimens valuable as rarities or curiosities. That practice explains the frequent occurrence of Roman coins of various reigns in the *stūpas* of Afghanistan and the Panjāb.

Relic-worship attained its highest prominence in ancient India and Ceylon. Burma comes next in devotion to the cult. In all other Buddhist countries the adoration of relics is but a minor incident of popular religion. The Sera monastery to the north of Lhāsa prides itself on the possession of the metal thunderbolt (*vajra*, or *dorje*) of the god Indra, which fell down from heaven, and was used by Buddha; but Tibet, on the whole, sets little store upon ancient relics, while keen on the quest of relics, even the most offensive, of recent or living Lāmas, which are believed to possess magical curative properties of the highest value.

Certain monasteries in China rejoice in their custody of famous relics; but the number of notable places of the kind does not seem to be great. One of the most celebrated of such places is the temple, or *stūpa*, on the Five-peaked Mountain (U-tai-shan) in N. China, built by a Wai sovereign in the 5th century.¹ The absurdity of the cult of relics has not escaped the ridicule of Chinese scholars. In A.D. 819 Han Wan-kung, an eminent writer and statesman, deeply offended the reigning emperor by mocking at the honours paid to an alleged finger-bone of Buddha, preserved at a pagoda in the prefecture of Fung-tseang. His candour was punished by official degradation, and he narrowly escaped execution. But ordinarily, in all countries, sceptics have been content to preserve a discreet silence.

Japan, Korea, and Siam seem to care little for relics properly so called, although the Siamese venerate a much-esteemed alleged footprint of Buddha.

Burma excepted, most modern Buddhist countries prefer to expend their devotional enthusiasm on

images rather than on alleged relics. Sometimes copies of the sacred books serve the same purpose as relics and are used to consecrate by their presence *stūpas* or pagodas, built primarily to gain a store of merit for the donor.

In Burma 'pagodas are built over relics of the Buddha, or models of them, over the eight utensils of a mendicant, or imitations of them, and over copies of the sacred books.'²

'No work of merit,' the same author observes, 'is so richly paid as the building of a pagoda,' and the structure, in order to have proper efficacy, must be sanctified by the inclusion of relics, if practicable, and, when they are not available, by the best procurable substitute. In ancient India also copies of sacred texts, such as the twelve *Nidānas* or the so-called 'Buddhist creed,' were often used as a substitute for relics in order to give the requisite sanctity to a *stūpa* or an image.

2. Brāhmanical Hinduism.—The veneration of relics seems to be practically unknown to Brāhmanical Hindus, one reason being that their ill-defined religion has no recognized founder like Jesus Christ, Buddha, or Muhammad. All accounts agree that the rude log which does duty as the image of Jagannāth (*g.v.*) at Puri encloses a mysterious deposit which is transferred when the image is periodically renewed; and, according to one story, the deposit consists of the bones of the demi-god Kṛṣṇa.³ If the deposit really consists of bones, the fact may be regarded as a survival of Buddhist relic-worship. The cult of Jagannāth certainly is connected with Buddhism.⁴

It would be difficult to specify any clear instance of relic-worship practised by Brāhmanical Hindus. The honours paid to reputed footmarks of Viṣṇu (*Viṣṇu-pada*, *-pādūka*) resemble those rendered by the Jains to the vestiges of their Tirthankaras, and by Muhammadans to those of their Prophet, but are not exactly relic-worship.

3. Jainism.—The statement of Fergusson, that the Jains 'have no veneration for relics,'⁵ although possibly true for the present day, is not quite correct with reference to ancient times. Jain *stūpas*, indistinguishable from Buddhist ones in appearance, were numerous, and some of them may have contained relics, although no record of the existence of such contents has been published. Bhagwān Lal Indrajī, referring in general terms to Jain literature, asserts that the early Jains honoured bone relics of the Tirthankaras, corresponding to Buddhas, and that survivals of the ancient relic-worship may be traced in modern practice.

He states that 'at the present day the Jain *Sādhus* of the Kharatara *gachchha* use for worship a five-toothed sandal goblet called *thāpanā*, and this is a copy of the jaws of the Tirthankaras. So the Jain nuns or *sādhvīs* use for worship as *thāpanā* a kind of shell (*śaṅkha*), which they take to be the knee-bones of Mahāvīrasvāmī.'⁶

A Jain *stūpa* was built in honour of Akbar's friend and teacher, Hīravijaya Sūri, who was cremated in A.D. 1592 at Ūnā or Unnatpur in the Jūnāgarh State, Kāthiāwār. Various miracles having occurred at the spot, the *stūpa* was erected to mark the holy ground. It has not been described, and may or may not contain relics.⁶ Recent European works on Jainism do not make any allusion to either relic-worship or *stūpas*. Mrs. Stevenson, however, mentions that childless women attending the funeral of a nun strive to tear a piece from the dead *sādhvī's* dress, believing

that it will ensure their having children.¹ That practice is a near approach to relic-worship.

4. Muhammadanism.—Although the treasuring and veneration of relics are hardly consistent with the spirit of Islām, Musalmāns have followed to some slight extent the example of their heathen neighbours and have been tempted occasionally to cherish and reverence tangible memorials of their Prophet. Such limited compliance with non-Muslim practice has not produced any considerable effects, and the few instances of Muhammadan reverence for relics which can be cited are detached phenomena with no special significance. Certain places pride themselves on the possession of hairs from Muhammad's beard. Two such relics (*ḍarī*) were brought to Bijāpur in the Deccan, India, at some time in the reign of Sultan Ibrāhīm II. 'Adilshāh of Bijāpur (1580–1626), and were deposited in a palace now known as the Āsār Mahal, 'Relic House,' where they are treated with much reverence. Even foreign Muhammadan potentates send rich offerings in honour of the relics, which are venerated by a special ceremonial on the Prophet's birthday, 12th Rabi' i.² The box in which they are kept is never opened, so that 'no one living has seen the relic.'³ Rohri (Rūrhī) in Sind boasts of a similar treasure, a single hair, which is kept in a jewelled gold case in a shrine named the Wār, or Wāl, Mubārak, a building erected for the purpose by Nūr Muhammad in or about A.D. 1745. The relic is exhibited to the faithful once a year, when, by means of some trick, it is made to rise and fall, the movement being regarded by the crowd as supernatural.⁴

'In the Mogul armies, before the introduction of European tactics, an elephant always marched in the van, bearing on its head a long pole, from which floated a large flag. Sometimes this was followed by another elephant carrying a rich howdah, on which was placed a box containing a priceless relic, which usually was, if one may believe it, an actual hair from Mahomet's beard.'⁵

Certain relics of the Prophet are kept in the Topkapu Palace at Constantinople and visited by the Sultan at the beginning of a new reign.⁶

The reputed footprints of the Prophet on rocks or slabs of stone are venerated in many places, which need not be specified. J. Burgess mentions examples at Ahmadābād, Gaur, and Delhi,⁷ and many more might be collected from various countries. The honours paid to the tombs of numerous *pīrs*, or reputed saints, in Muhammadan lands are near akin to relic-worship, but are not quite the same thing.

LITERATURE.—Innumerable books dealing with the Buddhist cult treat more or less fully of relic-worship. Some of those books have been cited in the text. Works deserving of special mention are: trr. of the travels of the Chinese Pilgrims, especially Fa-Hian (q.v.) and Hsuen Tsang (see YUAN-CHWANG), by various authors; P. Bigandet, *The Life or Legend of Gaudama*, popular re-issue, 2 vols., London, 1914; H. Kern, *Manual of Indian Buddhism*, Strassburg, 1890; R. RELIGION. — I. INTRODUCTION. — 1. The subject.—From time to time men find themselves forced to reconsider current and inherited beliefs and ideas, to gain some harmony between present and past experience, and to reach a position which shall satisfy the demands of feeling and reflexion and give confidence for facing the future. If, at the present day, religion, as a subject of critical or scientific inquiry, of both practical and theoretical significance, has attracted increasing attention, this can be ascribed to (a) the rapid progress of scientific knowledge and thought; (b) the deeper intellectual interest in the subject; (c) the widespread tendencies in all parts of the world to reform or reconstruct religion, or even to replace it by some body of thought, more 'rational' and 'scientific' or less 'superstitious'; and (d) the effect of social, political, and international events of a sort which, in the past, have both influenced and been influenced by religion. Whenever the ethical or moral value of activities or conditions is questioned, the value of religion is involved; and all deep-stirring experiences invariably compel a reconsideration of the most fundamental ideas, whether they are explicitly religious or not. Ultimately there arise problems of justice, human destiny, God, and the universe; and these in turn involve problems of the relation between 'religious' and other ideas, the validity of ordinary knowledge, and practicable conceptions of 'experience' and 'reality.'

The very nature of the subject, therefore, forbids any one-sided treatment. No one particular aspect or phase can form the basis, nor can it be ignored that upon no other subject are differences of opinion so acute, and the risk of causing offence and pain so great. The subject of religion inevitably involves both the 'non-religious,' or secular, and the 'anti-religious' (irreligious, blasphemous, etc.); and, while its very intimacy compels a restrained and impartial treatment, its importance demands an impartiality and objectivity which in turn may easily seem 'irreligious.' None the less, the actual problems are such that, if any critical or scientific treatment is once legitimate (and everywhere there is a tendency to treat quite freely the religion which is not one's own), it must be pursued as thoroughly as possible, with the consideration for the convictions of others that one would ask for one's own (the Golden Rule of criticism) and with the clearest recognition of the fact that the subject concerns the most vital beliefs and practices of human beings, all of whom may, on purely scientific grounds, be regarded as closely related—physiologically and psychologically.¹

2. Definitions.²—(1) The term 'religion,' whatever its best definition, clearly refers to certain characteristic types of data (beliefs, practices, feelings, moods, attitudes, etc.). Its use presupposes criteria, and therefore some preliminary conception of what does and what does not come under the category. But it soon appears that there is no absolute gulf between religion and what, in some one respect or other, closely approximates it (e.g., art, morality). Different people draw the line differently. A man will be swayed by his conception of what religion is or is not; but such conceptions vary, not only among individual members of the same society, but even in the lifetime of any one of them. Only in the course of his mental or psychical growth does a man acquire the conception and come to distinguish between

¹ On standpoints and methods of inquiry reference may be made to S. A. Cook, *The Study of Religions*, London, 1914.

² Two derivations are familiar, one from *religare* (so Cicero, *de Nat. Deor.* ii. 28: 'qui autem omnia, quae ad cultum deorum pertinerent, diligenter retractarent, et tanquam relegerent, sunt dicti religiosi, ex relegendo, ut elegantes ex eligendo, tanquam a diligendo diligentes, et intelligendo intelligentes, his enim in verbis omnibus inest vis legendi eadem, quae in religioso'), the other from *religare* (so Lactantius, *Div. Inst.* iv. 28: 'hoc vinculo pietatis obstricti deo et religati sumus; unde ipsa religio nomen accepit'). But, whether *religio* was what is re-read and reflected upon, or whether it had the idea of obligation, what was more to the point was the meaning of *religio* and its relation to *superstitio* (see Mayor's note on *de Nat. Deor.*, loc. cit.).

what is and what is not religion; and this development—which is of the greatest *personal* significance for the individual—finds an analogy in the history of the race, where the distinctions which we draw (*e.g.*, between religion and law or ethics) are not found among rudimentary or backward peoples. Herein lies the fundamental importance of such questions as: How and why do we come to distinguish the 'religious' from the 'non-religious'? Is there a border-line? and If we rely upon a prior definition, how did that definition originate? Consequently, the subject is seen to involve not only (a) the various beliefs and practices which obviously belong to the subject-matter, but also (b) the mental or psychical aspects of all the individuals concerned. In a word, besides the ordinary stock of religious data, one has to consider the individuals who, as a result of certain vicissitudes in their development, have the beliefs which are called 'religious,' or who, again as a result of their experiences, will differentiate between the religious, the non-religious, and the anti-religious.¹

(2) A survey of the numerous definitions of religion would be more informing than any new one that might be proposed. Even the simple minimum suggested by E. B. Tylor (religion is 'the belief in spiritual beings') at once brings in the question of the nature of these beings, the origin of the belief, and its validity for every individual.² Every definition ultimately implies theories of reality and indicates the place that religion should hold in the world of life and thought.³ Directly or indirectly, some very significant terms are involved (*e.g.*, 'death,' 'heaven,' 'sacred,' 'supernatural,' etc.). These require definition and justification, and, when pursued logically, the ideas ultimately concern man's whole body of thought, both religious and non-religious. In general, the definitions themselves are a valuable contribution to men's conceptions of what religion was, is, or should be. They convincingly demonstrate the *personal* interest in the subject: even the one-sided and unsympathetic definitions show how intimately the self feels itself at stake. They point to subjective convictions of the most vital importance; they characteristically recognize a gulf between man and the 'divine,' while at the same time emphasizing feelings of the closest relationship with or the most absolute dependence upon a 'higher Power.' Especially characteristic are (a) the admission of the strength, support, peace, and consolation afforded by religion, and (b) the intensifying and 'sanctifying' of otherwise non-religious phases of life and thought. The effects of religion are seen to be varying

emotional and intellectual, leading to practical, social, æsthetic, speculative, and other efforts. The results for the individual are now narrow and egoistic, and now broad, self-less, and social; and while, on the one hand, religion typically has its 'supernaturalistic' aspects, on the other, all the profounder and more permanent values of life are in some way religious or quasi-religious, even though the characteristic supernatural or other typical religious features be wanting. In other words, there is that which is of supreme *personal* significance, whether it concerns the self (1) alone, or (2) in its relation to others, or (3) in its relation to a higher Power. Thus, as opposed to any efforts to set religion in a watertight compartment by itself, there is evidence which represents it as belonging to so many phases of life that religious data are, so to say, only a special form of otherwise non-religious data. Religion none the less claims to be *sui generis*; hence it is explicable why some observers see only the features which distinguish religion from that which is non-religious, whereas others do not recognize the distinctive features. The paradox of the immanent and the transcendent rests upon the fact that certain kinds of experience and evidence tend to destroy the distinctiveness of religion, whereas other evidence as unmistakably compels or enhances the subjective convictions of the transcendence and distinctiveness of the divine. Other paradoxes relate to 'this' world and 'the other,' to the ideals for mankind and 'this' life, and those for a future which is felt to transcend this world. Paradoxical features are also very marked in the varying normal, abnormal, and pathological aspects of religious life, which clearly prove that the problems are ultimately bound up inextricably with those of ordinary 'mundane' existence. In a word, the subject of religion inevitably involves the problems of personality and existence, and the deeper vicissitudes of life and thought.

3. Method.—(1) Every reader tends to approach the subject with certain more or less definite preconceptions touching some of the most essential terms or elements of religion. Herein is clearly seen the individual's implicit reliance upon his personal experience, reflexion, and ideas of truth and reality. But, since differences of opinion and of method at once arise in the problems of religion, it is impossible either to start with theories or convictions of the ultimate realities or even to adopt some one standpoint as opposed to another. Yet, though much may be disputed, there can be no dispute that men differ profoundly over the ultimate facts, and that their inmost convictions will tend to be entirely authoritative and to regulate their lives. So, *e.g.*, whatever be the ultimate realities underlying the data of 'psychical research' and the like (occultism, astrology, angelic visitations, etc.), no one can doubt that there are three typical attitudes: (a) believing, if not unduly credulous; (b) incredulous, if not contemptuous; and (c) discriminating, on the basis of some authority. These are real facts of importance for human nature and the history of religion, inasmuch as a *rational* conception of religion has to find a place for all the evidence and dare not ignore the inconvenient data, from whatever side they are brought. Now, all beliefs (theological, scientific, political, etc.), and whatsoever they imply, have a value as apart from questions of historical credibility, rationality, value, etc.; and in religion as in history much can be learned from the study of beliefs, explanations, and the like, as apart from their particular value for the inquirer and the ultimate facts themselves. Hence, although religion concerns the most vital truths of man and the universe, there can be a critical, objective, or

¹ On the 'genetic' and 'psychological' treatment of the subject see below, § 10. On the importance of tracing these differentiations cf. A. Sidgwick, *Distinction and the Criticism of Beliefs*, London, 1892, *The Use of Words in Reasoning*, do. 1891.

² PC4 i. 424. For criticisms of definitions see J. H. Leuba, *A Psychological Study of Religion: its Origin, Function, and Future*, New York, 1912, ch. II, and appendix E. Durkheim, *The Elementary Forms of the Religious Life*, Eng. tr., London, 1915, bk. I, ch. 1; G. Galloway, *The Philosophy of Religion*, Edinburgh, 1914, ch. IV. Durkheim's definition may be noticed: 'A religion is a unified system of beliefs and practices relative to sacred things, that is to say, things set apart and forbidden—beliefs and practices which unite into one single moral community called a Church, all those who adhere to them' (Fr. ed. p. 65, Eng. tr. p. 47). Galloway (p. 184) suggests tentatively that religion is 'man's faith in a power beyond himself whereby he seeks to satisfy emotional needs and gain stability of life, and which he expresses in acts of worship and service.' C. C. J. Webb (*Group Theories of Religion*, London and New York, 1916, p. 59) asserts, on the other hand, 'I do not myself believe that Religion can be defined.'

³ Cf. the words of E. Caird: 'A man's religion, if it is sincere, is that consciousness in which he takes up a definite attitude to the world, and gathers to a focus all the meaning of his life. Of course, the man's world may be, and in earlier times is, a comparatively narrow one' (*Evolution of Religion*², Glasgow, 1894, 1 81).

scientific treatment which considers, not the goal or destiny of things, but men's beliefs and theories on the subject; not the ultimate facts, but men's convictions of them; not the final objective reality, but religious and related conceptions of this reality.¹

(2) Just as every religious individual has his non-religious side—and the term distinguishes certain data from those outside the category—so an objective treatment of religion can aim at a conception of religion which would find a legitimate place among the other conceptions which, forced by experience and reflexion, are necessary for a rational description of the entire range of human experience. In other words, the best conception of religion will not be severed from the best conceptions of all else that is relevant; for religion is not something in and by itself, but, in the whole world of life and thought, has a part which has to be determined. Now, as a matter of fact, quite characteristic of modern research has been the study of religion along non-religious and purely technical lines and from various points of view. But, owing partly to differences of method, scope, and aim, and partly also to the difficulty of controlling an enormous field, the more synthetical and comprehensive works have been no more convincing than the more analytical and specialistic. Still, the collection of material and the organization of it proceed *pari passu*; improved methods lead to a better treatment of the evidence, and the latter in turn discovers defects in past methods. Everywhere difficult problems arise, and the persistent *cuius* is the conflict between the infelt conviction that religion can be handled in a way that satisfies the reason and the individual's refusal to go against his inmost convictions, even though these cannot be logically or consistently formulated. Preliminary questions of method thus become indispensable, for no one can approach the subject with an entirely blank mind. But these questions will also serve another purpose; for we have to assume that, between the ultimate realities (whatever they may be found to be) and current conceptions of them, there is no absolute gulf. Of these conceptions we can gain some notion by continued comparison and classification and by psychological interpretation. Moreover, only through some implicit or explicit theory of reality can we handle and interpret the data. Consequently the methodological questions contribute both to our own conceptions of reality and to a better understanding of those which have prevailed elsewhere; cf. below, § x5 (3).

II. METHODS, PROBLEMS, AND CRITICISMS.—

4. The comparative method.—(1) Among the most conspicuous features of modern research has been the application, in their widest extent, of anthropological and comparative methods of inquiry.² The effect has been to break down racial, social, intellectual, and psychical boundaries, and to bring into relation all classes and races of men, all types of organic life, all forms of 'matter.' Step by step the most advanced and the most rudimentary of psychical and physical phenomena are related and classified; man is brought into connexion with the rest of the universe, and his conscious, purposive thought-activity comes into line with all types of psychical and other energy. New conceptions thus arise of man's place in nature, and these, in so far as they can be co-ordinated, correspond to the cosmogonies and cosmologies of rudimentary and early peoples, whose general body of religious and non-religious thought was more or less organized and coherent, but whose stock of knowledge was, relatively speaking, extremely small. Now, the comparative method is the unbiased co-ordination of all comparable data irrespective of context or age. It has led to the accumulation of much valuable material. As a popular, simple, and interesting inquiry, it has familiarized many people with the miscellanies of folk-lore and religion. It illustrates popular beliefs and practices, and reveals a remarkable resemblance among peoples all the world over. But, while it supports or suggests various theories and explanations, it does not prove that others are excluded. Moreover, similar practices can have different meanings or motives, and similar ideas and beliefs can be differently

expressed. It does not follow that a belief or practice in one environment has precisely the range of feeling, meaning, or application that its parallel or analogy has elsewhere; nor is the apparent origin of any datum necessarily significant for its later meaning or function. In fact, everywhere mere comparison may be legitimate for some purpose—as, e.g., between men and apes—but in every problematical situation the question of the validity of particular inferences is exceedingly urgent, and confusion has often been caused by naive comparisons and rash inferences. Hence, where sweeping theories have been suggested on the basis of comparison (e.g., primitive promiscuity, ignorance of paternity, phallic, serpent, or astral cults, the priority of magic over religion), they must invariably be tested by other methods.¹

(2) The comparative method is commonly bound up with certain persistent and prevalent notions of the 'evolution' of thought and the 'survival' of rude, superstitious or otherwise irrational beliefs and practices from an earlier and more backward stage in the history of culture. But every datum which can be regarded as a survival must be viewed psychologically; the individuals whose beliefs and practices are so stigmatized are not actuated solely by the mere fact that these belong to the past or have an ancestry. Some feeling of value is characteristically present. The 'survivals' have survived because, while much else has been neglected or forgotten, they have been selected and retained along with the entirely rational data which also have come down from the past. To regard certain data merely as survivals is to ignore the question of their origin, persistence, and function; for the type of mind or the conditions which explain their rise may also explain their continuance. Besides, comparison itself reveals innumerable subtle differences; and these indicate that there has been no artificial or mechanical borrowing or imposition, but a process of re-adjusting and reshaping for which the individuals concerned have a certain responsibility. In fact, whenever beliefs and practices can be compared, a distinction can invariably be made between what it is that recurs and the form in which it recurs. The types of beliefs and practices which are selected, assimilated, or reshaped are not to be confused with the external aspects which can be treated historically. Thus, beliefs in witchcraft everywhere contain similar elements, and one can distinguish (a) the subjective or psychological aspect (e.g., the tendencies responsible for their persistence and retention), and (b) the more external details, which may be of traditional or legendary interest, due to borrowing, external influence, etc. Indeed, an analysis of typical survivals reveals a fundamental resemblance between data that are distinctly religious and those that usually rank as superstitions or survivals; but, while the latter will generally be sporadic, isolated, and out of harmony with current thought, the former will be more or less organized, socially and intellectually, and will at least claim to be in accordance with the 'best' thought.²

(3) The presence of survivals, superstitions, and other signs of cultural differences in an environment shows that, as a general principle, any apparently rudimentary or irrational datum need not

¹ Hence the terms 'truth' and 'reality' (or 'system of realities') must be used with a certain looseness, and with the assumption that every one admits that there are truths and realities of ultimate validity, even though men now differ as to what they are.

² On the no less conspicuous employment of psychology see § 10f.

¹ E.g., one may note the care taken by J. G. Frazer in *The Golden Bough*³ to emphasize the difference between the great mass of material collected and classified in this monumental work, and the various important theories, conjectures, and explanations with which they are more or less closely interwoven; see, e.g., pt. 1, *The Magic Art*, London, 1911, i. p. ix f., pt. vii., *Balder the Beautiful*, do. 1913, i. pp. v f., xi.

² On the fallacies in the current popular theories of survivals see, further, Cook, chs. v., vi.

on that account alone be older than one more advanced or elevated. Moreover, a culture can decay and be followed by one of a lower, ruder, or less organized type. Not only has this often happened in the East, but in Arabia, *e.g.*, the old civilization reflected in the Minæan and Sabæan inscriptions was followed by the pre-Islamic Jāhiliyya, the age of savagery or barbarism, and this in turn by a new growth—the rise and development of the specifically Muhammadan culture. Facts of this sort bring intricate problems of the rise and fall of systems or cultures, and their consequences for the development of thought. There has undoubtedly been a profound advance from the first appearance of man onwards, but the persistence of all that is styled irrational or superstitious, and the frequent cases of decay, retrogression, and new growth, shatter all facile theories of a simple, continuous, mental or psychological evolution.

(4) Evolutionary ideas hold such a prominent place in conceptions of religious development that it should be noticed that there are really two types of theory. The one involves ideas of survival, retrogression, decadence, recidivism, and it lays the emphasis upon man's savage ancestry in an extremely remote past. The other does not measure the difference between the civilized and uncivilized by centuries or millennia, but it sees the savage 'beneath' the civilized man, the barbarian 'below' the veneer of culture, and so on. The former seems to offer an easy explanation of the presence of lower features (cf. Tennyson's 'the Ghost of the Brute that is walking and haunting us yet' [*The Dæmon*]), but the latter is probably more important. The ante-natal stages have a profound significance for the development of man's psychological nature. These stages, and the dependence of the infant upon the mature experience of parents and environment, are as fundamental for his psychological life as the more complex and obscure factors of heredity, or the influence of human or animal ancestors 'hundreds of thousands of years' ago. The actual history of the ancient civilizations shows that there is no inherent momentum in a culture or a religion; its fate depends upon the individuals who are involved. Hence, whatever may be proved to be due to heredity and pre-historic evolution, more attention must first be paid to the traces of the ante-natal stages with all their suggestiveness for lower levels of psychological development which the individual may not have entirely outgrown.¹

5. Historical and sociological methods.²—(1) The purely comparative method of inquiry has emphasized the necessity of constructing conceptions of religion upon a wide basis of data. While indicating resemblances between different religions and peoples, it has also brought to light many significant differences, whether in single environments, at some given time, or in the course of their historical development. Religions can be fruitfully studied in their relations to the political, economic, social, geographical, and other features of the people or area where they flourish. Here attention is paid to the influence of surroundings (mountains, plains, deserts, swamps, etc.), to the proximity of higher or lower cultures, and to means of intercommunication.³ Of special importance are the food-supply and means of livelihood. Thus, hunting and agriculture conduce to different types of mental and therefore, also, of religious outlook; and, where the food problem is negligible,

the religion is without the positive features that recur when the supply is limited or a source of anxiety. The influence of city-life and of political and social interests upon an earlier religion is especially noticeable in the vicissitudes of the Homeric gods. The differences among the various religions are thus due very largely to quite recognizable factors and vicissitudes; and a distinction can be drawn between the history of religions, which is that of definite systems, peoples, or areas (so far as the material permits), and the history of religion, *i.e.* of the development and advance of religious and related thought in human history generally. It is the task of the latter to determine the character and the principles of the development; but the two inquiries are interdependent, and it is a natural presumption that the various religions reflect the working of similar principles, which, moreover, will hold good in the future. But every treatment of the development of religion forces some recognition of 'lower' and 'higher' stages, of which the latter will irresistibly be related to our own ideals (whatever these may happen to be), and our own ideas of what must be the outcome of a progressive development. As for the 'lower' stages, primitive pre-historic men are unknown.¹ Nor can one estimate confidently all the religious and other ideas of, say, the pre-historic cave-painters.² If, on the one hand, primitive man once lacked the traditional experience of the lowest of modern savages, on the other, there are tribes so rudimentary that a lower level can hardly be conceived, while possibilities of development are recognizable. The latter may then be called (relatively) 'primitive,' even though their beliefs and practices are complex and have a history behind them.

(2) Thus the relation between a primitive religion and the actual religion of primitive pre-historic people is fairly analogous to that between the child or the savage and the actual 'childhood' of mankind; there will be certain parallels, but there will be essential differences, due to the fact that the environment in the one case has a history and an experience which in the other case are quite wanting. It should be observed that, although some typical developments can be discerned everywhere, we nowhere find the actual dawn of religion in an entirely non-religious environment. Further, all theories and ideals of religion implicate societies or systems, and not particular individuals or details. All significant movements have been collective, and development has been due, not merely to individuals (who often find no following), but to the tribe, society, church, organization, or people who were influenced by them. Consequently, every conception of the lowest stage of religion must refer, not to the first 'religious' individual, but to the group which could be styled 'religious,' not to separate ideas, beliefs, or concepts, but to the whole mental fabric or system in which these found a place. The earliest conceivable religion would necessarily be a system; behind this one can scarcely go. In like manner one can conceive exceedingly rudimentary or primitive groups of individuals, but not isolated human beings who had not yet associated with one another. Only in this way can the problems be *methodologically* pursued; and it is the great merit of sociological inquiries that they illuminate the relatively stable and coherent beliefs and practices of ordinary social groups, and not the individuals who may be exceptional, extreme, or even abnormal. On the other hand, one cannot ignore the individual and what society owes to him. The social group is not an absolutely homogeneous, undifferentiated, and self-moving unit. Every body that can be regarded as a unit moves through those who in some respect are outside it, and cannot be properly described without taking into consideration the environment. No group is actually a closed system, but it is necessary to regard it as a

¹ Cf., *e.g.*, the 'vegetative' soul of Aristotle and the Schoolmen; see M. Maher, *Psychology*, London, 1910, pp. 33 ff., 357, 556, 571 f.

² See, among other works, F. Ratzel, *Hist. of Mankind*, Eng. tr., London, 1886-98, bk. 1.; E. Meyer, *Einleit. Elemente der Anthropologie* (*Gesch. des Altertums*), i. 1, Stuttgart, 1907; Durkheim, bk. 1. ch. 1.; R. R. Marett, *Anthropology*, London, 1912; O. H. Toy, *Intro. to the Hist. of Religions*, New York and London, 1913; G. F. Moore, *Hist. of Religions*, Edinburgh, 1914, 1.

³ Thus the old Indo-Iranian stock, as illustrated by a comparison of the *Rigveda* and the *Avesta*, divides into two markedly contrasting streams: the Zoroastrian, or Persian, which is strenuous, practical, and ethical, and the Indian, which is typically passive, mystical, pantheistic, and metaphysical. Differences of climate are adduced to account for the psychological differences. Moreover, the geographical and other features of Egypt and of Babylonia and Assyria favoured a certain unity and fixity of life and thought, in contrast to the broken nature of the lands of the Aegean and Hellenic cultures and the absence of physical links. See Moore, pp. 145, 201, 369, 411 f.

¹ 'A culture would be absolutely primitive if no antecedent mental development whatsoever could be presupposed' (W. Wundt, *Elements of Folk Psychology*, Eng. tr., London, 1916, p. 20; cf. pp. 21, 32).

² All artistic and other human workmanship will imply some mental equipment, observation, and reflexion, with perhaps social, ethical, or moral interests. In any case the data will point to some 'psychical context,' and the task is to determine the certainties, probabilities, and possibilities, and not (say) to suppose that the artists of the Rembrandt Period were in no degree inferior to modern artists. The necessity of determining the context of data is obvious when one observes the very different beliefs and practices which can be associated with any particular god (*e.g.*, Jahweh in the OT) or the divergent conceptions entertained of some particular significant term.

simple unit and to neglect provisionally the more complex and difficult details.¹ The group, like the concept, is a methodological necessity, and not an ultimate reality. See, further, § 13.

6. Social practice and myth.—(1) Sociological inquiries have thrown a vivid light upon the inter-connexion of life and thought among rudimentary societies and upon the place that religious and related ('superstitious') beliefs and practices hold in the life of the individual or the social group.

The birth of the child brings ideas of legitimacy and kinship, incarnation or rebirth, tabus, and various 'superstitious' usages (cf. art. *BIRTH* [Introduction]). With the early training and initiation into the group all the deep values of the group are associated. Marriage and marriage-bars involve highly complex ritual and practice. Illness, death, burial, and the fate of the dead almost invariably bring beliefs of the relation between the dead and the living. Religion characteristically embraces all that is for the continuity and security of the social group—entrance into the group, adoption, expulsion, outlawry; vengeance, manslaughter, blood-feud; the protection of property (including women and slaves); the rights and responsibilities of prominent or representative individuals; defence and war; fear of famine and disaster; the preservation of the (animal and plant) food-supply and means of livelihood. Here are inextricably blended tabus and regulations which modern observers from their own standpoints will variously style religious, superstitions, mystical, irrational, rational, secular, and so forth.

A fact of the greatest significance is the increasing differentiation of departments of life and thought and the growing complexity of society.² At certain stages there is no clear division, e.g., between ritual, moral, and religious requirements, or between religious, economic, and legal ideas. The appearance, disentanglement, and separate development of special departments of life and thought (e.g., astronomy, anatomy, law, physics) continue on higher levels the early and rudimentary processes which at previous stages enabled men to differentiate and classify simple phenomena and thereby to describe their experience and organize their scanty knowledge. In this differentiation, specialization, and co-ordination there are typical processes which subsequently account for the co-existence of the various conflicting religious and non-religious views of the universe.³

(2) A special problem is that of the relative value of the evidence contained in ritual behaviour, social practice, etc., and that in myths, legends, and the like (see art. *MYTHOLOGY*). The controversy 'myth versus ritual' arose as a reaction against excessive reliance upon myths.⁴ Myths appear to be of only secondary value in so far as they are intended to explain, and have secondary aims which are political, ecclesiastical, philosophical, etc. On the other hand, the ritual or practice may be a lifeless inheritance from the past, bereft of its original significance or motive, and modified by reflexion or myth. The same actions are not necessarily accompanied by the same feelings and ideas, and the latter in their turn can express themselves in very different forms. This is one of the clearest results of the comparative method (§ 4 [2]). Further, every behaviour or action is earlier than reflexion upon it or the desire to explain it; it presupposes feelings, impulses, and needs of which men may be barely conscious. But myths, however artificial they may be, are significant for some stage of thought and for its movement, even though their contents be useless for modern knowledge. Both ritual and myth bring difficult questions of the meaning of each for a people. The true meaning of a rite for us (i.e. our interpretation) is not necessarily that which it has for those who practise it; and the relation between (a) ritual, behaviour, action, etc., and (b) subsequent reflexion, explanation, myth, interpretation, etc., is analogous to that between impulsive, instinctive activities and the reflective, intelligent states of consciousness, or between any activity and the apparently obvious purpose which, however, was not recognized at the time. In fact, one of the most

interesting features of the more rudimentary religions is the presence of earlier forms of what is fully explicit in the higher religions (e.g., vegetation rites and the later belief in a resurrection), of apparently logical transitions, and of a striking continuity or development, such as to permit continued interpretation, and to suggest theories of a progressive revelation or the like (cf. also the view in Gal 3²⁴). See, further, § 30.

7. The group unit theory.—(1) It is a fundamental postulate that social life and social-religious practices cannot be founded upon hallucinations; the basic feelings and convictions are both genuine and effective. Moreover, while, on the one side, all maxims, principles, and rules of life, business, recreation, etc., are for the better ordering and organization of activities, on the other side, all practical working life or activity implies principles which, however, may not be consciously realized or formulated. Systematized social religious organizations imply systems or principles of regulative ideas; and all social organization or disorganization corresponds to a sufficient equilibrium of the ideas involved or to an absence of the indispensable harmony. The interrelation between the constituents of any effective group, or between different groups, depends on the essential ideas which unite or disunite; and the development or decay of such a group (e.g., a political party) is coincident with that of the constitutive ideas. An active group or body does not ask, 'Is it true?' but in the stress and conflict of life, as also in reflexion upon the ideas and principles that underlie or are implied in its activities, their 'truth' is put to the test. Hard events and explicit discussion thus try the effectiveness of the convictions and ideas; and every state of equilibrium, after a period of severe crisis or disintegration, points to some equilibrium of ideas, of greater or less permanence, uniting the group. Hence we may speak of a system of ideas, even though they are not necessarily consciously recognized.

(2) Now, at certain stages of development the social and religious ideas form an inseparable part of one and the same system—a practical system; life and thought are relatively undifferentiated, and every man is born into the nexus of beliefs and obligations which obtain throughout the group. Such a system, with its body of cults, practices, beliefs, and traditions, implies a system of ideas, ways of thinking, standpoints, explanations, etc. But, further, Robertson Smith, whose *Religion of the Semites* brilliantly illuminated the sociological aspects of religion, especially emphasized the important fact that 'the circle into which a man was born was not simply a group of kinsfolk and fellow-citizens, but embraced also certain divine beings.' 'The social body was not made up of men only, but of gods and men.' 'The gods are part and parcel of the same natural community with their worshippers.'¹ Here, then, ideas of gods and men and of the supernatural and natural, would tend to form part of a single coherent whole—a unitary system, so to say, of thought and practice. It is necessary to grasp this conception and contrast the 'psychical' solidarity of such groups with those situations where life and thought are extremely differentiated, where religion is kept quite apart from the non-religious, where the social system is undeveloped, or, finally, where (as in totemism) there are no clear ideas of gods as part of the social

¹ Cf. Marett, *Anthropology*, p. 169 ff.

² See, e.g., W. H. R. Rivers, in *Science and the Nation*, ed. A. C. Seward, Cambridge, 1917, p. 310 ff.

³ As these processes are of fundamental importance, it may be observed, at this point, that it does not follow that, historically, society goes back to an absolutely undifferentiated state, or that its earliest phase was wholly or essentially religious. What undergoes development can be regarded as an individual datum or detail which is a part or aspect of something, and what can be regarded as a system will be preceded by another system. Thus, e.g., a distinction must be observed between some particular logical prerequisite (e.g., an alphabet) and the actual earliest historical stage (e.g., of intercommunication).

⁴ See W. R. Smith, *Religion of the Semites*, London, 1894, p. 17 ff.; A. Lang, art. 'Mythology,' in *EB* 11, xix, 128, M. J. Lagrange, *Études sur les religions sémitiques*, Paris, 1905, pp. 23-40. For an intermediate position see D. G. Brinton, *Religions of Primitive Peoples*, New York, 1897, chs. iii, v.

¹ See *Rel. Sem.* 2, pp. 11, 20 ff., 23 ff., 51, 58, 74, 255, 263 ff. Note also p. 32: 'The principle that the fundamental conception of ancient religion [and of all religion at a certain stage (cf. p. 31)] is the solidarity of the gods and their worshippers as part of one organic society [with common interests and common aims (p. 31)], carries with it important consequences.' This may be supplemented by Durkheim's purely sociological investigation (esp. bk. ii. ch. iii.), and by his argument that the ideas of the social group, the sacred beings, and the outside world are interrelated in one solid system all parts of which are closely united. In the present article, also, the attempt is made to develop Robertson Smith's remarkably suggestive statements.

system. In a word, the conception of a system of belief and practice where gods and worshippers are very closely related and belong to the same system of ideas serves as a standard or type. All views of divine immanence and transcendence, of the nearness or remoteness of a Supreme Power, of the permanent or negligible part that this Power takes in mundane affairs, and therefore all views, both of the necessity of a *distinctive* concept 'God' and of its meaning, depend essentially upon the coherence or systematization of the leading relevant conceptions of life, and upon the interrelation between the differentiated aspects of life and thought.

8. **Totemism and exogamy.**—(1) Some extremely interesting questions are raised by totemism and exogamy. Totemism (*g.v.*) is especially remarkable for its striking contrast to all anthropomorphism or anthropopathism, where the spirits or gods who are venerated, respected, or feared are thought of or described as partly or wholly human and with human traits. In totemism the social group, and particularly an exogamous one (see § 9), stands to a species of animal or plant (generally edible), or to an object or class of objects, in an intimate relation of friendliness or close kinship; and the totem is treated, not precisely as a deity, but as a cognate and one to be respected (*e.g.*, not to be eaten or used, or at least only under certain restrictions).¹ Totemism is essentially a social cult (with some remarkable forms in Central Australia); but 'individual' totems are also found (notably the 'spirit-guardians' of N. America). There are many variations, and it is disputed (*a*) which particular variety is to be treated as typical, and (*b*) whether totemism is a primary and invariable stage in all human evolution.² Animal features (theriomorphism) frequently recur on higher levels; of this there are noteworthy examples in Egypt of the Hellenistic age. But here we have not so much pure totemism as totemistic tendencies and modes of belief and practice analogous to those which among really rudimentary peoples characterize totemism as a social or individual system. As for anthropomorphism, it is certainly not absolutely primitive; it represents a stage typically later than theriomorphism; and, when the latter appears on the higher levels, it is not the thoroughgoing system of the lower levels. While typical totemism has not reached the level of typical anthropomorphism, the latter can become indefinite, inadequate, and crude. The late Egyptian theriomorphism is best regarded, not as a mere survival, but as a popular and unsystematized tendency at a period when the national religion was decadent and unsatisfying. What is really most characteristic of all totemism is its non-anthropomorphism (below, § 17 ff.); but, while the totem is impersonal or 'sub-human' to the outside observer, to the totemist it is as personal as is the doll or toy-animal to the child. Totemism and all theriomorphic features involve problems of symbolism, imagery, and the consciousness of human personality in its relation to animal and other life. A feeling of peculiar affinity with animal or plant life is by no means confined to totem-clans or rudimentary peoples; but the characteristic *systems* distinguish totemism from all those cases where the theriomorphic details might seem, in the absence of evidence to the

contrary, to point to totemism or its survival. In any case, the alleged survival or re-appearance of totemism on a generally higher level of society will indicate typical modes of feeling and expression which help to explain the undeniable totemism of the lower levels. Here are data of the greatest significance for the development of the consciousness of human personality.³

(2) In Babylonia there is a characteristically 'unstable anthropomorphism.' The imagination in its highest exaltation is, on the whole, anthropomorphic, 'but often in the ecstasy of invocation the religious poets felt the human image too narrow and straitened for their struggling sense of the Infinite. Then the expression becomes mystic, and . . . avails itself of theriomorphic imagery.'⁴ Thus, totemism is not merely an extremely curious animal (and plant) cult, but it illustrates systematized and socialized modes of thought which recur 'outside' as well as 'below' the anthropomorphic mode of thought. The anthropomorphic ideas—perfectly familiar and intelligible in the higher religions—are not only not of primary origin, but they do not always do justice to human experience, and that on many different levels. The tendency then is to find an outlet in ideas which are non-anthropomorphic and, for this reason, are often spoken of as 'mystical', but, strictly speaking, it is always a question whether mystical ideas are then really superior or inferior to those that they repudiate.⁵

9. **Exogamy and kinship.**—(1) Although exogamy (marriage outside the group) in contrast to endogamy (marriage within it) concerns the history of kinship and society rather than that of religion, certain points require notice. Especially noteworthy is the classificatory system of kinship, where a man's status and marriage-rights are the criterion, and the social practices and the terms of relationship refer to a group or class as a whole, and not to individuals (see art. KIN, KINSHIP). The point of view is collective: the group thinks of itself as a single unit, and the feeling of solidarity readily tends to be absolute. Hence it can happen that the fact that a child is a member of a group is more important than the identity of the father, or even of the mother. Now, while exogamy proper avoids the close and incestuous marriages which occur in an endogamous society, exogamous *tendencies* sometimes appear, and even to the extent of forbidding marriage between persons of the same district or name. Moreover, endogamous *tendencies* appear, and are sometimes influenced by the desire to preserve unity, to keep together property, or to prevent a clan from dying out. Hence the tendencies which re-appear in different forms are not to be confused with the special cases of exogamy and endogamy proper. On the other hand, definite ideas are implied throughout: endogamy made for solidarity, unity, and oneness, whereas exogamy avoided the physical and psychical effects of any close unity and made for the movement and exchange of ideas.⁶ In any case, the physical or material aspects, however conspicuous, are not so fundamental as the feelings and convictions which now allow what a later generation will reject, and now enforce, on occasion, a chastity and restraint for no obvious 'rational' reason. In other words, the practical working group is not necessarily united by ties of blood-kinship as we reckon it.⁷ Any group of individuals united by profound ideas may look upon themselves as one, and the bond will be closer as regards the particular functions of that group than

¹ See artt. ANTHROPOMORPHISM, PERSONIFICATION, and, for a suggestive treatment, Card, 1. 213 f., 264 ff., 270 ff., 294 ff.

² L. B. Farnell, *Greece and Babylon*, Edinburgh, 1911, p. 55, also p. 13 f., and all ch. iv.

³ On the general relation between totemism and mysticism cf. J. E. Harrison, *Themis*, Cambridge, 1912, *passim*, and *Ancient Art and Ritual*, London, 1913.

⁴ Marriage into another group constantly forces adjustment of beliefs and practices; on the lower levels the wife may be dedicated to the husband's deity (Frazer, *Totemism and Exogamy*, i. 72; cf. iv. 242), or the bridegroom may discard his own totem and paint on his face that of the family of the bride (E. S. Hartland, *Primitive Paternity*, London, 1909–10, ii. 44).

⁵ Note the prevalence of adoption, blood-covenant, artificial kinship, the levirate, etc.

¹ See the definition of W. H. R. Rivers, *The Hist. of Melanesian Society*, Cambridge, 1914, ii. 75. This section confines itself particularly to animal totems; other aspects of totemism are noticed below, § 17 ff.

² See, generally, F. B. Jevons, *An Introd. to the Hist. of Religion*, London, 1896; Frazer, *Totemism and Exogamy*, iv; Durkheim, bk. ii. The methodological question is: What conception of totemism best enables us to handle the relevant facts? (Similarly the methodology of religion has to determine the conception of religion that best answers all the facts of life and thought.)

the bond between the members and actual blood-relations who are not members. The group feeling, it is true, can kindle extreme ideas of communism and oneness; but, although physical and sexual factors are near at hand, and grave excesses can occur, the unit or group idea is not logically or fundamentally physical, and in fact, in social-religious systems, sexual aspects of life are explicitly regulated and subordinated to what may be called the ideal (cf. also below, § 23 [3]).

(2) The distinction between exogamy and endogamy proper, as primitive social systems, and exogamous or endogamous tendencies is analogous to that between totemism and totemistic or thernomorphie tendencies (above, § 8 [1]). The history of society and that of thought do not advance *pari passu*; none the less, the social vicissitudes and the religious ideas constantly interact. The closer the social unity, the more do gods and men form a single whole—the gods are 'our' gods, and not of the royal, priestly, or any other exclusive class of society. Moreover, the conception of a dominant goddess implies ideas of dominant women, and the entire psychology of sex will reflect itself in ideas concerning female saints and deities. Hence also the paradoxical extremes, where goddesses and priestesses are prominent—chastity and gross impurity, tenderness and fierceness. Again, the conception of the Fatherhood of God would be meaningless where paternity was of little account; and the notion of divine sovereignty is hardly intelligible where there is no experience of overrule or lordship. So ideas of social equality and democracy influence the way in which men think of a deity; and, conversely, every adequate conception of deity involves adequate views of the relations between both man and man and man and God. Convictions of a 'chosen' people or of some particularistic and narrowly 'national' God reflect in their turn the interrelation between current sociological, historical, and psychological conditions; and they emphasize the fact that man's religious ideas and conceptions, while genuine, cannot be torn away from his ordinary life and thought, but all form some sort of a system, however imperfect.

10. **Psychology.**—(1) Theories of religious development must be based upon observation of actual historical vicissitudes and the psychological aspects of religion. Complexity of thought, found even in Central Australian totemism and other primitive cults, points to complexity of history; for complex history makes complex thought. Here, principles of historical criticism are indispensable. There is a common tendency to focus upon outstanding persons, events, and periods changes more numerous and greater than those for which they are actually responsible, and to assume periods of almost absolute stagnation (e.g., the 'Dark Ages'). On the other hand, movements of thought are, alternately, relatively slow and fast; sweeping and sudden changes are not permanent in themselves, though they can leave permanent results, and they are the outcome of slow preliminary steps which may not be recognizable. The whole environment invariably moves more slowly than the reformers or the reforming tendencies, which are usually local, one-sided, partial, specialistic, or extreme. The actual facts of religious development, and the relationship between different stages of the process, can be directly ascertained by historical study.¹ Against the apparently obvious cases of immediate and deep influence must be placed the cases of drastic adjustment, cataclysm, and relapse and failure.² These prove that beliefs and customs are not mechanically accepted or assimilated, and that the ethnological and historical factors have their psychological side (cf. § 4 [2]). From a psychological point of view, questions of external influence are not necessarily so important as the mental factors and processes which are involved—e.g., the ability of the individual to accept, retain, and utilize certain ideas, the preliminary mental development necessary, his psychical, moral, or spiritual needs and aspirations. The psychological method is concerned with men, their mental states,

¹ Note, e.g., the history of religion in W. Asia and India (cf. esp. Alfred C. Lyall, *Asiatic Studies: Religious and Social*, London, 1907), the influence of invading Romans and Normans upon England, the effect upon Japan of the thought of China and W. Europe.

² See, for a notable example, the monotheistic reform of Amenhotep IV. (art. PHILOSOPHY [Egyptian], vol. ix. p. 858).

their interests and values, and the relation between the religious and other aspects of their life and thought. It considers the *subjective* value of the beliefs and practices of the individual. Many relatively simple inquiries must be made before complete synthetic statements can be ventured, and consequently no 'superhuman' or 'supernatural' factors, causes, or elements can be presupposed. That men have experiences which compel them to distinguish what they call the 'divine' from the 'human' no one can dispute; but the psychological method can deal only with the human side of the great questions, as apart from the problem of the actual underlying realities.

(2) To the psychological department belong many extremely important inquiries: (a) the growth of the mind (the mind of children and of savages), the relation between human and animal psychology; (b) the dawn of religion in the young, and notably the data of 'conversion,' as regards both the psychical states of the individual and the effect of the 'regeneration' upon his ideas, attitudes, and conduct; (c) 'the varieties of religious experience' (the title of a striking work by William James [London, 1902]), together with the facts of religious revivals, mysticism, spiritism, occultism, ecstasy, and propheticism; (d) the 'subconscious,' a field with many pitfalls, although the elementary facts show that that of which the individual is conscious at any time is part of a larger whole, that he can attend only to partial aspects, and that *theoretically* there must always be a less imperfect synthesis than that which he gains by his fragmentary glimpses, and, therefore, that there must be the possibility of a less imperfect, less undeveloped Self than the present one; (e) noteworthy also are the elementary facts of the effect of mind upon body (faith-cure, Christian Science, New Thought [q.v.], etc.), and *vice versa*, all of which are significant for the ultimate relationship between what we distinguish as the physical and the psychical. Further, (f) though abnormal and pathological phenomena a clearer idea is obtained of the sound and healthy mind-body, and the evidence is instructive for all conceptions of personality (normal or 'disassociated'), for alienation of personality and double consciousness, the danger of weak control, of absence of homogeneity and of continuity of interests, of extreme and morbid egotism, and of persistent obsession. Finally, (g) the interconnection of the physical and the psychical sides of the individual (illustrated especially at adolescence, in the sexual life, and in ideas associated with birth, marriage, and death) involves facts of which account must be taken by any science of religion. No doubt the enormous stock of data from which to reach a just conception of religion includes much that belongs to the extreme, the irrational, and the abnormal. There is much that is without the elements of practicability, permanence, and progressiveness, and that forces a contrast with those conditions where these elements recur, and there is a certain equilibrium of religious and social life and thought. All inquiry which is scientific, and not purely antiquarian, has the future in view, and a just conception of religion must treat religion as a persisting phenomenon; hence it must determine the elements in question, and distinguish them from the features which, however frequently they recur, do not make for endurance or advance. Proceeding in this way, we have to consider man as the outcome of a lengthy evolution, a progressive, thinking animal, able to speak, to form concepts, to preserve his experiences in oral tradition and in writing, to reflect upon the past, and, by so doing, able in greater measure to shape the future. Man is thus part of other organic life which has made its appearance in the course of the history of the universe; and as a result of development he is able to differentiate the human and the non-human, the psychical and the physical, the religious and the non-religious. From these biological, anthropological, and evolutionary points of view, the development of man is that of increasing knowledge, function, and ability, though what is most significant is the individual's increasing consciousness of the past, of the self, and of the universe; for this development in consciousness is one of quite another type.

11. **The psychological method.**—Characteristic of the psychological treatment of religion are (1) the insistence upon the human aspects, and (2) the association of data, however unusual, with familiar beliefs and practices. The general aim is to fasten upon the features which unite the religious and non-religious sides of our common human nature. Thus, the deification of kings, saints, and heroes in the past finds analogies in ordinary modern hero-worship; the individuals throughout are personalities *qualitatively* different from others. Again, the psychological efficacy of the fetish and that of the modern mascot are akin. Moreover, all initiation ceremonies involve similar typical ideas, which recur wherever it is a question of entrance into privileged groups or private societies jealous of their rights and of their solidarity; even

'hazing' is in some respects reminiscent of the torments and tortures inflicted elsewhere upon the novice. Also, it is *à propos* to note the 'best clothes' feeling, the impressiveness of uniform and ceremonial, and the attitude of the average individual to his treasured souvenirs and all other centres of deep feeling. Instructive, too, is the spontaneous, unreflective, and unsystematized behaviour of him who kicks the table 'which has hurt him' (not 'against which he has hurt himself') and the attitude of children to inanimate dolls and toys. The strange effectiveness of tabu and magic can be psychologically associated with everyday facts of conscience and with ordinary features of suggestion, telepathy, and hypnotism. Especially interesting from a psychological point of view are such topics as sin, confession, forgiveness, sacrifice, communion, prayer, and ritual. Whatever be the reader's conception of religions or of religion in general, there are everyday facts of human nature of the first importance for the study of the nature of man. All enduring religion has specific psychological aspects, material for the science of human nature; and, conversely, the psychological study of man is of the first importance for a better knowledge of his religious and other 'deeper' sides. In general, the psychological method emphasizes (a) the essential and fundamental resemblances throughout mankind, underlying the many different beliefs and practices, (b) the undoubted *subjective* value to the individual of his religious and other convictions, as apart from their value for his or another environment, and (c) the tendency of religion, when it is genuine or effective, to be inextricably bound up with what is not specifically religious.¹

12. The theory of interpretation.—(1) Important methodological problems at once arise. It has been urged that savage or rudimentary men are psychologically so different from the civilized individual that the latter's interpretations of them are inapplicable. But the savage is, by definition, a human being; some intercommunication is possible between him and the civilized. Besides, all men share certain instincts, and on ordinary biological and other grounds some essential resemblances must recur among all men. The problem is obviously the extent of the resemblances. Everywhere there are differences; no two leaves or stones are absolutely identical in all respects. But ordered thought must invariably start with the points of resemblance—otherwise there can be no further progress; and what is necessary is to ensure that these justify the conclusions one draws, and that the latter are not invalidated by the differences. There are undoubted psychological differences, even in the same family, circle, or environment; but these are not so important for preliminary inquiry as the undoubted points of similarity, and no sound reasons can be given for denying a fundamental psychological resemblance between the highest and the lowest individuals.²

(2) In interpreting another mind (savage, child, animal-pet, etc.) it is easy to ascribe to it a consciousness or knowledge which it does not possess, or to discern in its activities a meaning or purpose of which it is ignorant (cf. above, § 6 [2]). Here the data on one level or in one environment are interpreted from the point of view of the observer. This, however, is an everyday normal process, and there is everywhere some risk of more or less serious misinterpretation. But the risk may be lessened by considering the data in their own context, and by determining whether the interpretation demands facts outside the scope of the subject under consideration. The interpretation may lie between two extremes, as when the care of animals for their young is too closely paralleled with that of parents for their children, or, on the other hand, is treated as merely mechanical and devoid of all suggestion of feeling. Every in-

terpretation involves some notions of reality, which of course may be ultimately erroneous. Now, if other levels were psychologically quite distinct from our own, not only would they be entirely unintelligible, but every theory or interpretation, however absurd or incredible, could defend itself by declaring that our conceptions of reality did not apply. But we intuitively demand an intelligible interpretation, and thus implicitly assume a psychological relationship (see above, [1]). If every theory of the beliefs and practices on levels other than our own may legitimately be tested by our logic and by our own conceptions of reality, this psychological and humanistic type of interpretation is sounder than a crude rationalism which betokens a mentality utterly different from that of those whom it condemns or opposes, and would implicitly ascribe to savages and others mental processes and ideas so different from those we can understand that they would really lie outside the scope of criticism. See below, § 15.

(3) Every interpretation represents the observer's conception of the true meaning, and it may have involved some significant psychical development on his part to reach it. Moreover, every sympathetic appreciation tends to discern the features felt to be permanent and worthy, and to pass over those which have lost their value. Thus, the data always become much more significant for the observer and his level than for their own. In fact, what some other level or mind *really* is often eludes us; nor is it always so important for us as what it contributes to us or what it can or did develop into. A perfect interpretation—to see things as another mind sees (or saw) them—is often impossible, unnecessary, or of secondary importance. What is essential is a sympathetic comprehension which can retain its independence, objectivity, and power of criticism. Such a combination would find an illustration in the attitude of parent to child or of teacher to pupil. The mental or psychical situation involves the co-existence of mutual intelligibility and the consciousness of a psychical difference. Now these two represent phases of immanence and transcendence. Consequently, the principles of the relation between mind and mind (and especially when there are significant differences between them) are extremely suggestive for the religious problems of a divine (transcendent) mind in immediate (immanent) relationship with man. All ideas of the unknown, including those of the relation between God and man, are influenced by the known (by conditions, data, etc., which are felt to be suggestive and analogical); hence, not only are the principles of the interpretation of minds, and of the relationship between minds, of very great importance for the theoretical study of religions—and also for the practical and political problem of the attitude to minds which are felt to be inferior—but the very tangible problems which they bring have a real bearing upon the more ultimate religious problem of the interrelation between personality human and divine.¹

13. The individual and the group.—(1) It has also been objected that there is an essential difference between the psychology of the individual and that of the group. Certainly, the spontaneous contrast of society and the individual is the recognition that society is more than a mere aggregate or sum of separate individuals. But, while society is a working system or unit, every man of individuality is measured by his value to society, and a man with no social instincts whatever would scarcely be a human being. Society moves only through the constituent individuals who differ and who initiate movement; men of some individuality are found on low levels, and it is obvious that the first pre-historic social group was sooner or later disturbed by men whose beliefs and practices differed from those of the rest.² Hence, from the very first, human progress has depended upon individuals who differed in some particular respect from their fellows. Now, the psychology of a group is that of individuals *qua* social beings. Whether in the madness of the 'Terror,' in joint religious service, or in quiet normal intercourse, there are seen merely different states in the life-history of individuals. When all has been said of 'the psychology of the mob,' and of its ultra-emotional and irrational aspects, the fact remains that there can be no absolute gulf between (a) the normal states of an individual, and (b) the unusual or even abnormal states when, as he may afterwards protest, he was 'not himself'—states which may be repudiated, or which, again, may manifest some rare, profound, and unsuspected depths. Thus, man's modes of thought and action are variously individual or collective, normal or intense (abnormal, etc.); and he who is now entirely one with the mob, the team, or the social group, and now markedly egoistic or individualistic, is one and the same individual at different points of one and the same life-history.

¹ The most important literature on religious psychology is French and American. Among recent works may be mentioned: I. King, *The Development of Religion: a Study in Anthropology and Social Psychology*, New York, 1910; E. S. Ames, *The Psychology of Religious Experience*, do. 1910; J. H. Leuba, *A Psychological Study of Religion: Its Origin, Function, and Future*, do. 1912; G. A. Coe, *The Psychology of Religion*, Chicago, 1910. It should be observed that a psychological study of religion can treat religion as a human phenomenon, and in its functional, individual, sociological, and other aspects, but it cannot nullify the subjective distinctiveness of religion, nor can its theories of the objective source or foundation of religion (e.g., in humanity) be more than merely theories.

² See G. S. Patton, *The Philosophical Review*, xxi. [1912] 456-462; J. M. Baldwin, *Thought and Things: or Genetic Logic*, London and New York, 1906-11, vol. iii. p. xff.; W. H. R. Rivers, *HJ* x. [1911-12] 393 ff.; Webb, ch. vi.

¹ It is to be observed at this point that the resemblances which the comparative and psychological methods emphasize are not to be allowed to obscure the differences. Where comparisons are made (between religions, minds, etc.), there is, logically, something which appears in varying forms, which might re-appear in some new and as yet unknown form, or which might be supposed to exist in some ideally perfect form. Logically, therefore, religious data could conceivably take new forms without the limitations found or alleged in those that are current, old interpretations of data could be replaced by new ones, and the existence of minds varying in powers of comprehension and sympathy will suggest the possibility of a mind infinitely wiser than that of man. Further applications of this principle (on which cf. § 4 [2]) will be found below.

² Men of distinct individuality may be found low down in the ethnological scale, see Spencer-Gillens, pp. 12, 14 ff.; Frazer, *Totemism and Exogamy*, i. 364.

(2) Although nothing seems more real than the individual with all his self-consciousness, there must be some more ultimate reality of which he is but a part. A group or organization may appear more real than the individuals upon whom it depends, and who in turn operate through it. But it is not a complete or ultimate reality, because it is only part of an environment which is indispensable to it, and there are other individuals outside it. Moreover, the human group came into existence at a relatively late stage in the evolution of the universe, and such is the relationship between human and other life, and between the organic and the inorganic, that ultimate reality must be sought, not in society, the state, or any other organization, nor even in mankind (as in some modern types of ethical religion), but in something of which all that which is shown to be ultimately interconnected forms a part (cf. § 20 [2], end). Here, however, we have all kinds of convictions, theories, and so forth, so that while, on the one side, the self-conscious individual has no doubt of his own real existence, it cannot be doubtful, on the other side, that there are ultimate realities concerning which opinions differ. Hence we may say that (a) between the real self-conscious individual and the ultimate realities there come all the sociological, naturalistic, religious, and other conceptions of the place of the individual in the universe, and of the nature of the realities; and further, (b) that these supply material for perfectly objective investigation.

(3) Sociological inquiry has already emphasized the indebtedness of the individual to his social environment. He is born into and grows up in the current thought of his age, and he both selects from it and contributes to it as his own body of thought develops. But he does not 'become' a member of society; rather, as an integral part of some larger whole, and starting from an incoercibly rudimentary individuality, he gradually manifests an ever more distinctive and complex self, the real value of which depends upon his relation to his fellows. The more conscious and purposeful selection and choice of his later years are preceded by a less conscious procedure, which, however, is generally effective and beneficial, and the conscious efforts to co-ordinate mental and physical activities and to prepare for the future follow upon stages where co-ordination and preparation have already been at work. The growth is one of awareness and consciousness, and of deeper and wider realization of existing facts and possibilities. It brings the possibility of greater effectiveness, and not only can the individual take an objective attitude towards many of his own beliefs and practices, but he can even realize the painful difference between an ideal self and that congeries of dispositions, convictions, practices, and so forth, wherein he manifests himself and which he may desire to remedy, improve, or even escape. Consequently, one can view the life-history of the individual as a great complex series of vicissitudes, differing in their significance for his development—like the events in the history of a country; beneath its manifestations lies the self that undergoes development, and the individual will recognize realities profounder than the most real events of ordinary experience. Thus, not only must the individual be regarded as a part of some larger whole, but the nature of his development points to an 'ultimate' self underlying all its manifestations, to a reality transcending ordinary knowledge, and to an increasing consciousness of that which is felt to be most essential for the further progress of the self. The psychology of the individual and that of the social group are not opposed, although the man as a distinct individual or as a fraction of society manifests himself differently. What is of supreme importance throughout is the individual, for he contributes to society, he is for or against his environment, he accepts or opposes current ideas, and he is a living personality; on the other hand, the society, group, or state depends for all effective purposes upon a body of principles, ideas, practices, and institutions, and these again and again prove to stand in need of reconsideration and correction by the constituent individuals.

14. Psychological truth. —(1) Among the individual's states of consciousness are those which differ so profoundly from the rest that they compel some distinctive description. Through them the individual comes to have convictions of 'another' world, as distinct from the world of ordinary experience of time and space—the empirical world of which, however, his knowledge is based only upon partial aspects. While all 'religious' and related experiences are felt to be entirely different from those of 'ordinary' life and thought, they occur interspersed amid the latter, and are interpreted and described through them. All the intenser experiences are typically of the profoundest personal significance and of abiding value; they are visions to be realized, starting-points for further reflexion and explanation, and intuitions authoritative for subsequent conceptions of the universe. But the experiences, viewed broadly, are not all necessarily religious, or even beneficial in their results, and one may distinguish between similar types of psychical state and the content—whether it belongs to this or the other religion, or has no religious

characteristics, or is without permanent ethical value. Throughout, prior experience and knowledge condition both the content of the new experience and the subsequent reflexion which elaborates it. A criticism of the form, expression, or content does not necessarily affect the fundamental psychical facts, and between the most intense and abnormal states and the normal and healthy examples there are many stages, but no impassable gulf. Religious literature abounds in evidence which is of the greatest importance for the psychical nature of man; and it emphasizes the fact that all the religious states, whatever their content, are natural, integral, and inseparable parts of existence and experience. Consequently, the psychological investigation of religious and related (aesthetic, etc.) experience does not find that the relationship with the divine, the knowledge of higher truths, or the consciousness of a transcending happiness or grandeur is only for the chosen few: what is psychologically applicable to the normal individual has a virtually universal application—for all individuals. Indeed, this relationship, especially among rudimentary and naive religions, is almost mechanical (below, § 18 [3]). Nor is this altogether unexpected (cf. Mt 7¹¹). But this experience of a relationship, as also the familiar ideas of God's need of and love for man, must be balanced by the recognition that not every religious expression or practice is *effectively* religious (cf. v. 21¹⁸). Religion characteristically tends to set an exceedingly high standard of motive, thought, and conduct; it demands an absolutely sincere manifestation of the inmost self, and an absence of selfishness and guile (cf. 1 Co 13). Hence religion must be regarded as involving all that which is profounder, more constructive, and more permanent than all the ephemeral, casual, and superficial things of life; it is bound up with a development of personality which is to be in all respects 'whole' and 'healthy.' Consequently, to determine the essential nature of religion, it is necessary to look beneath the surface of men's beliefs and practices and determine what is dynamic. The problems of ultimate truth and reality, whether among rudimentary or among advanced peoples, are bound up with our knowledge of the depths of human personality; and the familiar religious conviction, that a Supreme Power to whom all 'reality' is known can see into the hearts of men and distinguish 'true' religion, really implies that ideas of a Supreme Power, of Ultimate Reality, and of the underlying self must be essentially interconnected. The goal of the science of religion is to see religion as God would see it!

(2) The religion that is most effective involves the very depths of man's personality, and inevitably concerns the greatest realities which he can conceive. But, although the religion of every sincere individual may be subjectively conclusive, its objective value will unhesitatingly be tested by the men and knowledge of his or of a later day. The truth of an individual's religion cannot therefore be necessarily regarded as ultimate, complete, objective truth. Even the savage can find peace and strength in his religion, and fetishes and mascots can be psychologically efficacious. But the progress of knowledge and all thought cannot be set aside with impunity. No religion has ever been able to remain aloof from the trend of thought without suffering the penalty; and, although again and again the religion and thought of some environment may be in conflict, the recurring periods of harmony have been more significant for progress. It is necessary to recognize the persistent efficacy and persuasiveness of religious and other (e.g., superstitious) beliefs and practices, even where they represent a knowledge or a mode of thought very different from one's own. Hence, a distinction must be maintained between the fundamental psychical tendencies, underlying convictions, and the like—which are proved by the comparative method to recur in manifold different forms (cf. § 4 [2])—and the particular forms, arguments, etc., which may no longer retain their old validity (cf. p. 669, n. 1). This is to distinguish between some expression and what it is intended to express, and between a conviction and the various ways in which it is substantiated (e.g., beliefs in a soul, or in a superhuman guardian, or in an approaching 'new age,' etc.).

Here another important distinction is to be drawn, viz. between that which has a psychological basis in immediate experience and the further secondary more or less logical elaboration of it. Thus a genuine belief in the kinship of a deity can rest primarily only upon certain experiences which seemed to find a natural expression in terms of relationship (cf., e.g., the 'Fatherhood of God'). But they are symbolical or analogical, and errors multiply whenever the origin of such terms is forgotten, and the words, taken in a literalistic manner, form the basis of argument unchecked by resort to the original data of experience. Similarly, the idea of a 'Kingdom of Heaven' will primarily be justified by psychical facts (aspirations, longings, etc.), although it is at once capable of development suggested by the experience of earthly kingdoms. The words, 'the kingdom of God is within you' (Lk 17²¹), represent a profound transition from concrete imagery, which was open to misunderstanding, to a more psychological statement, and this in turn is capable of a certain psychological development which, however, can go astray.

15. The theory of reality.—(1) On sociological, biological, and even chemical grounds, the individual is in various respects a 'part' of that which is greater and more permanent than his growing and dying body. Not only do his intuitions and convictions testify to some greater and more permanent reality, but these are the mainspring of his life and they take into their service all that we call material and physical, and that belongs to space and time. The various polytheistic and monotheistic convictions of men, like the conflicting religious, philosophical, and other conceptions of the universe, indicate either that there are no stable or dependable realities or that it is men's convictions and conceptions of the realities that vary and develop. The latter is the only rational view if there is to be any effort to think coherently about the world; and a distinction must be drawn between the ultimate realities and the conceptions, formulas, etc., which may be felt to be the realities themselves. Thus, the mystical experience, e.g., is felt to be reality itself, although the striking and conflicting varieties of experience indicate that it must be of subjective and not objective validity. That variation and development are to be expected is shown also by the vicissitudes of religion, due to individuals who are unable to accept what to others has absolute validity, and who have convictions which are felt to be more real than those already current. Human personality is profounder than any given system of life or thought, and consequently the soundest theory of reality must be based upon the existence of (subjective) convictions of reality which obtain among men. These and their vicissitudes provide the material for the most logical theory of reality.

(2) Explanations, interpretations, theories, and the like all imply some notions of ultimate reality. Thus, e.g., the popular theories of primitive or universal serpent, stone, phallic, or astral cults, if taken seriously and rigorously pursued in their implications, would have the greatest significance for all conceptions of God, man, and the universe. As a general rule, even sweeping theories may seem immediately plausible or absurd, as the case may be, but the logical aspects are invariably complicated, and the theory will be favoured, because it explains a certain number of facts, or condemned, because of the facts which are ignored or interpreted in some forced manner. Indeed, the most absurd theory covers some unimpeachable facts; but, when it has once been obtained, evidence is forthwith more or less ingeniously twisted to fit and it becomes Procrustean. Concepts, theories, systems, methods, attitudes, and positions have this twofold aspect—their *origin* in the presence of data which have been experienced and must be interpreted and organized, and their subsequent *application and employment* when the data, instead of being used to test or control them, are tested by them and viewed or interpreted in their light. This holds good of (a) modern theories, beliefs, convictions, concepts, etc., which flourish because of the sound elements they contain, and are injurious when their origin is forgotten and they become Procrustean; and (b) those of old, which in like manner must have flourished only because of their effective elements.

(3) Of the first importance for the theory of reality is the problem of religion and magic. It is obvious that any persistence of both must be due psychologically to certain effective elements (e.g., subjective satisfaction). But, since magic is admittedly impermanent and unprogressive, and religion admittedly has had its periods of decay

and revival, both contain certain ineffective elements which, in the case of religion, were not irremediable. Both include elements which are often styled irrational; and both involve convictions of man's relationship with the powers and processes of the universe and of the possibility of utilizing or of co-operating with them. But magic typically involves attitudes of compulsion and coercion; there are processes in the universe which are *not* beyond man's control; whereas dependence and humility are characteristic of religion. Yet the latter are not the only notes in religion (cf. § 18 [3]), and there is frequently a behaviour and attitude which can be styled magico-religious, being magical in its 'irrational' and external aspects and religious in its temper and spirit. Thus, we find convictions of a really profound relationship between man and the universe which are not confined to crass magic, but there are two fundamentally different attitudes (direct coercion or command, or indirect appeal or prayer), and, where the contemporary religion and magic are in conflict, the latter is typically anti-social and individualistic (cf. art. MAGIC [Introductory]). Here, magic is felt to be not so much untrue as a wrong handling of the truth; and it is regarded as irreligious and blasphemous, and is feared and dreaded. Consequently the problem of magic and religion involves (a) our own views, both of religion and of what is antithetical to it and to the progress of society, and (b) our own views of causation and reality; for we rely upon our own ideas of the relations between ourselves and the universe, and we must assume that the ultimate realities are the same everywhere. It follows, therefore, that the concept 'God' is fundamental: (1) because, from a theistic point of view, God is the ultimate judge between religion and magic, and (2) because, unless we have definite ideas of the ultimate realities and of God's place in the processes of the universe, the crassest magic cannot be finally estimated—for to hurt a rival by sticking pins into an image, and to expect rain by sympathetic magic or by prayer to a rain-god or a Supreme Deity, is to imply a theory of some ultimate interconnexion and causation, and upon this we have to make up our minds.

16. The concept 'God'.—(1) The value of all convictions and theories of God, man, and the universe must be at the mercy of the ultimate realities themselves, whatever these may prove to be; and this fact obviously conditions all critical inquiry. The concept 'God,' however it originated, both influences and is influenced by conceptions of reality and truth, and the fundamental problem concerns the necessity of the concept and its content. The theist will naturally accept the concept which, however, will tend to control his argument and as a rule will be only imperfectly analyzed. On the other hand, a procedure which seeks to be purely inductive and to construct a systematic view of the universe will, if it admits the concept, tend to use it illogically and without the wealth of significance which characterizes it for the theist. All the theories of the origin of religion are, therefore, extremely instructive for what they both spontaneously concede and imply. They are usually obliged to assume some most essential features (e.g., awe, reverence, sacredness); or they confuse what *evokes* a religious feeling with the *origin* of it. It is meaningless to suggest to the true theist that his belief in a living God originated in the ancestor-worship, animism, or animatism of the past; such a notion is part of the fallacious theory of survivals (§ 4). However persuasive be the parallels, however striking the links between theistic and other beliefs, the external observer can easily overlook

the qualitative differences and the different 'systems' involved in each. The most rudimentary form of a feature is not thereby the origin of what appears in more advanced forms, and the data of totemism suffice to prove that the origin of a religion is not so practicable a problem as the interpretation of the rudest type of it.¹

(2) The qualitative differences between the child's care for the doll and that of the mother for the babe, or between mere affection and genuine love, override any attempt to trace an actual linear or serial development from lower to higher, or the like. No intense or new experience (evoked by love, religion, crisis, war, etc.) can be successfully imagined, grasped, or calculated before its arrival; love is not a magnified affection, and religious experience is *svi generis*—save to the outsider. All intenser experiences are typically private, ineffable, and incommunicable; and ordinary language is admittedly a description in lower terms. So, in religion the 'Fatherhood of God' is—from a theistic point of view—an analogical expression of an experience, and, if it is developed in a purely literalistic manner, it loses its distinctiveness and is without the elements of development and progress. From another standpoint, the term might seem to be a construction, a figment, a theory, suggested primarily by mundane experience. But this will not explain the qualitative difference for the theist and the typical system of thought in which it appears.² In other words, the concept 'God' is inexplicable save as the result of a growth of consciousness, a realization, an awareness of that of which man can find only an imperfect and inadequate description. It is only in the secondary stages of each moment in the process that the term is treated as itself an object of knowledge; primarily the concept can be justified only as representing a reality of which man has come to have some conscious experience, and which he has been able to express only in a partial and limited way.

It is self-evident that, if we assume the existence of the reality whom man conceives of as God, this Supreme Power does not depend upon man's recognition. Wherever the conception makes its appearance, it must owe its authority and validity only to the consciousness of something distinctive and unique, something not covered by other terms; at the same time, it will be intelligible only because the new experience is blended with what is known and familiar. These are among the elements which go towards forming man's idea of God's transcendence and immanence (see § 31). The blend of old and new is significant, for, if man is ever to become aware of the (objectively) ultimate realities, his new conceptions cannot, for psychological reasons, be absolutely disconnected from those which he previously possessed; the realities to be intelligible cannot be absolutely unrelated to the prior experience. Finally, the fact that conceptions of God or of the ultimate realities have undergone development does not justify the supposition that either or both conceptions develop. The objective existence and nature of God do not depend upon this or the other theory or thinker; on the other hand, the great variety of religious beliefs and convictions would justify the theistic view that any 'divine revelation' must take up the individual as it finds him; it must come 'through the medium of our own

mental and moral experience and equipment,' and 'this medium fashions its form.' Consequently, from a purely critical point of view, the remarkable variation in men's beliefs and practices, and the impossibility of reconciling many of the theistic and non-theistic convictions, make it necessary to approach even the profoundest and most sacred questions from the human side.

(3) Without a preliminary survey of some introductory questions it would not be possible to thread a way through the mass of data. The ultimate realities touching man, God, and the universe must be such that the different conceptions of them and their development can be in some measure explained; otherwise we imply innumerable realities and ignore both the results of careful comparison and the psychological relationship among all men. The data of religion can be handled methodically only on the assumption that there are certain profound truths, principles, and realities which are apprehended (a) in ways that can be shown to be related to one another, and (b) among men who are psychologically more alike than unlike: either experience and existence must be entirely irrational or some way of organizing and co-ordinating the diverse data can be found. The method is both deductive and inductive. The simplest classifications, even the meiest beginnings, involve postulates and assumptions; all organization of data is due partly to prior selection—not to chance—and to some view which will be replaced later by other and more developed views. There is continuous alternation between the 'structure' or 'content' of a standpoint or of an attitude to things or of a 'world-view' and the things themselves, between the concept and its material, between the theory and the facts it embraces, between the method and the evidence it handles, between the vision of the goal and the method of reaching it. Neither member of each pair remains unchanged. Man has a consciousness, an awareness, a mode of experiencing, which is capable of progressive development; and in the history of religion we discern the vicissitudes of men's conceptions of what to them were the supreme ultimate realities. Just as data cannot be handled unless we are given methods of classification, postulates, etc., so we cannot construct or 'invent' conceptions of reality, but must test, verify, and develop those which we find already in our possession, and which, such as they are, are the result of past experience. And, so long as the best description of reality depends upon men, and personal experience and convictions control both men's life and thought and their attitudes to one another, so long must a critical inquiry seek the road to reality in their conceptions of reality and in human personality.

III. THE ELEMENTS OF RELIGION.¹—17. Totem and other names.—(1) For the classification of the 'elements' of religion it is necessary to observe the psychological identity of all religions, including even totemism, and the general similarity of the psychological, the historical, and the other factors in their development. Especially significant is the close connexion between theistic religion and totemism and all other cults or religions which are not theistic. The explicitly theistic convictions, when they enter the history of religion, produce, as in the history of the individual, a genetic development of thought, and not a stage entirely unrelated to its predecessor; and this allows the conclusion that theistic religious experience is not to be entirely separated from other religious experience. The theistic convictions undoubtedly cause a profound development, and there is no doubt a reshaping of the world of beliefs and practices. But there is none the less a genetic relation between earlier and later stages, and, consequently, it does not appear that the ultimate reality which we call 'God' was isolated from the consciousness in which He had not before been explicitly present. That is to say, it is a development in the human consciousness which—however caused—is the fundamental fact, and this conclusion is of vital significance for all interpretation of religion, especially on the 'lower' levels (cf. §§ 16 [2], 24 [1]). Totem-groups naturally owe their unity to the implicit or explicit recognition of principles and ideas which make for unity. The

¹ Cf. p. 680b, n. 1. It should be observed, therefore, that although it may be possible to see a certain continuity or sequence in data, it does not follow that there has been a simple development from any one of them to the next in the series.

² A theistic system is not a belief in God *plus* a system fitted to it, but an organic whole; cf. similarly the problem of the origin of totemism (§ 17), and of all else that can be regarded as a single unit.

¹ Although this division of the subject forms the real inductive starting-point, there must be preliminary ideas of method, classification, and so forth, otherwise (as can be seen from the conflicting results of the application of the 'comparative method') the evidence cannot be critically handled (see § 16 [3]). Here, only the merest outline can be represented, and further reference must be made to the works of Tylor, Frazer, Toy, Durkheim, etc., and, for §§ 17 ff. in particular, to the art.

totem is the emblem, badge, symbol, or link; it is more than the mere animal or plant species, and its value lies in the meaning that it has for the group, in the system of beliefs and practices of which it is the centre. Though it has been denied that totemism is a religion, it is undeniably on the border-line, and there are variations such that, in Samoa, *e.g.*, the totems are almost, if not quite, gods.¹ No single element by itself is a proof of totemism; *e.g.*, animal names alone have no weight. The point lies in the context or system of thought, even as any given name compounded with Baal or Nebo does not necessarily prove the existence of a contemporary belief in those gods.

The suggestion that totemism arose through a literal interpretation of metaphorical, symbolical, or similar names, or that an animal or plant nickname was the origin, does not explain the organic system of cult. This suggestion emphasizes 'the usual savage superstition which places all folk in mystic rapport with the object from which their names are derived.'² But it begs the question; for a name could originate totemism only provided we grant the psychological and other factors which await explanation—*viz.* the meaning of 'superstition,' 'mystic,' and 'rapport.' What is important, however, is the assumption that a system can come into existence at a bound, since the fact of its being a system, and the presence of many gradations of totemism, as also the close parallelism between it and other cults, tell against the view that it can be explained by pointing merely to a particular element (*viz.* the name) and not by regarding the cult as an organic whole.³

(2) In fact the names of totems usually function similarly to those in other types of cults. For (a) not only will a particular stock of names often be reserved for the members of a totem-group, but (b) sometimes the names refer to the totem, as truly as compounds of Jah(weh), Baal, or Nebo indicate some sort of relationship between the god and the people.⁴ Sometimes it is a solemn duty to keep the names in use, for otherwise the totem will feel neglected and be angry. Sometimes a native on lying down or rising up will murmur the name of his totem, which is believed to be helpful only to those who belong to the particular group. Again, the name of a totem must not be spoken heedlessly, or it is referred to indirectly; thus the Warramunga of Australia tell of a huge world-snake which is not called by its proper name, because to mention it too often would cause them to lose control over it, and the reptile would come and eat them up.

(3) Characteristic everywhere are not merely the associations of the name of revered or sacred objects, and what they betoken or presage (*nomen, omen*), but also the claims involved when names are conferred or assumed ('Name spells claim'). The name indicates the known, and there is a common tendency to identify the name with that for which it stands, to connect the name and the nature of a thing. So it is that change of name often suggested or indicated change of nature or personality, or a new stage in the history of an

individual or a place.¹ As indicating a claim, the name is the written symbol or mark representative of the owner. A name will be kept secret lest an enemy by knowing it should have power over the holder of it; and the greater the owner, the more potent the name and the greater the need for care. To name the dead is to bring them vividly before one; hence the names of venerated and sacred beings, as also of harmful and evil ones, may not be used freely. The customs are psychologically quite intelligible. Consequently, the names that have valued or treasured associations, that mean much, are neither to be ignored or forgotten nor used carelessly and heedlessly. Two transitions are possible: the one is to keep the name secret, to avoid it, to replace it by another which will not have the old psychical force; in this way it falls out of use, or it is retained among the few, or it has a magical value—it is self-effective, automatic; the other makes the name too familiar and robs it of its earlier worth. Two stages can therefore be recognized—one where a name is effective on psychological grounds, as being part of a system of interconnected feelings and ideas, and the other where it is becoming or has become isolated and barren, with little or none of the former psychological, social, and intellectual significance. The latter stage is evidently ineffective and impermanent, whereas the former must have recurred from time to time; for, whether the name stands for what is visible (*e.g.*, the totem species) or for the invisible (the distant, the dead, a spiritual deity, etc.), it has an effective value only because of the appropriate feelings or ideas which it evokes. The first stage, then, is essential for all progressive development.

(4) Tabus against looking at or touching things are rarely applicable to totems, because the species is generally common; but they apply to the objects or vessels used in the totem cult. Everywhere there are sacred objects which may not be heedlessly gazed at or handled. Just as a sacred name calls up that to which it refers (*i.e.* typically, the reality itself, as it is apprehended), so objects are sacred and effective because of the associations. Thus, relics, bones of saints, etc., are used for magic; and parts of a man's body, or even his shadow or footprint, are regarded as essentially himself.² If, on the one hand, an object may lose its sanctity (of the vicissitudes of the bull-roarer and of sacred masks), on the other hand, an object that is treated as sacred appears as an organic part of an entire rite, cult, or system.

18. The sacred relationship.—(1) Psychologically, the sacredness of things (names, visible objects, etc.) is akin to the natural delicacy where one's treasured souvenirs and memories are concerned, where one's inmost personality is felt to be at stake, and where there are ideas which are neither to be obliterated or forgotten nor treated with familiarity and tactlessness. The fear of gazing heedlessly upon sacred objects applies also to particular individuals (priests, kings) who must be kept in seclusion because of the tabus.³ The OT, in turn, illustrates the real danger felt in being in the presence of a divine being. The psychological foundation throughout is similar; there are some things which are too closely bound up with ideas of ultimate reality and personality to be lightly handled, or even to be treated objectively—the thought and the reality fuse into one.⁴ That 'the pure in heart shall see God' (*cf.* Lk 5⁸) is

¹ Hence the idea of changing a name in order to change the personality finds a concrete parallel in the custom of changing clothes in times of crises (*see* W. E. Halliday, *BZA* xvi. [1909-10] 212 ff.). The tendency noted above finds its parallel in the higher (conceptual) development of thought when thought or description is confused with actual existence or reality.

² *Cf.* the evidence collected by Frazer, *GB*, pt. i., *The Magic Art*, i. 174 ff.; pt. ii., *Taboo and the Primals of the Soul*, London, 1911, pp. 77 ff., 258 ff.

³ *Cf.* *GB*, pt. ii., *Taboo*, chs. i., iv. § 1.
⁴ *Cf.* Emerson, in his essay on Intellect: 'I would put myself in the attitude to look in the eye an abstract truth, and I cannot. I blench and withdraw on this side and on that. I seem to know what he meant who said, No man can see God face to face and live.'

¹ This is only to be expected, for, where we find the earliest stage of what we agree to call 'religion' (or 'ethics,' § 28 [1]), the distinctive features will appear in an environment which admitted of the development, and, as is the case wherever the necessity for a new concept appears, there must be a combination of the old and the distinctively new.

² Andrew Lang, in *EB* xlvii. 86, *Secret of the Totem*, London, 1906, pp. 121, 125.

³ This reliance upon single elements and not upon their context or their system is a common cause of fallacious argument, when the comparative method is uncritically employed. *Cf.* also the erroneous view that theism originates in the super-addition of the belief in a God (above, p. 672ⁿ, n. 2). For the 'birth' of systems *cf.* the sudden rise of eikon cults (*e.g.*, A. J. B. Wace, *Annals of Archaeology and Anthropology*, Liverpool, 1910, iii. 22 ff.), of new religious cults in British New Guinea (E. W. P. Chinnery and A. O. Haddon, *HJ* xv. [1917] 448 ff.), of new castes in India (with an entire caste system), of cults of deified men in India and elsewhere, and the strange cult around the ideas of Fatherland, Liberty, and Reason at the French Revolution (Durkheim, p. 214).

⁴ For (a) and (b) respectively see Frazer, *Totemism and Exogamy*, ii. 343, 473, iii. 13, 329, 360, and i. 53 f., ii. 478 f., iii. 34 f., 77, 101 f., 272.

the complement of the fear of an Isaiah (Is 6⁵), and the convictions herein involved are quite inexplicable unless they were based upon certain intense experiences and endorsed throughout the ages by those who had similar types of experience and could realize their validity. The evidence naturally varies in significance and spirituality. From totemism and upwards purificatory ceremonies on all solemn occasions abound. Among rudimentary and simple people the practices are extraordinarily concrete: fire, water, abrasion, scarification, change of clothing, etc., prepare the individual for the sacred ceremony. So, too, guilt is treated as something physical or material, to be washed away, removed by an emetic, or dispatched upon a scapegoat. The data represent a pre-ethical rather than an ethical stage. What we call 'ethical' was not born in a day (cf. p. 673ⁿ, n. 1); and practices which were purely external could have no psychical or subjective efficacy. Ritual can be accompanied by its appropriate psychical, moral, or spiritual accompaniment, and can readily lose it; and the difference is between an apparently magical (or rather magico-religious) rite and a purely magical one (§ 15 [3]). Of the two, the former and not the latter can permit progressive development.¹ The apparent edification, the psychical transitions from feelings of fear, grief, or unworthiness to those of relief, forgiveness, and the like, and the persistence of the rites in practical social groups are incomprehensible unless the data are treated as entirely *bona fide* and rational within their limits. It is to be noticed that the purificatory and similar ceremonies are for practical purposes, when great values are at stake, and the welfare of the people is concerned. They have the effect of producing or strengthening a certain psychical state, a desired relationship; and, in point of fact, genuine feelings of confidence and security recur even among rudimentary religions in the midst of strange and apparently quite irrational tabus.

(2) Even the totem is supposed to help and succour the clansmen who respect it, and the individual totems or spirit-guardians are ready to strengthen those who own them. The help may be of a very general character, or the beliefs may be shaped by the attributes of the object: thus the eagle gives keen sight, and the bear gives strength—but the bear is slow and clumsy, and hence the protégé may suffer! The central object of the religious feelings and beliefs will thus stimulate thought; hence it is possible to consider separately (a) its objective nature, character, reputation (whether totem, deified ancestor, etc.), and (b) the feelings, needs, and psychical nature of the worshipper (see § 31 [4]). Throughout there is a reliance upon some explicit source or centre of definite or indefinite efficacy; and it is not unrelated to the perfectly vague and implicit reliance upon 'something' in the universe which will respond to the flung-out curse, the earnest adjuration, and the resort to lot or divination (cf. § 29 [1]). Whether the individual has explicit convictions or no, and however they may be shaped, the underlying ideas are essentially similar in spite of their profoundly different shapes and their effects upon his intellectual development.

(3) Especially noteworthy is the intuitive idea of reciprocal relationship; the evidence is strong enough to suggest the *do ut des* formula of sacrifice (*q.v.*). Yet the idea of a mutual undertaking which may seem a veritable bargaining (cf. in the *Rigveda*; also Jacob's vow [Gn 28²⁰⁻²²]) is not necessarily so crude and unethical as it may appear (cf. the ideas in the Deuteronomic threats and rewards—e.g., Dt 28 f.). But the conception of a god as unswerving and unalterable is the parting of the ways for religion and for magic. There are convictions of a certain uniformity, and a free response (cf. Mt 7¹⁸), which make the promises of religion a free gift to 'everyone that thirsteth' (Is 55¹), and a reward for importunity (Lk 11⁹⁻¹⁰). In striking contrast to the tendencies of the tabu to maintain a gulf between the sacred

and the profane is the respectful friendliness, or the easy, confident, and even naive behaviour, as reflected, e.g., in popular stories in the OT (Abraham [Gn 15²], Moses [Ex 3²], Gideon [Jg 6^{17, 22, 38f, 39}], Hezekiah [2 K 20³]). The child-like attitude in all its phases—good and bad—has parallels in personal religion and mysticism, and stands in the strongest contrast to the attitudes of subservience, humility, resignation, and submissive faith. So, in the OT itself, quite opposed to the spirit of the popular narratives in question is the Deuteronomic teaching which sternly forbids man to 'tempt' the Deity (*i.e.* put Him to the test).¹ The data are exceedingly instructive, especially when viewed in their historical development, because (a) the attitude to all that is delicate, intimate, and sacred readily passes from naive, free innocence to an attitude that is blameworthy—in this manner a relationship with one who is felt to be psychically superior can pass through familiarity to one with loss of respect; and (b) the institutional religion, like all organized thought, has commonly to restrain a certain individualism which from being markedly individualistic becomes extreme, antinomian, and irreligious.²

19. Ideas of imitation and identification.—(1) Signs, symbols, and tatu-marks can be used, like names, to indicate relationship, claim, or possession; and they are effective, provided they have an appropriate meaning and call up the required feelings and ideas. The symbol which stands for the totem, spirit, or god may be carved upon weapons, boundary-stones, utensils, etc., to signify the presence of a protective being, to warn off the evil-doer, and so forth. The symbol may even be cut or painted upon individuals, or the latter may wear skins, helmets, etc., to represent or symbolize the totem, spirit-guardian, or other protective power. Whether we find a realistic imitation or a symbol more or less conventional or no longer intelligible, the individual is very closely associated with a being who, however superior, stands in an intimate personal relationship with him. In war, e.g., the wooden images of dead ancestors may be invoked or taken into the fight; and there may be an appeal to old heroes or to war-gods (who are sometimes deified heroes). But, when the warrior in some way imitates his protective genius, there is a virtual identity—the warrior does not fight for his god, but *with* or rather *as* his god. Sometimes the totem is painted on the dead, or otherwise associated with the corpse—a fitting climax when the individual and his totem are supposed to be of the same 'substance,' and the man is born of the totem stock. Even in totemism there is a certain identity of nature of man and his totem, together with the realization of a difference, and this co-existing 'immanence' and 'transcendence' faithfully reflects feelings of the paradoxical relationship between what we call the 'human' and the 'sacred' or 'divine.'

(2) The various imitative practices occur in commemorative ceremonies (e.g., where dead ancestors are supposed to be present); but of far greater interest are those which represent needs or wants and their fulfilment. There are mimetic ceremonies to effect cures, to bring rain, to further the

¹ Cf. Driver's note on Dt 6¹⁶ in *ICC*.

² Psychologically, and apart from any theory of ultimate realities, it is significant that human personality develops, in religion, as in human life, where great values are concerned. A path has to be found between (a) utter familiarity, with the loss of the earlier recognition of one's own psychical inferiority, and (b) feelings of aloofness, remoteness, and of the gulf between the self and another self; see § 31 (3). Just as sacred objects are to be named, seen, or handled only with respect, so in religion there is an experience of a relationship which has to be treated similarly, and, although the relationship has human analogies, yet it is characteristically more vital than any in ordinary human life.

¹ Intermediate steps in the advance are illustrated when the rites are explicitly associated with appropriate sentiments; cf. He 10²², and the Syrian story of the woman who in the ceremonial washing cleansed her thoughts also (F. C. Burkitt, *Euphemia and the Goth*, London, 1913, p. 166).

increase of edible animal and plant totems, etc. In these cases (especially in Central Australia) the groups or the headmen, by virtue of their relationship with the totem, are supposed to be able to exercise some control over it for their own purposes.¹ The practices are noteworthy for the solemnity, self-denial, and restraint which accompany them and forbid us to style them purely magical. Elsewhere it is not uncommon for groups or individuals to be ascribed power and authority over some one department of nature (rain, winds, crops, etc.), and the general principle implied is twofold. A can control B because of some relationship (resemblance, etc.) between them; or, to control B, or gain B's help, A must first enter into some close relationship.² The manifold beliefs and practices turn upon ideas of likeness, resemblance, and identity; and the main lines of development are: (a) a testing and verifying of the ideas, (b) the choice, on the one side, of special individuals, and the recognition, on the other, of special sources of activity such that, instead of a rain-totem group, we find (a) individuals credited with the power of controlling the rain, and (b) spirits and gods, either of rain or of less restricted powers (see § 25).

(3) Throughout, what is fundamental is the imitation, whether of the venerated being, the particular need, or the activity required. Now, the idea of imitating the holiness or perfection of a deity (e.g., Mt 5⁴⁵) could not spring up suddenly; the desire for a spiritual, ethical, and inward resemblance cannot be separated psychologically from the rudimentary rites where men, *externally at least*, in some way assimilate themselves to their sacred beings, and not rarely with every sign of earnestness and solemnity. In this psychical state there is a communion, approaching identity, with the object of the profoundest ideas; there is a typical desire to reach the state and to profit from it. All imitation gives a certain reality to the conception entertained of the person who is being represented. Moreover, intense ideas and desires will tend to realize themselves in appropriate gestures and activities.³ Hence the apparently magical representation of rainfall is not unintelligible from a psychological point of view, and it is significant that some of the ceremonies typically involve attitudes which are characteristic of religion. It is true that there is in religion a characteristic submission (not necessarily an attitude of passivity) to the supremacy of the divine will—'Thy will be done.' On the other hand, in magic 'there is too much "My will be done" about it all.'⁴ But there is the third attitude, naive and confident, and for this the formula would be 'Our will be done.' This corresponds to the group-unity where men and their sacred beings form part of the same social system, and it is taken as a matter of course that the gods and men perform one another's will (cf. § 7 [2]). Moreover, logically speaking, this is a primary attitude and one that tends naturally to become that in which the individual acts as though he had only to control, coerce, or set in motion the required activities. The first attitude ('Thy will') is certainly not primary; and, while it is easy to understand the transition from an implicit 'Our will' to 'My will,' it is impossible to explain, psychologically and logically, any transition if the magical attitude is original. This is vital for all conceptions of religion; the apprehension of a qualitative difference must be taken as primary and fundamental. All human activity implies that there are processes

in the universe with which man is co-operating; man in the course of development tests and purges his more unconscious presuppositions. The religious conception of reality involves the recognition of some ultimate interconnexion between the human and the divine, between man and the Supreme Power of the universe.¹ Even the crude imitative rites imply something worthy of imitation with self-denial, sacrifice, etc.; and the practices, together with the vague curse and the lofty prayer, imply a certain belief in their efficacy. To achieve his ends, man must make the necessary preparation and use the necessary factors; hence comes the need of concentration, discipline, self-control, and self-sacrifice, and the progress of thought consists in the better knowledge of what is indispensable if effective results are required (see, further, § 29). Here the efficacy of prayer and sacrifice comes under consideration.

20. Sacrifice and prayer.—(1) The data of sacrifice undoubtedly include some gross ideas of mere bargaining, and of cajoling and feeding the gods; they typically point to a relationship for utilitarian purposes, and thus the sacrifice appears as a preliminary gift in order to win the favour of the gods, or as a thank-offering afterwards. But, in its more suggestive form, the sacrifice is communal—it is a ceremony in which members of a unit participate, one which creates between them, for a time at least, a stronger bond of connexion than ties of blood.² In such a unit or bond the profoundest ideas are realized, and men and their sacred beings are brought into the closest relationship. The ceremony is psychically impressive, it is an intensifying and strengthening experience; and the state typically involves feelings of union and solidarity, and of communion or even identity with the sacred being. While sacrifice is felt to be effective, conversely, effective results are to be obtained by sacrifice and self-sacrifice. Hence extravagant asceticism, torture, and extraordinary self-mutilation (the last even before a fight [*GB*³, pt. ii., *Taboo*, p. 160 ff.]) can produce a state of exaltation, infel strength, and the conviction that the desired help *must* be forthcoming. Indeed, violent measures may be adopted in times of crisis or distress; and gloomy rites can reappear or be more intense in order to bring help or to stave off disaster or decay. Healthy asceticism, sacrifice, and self-denial—all psychically and physically beneficial—can thus take perverse forms in order to ensure, or virtually to *compel*, the benefits that are sought. That man by these measures can achieve his ends is in keeping with what proves to be a common presupposition: that the efficacy of 'nature' and the course of 'natural events,' in general, are connected with the behaviour of men, and particularly of such powerful and representative individuals as semi-divine kings and priests (cf. § 25 [3], and art. BRAHMANISM, vol. ii. p. 800). Sacrifice has as its central idea the implicit or explicit assumption that there is some connexion between human behaviour and natural causation, whether directly or indirectly (e.g., through a deity), and such an assumption goes behind the usual differentiation of man and nature, human and divine. Hence, the distinctively religious and the obviously magical aspects are often closely akin, although their significance for the development of thought is essentially different.

(2) Similarly as regards prayer.³ The spell or

¹ The fact that we distinguish human and divine (and other antitheses—e.g., man and animal) means, not that the two are absolutely distinct and unrelated, but that we realize a distinction between the constituents of some larger realm.

² For the latter cf. A. Barth, *Religions of India*, p. 274, and see, in general, W. R. Smith, *Rel. Sem.*

³ See especially L. R. Farnell, *The Evolution of Religion*, London, 1906, pp. 168-281; F. B. Jevons, *An Introd. to the*

¹ See the critical summary by Durkheim, bk. iii. ch. iii.

² Cf. therefore the semi-magical character of the symbolical toilet or dress of old Oriental priests and kings, etc.

³ See art. MAGIC, and cf. G. F. Stout, *A Manual of Psychology*, London, 1913, pp. 166, 392 f., 602 f.

⁴ Marett, *Anthropology*, p. 208.

charm involves ideas of self-sufficiency and compulsion, and of a mechanism which has only to be set working, whereas the prayer primarily means a call upon the inner self, and is typically a communion with or an appeal to a Superior Power. But from the explicit prayer to a Heavenly Father for the daily bread there cannot be isolated the deeply-felt earnest wish, as when the Gold Coast negro cries: 'Heaven! grant that I may have something to eat this day.' On the one side is the psychical nature of man, whose appeal is formulated to a sacred being who either is the centre of a systematized body of thought or is perfectly vague and unsystematized; and on the other side is the question of the ultimate realities—whether the prayer or wish has any effect save upon the man himself, his courage, confidence, etc., and whether a Supreme Power pays heed to the appeal, be it systematized or vague. Moreover, the earnest prayer or wish cannot be severed from the earnest behaviour which requires or manifests needs to be satisfied. That prayer easily decays and becomes the spell, charm, or magical formula is well known in the history of religion; the efficacy is then thought to lie in the expression itself, as apart from the psychical state which is typical of prayer. This primary psychical aspect of prayer is fundamental, and it is instructive to observe among rudimentary peoples indications of it in practices of an apparently magical character.¹ Under the stress of emotion men help out their ideas with gestures, and there is always a tendency for feelings and ideas to realize themselves in action; children commonly 'play' at that which impresses them (see p. 675², n. 3). So it is that upon the lower levels of mankind there are mimetic rites for explicit needs, whereas on the higher levels there will be explicit prayers, and also a recognition of explicit powers to whom an appeal can be made. But all earnest, sincere activity is purposive, implying wants and aims, and the growth of knowledge and the development of religion are marked by better conceptions of the necessary factors and means to achieve success. Hence we can scarcely sever genuine purposive activity and a prayer for some effective activity.

Sooner or later the need is felt of some theory of reality to connect, rationally, human activity and the processes at work in the universe. The vicissitudes of thought—the periods of scepticism and of credulity, of doubt and of faith—do not affect the underlying realities, whatever they may prove to be; and what is implied in religious, magical, scientific, and philosophical conceptions points, not to many different realities, but to different and even contradictory apprehensions of one reality or system of realities. It is because the religious conceptions claim to be the nearest to truth, and because the consequences of an infelicit conviction are so potent, that serious differences between religious and non-religious conceptions are feared or resented; and indeed the history of religion from the rudest types upwards proves that these differences are vital for the progressive development of life and thought (see § 251).

21. Ideas of soul and spirit.—(1) A survey of the whole field of religion brings to light two fundamental convictions or, rather, presuppositions: (a) there are ideas of agency, causation, activity, or function in the universe, such that man can enter into relationship with the effective processes and utilize them; (b) man is more than the

sensible body; there is a part which is separable, which can leave the body temporarily (a common explanation of dreams, fainting, illness), is not annihilated at death, may go far away or remain in the old haunts, or may enter another body, or be reborn.¹ These ideas overlap: the ideas of a soul or of some non-bodily part of man are extended and refer to the life after death and the unseen; and the ideas of power or causation are connected with powerful individuals (especially dead ancestors and heroes), saints, spirits, deities, and powers of nature.

But the ideas are never consistent, nor are the categories distinct. Life, feeling, consciousness, mind, spirit, and soul are confused; and physiological, psychological, aesthetic, theological, and other points of view are unreflectively mingled. The progress of differentiation marks the progress of observation and classification. The 'spiritual' part of man may be thought of as a double, material, minute, and ethereal, or it may be identified with certain parts or constituents of the body. Modern Western thought, with its attempt to distinguish the material from the non-material, goes beyond the common conception of body and spirit as a grosser and a finer material.² But it in turn is scarcely consistent when it distinguishes at the same time mind and matter, living and non-living, organic and inorganic. Consequently, it is impossible to determine clearly the ideas of those whose thought is not the same as ours, the more especially as our modern categories are confused and not co-ordinated. It is sufficient to observe that everywhere it is possible to distinguish systematically some A and non-A (e.g., organic and inorganic), but every separation of an A and a B (e.g., the living and the dead, body and mind) invariably raises the question whether the two are rightly kept apart or are to be related and regarded as different forms of some one underlying substance.³

(2) Ideas of soul and spirit are not to be treated as 'survivals,' though special beliefs and practices may be traced historically (§ 4 [2]). There is a tendency to accept the ideas and to justify them—e.g., by reference to dreams, of which, however, only those will be cited which are actually in harmony with the predisposition. Much also depends on the extent of the individual's experience and knowledge by which he is able to discriminate between the waking hours and the dreams, or any unusual subjective experiences (e.g., 'ghosts') which may seem to have objective reality. The ordinary familiar theories of the 'origin' of the ideas do not account for the great social and intellectual systems with which they are organically interwoven, and which could not in any case be based upon isolated ideas or dream-experiences (cf. Durkheim, pp. 56–60, 268). Moreover, no theory of the spiritual world can be considered satisfactory which applies solely to a particular age, land, or sect; and a careful distinction must always be drawn between the particular ideas under consideration and the common psychological aspects which indicate that the essential features of the ideas of soul and spirit are logically *a priori*.

(3) All the world over there are many words to denote a power manifested in special or general forms, material or other, whether in human, animal, or 'nature' phenomena.⁴ The Melanesian term *mana* (q.v.) is often used typically by modern writers; but, while this more especially restricts the power to one originally manifested in human activity, other terms are not necessarily limited in this way (cf. our use of [Holy] Spirit and Power). The words are characteristically applied (a) to what has an emotional effect, exciting surprise, wonder, marvel, admiration, reverence, and awe;

¹ As is quite intelligible, it is especially when an individual has been powerful or famous that the continuance of his presence and effectiveness is commonly and quite spontaneously assumed.

² Cf. medieval ideas of a more or less material soul (Telesio Bacon); cf. also the Jainist views above, vol. vii, p. 468.

³ Cf. the controversies between the dualistic and monistic systems, and the relation between polytheism and monotheism.

King, *The Development of Religion*, New York, 1910, ch. vi.; Marett, *Threshold of Religion*, pp. 13, 120 ff.; Durkheim, p. 192 ff.; J. E. Harrison, *Themis*, chs. iii. and iv.

Study of Comp. Rel., New York, 1908, pp. 139–174; R. R. Marett, *The Threshold of Religion*, London, 1914, p. 68 f.

¹ E.g., in one case a mimetic rite is employed when a woman desires a child and a father of a family is called in to offer up a prayer (Babar Archipelago). But, while this is magico-religious rather than magic, elsewhere we hear of a similar rite but no explicit prayer or appeal is recorded (GB, pt. I, *The Magic Art*, l. 73; Hartland, *Primitive Paternity*, l. 139 ff.). To conclude that whether the latter is really pure magic or not depends on the record of the observer is extremely unsatisfactory. For all critical inquiry the issue concerns the psychical state (which determines whether we are to style the evidence magical or not) and our view of the ultimate realities—in other words, (1) what is the rite in the eyes of God? and (2) how much efficacy is there in it, according to our own conception of the universe (cf. §§ 15 [3], 32 [4])?

and (b) to the unusual, impressive, striking, and inexplicable examples of all kinds of causation. Religious, non-religious, and magical aspects are interwoven; and everywhere the tendency is to differentiations (religious, moral, æsthetic, physical) which depend upon the current tradition, knowledge, and stock of categories. The psychological aspect of this 'power' is more primary than the logical, and this is illustrated, *e.g.*, when a real (psychological) reverence for the Sabbath leads to tabus wherein the (logical) question enters whether such-and-such an act does or does not break the Sabbath.¹ There is an *a priori* readiness to recognize a mysterious or profound cause or activity outside the run of ordinary experience; increase of knowledge may seriously disturb the beliefs, by making the activities 'natural,' but a distinction must be drawn between the psychological tendencies and the particular beliefs which prevail. Hence, theories of naturism and the like do not really explain origins, but only show how the religious ideas could be engendered and brought to the birth. In like manner, theories of the transition from polytheism to monotheism, or (as can be suggested in the case of India) to pantheism, overlook the important fact that the recognition of a number of phenomena which can be classed together and given one name, because they are similar in some one respect (*e.g.*, as being gods or spirits), logically implies an apprehension of some underlying undifferentiated unity. It seems impossible for the observer to draw any line objectively, save with the help of some prior presuppositions, and consequently it is necessary to admit the prevalent and normal apprehension of some 'power,' or the like, the nature or quality of which is realized only when it is identified, and that on the basis of current categories and in accordance with current thought—although the very act of categorizing or naming shapes the apprehension and interpretation and gives it a form. And, while continued comparison of the data of religion tends to weaken the barriers between the manifold manifestations of *mana*, etc., it is solely through the categories, differentiations, and distinctions that the progress of knowledge is possible, even though the underlying unity be ignored from time to time.²

22. Life and death.—Among other ideas which are presupposed and which rule and control human activity, conscious and unconscious, is especially that of the persistence or continuity of the individual. No rational description can be given of oneself or of others without implying it, even though the arguments which are conclusive proofs of existence after death to one man may make no impression on another whose personal experience and body of thought are different. But the conviction, instead of being distinctively 'religious,' is one taken up by religion, regulated by it, and sometimes even abused. The firm conviction that death is merely the gateway into another realm, or that the individual cannot escape some sort of continuity of existence, is not in itself religious; it has justified barbaric cruelty and irrational practices, and in India religion is devoted partly to remedying the evils of rebirth. The wide prevalence of initiation or of baptism ceremonies illustrates the tendency to prepare the individual

for a life of which bodily existence is only the prelude. Here the crucial point is not death, but the ceremony during his lifetime when the individual becomes an integral part of an enduring body—the group, brotherhood, society, church.³ The persistence of the individual is felt to be in some way ensured by becoming part of a larger, tangible, or intelligible unit. Who dies if his country lives? Now, death is the occasion of feelings of grief and distress (significantly rare, however, among the dying), of peace and sublimity, of doubt and uncertainty. Moreover, the life after death is also a matter of perfect assurance (allowing, among rudimentary and barbaric peoples, horrible sacrifice and callousness), and even an astonishing self-complacency (as being one of the 'elect,' and so forth). Again, the 'next' life has often been regarded as essentially a replica of the present, so that even gods and men are thought to enjoy only a limited existence and not an eternal one. Thus, everywhere psychological and logical factors intermingle in the history of the ideas; but those which represent the apprehension of a *qualitatively* different state are in every respect more vital than those which view the other world as a mere 'super'-world. Indeed, the fact of some qualitative difference alone explains the analogical character of the results of the intuitions, experiences, and feelings. It would be impossible to attempt a rational description of man unless there were fundamental psychical facts which transcend the ordinary conceptions of 'this' world. Conceptions of 'another' or the 'next' world are inexplicable unless man is already in touch with a larger existence, and unless 'this' world, as he understands and describes it, is the empirical description of some part, phase, or aspect of a profounder reality the full comprehension of which transcends human mental processes.²

^{23.} Synopsis of the evidence.—(1) It is a common belief that the 'soul' (vital principle, etc.) can be, temporarily at least, separable from the body; it can depart when a man dreams or is ill; it can be lost, enticed, or stolen (*GB*, pt. II., *Taboo*, ch. II.). It can also be transferred; hence the common idea of the 'external soul,' where a man believes himself to be secure as long as the 'soul' is hidden or guarded in some safe, remote, or unknown spot (*GB*, pt. VII., *Balder the Beautiful*, II. 95-278). The idea is akin (a) to the belief that one's name may be written, or a piece of one's person (*e.g.*, hair) or property left, in some holy place as an essential part of oneself and for one's welfare, (b) to the conviction (on a higher level of thought) that the soul can be entrusted to a saint or deity or be in his care (see a curious form of this in I S 259). Moreover, a man's life may be intimately connected with a tree, which becomes an 'index' or 'sign' of life, indicating his strength, weakness, or death; or, again, the weakling may be symbolically united with a tree to gain thereby something of its strength and vigour.

(2) Trees, like animals, plants, and even inanimate objects, may be ascribed a 'soul', deities may eat the 'spiritual' part of the food-offerings presented to them, and utensils may be broken ('killed') in order that their 'soul' may accompany the dead. Animate and inanimate objects can contain a man's 'external' soul or his 'twin' soul; they can also be the vehicle of some power or spirit (see art. FETTERISM). Both among men and among inanimate objects the 'spirit' can be ceremonially transferred; and it is necessary to distinguish between any object (human, etc.) viewed (a) as a vehicle, a representative of some power or spirit, or (b) as the actual power itself.³ It is

¹ The practice of associating oneself with that which outlives one is illustrated by the means whereby men endeavour to make their name 'live' (so notably in ancient Oriental thought), by building enduring works (*e.g.*, a pyramid), by inscribing their name upon lasting objects, by beneficent and other deeds, which will not soon be forgotten, and so forth.

² The point of view (explicit or implicit) according to which (bodily) life is only 'part' of a larger existence represents a psychological and logical *suppositio*, 'unit' or 'universe' of discourse' more comprehensive than that which confines itself only to 'this' world, and refuses to go beyond it consciously. Every description of 'this' world at length shades off into a theoretical account which goes far beyond actual knowledge, involves metaphysical problems, and leaves out the prime fact—the development of the individual who has become conscious of the world.

³ For the transference cf. *FL* VII. [1897] 325 ff.; J. H. Breasted, *Anc. Records of Egypt*, Chicago, 1905-07, II. 179, n. c.; Hartland, *Ritual and Belief*, p. 56.

¹ The Dakota Indians, who believe that the mysterious whirlwind must be endowed with *wakonda*, proceed to associate with it analogous phenomena—*e.g.*, the fluttering moth, and the buffalo bull pawing the earth and throwing up dust in the air (J. King, pp. 139 f., 161).

² Differentiation tends to obscure the logical unity which is more obvious (a) on rudimentary levels of society, (b) in particular psychical states (concentration, mysticism, etc.), and (c) as a result of any stringent comparison of the manifestations; but it does not follow that there was or is in existence an absolutely undifferentiated unity (cf. similarly p. 666, n. 3).

an especially common belief that the vital essence of some powerful being can be found in anything belonging to or associated with him; hence the virtue of relics, the dust from the tombs of saints, etc. Human life can be vitally bound up with animals, trees, fire, and inanimate objects, and the dead can reappear in another human form (whether in the family or not) or in animal shape. But amid all these variations it is to be observed that, while the fetish tends to be of private and temporary value, the idol is generally the centre of a more permanent cult, and, while the spirit-guardian represents a relatively stable but individual cult, the totem is rather the affair of the clan. The question of the stability and clientele of the sacred object is always important for the body of beliefs and practices involved. A sacred object may be shared by father and son, by mother and daughter, or by the whole family, it may be inherited, accepted by other families, or imposed upon them. There are many gradations between the purely individual cult of a spirit-guardian and the cult accepted by a confederation of clans or a whole people, between the most ephemeral of cults (cf. art. MOMENTARY GONS) and those which are a fundamental part of a people's life and thought.

(3) Thus, the ideas of a 'spiritual' relationship between the individual and something outside him are extremely variable, and everything depends upon the social and logical co-ordination. Throughout, the ideas tend to overrule the crudely physical or literal aspects. The beliefs are usually far from simple, and the common ideas of rebirth and re-incarnation make it difficult to distinguish (a) the individual who will be reborn, and (b) the maintenance of his own individuality, which now seems to be partially admitted and now seems to be entirely merged with the family or group. Sometimes the dead are supposed to rejoin some sacred stock or nucleus, as it were; and from birth to death the man is periodically in touch with the 'essence' from which he came and to which he will return.¹ A great deal of evidence, it is true, might seem to support the theory of a primitive ignorance of paternity.² On this theory there was a primitive belief that every birth was due to supernatural causes; every child was a 'spirit child.' The theory implies the existence of an appropriate body of thought connected with it and outweighing the purely physiological considerations. Now, the OT illustrates the explicit conviction that the Deity can restrain child-bearing or grant it (e.g., Gn 15³ 16²⁻¹⁰ etc.), i.e. that the 'supernatural' considerations are stronger than the 'natural.' This co-existence is in harmony with the evidence elsewhere among rudimentary peoples.³ In fact, rites of puberty, initiation, marriage, and adoption indicate not only that certain physical aspects are not unknown, but that 'ideas' implicitly predominate. So, also, the collective or social feeling which treats questions of parentage as secondary, provided the child is one of the group, does not necessarily point to ignorance of paternity, but to the fundamental importance of the ideas which are implied in the social life. The theory of spiritual conception clearly assumes the predominance of regulating beliefs or convictions, but is needlessly hampered by the inference that the physiological facts were not known. The evidence rather proves the significance of ideas which, on a higher level, become explicit and would be called 'spiritual'; and, if rudimentary man thus falls into line with the higher levels (cf., e.g., the OT), where the co-existence of physical and psychical ideas is at once obvious, it has to be added that the greater importance of the psychical aspects appears not only in the practices and beliefs relating to the dead, but even in totemism, where the totem and totem-clan may be said to be 'consubstantial' (cf. Durkheim, bk. II, ch. viii). Thus, even on the lower levels, the system of behaviour implies some system of ideas, which, however, has not yet become explicit, though we must describe it in such terms.⁴

(4) The ideas of soul and spirit are extremely complex, but they reduce themselves to a few fundamental principles: (a) there is no absolute individual—he is always bound up essentially with something outside himself; (b) he is constantly becoming conscious of a relation with something 'not himself,' stronger, vaster, more enduring—he is what one may call 'psychically incomplete,' a part of some larger psychical whole; (c) the difference between life and death, between 'this' world

and the 'other' or the 'next,' is not absolute, and the ideas concerning these depend essentially for their origin upon states of experience and their interpretation, (d) finally, while the ordinary facts of sympathy, interest, and enthusiasm indicate the ease with which limits of space and time are felt to be removed wherever deep personal feeling is aroused (viz. in reference to distant or past events, people, etc.), there is everywhere a network or pattern of particular beliefs and convictions, conventions and prejudices, categories and classifications, such that the particular character or expression of the underlying feelings is thereby shaped and guided. There is an (logically) *a priori* feeling of kinship and oneness with something of which one is a part, it is ready to be evoked and shaped, but it is shaped, limited, and obscured—usually inconsistently—by current clan, social, tribal, and national circumstances, and by the current body of thought. These determine man's 'kinship' with the rest of mankind, with the 'lower' orders, or with nature.

24. Analysis of the concept 'God.'—(1) The widely different conceptions touching the validity and content of the concept 'God' prove the difficulty of making any statement that can be considered adequate. What is most prominent is the characteristic conviction (feeling, doctrine, etc.) of a profoundly vital *personal relationship* between the individual and an external transcendent Power (see § 18). But convictions of *some relationship* are wide-spread, and there is remarkable variation touching (a) that with which the individual is very intimately related, and (b) the ethical, social, intellectual, aesthetic, and other ideas involved. Moreover, although the data of mysticism, ecstasy, and the like, point to a psychical state of such intense subjective value that the experience will be felt to be 'divine,' yet the common recognition of a difference between 'true' and 'false' religion, prophetism, mysticism, etc., forces the necessity of distinguishing between the subjective and the objective value of every such experience. Besides, the individual who feels a close and intimate relationship with an external protective Power does not necessarily regard it as a deity. Here the experience and the interpretation may tend to interact, and the various beliefs in the reality of spirit-guardian, genius, ancestral spirit, or deity combine essentially similar types of experience with essential differences of form and expression, which are obviously of great importance for the history of religion. The ordinary facts associate the human and the divine in such a way that a criticism of them may seem almost blasphemous, and this in itself is an indication that the depths of human personality are concerned with the realities which the experiences involve.

(2) Moreover, the great concept involves ideas of *causation*, the manifestation of power, etc. The belief in a divine Power is typically in its effectiveness. This will commonly depend upon man's behaviour, and will entail ideas, not of magic (automatic or mechanical working, coercion, compulsion), but of religion (dependence, prayer, sacrifice, necessity of moral behaviour, etc.). While, on the one hand, the concept 'God' raises the question, What do men expect from their Deity?, on the other hand, all important functions, operations, and departments of life and nature will often be attributed to a patron or effective power.⁵ Especially is this the case where men's personal needs and interests are concerned; this is true not merely of concrete activities (e.g., coin-goddesses), but also of those which we treat as abstractions, but which none the less could be regarded as evident causes, sources, etc. (e.g., deities of piety, concord, righteousness). In this way we also obtain the results of continued observation of operations, the classification and co-ordination of functions and processes, the deter-

¹ See especially, among recent literature, W. E. Hocking, *The Meaning of God in Human Experience*, London, 1912.

² Cf. the Roman *indigmentia* (q.v.); also the *genius* permeating and actuating all that is highly organized (see W. Warde Fowler, *Roman Ideas of Deity*, London, 1914, p. 17 ff.).

¹ The religious and philosophical systems of India are especially important for the different ways in which essentially similar ideas are developed.

² For this see Hartland, *Primitive Paternity*, ch. I. 'Spiritual Conception,' ch. II. 'Magical Practices'; Frazer, *Totemism and Exogamy*, iv. 61 ff., 155.

³ Cf., e.g., the corporeal and spiritual husbands of the Akamba women (Frazer, *Totemism and Exogamy*, II. 423 ff., 633, pt. I, *The Magic Art*, II. 317 f.; see, further, *Totemism and Exogamy*, I. 536 f., 576, II. 83, 90 ff., iv. 287; Hartland, *Prim. Pat.* I. 55, II. 275 f., 278 ff.; Spencer-Gillen, p. 285; Spencer-Gillen, p. 676, B. Spencer, *Native Tribes of the N. Territory of Australia*, London, 1914, p. 263 ff.; and especially B. Malinowski, *J.R.A.I.* xvi. [1910] 403 ff.

⁴ Cf. above, §§ 6, 9 (1). The complexity and inconsistency of ideas of life and soul, even among so rudimentary a people as the natives of Central Australia, emphasize the futility of any attempt to present a perfectly logical and co-ordinated picture of all their ideas. More important is the fact of their presence, the recurrence of similar types of problems on different levels (viz. in creationism, traducianism), and the necessity of a more methodological treatment (e.g., of co-ordinating logically all the evidence together with modern knowledge and convictions).

mination of classes and categories, and the arrangement of the contents of the universe. By the side of this rudimentary 'logical' process is the more psychological tendency to respect, admire, and venerate significant operations and organizations in the abstract, or the concrete objects or persons associated with or representative of them (cf. the Navy, Army, Church, etc.). The psychological aspect is also illustrated in the attitude to those who 'know' or 'do' (cf. the derivations of 'wizard' and 'fetish'). Individuals of unusual personality or ability are outside the normal, and, as frequently seen in India, tend to be regarded as more or less divine. The fusion of psychological and quasi-logical factors (potent and therefore divine, divine and therefore potent) has complicated the history of men's conceptions of the Deity. On the one hand, the attribution of deity to operations and processes of nature readily explains polytheistic features (gods of rain, sun, etc.); while, on the other hand, intense feelings of relationship encourage a monotheistic or rather a henotheistic attitude (as in the hymns of the *Rigveda*). Consequently, gods of similar or related functions are easily associated, as also are the departmental and other gods of tribes or districts which coalesce or federate themselves. But, while the functional god is typically that and nothing more—and the problems involved are those of knowledge and observation—the part played by feeling (e.g., in the relations between peoples and their gods) has to be considered; and, when the gods are felt to be *personally* related to man, depth of feeling forces the individual to co-ordinate his ideas, to consider the relation between this 'our' god and the gods of causation, who are gods of function rather than of relationship. In this way men's ideas of the universe and of the ultimate realities constantly have new and different patterns which can be objectively compared and traced, and the vicissitudes of which would be inexplicable unless account were taken both of the more logical processes of ordinary thought and of the more obscure problems of the immediate consciousness of some underlying reality (see § 25).

(3) Moreover, the concept embodies ideas of co-ordination and the systematization of ideas of climax and limit. It 'completes' the needs of feeling and reflexion; it answers the grievous and perplexing experiences of life and the deep-reaching questions of the intellect. In this way conceptions of 'God' (according to their nature) tend to satisfy human personality on all its sides, and they will respond to religious, moral, æsthetic, and intellectual demands. But everywhere there arises the necessity of co-ordinating conceptions of 'God' with conceptions of nature, physical science, society, the State, etc. For, while, on the one hand, the conception inevitably concerns the ultimate facts and values of life, on the other hand, everywhere there is an absence of strict co-ordination, and a man's conception of God influences other conceptions, and *vice versa*. Viewed as an 'ultimate' concept, beyond which the mind cannot proceed, it involves ideas of extreme intensity and limit (as when the Psalmist speaks of the mountains and trees of God). It is then easy to regard it as expressing a superlative or infinite form of the ordinary and finite (e.g., God as infinite love, justice, etc.). By this linear, serial, or semi-mathematical mode of thought the Deity has been regarded merely as a Superman, even as heaven has been thought of as a superior copy of mundane life. But in all new religious experience the concept is typically transcendent, involving that which is *qualitatively* different—that of which thought is a very imperfect representation—and compelling (characteristically) some systematic

re-organization of one's earlier body of thought. 'Linear' development is an aid to thought, but it does not answer the experience where a new stage of consciousness forces a development of the whole body of thought, comparable in some cases (e.g., of 'conversion') to the more or less drastic developments of organisms. The 'linear' symbol does not explain that awakening and new vision which justify the conception of a 'transcendent' God; and only an undiscerning comparison will suggest to the outsider that the ideas concerning a Supreme Being are 'constructions' made up of everyday sensuous experience (cf. § 16 [2]). It is precisely when one considers the relationship between human personality and the meaning of the concept that the problems of each are seen to be inter-related, and with both are interwoven the problems of the development of ordinary life and thought.

(4) It is evident that the development of *personality* in its totality and that of the conception itself are interconnected. Group-totemism is more in harmony with the undeveloped ideas of individuality among rudimentary peoples, whereas the individual totem or spirit-guardian, although it is a man's private possession, is on the road to become a personal Deity—at the same time as the man's own personality is becoming more marked.¹ There is an inter-relation between a man's personality and his conception of the universe and its ultimate realities. It is true that he may fail to recognize any ultimate authority outside himself, but this phase cannot be permanent. Characteristic of religion is the recognition of an external Power *personally* interested in the individual; and, consequently, from both the psychological and the metaphysical points of view, this phase, together with the ideas of the 'fall of Lucifer' type, will require a closer criticism (see below, p. 688^b, n. 2).

25. Social-religious development.²—(1) The growth and differentiation of society, its internal development, and the relation between different societies combine to shape the development of religion. The religious ideas extend to all that is for the preservation of existence; hence food-supply, livelihood, trade, war, and government are commonly found associated with religious ideas (§ 6 [1]). But, when there is a differentiation between the religious and the non-religious, the modern inquirer is hampered because he may be (perhaps unconsciously) swayed by some differentiation (e.g., law and religion) which is not recognized by the society under consideration, or he may fail to observe another particular mode of differentiation (e.g., magic and religion). Throughout the history of religion there has been no continuous, orderly, logical development; periods of greater cohesion and unification of thought have alternated with periods of greater incoherence and incompatibility. There are, however, some typical features of importance for the trend of thought, and these can be sketched in outline. Specialism of function, with its inevitable disintegrating effect upon the collective social thought, occurs when, instead of a group as a whole officiating in some solemn ceremony, special individuals or representatives are employed. In the Kei Islands, e.g., girls are chosen and must submit to extraordinary restrictions for the benefit of a trading expedition; but elsewhere tabus and restrictions of a sympathetic and telepathic character are frequently imposed upon a people as a whole (*GB*, pt. i., *The Magic Art*, i. 126 ff., and pt. ii., *Taboo*, ch. iv. § 4). In Central Australia each clan performs ceremonies for the increase of the totem (if edible), whereas in the north, where the organization is more advanced, a headman will officiate, and he assumes the responsibilities and privileges of the group.

¹ See § 8, and cf. Frazer, *Totemism and Exogamy*, iii. 452 ff. The sense of personality was vaguer among the Romans and the Semites than among the Greeks, and in Buddhism one may observe the absence of a personal God (from the theistic point of view) and of distinctive individualism.

² An interesting attempt to work out the 'psychological history of the development of mankind' is made by W. Wundt, *Elements of Folk Psychology*, tr. E. L. Schaub, London, 1916.

Now, men of elevated position are commonly felt to be *psychically* superior, and those to whom important or valuable powers are ascribed tend to acquire position and authority. Such individuals, all the world over, have a significance which is both psychical (because of the ideas entertained of them) and material (because of their actual abilities); and in this way the authority acquired by the 'magician' or any other potent individual and the powers ascribed to chiefs, kings, and other authorities are factors that are continuously at work in the history of society and thought (see especially *GB*³, pt. i., *The Magic Art*, i.).

(2) The Central Australian totem-group that officiates for the increase of its totem (*e.g.*, the emu) stands to the rest of the tribe like some departmental god (*viz.* emu-god) on another level. The group is almost wholly debarred from tasting the totem-food, except on the occasion of the ceremony. But among the Dieri it is the headman of the seed-totem group who is effective, and who boasts of being the stay of life; while on higher levels not only are there gods especially associated with particular departments of nature, but the firstfruits will be the property of the god or his representative, the priest. In this development of the different constituent features of the once simple cult the office of headman, or of the man selected for his powers, readily becomes hereditary; and frequently there are religious rulers, chiefs with priestly powers, or priests with secular authority—a circumstance which soon leads to rivalries between religious and secular classes. Meanwhile, the chief's abode and the sacred place are most closely associated, and the claims of the palace (or the king) and of the temple interact in the history of taxation, of royal and priestly regalia and ceremonial, and of the structure of the buildings, of the *personnel*, and the pantheon. It is in the course of such social development that initiation ceremonies are no longer for the group as a whole; they are for special classes, or for entrance into brotherhoods, sects, guilds, or secret societies (*q.v.*).

The development from totem-species to the single specimen, or to an image of it, is easy, and the anthropomorphic treatment of the object can turn the latter into the god of the tribe or district. Conversely, although gods with remarkable animal-elements in their cults or myths are not necessarily derived from totems, sometimes the ancestry can be clearly traced (*cf.* Frazer, *Totemism and Exogamy*, II, 19 ff.). Further, a very significant but as yet obscure development is that of ideas of group-marriage (§ 9 [1]). Sometimes the men of one group will have marital rights over the women of another, and these may be exercised before a woman marries away. But elsewhere there has been the *jus primæ noctis*—the claim asserted not by a group, but by a local head or representative, or by a priest (who is the representative of the god)—or there has been a preliminary dedication to the god. It is conceivable therefore that the earlier rights of the group were taken over by a representative (*a*) of the group, or (*b*) of the group's deity, and that the custom on the higher levels is connected with what is found on the lower. That the custom has a primary psychical explanation is suggested also by the law of the Council of Carthage in 598, on which *cf.* *EB*¹ xv. 593.

(3) Where a group and its sacred object (totem and totem-group, god and tribe) practically form, as it were, a single unit (§ 7 [2]), the selection of a representative (headman, priest, king) would tend to disturb it. The effect of the development is illustrated in the varying relations between a people or land, a ruler or priest, and the god or gods. The intermediary is the representative of the people before the god, or *vice versa*; and in the religions of China, Egypt, and Babylonia there are many examples of the consequences. Moreover, the king is often regarded as the source of the people's prosperity and is responsible for disasters. He is the central figure, and therefore there are tabus to protect and safeguard him; he may be kept in seclusion or supplemented by a secular partner. In fact, the representative individual, king or priest, is so essentially associated

with processes in the universe that his death may be a sort of cosmical catastrophe. Hence it may be thought necessary to ensure that he is always vigorous, and even to kill him before his powers weaken.¹ The 'divine' chiefs or kings are of cosmical significance, like the Brāhman priests elsewhere; hence these visible and accessible functionaries exercise a great influence over the course of thought. As ethical ideas prevail, such men must possess moral attributes; and, when things go wrong, they—like all representative individuals and functionaries—are the obvious and most tangible scape-goats.² Throughout there is interaction between ideas of the effective gods (the ultimate realities) and the very human representatives, incarnations, and the like; men's ideas of the gods are swayed by the good or bad behaviour of these individuals as truly as, in course of social development, conceptions of the moral nature of the universe are influenced by the good or evil which men find in their environment.

(4) Intercourse with other groups, the rise of a central authority, and the vicissitudes of history invariably force movements in religious thought. The local god, the chief, and the district find their parallels in the national god, the king, and the land; there are units within a larger unit, and complications arise in the effort to co-ordinate the various gods of the local districts and of the whole area. This co-ordination can be regarded as one of convictions, ideas, etc. The local gods, patron deities, and saints (*cf.* the Muhammadan *walis*) are felt to be near at hand, and directly interested in their small circle—like the local chief; and often, while a land, viewed from without, seems polytheistic, the average individual is henotheistic. The problems of co-ordinating the local cults are illustrated in the relation between the Israelite Jahweh and the Baals, the Muhammadan Allah and the *walis*, or the Deity and the saints and Madonnas in Roman Catholic lands. When the local being was identified with the national god, the result was partly to drag the latter down to the popular level, partly to elevate the former, and partly also to remove the former away from popular veneration to the court and temple. In the many vicissitudes that occur, and in the ebb and flow of ideas, there are complex problems (*a*) of the psychological consequences for the individual whose sacred being had once been 'personally' related to him, and (*b*) of the quasi-logical developments of doctrines and theories of the gods. Personal experiences and the theories of the universe and the gods have to be adjusted to each other. Especially significant are the vicissitudes of the intimate relationship between the gods and their representative individuals; for, although the latter are, properly speaking, subordinate to the former, yet, because they are visible, accessible, and more 'real' than the unseen powers, there is a tendency to regard them as actual gods (*cf.* *GB*³, pt. i., *The Magic Art*, i. 397, 401). This tendency is in harmony with the readiness of all individuals with functions and powers to ignore their subordinate position and (when they become increasingly conscious of their value) to be a law unto themselves. The data point to profound vicissitudes in the beliefs and convictions of the men concerned, and are of the

¹ This is the motif of the *Golden Bough*; see Frazer, *Totemism*, II, 529 f., 608; *GB*³, pt. i., *The Magic Art*, II, 5, 322, pt. III., *The Pagan God*, London, 1911, ch. II. Although the remarks above are not everywhere applicable as a whole, they refer to inter-related bodies of ideas which recur, in one form or another, almost universally.

² Hence, in the development of society, one of the most difficult of problems is to fix responsibility and determine just conceptions of responsibility. Such problems are much less serious in undeveloped communities, where there is little differentiation of function and religious ideas are not separated from social life.

first importance for any attempt to deduce the nature of the ultimate realities (see § 32 [2]).

(5) The necessity of maintaining the unity and security of every group, tribe, and people explains the various means that are taken (*e.g.*, in rites of adoption). Ideas outweigh purely physical or material considerations. There is a deep-seated feeling that powerful representative individuals should be above chance and change; hence there are innumerable practices and beliefs which refer to their immortality, rebirth, re-incarnation, etc., while, later, attention is directed not to the individual, but to the stability of the function, agency, or office. If the death of the semi-divine king was more or less a cosmical disaster, royal marriages and births, too, had a national or even greater significance for current thought, and ideas of increase and growth were associated (in an undifferentiated sort of way) with the course of nature generally. Moreover, the superior significance of representative individuals explains the early importance attached to their participation in religious ceremonies—*e.g.*, in solemn acts of confession. Hence, also, the greater interest attached to records, ritual, hymns, etc., relating to them, and to the careful preservation of them (*cf.* the priestly hymns of the *Vigveda*, Babylonian ritual, and penitential hymns). While the life and thought of the ordinary people are generally colourless, with few distinctive features, the representative and other outstanding individuals leave their mark upon a people's history, although they, in their turn, are far more subject to change than the ordinary level of thought which pursues its way, rejecting what it cannot assimilate and rehabilitating, though no doubt in a new form, beliefs and practices which well-meaning prophets and reformers had sought to eradicate.

26. Eras of crisis and transition.—(1) As the vicissitudes which we have been noticing break up the social or national unity, with it disappears the congruence of thought. The loss of collective feeling and the absence of a feeling of harmony of aims and interests proceed *pari passu* with a great increase of individualism. Individualism is already present in some degree where there are individual totems or spirit-guardians, or where the man has his own protective genius and does not share that which either is common to the group or is tended by a recognized representative. But the differentiation of society, labour, intellectual and all other work, steadily increases the heterogeneity of convictions, modes of thought, interests, etc.; and, as it disintegrates the thought of the environment as a whole, there is the more urgent need for some new strong unifying impulses. Now, there is always a logical relationship between the character of a people and their religious convictions; thus one may note the combination of fanaticism, gloominess, and fear of divine anger both among the barbarous Assyrians and among the fiery zealots of early Arabia. And, as regards individuals, the psychology of Calvinist and Puritan, of a Francis of Assisi and a Luther, of a Paul and a John, of a Hosea and an Isaiah, illustrates varieties of religious character which will be even more varied, though naturally of very different value, whenever individualism becomes excessive. In other words, where there is excessive individualism, there is every opportunity for markedly different varieties of religious and other strongly subjective convictions, and also for a dangerous amount of extremeness, which at other times would be checked and suppressed by the great body of average thought. The experiences, ideas, etc., will always be subjectively impressive, but there will be no coherent body of objective thought whereby to test their real value.

(2) In the disorganization that ensues coherence of social life and of the fundamental ideas gives way to an incoherence which has a disturbing effect upon the religious conditions. The early social-religious beliefs and practices lose both their practical and their traditional authority; religion tends to be severed from life and is often mechanical or magical. Scepticism, agnosticism, and pessimism find fertile soil; and the needs once nourished by the current religion now atrophy or find other supplies. Old beliefs return, foreign and incompatible ones are admitted, fanaticism and superstition balance trustful faith and a new spirituality. The vision shifts to the 'next' world, or it ignores

it—only the 'visible' is real; there is a deeper insight into social conditions and a freer attitude to sacred things. Amid many extreme tendencies in all directions there will be found dangerous excesses (*cf.* the frightful human sacrifice of the Aztecs, gross licentious cults, irrational and suicidal tabus), which, like all features that are incapable of development or persistence, are not to be regarded as typical of normal religion or life.

(3) Meanwhile there is a general levelling. The divisions which had disturbed the earlier solidarity are blurred, the privileges of the few are claimed by the many and become less distinctive, and exclusive ideas are common property and are popularized. In Egypt, *e.g.*, the belief in a life after death, once demanded on behalf of the king, was extended to ordinary men; it involved their recognition of the moral requirements once imposed upon the monarchs, but at the same time the belief was loaded with popular superstition. The general effect of the transitional process with its 'secularization' can be seen in the history of the drama, of certain toys (*e.g.*, the bull-roarer), and of games. The traces of a foundation-sacrifice have been found in the game 'London Bridge is broken down,' and echoes of grim rites lingered on in the stories of wells and woods which it was dangerous to pass. European folk-lore has thus preserved remains of old barbaric religion; and elsewhere traces of earlier organized cultures can be recognized by their incompatibility with the current systems of thought.¹ Thus, too, the great gods among rudimentary peoples may sometimes be the last fragments of earlier and even more advanced cultures; and, where the religious vicissitudes can be traced over many centuries (as in the East), considerable complexity of beliefs and practices is caused by the recurring periods of decay and new growth.

(4) The factors which, taken by themselves, would make for change and disintegration, and those which, by themselves, would lead to conservatism and stagnation, interplay and produce new growths, the inauguration of new ages, periods, cycles, etc. They involve a harmony of the deepest ideas, and thus affect the history of religion. Characteristic of every new harmony and solidarity is the religious spirit by which, first, individuals and then whole peoples are stimulated and undergo development. When, as in the history of Judaism, Buddhism, and Christianity, the religion of exceptional individuals becomes that of a people, it must adapt itself to many different classes, minds, dispositions, and needs. The tendency then is for the religious and other aspects of life and thought to become harmonious, an adjustment is made between new and old, and the religion is a socialized one, as distinct from the theosophical, ethical, or philosophical cults of select minds.² Everywhere these transitional periods are profoundly significant both for individuals and for peoples. The line of development is not necessarily snapped; a land will undergo periods of new reorganization, as, *e.g.*, in India and in early Babylonia and Egypt. On the other hand, the teaching of the Israelite prophets apparently caused a drastic revolution in the old Hebrew religion, whereas Babylonia and Egypt sought to satisfy their unrest by a conscious and artificial return to the conditions of a happier and distant past. Centuries later, one line of development ceases

¹ Cf., *e.g.*, W. H. R. Rivers, *The Todas*, London, 1906, p. 452 ff.

² It is now a religion which the diverse minds of the social body can understand and elaborate; the whole environment thus receives a new stimulus, although the steps from the ideals of individuals to the practical social-religious results in the environment as a whole may seem to mark a retrogression.

with Rabbinical Judaism, while a fresh growth begins with Christianity; but both passed outside the land of their home. The rise of Islam is virtually a new beginning, just as Arabic itself represents the 'proto-Semitic' language more closely than do any of the other languages. After many centuries of the old native religions, after Hebrew ethical monotheism, Hellenistic syncretism, and the conflicts between Rabbinical Judaism and the young Christianity, there is seen a new religion. It is in harmony with the psychology and cultural level of the people as a whole, and is thus in contrast both to earlier Jewish and Christian doctrine, which was above their level, and to the remarkable syncretism which in fact appealed only to the educated and governing classes. The new religion re-introduced God (Allah), not new conceptions of God or new developments in earlier ideas. Yet, although Islam thus begins at an earlier point than Judaism or Christianity, it speedily developed beyond the grasp of popular thought; and, although the lands were, as a whole, culturally below the level of the earlier ages, Islam quickly reached a high level, since it was able to utilize in some measure the theological and philosophical work of Greek and Christian thinkers. In such vicissitudes (illustrated in other ways in India and China) there is a recurrence of similar steps, though under different circumstances, and the earlier stage of a (chronologically) later religion can be more advanced, in certain respects, than a later stage of an earlier one; just as, in the psychical growth of the individual, the youth will certainly represent an earlier stage than his mature parents, but in various respects may be more advanced. Hence the danger of unchecked comparison and of facile theories of evolution, and the necessity of a deeper analysis of the content of religious thought (see § 4 [3]).

27. The advance of thought.—(1) Throughout, the social-religious development can be suggestively viewed in terms of thought, the organization and disorganization of every social body corresponding to that of the implicit or explicit ideas which prevail (§ 7 [1]). That there has been some great advance is shown (a) by the fact that, even though cultures and civilizations disappear and sweeping reforms fail, the apparent retrogression is not without traces of the beneficial influence of the preceding stage. Moreover, (b) although theriomorphic and low anthropomorphic cults may be prominent in times of decadence or relapse, there is not that characteristic totemism which is essentially pre-anthropomorphic (§ 8). Again, (c) the serious crises and hard vicissitudes have put the current ideas to the test and have compelled practical, adequate, and acceptable solutions of the difficult problems of life and thought. Consequently the recurrence of similar types of belief and practice is significant, and more especially when the old reappears in some new form—the new testifying to the positive progress of thought. The crises that bring scepticism and despair also bring new faith and hope, and the history of religion is the repeated justification and re-expression of old values (§ 33 [2]). The death of a member of a totem species was to be deplored; but, when a single animal was venerated, the death was then a catastrophe, until in some way (e.g., in ideas of rebirth or re-incarnation) the disturbance of beliefs was remedied. But the former case, with its less disastrous consequences, belongs to a lower stage; and, in like manner, endogamy, with its good and bad consequences of close group-solidarity, is relatively lower than exogamy, which at once brought new and often difficult problems. The problems become more complex as life and thought develop; they take new forms and require

new solutions in harmony with the thought of the time. At one stage there is a natural relation between the group and its sacred being; and, when this is viewed as an automatic or mechanical condition, it is psychologically harmful—it is 'magic.' But at another stage it is God who graciously chooses man, and who uses him as His instrument; the ideas are more advanced, and there is a logical development which, whatever be the ultimate realities, is extremely important both for deducing their nature and for the study of the human mind. There is a continuity between rudimentary and higher religions no less than between the different stages of the individual mind (§ 17 ff.). There is an ever more conscious awareness of current beliefs and practices, and reflexion can make explicit what had been implicit in behaviour.

'Redemption, substitution, purification, atoning blood, the garment of righteousness, are all terms which in some sense go back to antique ritual.'¹

Rudimentary religion already accustomed men to facts of self-control, self-denial, the sacrifice of valued objects, the forgiveness of sins, and atonement. Already the road was taken for the later deepening of ideas of mutual interdependence, sacrifice, and the relationship between man and the universe. In mimetic and other ceremonies man represented sacred beings, or acted a rebirth or a resurrection; on higher levels the imitation is definitely in the spiritual realm, and the ideas of a new life are worked out in the world of thought. At one stage men fight, clad with the symbols of totem or god; they fight *as* or *for* the god. Later the principles and ideals associated with their sacred Being are more explicitly recognized. Men acted and behaved as though there was a life after death before they discussed the possibility and embarked upon speculation. In Egypt the Pharaoh lived again because Osiris came back to life, while the ordinary man subsequently found safety in identifying himself with a saving god.² Identification, whether as ritual, imitative behaviour, etc., or as the vivid realization of thought and the experiencing of a belief, is profoundly effective, and points the way to both religion and magic. Mental concentration, absorption, and surrender lead to results subjectively final, thought and the absolute conviction of reality become one, and hence every religion is hostile to what is felt to be an irreligious attitude to or treatment of the great truths.

(2) Where life and thought are in harmony, the profound concepts have each a sufficiently similar meaning. But widely different conceptions—e.g., of the term 'God'—will represent a very secondary stage, because the terms must previously have been used to denote that which was distinctive and which had a certain identity of meaning for all concerned. Only as complexity of life and thought increases do the differences in meaning and application have serious consequences; and it is only in those periods where the religious and non-religious concepts become harmonious that the varied aspects of life and thought are in a state of equilibrium. The presence of some body or system of thought at one time guides and regulates, and at another it represses. It is weak or lacking at critical periods of the development of both individuals and peoples. Then it is that men, being without the help of a system tested by past experience, are at the mercy of ideas—new, original, extreme, and outside the limits of what had been normal. The nature of personal experience is profoundly varied, and of great subjective significance, whatever be its value for the environment. The less normal

¹ W. R. Smith, *Rel. Sem* 2, p. 439. See, generally, G. Gallo-way, *The Principles of Religious Development*, London, 1909.

² G. F. Moore, *Hist. of Religions*, I, 174, 194.

experiences and convictions which abound at the critical periods resemble the rarer examples at other times, when, instead of a prevailing dislocation and incoherence of life and thought, there are relatively few individuals out of touch with the system and conventional thought of their day. That men of conspicuous religious and other genius are not always normal (*i.e.* not in harmony with the average life and thought) is well known; and for the science of human nature it is significant that (a) the great figures to whom the world's thought is indebted often had unmistakable human frailties and shortcomings, even of a sort that shock the average 'conventional' thought, and that (b) the 'religious' life itself is characteristically described as a constant struggle and fight.

(3) Religious and all deep experience points to profounder realities than ordinary human thought can realize; and in fact the institution of special individuals (priests), places, and seasons is due partly to the necessity of regulating man's life in a socially beneficial manner, so as to adjust ordinary life and the consciousness of some overpowering ultimate truth. Did not religion express some realization of what was felt to be overwhelmingly vital, it is impossible to find an explanation of the facts and the vicissitudes of religion, or of the relation between them and man's knowledge of the universe. The more intense experiences are the basis of reflexion, and they develop the experiences of others. The great religious works represent a limit or height which men continue to find stimulating and satisfying to feeling and thought, to aspirations and ideals. They are intelligible because of the similarity of men's psychical nature; they are supreme because they are not surpassed. The religious aspects continue to appeal, and, although there can be a phraseology which makes them lose their value, because they belong to a different world of knowledge and thought, yet by looking beneath the letter it may be possible—by the comparative and psychological methods—to recover the spirit. So, too, rude savage ritual may prove to embody an idea which can be appreciated, though not necessarily tolerated, in the form which it takes. Similar experiences and periods understand and interpret each other; and the fundamental psychical similarity of all men accounts for the similarity in the great recurring ideas and in the convictions of the ultimate realities, and allows the possibility of a certain genuine process of re-interpretation and reshaping of old beliefs. But mere archaizing or a mechanical return to the old—as in Babylonia and Egypt—is decadence, whereas the recovery of the real psychical value of the old and its restatement in accordance with the progress of knowledge, mark an advance, and correspond to what has happened in the history of religion.¹ By the comparative and other methods the religions can be brought into one focus, and the inquirer can go, not only to the great orthodox or classical utterances (Bible, Talmud, Qur'ān, Vedānta, etc.), but also to the experiences, tendencies, and all the facts of man's psychical nature which lie beneath them, and explain their origin, acceptance, and persistence. In this way the relationship between a sacred book and the environment which found in it its highest truths is replaced by that between the re-interpretation of it and the modern environment. In other words, the positive advance of religious thought is always part of that of the total world of thought in which it is embedded; and it

remains, therefore, to turn to some points in the relation between religious and non-religious thought.

(4) Psychological comparison, it will be noticed, brings a reconsideration of the old familiar typology and symbolism of Scripture. There are fundamental similarities relating to a past or future Golden Age, an Armageddon and Last Judgment, and especially to the re-appearance of popular heroes and religious saviours—an *avatār*, Buddha, or Messiah. Moreover, not only are there similar psychological experiences among those who are conscious of a mission, but they are not unnaturally influenced, consciously or subconsciously, by such knowledge as they have of their predecessors.¹ And, as regards the OT and the NT, psychological as well as historical similarities (*e.g.* the Suffering Servant and the Crucified Christ) enhance the familiar insistence in the history of Christianity upon the connexion between the NT and the 'Messianic' passages in the OT, and this interconnexion is of supreme importance for man's religious nature, as apart from the historical data which, in the case of the OT, are entirely problematical, and, in the case of the NT, stand in need of criticism. Further, observation of and reflexion upon the recurrence of similar types of events have suggested the notion of cycles or world-periods. Yet there is always the demand for something permanent, and the Scriptural identification of Alpha and Omega symbolizes a common intuitive feeling of duration or continuity underlying development, of permanence in spite of change. It may perhaps be regarded as the counterpart in time of the idea of the One and the Many in space. Although modern evolutionary ideas seem to favour a 'linear' movement, there is no single line of progress continually shedding old beliefs and truths, and leaving behind what is outgrown. In history, too, the most revolutionary changes appear less drastic when a sufficiently long view is taken, and a continuity is discovered beneath the dislocation of life and thought. What is fundamental is the readiness of the mind to discover continuity, permanence, unity, and structure; and, while religion involves an apprehension and conception of an ultimate reality which is superior to all catastrophes, the vicissitudes of history and knowledge in the past have never caused more than relatively temporary disturbances of the convictions. Only in such unity and continuity has man been able to find a practical working solution of his difficulties and problems; and, since the religious view of the universe claims to be the nearest to reality, it is necessary, therefore, to note some features in the vicissitudes of the religious and non-religious conceptions.

IV. RELIGIOUS AND NON-RELIGIOUS THOUGHT.

—28. The differentiation of thought.—(1) The foregoing sections would, at this point, be properly followed by some account of the steps which lead from the more rudimentary stages of thought to the highly differentiated and specialized thought of modern life (see § 6 [1] *ad fin.*). But it must suffice to say that the comparative study of religion not merely affects the ethical, theological, and philosophical ideas of the inquirer; it also leads insensibly and logically to the comparative study of ethics, theology, philosophy, etc. The typical prevailing religious beliefs and practices imply principles, ideas, and convictions which become explicitly recognized and shaped; they represent the experience, observation, and reflexion of men of different temperaments and at various stages of the history of thought. As a result of continued application of the comparative method similar fundamental and prevailing principles and ideas can be traced underlying the different religious, ethical, theological, and philosophical expressions. Such are, *e.g.*, the presuppositions or the conscious convictions of the individual's continuity, of his intimate relationship with something grander and more permanent than his brief bodily existence, and of a oneness underlying the many various differentiated aspects or divisions of life and thought. Only in the light of such unity can one gain any rational conception of the many complex temperamental and other variations and divergences of thought; these find their logical basis, not in any ultimate heterogeneity, but in processes of differentiation with developments in various specialistic, diverging, and individualistic directions.

(2) Especially noteworthy, therefore, is the comparative study of the phenomena of ecstasy, inspiration, mysticism (*q.v.*; cf. also art. *POSSESSION, SŌFISM, and YOGIS*). Here are

¹ But this does not mean that some one department of thought is wholly adjusted to another. Rather, in every advance, individuals are so stimulated that every department (such as it is) undergoes a development which, like that of the individual himself or of his country, may be either orderly or somewhat drastic.

¹ Cf. M. Anesaki, *Nichtiren, the Buddhist Prophet*, Cambridge, Mass., 1916, pp. 67 f., 72 ff., 95, 97, 100.

involved the rarer psychical states where the individual has intense convictions of a deeper and profounder self, of the One behind the Many, of the Reality beneath all phenomena, or of the Ultimate Truth as set forth in his religious beliefs. The state is always exceedingly impressive and potent; and, all the world over, means are taken to induce it artificially. At a higher stage of development the passage from the more normal state to the rarer is considered more carefully, with a more conscious recognition of the roads, the goals, and the results. In Indian and Buddhist thought, in particular, the problems have been diligently studied; and, instead of the old mythological reification of the illusion (see *MAYA*), or the veil severing ordinary life from the profound states, there have been psychological and philosophical inquiries of a suggestive and fruitful character. The problem as to what stands between man and his inmost self, and between the outside world of appearance and the ultimate truth, is a very real one, forced by actual experience (§ 13 [2]); and efforts were made to analyze and classify (a) the constituents and processes of the mind that has the experiences, and (b) that which was experienced. While Indian thought went its own way, Western thought found its 'spiritual home' in Greece, where the problems were apprehended and treated at a higher and more differentiated stage of development. Consequently the East has preserved more of a primary undifferentiated experience; it has a more immediate view of its reality; whereas Western thought has become highly specialized and 'scientific,' the tendency being for the unity to be obscured, if not ignored. Yet it is soon found that no adequate synthesis can be made by combining the results of extreme specialistic analysis of experience; there is a unity in experience and in the experiencing mind which analysis destroys. None the less, although continued differentiation and specialization tend to destroy the unity and give scantier and more disparate conceptions of reality, every new and genuine synthesis is all the richer for the prior stage of disintegration. Just as all intuitions and immediate views are the fuller when the mind has had a laborious preparatory discipline, so the deep-searching introspection of Eastern thought is to be balanced by the less introspective, less subjective, but more specialistic training of the West; and, while the one has a nearer view of the problem, the other has the better tools, for what is fundamental in the development of religious and non-religious thought is the character of the concepts which both influence and are influenced by the interpretation of experience.

(3) Complexity of thought corresponds to the complex mental structure of individuals who are at a more highly differentiated stage than those in rudimentary society. All classifications, whether complex or not (law, morality, religion, etc.), are the result of growth, and they are not stationary. There is that in the conscience and in the ideals of the individual which tests, criticizes, and adjusts the legal, moral, religious, æsthetic, and other conceptions, principles, etc., of the environment. Such individuals go beyond current conditions and work for an unknown future. To say that they are ahead of their age is to beg the question, for their achievements, whatever their subjective impressiveness, become objectively valuable as they are adjusted to and assimilated by the environment. Hence the development of thought in history must undoubtedly be regarded as the collective result of the innumerable individuals concerned, and the ideals, aims, and processes in the whole environment will then represent some profounder 'whole' which transcends the conscious individuals themselves. At the same time, all existing systems, institutions, categories, and classifications — by which alone rational life is possible — are also transcended by the individuals who frame, accept, or amend them. Thus men are unconsciously shaped by processes, certain aspects or parts of which at least they are able to shape; they are an integral part of that of which they are more or less objective critics. Consequently, the most complete description of reality must take in the developing individual who both controls and is controlled by his conceptions of reality. It is a necessary assumption that of the ultimate realities men's conceptions are imperfect approximations, and consequently even the completest view of reality would have to be regarded as itself the outcome of a natural process of mental development still unfinished and always hampered by determinable limitations of the human mind. So, in all human development there is a combination of the transcendent and the immanent; there is a process

which transcends the men who are consciously and unconsciously a part of it.

29. Fundamental ideas.—(1) Every activity has its necessary conditions and principles, which are indispensable if it is to be successful. Everywhere are to be recognized necessary fundamental principles, all closely interconnected, but recurring in various forms, and associated with our own ideas of efficiency, law, order, right, and truth. Every group and every activity which can be regarded collectively as a unit has its unifying and necessary principles upon which success and efficiency depend; consequently, freedom of action, even of existence, involves adherence to *some* indispensable requirements. Liberty and subordination to law, freedom and discipline, are thus correlative, and they also involve ideas of aim and purpose. In practical life the difficulties usually concern the precise requirements, the relative value of the units and their aims, and the relations between those that impinge or conflict. From the earliest times the social group has acted up to certain obligations upon which group-unity alone could depend; but often it is only periods of crisis and incoherence that manifest the vital significance of principles formerly unrecognized, obscured, or questioned. Now, every genuine feeling of group unity is commonly reflected in spontaneous feelings of collective privilege and responsibility; the members participate in one another's merits and misdeeds.¹ Among rudimentary peoples this unity will frequently include both the gods and the processes of nature (§ 7). Hence, when the gods are felt to be near at hand, the behaviour of the group is bound up with that of the processes of nature controlled by the gods; cf., e.g., the common belief that great crimes will disturb the order of nature. But the action of the gods in thus requiring man's behaviour is only one form of a fundamental conviction uniting man with the rest of the universe. Often certain representative individuals are directly connected with the welfare of the people or land, and they are responsible for drought and other disasters (§ 25 [3]). But, if this applies to the evidently conspicuous men, who is to determine who are 'the salt of the earth' (Mt 5¹³)? The fundamental ideas, partly of common responsibility, partly of a profound interconnexion, re-appear in ritual, ethical, and other forms, in the ideas implicit in 'magical' control or in 'religious' prayer, in explicit curse or appeal, and in vague denunciation and adjuration, in instinctive ideas of retribution and recompense, and in emotional, poetical, and æsthetic feelings of man's kinship with nature or the universe. And notably in law and justice, and in the instinctive resentment to what is felt to be inimical to human welfare, the individual is no longer an 'individual,' but as his 'brother's keeper' implicitly associates himself with the progress of the universe as a whole and with the upholding of its principles, in so far as he realizes and can apply them.

(2) There is a continual rediscovery of a universal unity and interconnexion which specialized thought must necessarily ignore. But confusion arises when concepts, the result of such specialization, are criticized on account of what they lack, as, e.g., when nature is spoken of as impersonal, blind, and morally and spiritually indifferent. Now, in so far as conceptions of nature have been based upon phenomena where personal, moral, and spiritual aspects are irrelevant or out of the question, such criticism is beside the mark. Moreover, it would ignore the order, uniformity, and regularity which are indispensable for the processes of nature, and which are the counterpart of the requirements of every effective and ordered human society. The behaviour of animals and young children cannot be discussed throughout in terms of adult psychical life (e.g., ethics, insight, learning, etc.), but they commonly manifest

¹ Conversely, from an examination of customs, light can be thrown upon an otherwise barely recognizable social system (as by W. R. Smith, in his *Kinship and Marriage in Early Arabia*², London, 1903).

what in their sphere corresponds, in a rudimentary way, to the attributes that we apply, in another sphere, to adults. Similarly, the processes of nature are the 'natural' counterpart of the anthropomorphic processes in the 'psychical' realm. The 'natural' and the 'spiritual' laws reflect essential similarities differently shaped according to their realm. Moreover, a law is from one point of view the essential principle of some effective process or activity, while, regarded subjectively, it is our most essential, reliable, and effective formalization of the regularity of phenomena. True, the concept law has undergone different vicissitudes as nature and human society are considered separately; but what appears to be fundamental is that in a 'natural' law there is involved the explicit recognition of some immanent and effective principle, while human law is not really 'man-made' and 'imposed,' but is the attempt to make explicit the conscious recognition of what is essential for the better efficiency of human life, although for this purpose laws as prohibitions of what hinders successful growth become more conspicuous than the positive requirements of what ensures it.¹

(3) (a) The objective value of every group or activity lies in its relations to others, and ultimately, therefore, to the whole of that of which all of them are part. This applies equally to principles, ideas, concepts, and theories; their real value is tested by their relation to a larger field than that where they are first recognized. So the value of all that can be treated as a unit or whole lies in its place in the ultimate whole; and in practical life there are conflicting theories, activities, principles, groups, and so forth, which force the conclusion that either the ultimate realities are incoherent and discordant—which is clearly irrational—or there is a final solution which we shall judge rational. Of such conflicts those between law and mercy, or between 'nature' and the individual, may be specially mentioned. Yet the highest love is compatible only with the strictest regularity of cause and effect; and God's forgiveness of the penitent sinner is not arbitrary, but in conformity with some greater law, some profounder conception of justice. Moreover, in 'nature's' regard for the whole lies the hope of him who is an integral part thereof; for by nature's disregard of the individual we mean the conflict between our largest 'scientific' concept of order in the universe and the ever-developing individual who can command Nature only by obeying her. In either case there is a higher explanation, such that the absolute uniformity (order, justice, or love) is for the ultimate advantage, happiness, and consolation of those who can realize its sway, although offenders and others may suffer by rebelling against it. To pursue this further would be to turn aside to the 'burden' of the law, the question of free will, and the need for mediation and atonement.

(b) The power and responsibility of the individual are seen in the fact that, just as the total conditions at any time are the result of everything that has preceded, so all men are jointly and severally contributing to the good and evil conditions of the future. Consequently, the religious aspect is particularly significant, whether when evils and wrongs arouse the cry, 'Can there be a God to allow such things?' or when men more or less instinctively feel themselves the guardians of justice and order in the universe. An orderly and just universe is the underlying postulate. All insistence upon the worth of the individual is, therefore, a deeper and more personal expression of the fundamental inter-connexion of the universe, of the autonomous value of all the constituents, and of the entire dependence of the efficiency and welfare of the whole upon all the constituents.² Throughout, we have to seek a rational explanation; for, as apart from the question whether the universe is ultimately rational, only by treating it as such can we find any basis for our ideas, avoid mental suicide, and develop in the future as we have in the past. The most perplexing vicissitudes lead now to

¹ Another important example of specialization with tendencies to forget the undifferentiated aspects is afforded by the contrast between the terms 'psychical' and 'physical.'

² Cf. esp. the ideas as expressed in Mt 10^{20c} 13¹²⁻¹⁴, Lk 15.

doubt, scepticism, and despair, now to some firmer and wider conception of life; but the latter has been the line taken in the history of progressive thought. Self-sacrifice and renunciation of all that is most obvious and tangible find their rationality in the conviction that the unknown will bring a greater reality than the known. So, too, the frequent disturbing success of evil is a guarantee, not of lawlessness, but of the success of perfect good; for, when evil succeeds, there are, on analysis, factors which in themselves make for success, and, when good fails, once more analysis reveals factors which have not the elements of permanence and progress. And, when examples of this are clearly realized, one gains a more rational conception than if good and evil are treated as absolute, conflicting entities. The ultimate must be regarded as rational, else there can be no ordered life or thought.

30. Myth and knowledge.—(1) Ideas of the fundamental unity of the universe are implied also in the remarkable imitative and other ceremonies where men represent spirits, gods, etc., or perform the desired 'natural' processes themselves, or otherwise act on the assumption that the effective controlling powers can be moved (cf. § 19). In addition to this, the recital or description of processes or operations is often felt to be potent, so that, e.g., myths are not things to be lightly or irreverently spoken, because they arouse the sacred beings to whom they refer. Hence the commemoration of stirring and sacred events in the past has a very real value for the future; it stimulates appropriate feelings and ideas, and gives a new and intense vividness to the reality of the sacred beings who are the sources of action.¹ A very great part is taken in religion by imitation and mimetic representation, and to these processes of absorption and identification can be joined the deep mental concentration and the effort to realize for oneself beliefs and truths. In this way ideas are realized, if not refuted; they are so assimilated that, e.g., in ancient Egypt an effective means of escaping the perils of death was to identify oneself with some saving god who had successfully overcome them himself.² From the myths and traditions which concern the great things of life it is an easy step to the esoteric aspects, the secrecy of all knowledge which is in any way potent. Not only are there innumerable examples of the fact that knowledge is power (cf., e.g., the possession of the name of a god), but the psychological effect of increase of effective knowledge upon the individual is exceedingly instructive from the religious point of view. The inter-relations between knowledge, wisdom, reverence, and the 'fear of God' are, however, disturbed by the progress of thought and by the usual arbitrary and subjective distinctions between sacred and 'secular.' None the less, it will be freely admitted that moral and ethical qualities (sincerity, intellectual honesty, patience, sobriety, moderation, etc.) are requisite for the best 'secular' and 'scientific' labour; and in this way the whole self, and not a human intellectual machine alone, is involved. Thus the complete outlook (*Weltanschauung*) of the individual becomes, so to say, the mathematical function of his current stage of intellectual, ethical, aesthetic, and

¹ Cf. the influence of traditional history upon Israel, and note, e.g., Hab 3, the commemoration of the Deity's deeds in the past, the present distress (v. 17), and the brave confidence (v. 18). Cf. also the naive attitude (between confident 'magic' and submissive religious 'humility') in Nu 14^{15f}, Dt 9^{27f}.

² Moore, *Hist. of Religions*, i. 174; cf. 162 f., 165, 194. The same psychological process appears in both Buddhism and Christianity. The numerous beliefs and practices which illustrate the connexion between thought, action, and reality are of the greatest interest for theories of causation and knowledge, for which it must suffice to refer to Durkheim (bk. iii. ch. iii. § 3, Eng. tr. p. 382 ff.).

spiritual development; and, in so far as 'like is known only by like,' the completest conception of reality requires the completest conceivable development of personality.¹

(3) All myths and all conceptions of the universe, even the most extreme, have a threefold value: (a) they purport to add to our knowledge of reality; (b) they illuminate the mental structure of the inquiring, reflecting, realizing individual; and (c) they contribute to the further study of the way in which the mind experiences and interprets its experiences, and thus point to the nature of the objective realities which can be so variously apprehended. The emotional, poetical, metaphorical, and undifferentiated characteristics of myths correspond to the psychological character of those who frame and accept them. The spontaneous mythologizing, anthropomorphizing, and personifying mind always persists, and it contrasts with the careful intellectual efforts to be objective and impersonal, and to avoid irrelevant or misleading concepts. While myth is 'personally' interesting and intelligible, it is, when at its best, 'super-personal'—like the ballad—representing aspirations, ideas, and modes of thought that are collective, national, or universal, and not merely individualistic. In course of time the myth may become a fixed, authoritative statement, embarrassing the movement of thought; then its crudities and imperfections will perplex the faithful, fortify the sceptic, and even excuse the wrong-doer. It may then pass from being 'super-personal' to 'impersonal,' when it is no longer in touch with the people. There will be a failure to analyze and distinguish the permanent from the impermanent features—although this distinction is always made unconsciously by all who uphold any body of religious or other thought against their opponents. The more empirical knowledge, on the other hand, will avoid the arbitrariness and subjectivity of myth, but it tends to leave out human personality with all its richness of feeling and potentiality. It will present a synthesis which is in no sympathetic relationship with the experiences of the generality of mankind. It will acquire a false 'impersonal' objectivity, and become dogmatic, restricting personal development. Hence, although science and religion can exist for a time side by side, sooner or later the question arises of the validity of their several concepts and of their value for the further progress of personality.²

(3) The course of thought is directed by what is known, and it is in terms of familiar experience; so, e.g., cosmical processes have commonly been thought of in terms of human vicissitudes (birth, conflict, marriage, death). In like manner, on other levels, democratic ideas, sovereignty, or an age of mechanism will be reflected in both the religious and the non-religious thought.³ Conceptions of the universe are influenced by the current conditions, and *vice versa*; and in the development of thought the efforts to explain experiences and phenomena often proceed without the necessary reference to the primary data themselves. The psychological and logical paths then diverge, and the fluctuations in the progress of thought can be illustrated in the varying personal and impersonal conceptions of Providence, Nature, God (cf. the word 'agency' itself, used of both process and agent). The result is that isolated religious terms no longer have their primary subjective content, although there may be noble and quasi-religious feelings outside the religious phraseological framework, and associated, e.g., with art, science, or humanity. The expression of feelings, it is true, may seem to partake of the nature of religion, yet, from a point of view which must be regarded as primary and ultimate, religion must be treated as *sui generis* and distinctive (§ 33 [3]).

A belief in a life after death has no ethical or religious value in itself, and a monotheistic religion is not always superior to a henotheism or to the polytheism which most practical religions

are. The word 'God' may express more of a logical or intellectual necessity than the personal experience of a Supreme Being; yet the experience of some transcendent 'Presence' is not necessarily interpreted as that of a deity, and men have had their *daemon*, guardian-angel, or some psychologically effective experience, which has been identified in harmony with their conceptions of reality and the thought of the environment.

The interdependence between experience, interpretation, and the development of thought is well illustrated in the vicissitudes of such words as *Heaven*, *στοιχία* (see *EBI*, s.v. 'Elements'), the Chinese *Tao*, *Tien*, *Li*, and the Buddhist *Dharma* and the various personal, ethical, universal, and metaphysical conceptions of Buddha himself. A simple and typical example of development is afforded by ceremonial washing, which is religious or magical according to the precise ideas that accompany it (cf. p. 674ⁿ, n. 1). If it persists as a mere rite, the efficacy lies merely in the ritual, and not in the psychical state, and this is 'magic.' Proceeding to the other extreme, men avoid the ceremony with its beneficial and utilitarian aspects as a piece of worldly luxury, and misguided religiosity delights in afflicting and tormenting the body. Again, the utilitarian purpose can be retained and the religious aspect ignored, and this secularization is very common in the history of culture, of the use of astronomy, anatomy, and medicine from the astrological and more or less 'magical' soil in which they once flourished. All such changes are significant for the relation between the psychical states of the individual and the ultimate realities.

(4) The developments in the history of religion furnish valuable material for all conceptions of the relation between the religious and the non-religious aspects of life and thought, and for the criteria of religion. One can scarcely allow with Schiller that he who has art and science has also religion, though religion should possess the immediacy and beauty of art, and both it and science should be in touch with reality; or with Matthew Arnold that religion is the application of emotion to morality, though religion without either would hardly be so styled. Thought cannot be treated so atomically, and the fact is that purely non-religious thought can or cannot find a logical place in a religious system, and *vice versa*, just as two departments of natural science may be in some respects entirely separable, but in others may so intertwine that the problems of the one cannot be severed from those of the other. Now, the evident seat of all the varying relations is the individual mind and the connexion (such as it is) between the entire contents involved in its concepts and ideas. Differentiate as one may the religious and the non-religious, the moral and the non-moral (where morality is irrelevant), and the emotional and intellectual, all these find an ultimate common ground in the whole individual; and it may well be the case that the final aim of 'science' is not the perfect systematization of the many diverse tendencies and departments of thought, but the systematic treatment of the systematizations—of the metaphysical, the philosophical, the theological, the scientific, and all other minds ratiocinative and naive. Co-ordination of different legitimate interests, and not a perfect homogeneity of interests throughout will then be the goal.

31. Immanence and transcendence.—(1) Characteristic of religion is the combination of the known and the unknown, the natural and the supernatural, 'this' world and 'the other,' immanence and transcendence (see art. IMMANENCE). Despite all that can be said against the second member of each pair, they are the outcome of experience; and, while the difficulty has been to give a rational statement and justification of the experience, counter-criticisms and objections, often of a crudely rationalistic kind, overlook the prevalence of similar types of experience, and attack the particular forms in which it is interpreted and presented. The members of each pair are correlative; and therefore, as regards the last, conceptions either of immanence or of transcendence taken separately have neither permanence nor progressive value. The belief in a transcendent Deity has led to religion falling into the hands of the few; the God of the State or of the Church has seemed remote from the ordinary

¹ So, too, the great religious and other leaders, through their own total personality, have enabled their disciples to gain deeper and more powerful conceptions of reality.

² On the whole subject of mythological and scientific thought, and on the influence of personifying even in science, see Olive A. Wheeler, *Anthropomorphism and Science; a Study of the Development of Effective Cognition in the Individual and the Race*, London, 1916, esp. p. 130 ff.

³ Cf. § 9 (2), and see G. Murray, *Four Stages of Greek Religion*, New York, 1912, pp. 112^f, 115, on the conception of Fate as a goddess just at a period when men's fates seemed to bear no relation to their merits or efforts. Cf. also the interest in eschatology, the millennium, and a new age at the present day (see S. A. Cook, *The Study of Religions*, pp. 136, n. 2, 302). For a methodical treatment of the inter-relation of different branches of thought and their vicissitudes the work of Wilhelm Dilthey may be especially noted.

individual, and the latter has relied upon some intermediary, or else in some more private or individualistic cult has found an outlet for that which the institutional religion would otherwise have guided and developed. In the course of this process his experiences, ideas, and conceptions of reality clearly undergo profoundly important changes. Again, in the Deism which makes God a supreme majestic Being with no place in ordinary life and thought, He becomes as remote as when He is thought of as unknown or unknowable. Thus the concept may be characteristically intellectual, and without the immediate personal significance which it has when God is felt to be near at hand. But, when in many forms of popular and personal religion God is felt to be near, this feeling of His greatness can subsequently be lost, and then the gulf diminishes between the frail individual of a few decades and the Supreme Power of an inconceivably vast universe. Through the experience of immediacy there is no need felt for priestly ritual, ceremonial, dogma, or mediator; even reverence may disappear. Thus both immanence and transcendence have their extreme logical sequels. The God who is solely transcendent becomes remote and unknown: to say that there is One whom man cannot know is at first to recognize an incompleteness; but the next step is to be unconscious of the gulf, and then to ignore how the experience of it could ever arise and persist. On the other hand, the conception of the immanent God is near to pantheism, and so can lead to the absence of any religious distinctiveness in the term. In this way the distinctively *religious* content of the concept God is lost; and, while it is easy to trace the secularizing process, it is impossible to explain the personal meaning and psychical value of this supreme concept, unless *some* immediate personal experience is regarded as logically primary. The history and vicissitudes of the concept become intelligible only if the immanent and transcendent aspects are retained, only if there are ultimate realities of the universe—of human existence—of which these apparently paradoxical terms attempt to interpret the experience.

(2) The religious ideas of immanence and transcendence are a fundamental part of human nature, and are but the most intense form of what otherwise is not peculiar to religion. They find some analogy in human relationships (e.g., between parent and child), where complete understanding and friendliness co-exist with respect, reverence, and a consciousness of a psychical gulf (cf. § 12 [3]). Moreover, there is a similar co-existence as regards the attitude to those great human figures who are not isolated, unintelligible, or extreme, but who are at once on a much higher level than ourselves, yet are felt to be thoroughly intelligible and near to us. It corresponds with this that every individual can gain a more vivid realization of himself and a profounder and more potent personality when he sinks and subordinates himself to that with which he identifies himself, so that, in apparently becoming one with the environment, and therefore 'lost' in it, he rises above it and transcends it. It is the paradox of religious and other thought that, according to the view-point, the processes of the universe can be described 'naturally,' so that men have no need of the concept God, or 'in him we live, and move, and have our being,' and the experiences of immanence and transcendence co-exist.

(3) The key to the correlatives, mentioned above, lies in the progressive development of the individual, and in the phenomena of imitation and attraction which are familiar in personal, religious, and non-religious experience and are invariably significant for personality.¹ Development follows in man's striving to satisfy needs, reach goals, follow ideals, attain some psychical equilibrium, or bridge some gulf. It is essentially no passage from the known to the unknown, but a clearer or

¹ Cf., e.g., the *Imitation* of Thomas à Kempis, and the well-known words of St Augustine, 'Lord, Thou hast made us for Thyself and our hearts are ever restless till they rest in Thee'; also the frequent testimony of those who admit themselves led by degrees ('One step enough for me') towards a Supreme Personal Being or to some personally vital ideal or goal.

newer apprehension of that of which one was already in some degree conscious. But here the process of attraction, when there is a successful issue, is readily followed by a deadening satisfaction and complacency which would impede further progress. Not only in intellectual development (e.g., the search after some hypothesis), but most significantly in personal relationships of all kinds, can the psychical gap which formed the attraction give place to indifference. Yet, however complete the subjective feeling of finality may be, the passage, transition, or development is not objectively complete, and especially in religion there prevails a spiritual pride, arrogance, or consciousness of 'election,' which is as harmful for the further progress of the individual as for religion itself (see § 32 [2]). Even the saint has still to strive and may yet fall; and various attempts are made to determine the final goal of human development, and to distinguish, e.g., between conversion or baptism into a 'new life' and the state after death (*q.v.*), or to determine whether the final stage is reached immediately after death or after some purgatory.¹ The most intense consciousness of the ultimate realities appears readily combined, now with a greater complacency, but now with a profounder feeling of weakness and unworthiness, when the very nearness of the 'divine' enhances the frailty of the individual and his entire dependence upon God. Whatever be the best formulation of the experiences and their consequences, the 'healthy' and 'whole' development of the individual is at stake, for all development depends upon the possession of some transcendent object of attraction which shall call forth the utmost from the individual and be for the completest growth of his personality.

(4) All ideas, aims, needs, and quests are potent for personal development; but men's varying attitudes to some manifestation of 'divine' discontent, as it is felt to be, illustrate the difference between its singular impressiveness for the subject and its worth as viewed from the outside by others. Personal development is due both to the individual nature in its entirety and to the total environment. Thus the child is influenced in varying degrees by toys, animal-pets, playmates, parents, teachers, etc. His potentialities are actualized and shaped by the 'object'—by its psychical inferiority, equality, or superiority, and by its ability to respond to the child and to shape his growth. There is a subjective feeling of personal relationship even with the toy and the animal, as distinct from the objective personal or impersonal character of the 'object,' whatever it be. So, too, in the history of religion the centre of religious beliefs and practices has been inanimate or animate, totem, spirit-guardian, or ancestor; and there has been throughout a (subjective) feeling of 'personal' relationship, although in course of development we pass (objectively) from the totem, fetish, or idol to a Supreme Being. Whatever be the actual realities, whatever part a Supreme Power—or any process outside man—takes in shaping this development, it is at least possible to recognize that men's ideas will be shaped differently according to (a) their empirical knowledge of the totem-animal or bird, the deified ancestor, and so forth; and (b) the conceptions which they entertain of the sacred object or being, whether visible or not. The latter, (b), is fundamental, for in both religious and non-religious thought development depends on the full meaning of the concepts used.

(5) It is of course evident that neither the empirical objects nor the conceptions of any object can *in themselves* account for the phenomena of religion—it is precisely when the totem is

¹ Cf. in Buddhism the distinction between *Nirvāṇa* and *Parinirvāṇa*; see also vol. ix. p. 378^b (4).

merely an animal, when the once deified ancestor is merely a dead man, or when the god is merely a name or an intellectual term, that the distinctively religious colouring is wanting. It is this colouring that is primary, and what is impressed upon the consciousness of the individual is that which is logically anterior to the phase where the distinctive religious colouring is wanting. The correlatives (immanence and transcendence, etc.) could not arise except together and in some sort of system (see § 3a); and there must be some awareness of the as yet unknown and unattained, as apart from what is already known and attained, else there could be no consciousness of an incompleteness. What may be felt to be a whole is but part of some ultimate whole; for one can attend only to parts or aspects of things at a time, and the individual can present only the results of his own individualistic and partial development. By means of objective comparison, therefore, something can be determined of the ultimate worths and values which men collectively or individually feel to be essential for themselves or for the universe. Whatever the completest totality of experience and consciousness may be—and this would at least require the most ideally complete personality—exhaustive classifications can be attempted (e.g., the categories of the Good, the Beautiful, and the True); and these point conclusively to the objective inadequacy of any conceptions of the ultimate facts which concentrate upon particular parts or phases (e.g., humanity, nature, or art), and ignore values which other individuals insist upon conserving.

32. The religious system.—The greatest religious conceptions imply a system which is rational, disciplinary, and dynamic. (1) The psychical experiences which alone explain the origin and persistence of the characteristic religious concepts of the holy, supernatural, sacred, etc. (as opposed to the common, natural, secular, etc.), are followed by an assimilation wherein the primary immediacy, freshness, or uniqueness is deadened or lost. The actual process of secularization applies rather to parts, whereas the reverse process (idealization, sanctification) affects whole psychical states or systems of ideas (cf. p. 672ⁿ, n. 2). Various steps have everywhere been taken to induce the valued psychical states and experiences; and the difference between the rarer states and the ordinary ones is between two phases, orders, or realms of existence—the real problem is to describe the data adequately—such that the sources of the conceptions of 'this' world and of the 'other' lie within the scope of the single individual, and the character and interpretation of the rarer states are conditioned by his prior development (cf. § 14 [1]). Individuals will usually connect the rarer states with the objectively 'divine' (cf. also 'divine' discontent, above, § 31 [4]); but the social, intellectual, and generally rational value of the consequences of the states is prevalently tested, and every claim to inspiration and other divine privileges is, sooner or later, submitted to intellectual, practical, social, and ethical tests. Good and bad mysticism, true and false prophetism, beautiful spirituality and harmful religiosity exemplify the necessity of objective tests; and the environment or the course of history enables one to determine the result. Thus the supernatural and unknown in religion are not necessarily taken at their own valuation; the average prevailing type of mind insists upon passing its own judgment upon the data, and the holy is so, not because it happens to survive or is merely imposed upon men (cf. the notion of 'survivals,' § 4 [2]), but because in the long run the mind, of its own will, recognizes it as such. The natural and the supernatural, the known and the unknown, come within the horizon of the individual consciousness, and in the lengthy history of religion the prevailing, practical, average opinion spontaneously recognizes the necessity of distinguishing between good and bad religion—a distinction which again and again individuals are genuinely unable to realize.

(2) Entirely characteristic of the experiences of the 'divine' is the consciousness of uplifting power and strength, such that the self-confidence and mastery which characterize 'magic' have a certain kinship with religious confidence and conviction. But 'magic' has no place for transcendence; and

a very striking feature throughout the history of religion is the recurring insistence upon the gulf between the human and the divine—an emphasis upon the transcendent rather than upon the immanent. In religion, generally, the two fundamental conceptions of *mana* and *tabu* (q.v.) are correlative: on the one side, the wondrous power which man may, can, and should utilize and, on the other, the indispensable heed and caution; for *mana* without *tabu* becomes magic, and *tabu* without *mana* can lead to grovelling superstition.¹ This co-existence is the outcome of the need which is experienced for the two. It is extremely instructive to notice the data preserved in the Bible, for the religions of the Semites, as opposed to Indian quietism and pantheism, and to Chinese practical ethical religion, constantly manifest a passionate vehemence which in its religious aspects will at one time insist upon the might, jealousy, and arbitrariness of the Deity (corresponding to the psychology of the old Oriental despot), and at another will emphasize His favouritism for a people or for an individual who is the divine instrument, representative, or incarnation. The data in question are of the 'fall of Lucifer' type (Is 14¹²), where the gulf between man and God is arrogantly or wrongfully ignored.² Hence, also, the Israelite conviction of divine privileges is very intelligibly balanced with ideas of greater responsibility, as in Am 3². Yet the religious data, profoundly vital as they are, are in harmony with the non-religious parallels in ordinary human nature, in the recognition of certain gulfs not to be bridged, in the detestation of arrogance, of conceit, and of *ὕβρις*, in the need of modesty in good fortune and success—even to the feelings underlying the 'evil eye' and 'touch wood.' So also, in taking too much for granted or in trifling with one's deepest realizations and ideas, there is a recognition of the vital necessity of dignity, respect, reverence, as regards both oneself and others, in order that personality may develop wholesomely. These disciplinary and dynamic features of human nature are only more comprehensive, personal, and ultimate in their religious counterparts, and they tend to form a system, and that a dynamic and not a static one.

(3) Among rudimentary peoples the initiation ceremonies not only prepare the youth for tribal life, but at a critical physico-psychical period provide him with regulative and steadying ideas.³ Social-religious beliefs and practices cover the matters of everyday possibility, which, however, are of the deepest significance for the individuals concerned (§ 6 [1]). Where the individual is thrown back upon himself, so to speak, in all the great crises and occasions of life, a way is found between what would be utterly indifferent, callous, and animal-like and what would tend to be ultra-sentimental, emotional, or ascetic; for either extreme would preclude practical life and could not long persist. Thus, although the 'other world' is so near that death is nought, yet to act heedlessly upon this would be dangerous. Moreover, the intuitive feeling of disapprobation, fear, and dread as regards suicide is confronted with an intuitive appreciation of all self-sacrifice. Killing in war and murder are commonly distinguished even among the lower religions. There is a recurring average recognition of what is essential for continuous progressive movement, and the conventions touching sacred and delicate matters afford

¹ See especially R. B. Marett, *The Threshold of Religion*², ch. iii. f.

² Viz. the story of the expulsion from Eden (Gn 3^{22ff.}), the King of Tyre (Ezk 28¹⁴⁻¹⁹), Nebuchadnezzar (Dn 4¹⁰ 34, Jch 2¹² 62 4), the tower of Babel (Gn 11¹⁻⁹), Moses and Aaron (Nu 20¹² 24 27¹⁴, Dt 32⁵¹, Ps 106⁵⁸); cf. also the stories of Nadab and Abihu (Lv 10¹⁻³) and Uzzah (2 S 6).

³ See Marett, *The Threshold of Religion*², p. 169 ff., 'The Birth of Humility.'

many examples of one aspect of a self-educative and disciplinary process whereby life and thought are systematized so that with every new growth of consciousness the individual may be able to develop in a way useful to himself and others. Things may be true (*e.g.*, God's forgiveness of the sinner), but the truths do not and cannot exist in isolation, and the system of which each is part goes to the depths of the individual. Therefore the individual is now infinitesimally small and frail, and now one whose beliefs and practices unite him with the greatest and most ultimate realities. And truly life would seem irrational save as a part of some larger existence, and the severity of its discipline unjust save as a training; the audacity of man's aspirations would be childish or outrageous save as a genuine though imperfect apprehension of actual realities, and his humility and sense of unworthiness unintelligible save as an education for other responsibilities and privileges. The ideas in religion are not merely intellectual; they can be psychologically and subjectively effective.¹ The ideas are not merely cognate to those implicit or explicit in non-religious life and thought; they also represent the apprehension of realities which are nowhere set forth in completely systematized form, but which appear (when religious and other thought is compared) in many independent and variously differentiated forms. There is not some single body of truths 'imposed' upon men from without, but there are truths of which men become conscious in their own individualistic, specialistic, temperamental manner, and according to their own development and that of their environment.

(4) The common psychological effectiveness (*a*) of artificial means to produce mystical and similar states, (*b*) of magical beliefs and practices, and (*c*) of all else that could be styled superstitious or irrational brings up again the difficult question of ultimate and absolute rationality. Whether the answer be in terms of theism or not, conceptions of ultimate order, power, and rationality are involved: thus it is 'God' who sees into the hearts of His children, grants their legitimate wishes, consoles and guides them; or it is in 'the nature of things' that what is effective is so for reasons which, if we only knew them, we should judge rational. If the absolutely irrational or evil succeeds, there is no foundation for ordered life and thought; only the postulate of an ultimate and absolute good and rationality allows any systematization of experience, and our human nature is ultimately deceiving us if this postulate is not true and final (*cf.* above, §§ 28 [3], 29 [3]).

Moreover, it is evident that many beliefs and practices (*e.g.*, in oaths and curses), however irrational they may appear, are effective only when all share similar ideas or convictions.² The whole system of cause and effect becomes self-supporting, as it were, and a pseudo-rationalistic condemnation of the credulities of a past age is not so helpful as attention to the efficiency of the system in which one lives—the dead must be left to bury their dead. Besides, condemnation is not only the recognition of a standard by which one may be judged in one's own turn; it is due to a new development of consciousness which is significant for the individual himself. Finally, all condemnation seriously affects one's conceptions both of theodicy and the rationality of human nature and of the ultimate order of the universe; the choice lies between absolute justice and absolute chaos, but the latter is logically unthinkable.

33. The dynamical aspects.—(1) Fundamental in development is the explicit recognition of evil which apparently was not regarded as evil, and of all that which can no longer be done with impunity. When good comes out of evil, either evil has not been justly punished—and this would mean an

¹ The pragmatic test—that the religious truths can be proved by the individual—is so far conclusive as against the objection that everything that we conceive (*e.g.*, Kant's case of the dollars in his pocket) must exist. The religious argument is that there are truths which are the outcome of actual experience, which can be elaborated and described, and which under certain conditions can be put to the test, so that the description (seemingly intellectualistic) in one case can be part of a living experience in another.

² To take a simple case: in 1 S 25:32-39 (*a*) David commits his cause to Jahweh, (*b*) the guilty Nabal is conscience-stricken and dies, and (*c*) the immediate common ground is the body of convictions shared by David and Nabal. But the psychological effectiveness of witchcraft, black magic, etc., rests equally upon the system of ideas shared by the parties concerned.

ultimately irrational universe—or, in the midst of a complex process and among all the subsequent vicissitudes, good is seen to predominate. But to do evil that good may come is to assume a complete knowledge of and power over all the processes or factors that are necessary.¹ When, therefore, in religion God's grace or help is implored, the hope is implied that, as apart from man's own activities, the Supreme Being will ensure the co-operation of the totality of conditions necessary. The whole system of cause and effect is involved, and it is precisely in times of difficulty and crisis that, where religion enters, this union of human and non-human (and so divine) factors always persists. If the convictions are sincere, the subjective and objective aspects can be viewed separately. The unanswered prayers, and other instances of defeated hopes, are not necessarily followed either by despair or by unbelief; there are subjective psychological transitions and developments which are often more recognizably significant for the individual than would have been the objective fulfilment of the particular request. Throughout, the sincerity of the individual is at stake, and various developments are forced as his faith becomes blind, as his behaviour becomes 'magical', or as he seeks to determine what processes are 'natural' and what are not. To expect God to act contrary to one's explicit convictions of Him, and of the inevitable processes of nature, is a mark of unsystematized thought which paves the way, not for simple faith (which has no theory of causation), but for crude superstition; and it easily happens that popular—and other—naturalistic and materialistic conceptions of the universe do not logically permit those subjective notions and convictions of the ultimate reality which are expressed in more or less religious terms. Man cannot have it both ways, and his conceptions of God's power or existence, if claimed to be rational, must be in harmony with those which he has of 'natural' processes, and *vice versa*. So—to mention only one point—it becomes irrational for the individual to protest against conditions without inquiring into the nature of that freedom and liberty which he claims for himself; he has first to see whether the fundamental principles upon which he is entirely dependent are not those which are working in that which he is condemning, and whether what he condemns is only another form of that upon which he himself relies.

(2) Men can justly be judged in the light of those principles which they consciously recognize, although their beliefs and practices imply a profounder system in which they are unconsciously participating. The growth of consciousness breaks down the current concepts; they are no longer taken as starting-points, but are first tested in the light of the individual's own experience. It is a 'deeper' self that criticizes the categories, terms, and thought of its environment, and all profounder experience transcends them and commonly finds them inadequate. Development results, not merely in the use of new terms and formulas, but more especially in the subjective changes, the attitudes, points of view, the contents of one's terms, and in all that fresh flow of experience which language seeks to interpret and express. Now all deeper feeling compels a certain modification and adjustment of thought, and all sincerity and intellectual honesty force a certain systematization—although unfortunately the data which are not readily amenable are easily handled in some new Procrustean manner (see § 15 [2]). In the long run sincerity and genuineness are more

¹ Thus it is recognized in common life that the sweetness of the reconciliation after a quarrel does not justify another quarrel to reproduce the experience, nor, in the religious sphere, does the 'grace abounding' for the penitent sinner justify continuance in sin (Ro 5:20-6:1).

potent than what is cynical, indifferent, and merely conventional; and throughout human history, wherever 'lower' and 'higher' alternatives were recognized, the latter alone caused progress. Were there no sense of the lower and higher, there could be no consciousness of progressive development. The lower and all less desirable features have no elements of permanence or progress in any rational universe, while the higher constantly elude an immediately natural explanation, and manifest themselves in self-sacrifice, renunciation, self-denial, faith, and confidence in the future or the unseen. These higher factors are familiar in both the religious and the non-religious life; and either one must infer that progress is due to the apparently irrational side of man, or—since this, again, allows no ordered conception of the universe—the factors must be treated as thoroughly rational, by regarding the individual as part of the environment, or rather as part of the realities of the universe itself—an ultimate rational and interconnected 'whole.' It is impossible in the long run to sever human activities from those throughout the entire universe, and, although it is necessary to differentiate for practical purposes, the differentiation is never consistently carried out, and there is throughout a virtual co-operation of processes, variously regarded as 'human,' 'divine,' 'natural,' 'supernatural,' and 'cosmical' (cf. § 28 f.).

(3) (a) The factors that make for progress and development do not exist in isolation and cannot be severed from the field where they are manifested. Further, all that makes for permanence and progress must form the basis of conceptions, not only of religion, but also of science, art, ethics, etc. Hence, though religion in the course of its history has had very many extreme, unlovely, unprogressive, and impermanent features, these cannot go to form any critical or scientific conception of what it has been, is, or will be. Men's ordinary working concepts are based upon the persisting and average conditions; and, although thought thus seems to move in a circle, apparently determining what to select for its purpose, not only is the process inevitable, but each concept has to be adjusted to the rest of the system of thought to which it belongs. And, further, not only is the process of selection one of which men are primarily unconscious, but concepts will have characteristic 'ideal' aspects, with standards and criteria which enable men to realize approximations and defects. The origin of such 'ideal' aspects or types is an especially interesting inquiry, because in the spiritual life there is a frequent conviction of a decline or 'fall'—a real experience which it has been difficult to express except in myth, poetry, or metaphor. There is no reason to believe that man is gradually rising from a state of maximum grossness—here all judgments are relative—or that man has 'fallen,' in the terms of the Biblical narrative. None the less, the consciousness of a certain deterioration and decadence is familiar, and man is usually 'below the best' of what he feels to be within his capacity. The experience, which has its spiritual, æsthetic, ethical, and other forms, is bound up with the principle of attraction and with a recurring consciousness or vision of some great worth, existence, and reality which can and must be attained.

(b) Actual development is not to be described as from a part to a whole; but, like that of the child, it is from a rudimentary system to one less so (cf. § 5 [2]). Nor can thought be traced back historically to single concepts or ideas, but only to very rudimentary systems of what may be called 'psychical ability.' Yet even here the legitimacy of the term 'psychical' will be questioned, and it may be observed that what can be regarded as developing (e.g., 'mind' or 'psychical ability') will go back to some stage where it is non-existent, or where we are in another realm of conditions, or where our present thought cannot follow. Either the nature of what is viewed as developing, or the nature of our concepts, or, again, the limitations of our experience will preclude the solution which we seek. The limitations of the mind forbid more than a certain rough systematization of experience, the mind can determine the conditions of the solution, rather than the solution itself, of some great problems of which it becomes aware. Thus the question of the origin of religion can be treated only as a problem of method or logic. It is evident that, when 'God,' 'life,' or 'thought' first appeared in the history of the universe, the prior situation was such as to permit the development (cf. p. 673^a, n. 1), and it cannot be completely described without taking into account that which was shortly to affect it. The factors and conditions that make for development do not exist in isolation, and they cannot be conceived as entirely independent of the field upon which they are first recognized. Neither in the individual nor in history could the objective reality which we call 'God' enter upon a field from which He had before been isolated. The mind is unable to pierce to the ultimate realities themselves and, from primitive cosmologies and cosmogonies to the latest philosophical and other syntheses, it is confronted with a similar difficulty—an

experience of the absolute transcendence and priority of a Supreme Being or Principle, and the necessity of some conception of the actual steps in the differentiation of the universe. Differentiation as a process leads back logically to a single undifferentiated unit; but so far as our evidence goes we reach more and more rudimentary types of differentiation until the mind can reach no further. The steps are from system to system, and consequently it is important to distinguish between a static system of thought, which can allow no real development, and a dynamic one, which, if true to the history of the individual and the race, would embrace all the constituent or contributing minor systems (e.g., human society, the State, Church, etc.), which cannot be regarded as eternal. There are progressive steps from ideal to ideal and system to system, like the continuous development of methods (§§ 3 [2], 16 [3]). We can distinguish the vision and the reflexion upon it, the ideal and the effort to follow it up, the system and what it systematizes, the concept, method, and all that 'organizes' material, and the material itself. There is, however, a tendency to give a certain absolute priority to the former of each pair, and so also to the plan or purpose which appears to precede the development, but continuously undergoes development itself. This tendency reflects itself in static conceptions of an absolutely prior vision, a heavenly origin of the soul, primitive archetypal ideas, some primary all-containing concept or principle, and a pre-determined (static) reality which is slowly being recognized, and of which new portions are being discovered from age to age. On the other hand, there is in point of fact a continuous process which takes us back to earlier stages where thought can no longer follow, and it points forward to an 'unknown' which will blend with the already known, for this is characteristic of the growth of consciousness.

34. The rationality of the unknown.—(1) It is wholly in accord with familiar religious convictions of the ephemeral character of human life, as a prelude for a future, that human thought must not expect to comprehend the ultimate truths. If man cannot see God and live (cf. §§ 18 [1], 32 [2]), if perfect Truth is with God alone, he is confined by his mode of thought, although the significant fact is the mind's sure consciousness of its being limited. Hence what is truly rational is not the ignoring of the unknown, but the realization of all that is essential for every new step of development. Just as our knowledge of anything in space or time is fundamentally incomplete if we ignore the environment, prelude, or sequel, so the true point of view of human life must be based upon the most comprehensive ideas, and one must 'think universally' (cf. p. 677^b, n. 2). The terms 'supernatural' and 'miraculous' have some unfortunate associations, and need careful definition, but they can be used rationally when they imply a God who is not arbitrary, but One whose laws transcend those of which men are cognizant. A disbelief in the supernatural and miraculous can, at the best, only assume an ultimate *impersonal* law and order in the universe to which certain alleged phenomena would be entirely contrary. While an unchecked credulity hinders progress of thought, by giving facile explanations of all difficulties, an irrational incredulity, on the other hand, can be as repressive as the typical rationalistic treatment, for both burke inquiry or offer facile explanations of no rational or scientific value.¹ The issue is faith in a Supreme Personal Being who is absolute justice, or in a supreme impersonal process or principle. In the history of religion now the personal and now the impersonal ultimate stands at the head; and all exceptional occurrences and phenomena which disturbed current convictions have led typically to wider conceptions of some ultimate order.

(2) The multifarious phenomena of life are such as to allow diverging and conflicting opinions. Hence, as in compiling a grammar of a language, regularities and uniformities must form the starting-point. There must be an actual selection of data. The great fundamental truths do not lie in the phenomena themselves—this is very evident from the way men's opinions differ—but they manifest themselves in men's consciousness of them.

¹ Hence (a) alleged miracles cannot be accepted without preliminary examination of the evidence, but (b) they also cannot form the starting-point of any rational argument; cf. Lessing's important remark: 'Accidental truths of history can never become proof of necessary truths of reason.'

They are in this respect *a priori*. He who avers that God's ways are just, or that honesty is the best policy, has neither counted the cases nor balanced the evidence with anything like logical adequacy. But he can make the principles his standard, part of his life, and he lives up to them. There is a common and largely unconscious recognition of regulative principles which might seem to find innumerable exceptions everywhere, but they become permanent and ultimate. Men make them so. Thus do men lay down the lines of their future and form the framework of the unknown; and, like the organism, they will tend to be 'true to type.' But, in addition to this, they will become explicitly conscious of the type to which they must be true, if their personality, in its ultimate development, is to be in every respect efficient (§ 29 [1]). When in the course of mental development the implicit becomes explicit, there is a rigid logical connexion between the old and the new; the lines upon which development will proceed have already been laid, and the data are viewed, selected, and systematized in ways conditioned by earlier processes of selection. Yet this selective process, as it appears, *e.g.*, among the young, is one of which they cannot be said to be conscious; and, while its extraordinarily beneficial character cannot be gainsaid, it is very common for the process, as a man's individuality becomes more distinctive, to be markedly biased, one-sided, and so forth. Development thus brings greater freedom and a more conscious choice of action, and the individual more deliberately shapes his personality. This increase of consciousness gives the impression that the early years were blind, unconscious, and so forth; but consciousness is never complete, as the developing individual can realize on retrospect. Even the very young have an individuality of their own. The selective process, with the gradual recognition of guiding principles, is at work in these rudimentary beings, and we may speak of some 'system' embracing the child, his immediate environment, and all the factors that make for development. Of some of these factors the individual becomes aware, and continued increase of consciousness makes acute the relation between the individual's conception of himself and the supreme realities, so far as he has apprehended them. Now, whatever these may be found to be, they must always have had a significance, such that that of which man becomes conscious was already existing and had some meaning for his earlier stages. The entire process in the midst of which man develops must embrace all that which comes under the category of the transcendent, the supernatural, and the unknown; and in the course of his purposive, self-guiding development he becomes a more responsible part of that co-operative and progressive process which he can now more deliberately help or hinder. It is at this point that the comparative and historical treatment of all ideas of sin, forgiveness, and atonement deserves fresh attention (see artt. EXPIATION AND ATONEMENT, CONSCIENCE, SIN).

(3) In various forms there prevail beliefs and practices of entire surrender, whether to a Supreme Power or to principles in the universe, or of thoroughgoing asceticism or quietism. But self-suppression and surrender are in themselves normal. In entering upon any new system of thought, they are necessary in a greater or less degree, as against inhibition, objectivity, and insistence upon one's own individuality and point of view. Especially significant is the surrender of self to potent ideas or theories, to a body of thought or a Church, and, of course, in all cases where the self entrusts itself to another personality. Throughout, the step has its important

consequences, and the realization of the step becomes more impressive until it is felt to be a veritable leap into the unknown. The ideas and theories may lead one one knows not whither; the person to whom one surrenders oneself will to a greater or less degree affect one's unknown future. The process, a normal one, thus involves the question of the objective value of that to which the surrender is made, of that which is to be assimilated and realized. Progress is throughout due to innumerable acts of faith, trust, surrender, and reliance; and, as the occasions vary in intensity and objective significance, some part of the self is affected and developed, and at times the whole self seems to be renounced only to gain a 'higher' or a better self. However intense the feeling of surrender in human relationships, it is in the religious sphere that the significance of the step is most profoundly felt, and here the leap into the unknown is no less an one, even though there is the confidence that 'underneath are the everlasting arms.'¹ Here are experiences varying in degree and uniting the individual and his ordinary life and thought with that which is most profound and ineffable in the universe, correlating uniquely the non-religious and the religious, the known and the unknown, and forming the basis of all adequate conceptions of existence, knowledge, and reality.

35. Reality.—(1) It will have been seen that the trend of thought has advanced the study of religion to a new stage, and has interwoven it with the progress of other departments of research. In this article the endeavour has been made to introduce the reader to the wider field in which the study of religion must be placed, and to indicate some of the more important questions. Much more might of course be said, but the central problem would still remain: the underlying ultimate realities. Here it must suffice to observe that by the religious consciousness must be meant a consciousness of reality. The realities of religion must be more personally vital than those recognized outside the realm of religion; in fact a religion that would live must be able to claim to approach nearest to the ultimate realities. But even in religion we have to do, not with reality itself, but with intuitions, apprehensions, or convictions of it. The religious mode of thought appears to be essentially a very intense form of otherwise non-religious thought, and the most characteristic features of religion are a highly distinctive form of what otherwise is not peculiar to religion. Religion is 'natural' because the ultimate realities must be a 'natural' part of the universe of which man becomes conscious. Ideas of 'this' world and of 'the other' originate in the mind of one and the same experiencing individual; and there can be only one total existence of which he has such varying intuitions and conceptions as his nature, temperament, and training favour. Moreover, not only is there an interconnexion between the progress of religion, its increasing wealth of expression, and the general development of thought; it is also self-evident that the deliberate effort to raise the level of thought and to improve the mental equipment (*e.g.*, in education) enables one to experience life more fully and to utilize its data more effectively. Indeed, one has only to consider the meaner life of primitive men to perceive that the positive advances of thought have conduced to the general advance of religion, and to a clearer apprehension of all that is felt to be profoundly real and true. Thus thought—especially in its dynamic aspects—and reality are not to be separated.

(2) But, while progress brings better conceptions

¹ Cf. also the 'dark night' of the mystical experience; see artt. MYSTICISM, NEO-PLATONISM.

of reality, at the same time it certainly increases men's abilities, duties, and responsibilities. It magnifies the possibilities of good and evil. The development, therefore, is extremely significant for the relation between men and reality, whether one considers (a) the actual progress of physical science and the strides taken in utilizing the realities of the physical world, or (b) the deepening recognition of the necessity of higher standards of moral, spiritual, and intellectual life. Thus, the development of conceptions of reality powerfully affects human welfare as a whole. Moreover, they correspond in their remarkable variety to the variation of individual temperament, training, experience, and so forth. It is obvious that the striking differences—ethical, spiritual, and intellectual—in men's conceptions of God are due to differences, not in the nature of God Himself, but in human nature. 'God' is the name given to that sublimest of realities, of which man becomes conscious as standing in a uniquely 'personal' relationship with him. Whatever be the true *objective* reality, it is evident that both the Reality and man's own individual nature contribute to the resultant varying conceptions. And, in general, all the ultimate realities, *as formulated*, are man's imperfect conceptions of them, conceptions whose vicissitudes can be objectively studied, and which can develop further and, in so doing, lead to newer and more effective convictions of reality. Consequently, it is necessary to observe, on the one hand, the evident significance for the individual of his own conceptions of reality, and, on the other, the problem of the part taken by reality throughout. To the genuine theist God is the most essential, if not the only, reality, and it is impossible to isolate His working in the universe from the man who has an erroneous conception of God, or, perhaps, no consciousness of Him at all. None the less, it is of essential importance whether men's conceptions of any reality are adequate or not, and, to some extent at least, God's influence upon men is admittedly conditioned by men's conceptions. Hence the question is vital, how far God can influence man as apart from man's explicit consciousness of Him, how far God Himself is affected by human activities (*e.g.*, by gross evil) contrary to man's consciousness of His nature. (For we must evidently distinguish between human activities not yet recognized by men to be evil and those which they know within themselves to be wrong.) Moreover, since 'God' is the theistic consciousness of reality, the problem is essentially that of the relation between the ultimate realities in general and men with their varying consciousness of them. Vitally significant as this is on practical grounds, it is also a problem of the greatest methodological importance, *i.e.* if the data of the growth of consciousness, of religion and magic, and of science and philosophy are to be rationally and thoroughly handled. Reality must always be significant for men; it must have some effect, as apart from a man's particular conception of it. Only in this way can one gain a coherent view of the universe. Consequently there is need both of (a) an adequate conception of the ultimate realities to take the place of those felt to be imperfect, and of (b) a scientific and more theoretical treatment of such conceptions in human history, the development and differentiation of thought, and all that makes for the greater fullness and richness of life.

(3) All growth of consciousness brings increased power for good or for evil. The development is not so much of the self alone as of an environment or a system of relations of which the self is the centre. The development demands continued discipline and reorganization, for the consequences are harmful if the self is lacking in responsibility, morality, and all that encourages healthy progress.

The limit of such development furnishes the conception of absolute coherence, perfection, truth, justice, etc., whether as regards (a) an absolutely self-conscious, supreme, and personal Self, or (b) an impersonal system of regulative principles and uniformities, as manifested in the universe—the ultimate 'environment.'¹ Now, the entire complex field of religion becomes more manageable and intelligible only when notice is taken of the beliefs and practices which connect human activities with those of the universe, whether directly (especially in magico-religious and magical data) or indirectly (*e.g.*, through prayer to the gods). But this fundamental underlying interconnexion, implicit in life and thought, becomes explicit only in the development and differentiation of thought—when, *e.g.*, spiritual and non-spiritual forms of energy are distinguished, and definitions or theories mark off matter from mind, and the physical from the psychical. The primary logical interconnexions are continually being obscured through the growth of special knowledge, which, however, brilliantly illuminates the varied departmental (moral, spiritual, aesthetic, intellectual) aspects of the universe.

There is a perilous kinship between religion and magic; typically and characteristically they are respectively right and wrong ways of dealing with what is regarded as fundamentally real and true. Since strong convictions and supremely intense states of consciousness are the more potent for good or for evil, there is a bifurcation such that what can take a religious form might also become magical or irreligious. Thus, there is a sane and an insane supernaturalism, a healthy and unhealthy mysticism, and genius has its cases of perversity and depravity. Accordingly, it is possible either to distinguish the good and the bad examples or to refuse to admit the latter within the category; that is to say, either we have good and bad religion, genius, etc. (or examples of these) or the bad cases come under another category, as, *e.g.*, in the antithesis of religion and magic, (good) mysticism and (irrational) occultism, and the like. Whatever course be generally adopted, it is extremely important to distinguish the psychological and subjective aspects of data from their logical and other more objective value. It is important to distinguish religion, genius, etc., as a whole or absolute feeling and the more specialized forms which are examples of religion, genius, etc., and which can be more objectively regarded. In this way, the fact can be emphasized that, although the ultimate realities are in a sense religious (*e.g.*, as relating to a Supreme Deity or to life after death), they are not religious in themselves, although religion is directly concerned with their apprehension and formulation. For the subjectively impressive experiences so easily lead along beneficial or harmful roads, either to religion or to its worst enemy, that a careful disciplinary and regulative system of belief and practice is at once required for the sake of both the individual and society. In other words, reality—*i.e.* our own subjective conceptions of it—at once requires a formulation, a logical theory, an embodiment.

(4) From one point of view, then, religion, mysticism, etc., are one of many phases, aspects, and departments of the totality of existence. The most 'religious' individual has his non-religious times, and many 'good' men have had their anti-religious or rather irreligious occasions. The test of a religion lies in its relation to what is, as such, non-religious, *viz.* to the best moral, spiritual, aesthetic, and intellectual consciousness of the age as manifested in conduct, thought, ideals, and so forth. But, owing to the differentiation and specialization of thought

¹ The latter is not the objective universe of the senses, but a logical construction, and the former depends upon man's present stage of consciousness. The ultimate which the mind can conceive depends upon the stage of development reached by the mind.

—with the corresponding (objective) incompleteness of individual minds—no one mind can form a logically adequate estimate. It is impossible for any individual to grasp totality as a whole, although it is possible to do justice to the various aspects under which the universe is apprehended, and to investigate their growth, development, and interrelation. Proceeding on these lines, one can realize the necessity of proving and improving current conceptions, definitions, and other tools of thought, for, in the advance of thought, and in the better organization of the data of experience, one comes to realize more vividly and truly the universe of which one is an integral part. While the actual religious life implies principles, ideas, and the rest, the scientific or critical treatment of religion is concerned in determining these and in maintaining the progress of thought, inasmuch as nothing is more potent than the continued knowledge of reality and the convictions which sway mankind. The apprehensions of reality unite man and objective reality itself, and, varying, as they do, according to the individual, they are a key to a science of human nature and experience. It is obvious that there must be realities of a sort to allow the prevalent types, although the ultimate realities of the universe are not to be confused with the realities of our human nature. Thus, a conception of 'God' can be formulated and accepted; it will correspond and answer to personal experience at a certain stage of psychical development; it can prove the most vital and stimulating truth that man can possess. There must be some objective reality such that men become conscious of it in ways varying according to their individual nature and stage of development. Moreover, human personality is such that the conception of a reality in a personal relationship to man, and alike immanent and transcendent, is not merely a subjective reality; it is demanded by the data of religion, by the characteristic features of personal development, by the consciousness of the necessity of continued development in every direction which man feels to be good, beautiful, and true. In a word, the objective reality of 'God' is demanded if man is to give a rational account of himself so far as his intellect allows him, and the most objective theory of reality must be based upon the facts of human consciousness.

(5) All the ultimate realities themselves lie beyond human vision (cf. 1 Co 13¹²). Between them and the self there are, as a psychical veil, the impulses, ideas, convictions, and theories, the whole body or world of thought which makes every man what he is, and enables him to say, 'Here is reality.' Some mysteries of reality, from a psychical point of view, are hinted at in the strange data of psychical research, occultism, and ecstasy, in all abnormal and pathological phenomena of the mind, in the disastrous effects of vagaries, or of doctrines and theories which healthy opinion repudiates. Although progressive thought may reject certain explanatory conceptions or theories—*e.g.*, now of evil spirits, and now of guardian angels—men require some organization of experience, some adequate body of thought, some tolerable outlook upon the universe, which will enable them both to

direct and understand their experiences and to realize the significance of human existence so as to be able to live healthy and useful lives for the good of a universe from which they can never escape. Upon their body of thought depend their sanity and effectiveness. Even reality itself seems to some extent to be powerless against the will which we regard as bad and evil; while, on the other hand, how far reality can be objectively and positively influenced, under given conditions, is a vital problem which can at least be theoretically handled. Certainly religion has not been without daring conceptions of the practical relations between God and man—and, suppose religion proved to embody the truth about reality?

So the study of man's psychical tendencies, his ideas and ideals, his modes of thought, his beliefs and practices, his doctrines, theologues, and philosophies—all contribute to one's knowledge of human nature and of the universe. In the investigation of the development of conceptions and of the workings of the mind, whether in its immediate consciousness of reality or in its reflexion upon past experiences, one comes to know a little more of the realities themselves and of the objective relationship between them and man. If, then, it is judicious to venture upon a definition of religion on the lines upon which this article has proceeded, the following may be suggested, provisionally: Religion primarily involves some immediate consciousness of transcendent realities of supreme personal worth, vitally influencing life and thought, expressing themselves in forms which are conditioned by the entire stage of development reached by the individual and his environment, and tending to become more explicit and static in mythologies, theologues, philosophies, and scientific doctrines. But, as this article has tried to indicate, there is a positive development of consciousness and thought in history, and consequently it is possible to seek to correlate both the static aspects, which are essential for all stability, and the dynamic, which are indispensable for future progress. For to do justice to the ultimate facts of harmony and of development in the universe is one of the main functions of a living religion.

LITERATURE.—The more important special technical works have been mentioned throughout the article.

RELIGIOUS ORDERS (Christian). — I. GENERAL CHARACTERISTICS AND CLASSIFICATION.—Under the title 'religious,' in the Christian Churches, are included all those who make profession of a life in conformity with the precepts and counsels of the gospel, and who withdraw from the world in order to practise this life more perfectly.

The art. MONASTICISM deals with the origin and chief characteristics of this form of life, of which monasticism is itself the principal species. In monasticism we have the religious life in its essential elements; and it may be said that, from the 6th to the 20th cent., it has been a question merely of combining those elements according to different methods to serve special purposes, and that no new conception, no essential difference, has been introduced—nothing, in fact, that was not already existing in germ in the monastic life of the earliest centuries. The vows of poverty,

Japanese (J. A. MACCULLOCH), p. 718.

Mexican and Peruvian (J. A. MACCULLOCH), p. 718.

Muslim (E. MONTET), p. 719.

chastity, and obedience, the practice of mortification, labour, prayer, and silence—sometimes even preaching and other external work—were the obligations of religious life in all ages, whether under the cenobitical or under the eremitical form. We are concerned in this article with the different forms of the religious life distinct from monasticism. The first task of the historian, in presence of the number and variety of these forms of the religious life (they exceed 380 in number, even without counting certain religious societies of minor importance), is to attempt a classification. This is no easy task. Neither geographical nor chronological considerations will serve as a basis of classification, since, owing to the universal character of Christianity, these religious families are found in all nations, and some have put forth shoots in every age and thus belong to no one century more than to another. The attempt has been made to group them in families, placing side by

side those which offer analogous features or which follow the same Rule. Here, however, historian and canonist will not be in perfect accord.

If, e.g., the attempt is made to place under the same rubric all the orders in which the Rule of St. Augustine is followed, the result will only lead to confusion, for these orders are in other respects quite dissimilar and belong to different groups. The Dominicans, hospitaliers, and several congregations of women, e.g., all alike follow the Rule of St. Augustine, but they differ entirely from one another as regards the end and object of their respective institutes. This results from the fact that the so-called Rule of St. Augustine consists in reality of a set of general principles of spirituality which can be adapted to any form of religious life. It is the constitutions of each order, rather than the Rule, that give it its distinctive character. The Carmelites originally followed the Rule of St. Augustine. Some orders have followed different Rules at different times. The Premonstratensians combine the Rules of St. Augustine and St. Benedict. The Dominicans, who also follow the Rule of St. Augustine adapted from that of the canons regular, especially the Premonstratensians, seem to belong, with practically equal right, to two very different forms of religious life—that of the canons regular and that of the mendicant friars. The Brothers of St. John of God, who are hospitaliers, were attached to the mendicant orders by Urban VIII. It was the same in the case of the Jesuits to a certain extent, although these 'religious' belong to a totally different category—that of clerks regular. The title, in fact, of 'mendicant friar,' which distinguishes certain orders, came in time to be attached to those which were not originally comprised under this designation, such as the Augustinian Hermits, the Carmelites, as well as the hospitaliers and others mentioned above. The Theatines and Barnabites, who are clerks regular, received the privileges of the canons regular of the Lateran. Some—e.g., Vermeersch—regard the question from the point of view of canon law, and classify the orders according to whether they possess solemn vows, simple vows, temporary vows, or a mere promise. This method of classification, while legitimate in itself, has no historical foundation. Moreover, it leads to confusion, for some orders have adopted in turn temporary vows and simple vows, or have even practised both systems simultaneously for different members of the order. Finally, if we take as especially characteristic of an order the particular work undertaken by its members—education, care of the sick, preaching, etc.—it is not easy to judge to what class certain orders belong that exercise all these various activities at once.

Without flattering ourselves that it is in all respects a perfectly satisfactory system of classification, we shall adopt here, as the most practical for our purposes, one that is both chronological and pragmatic—one that keeps in view the different periods of time, while grouping together those orders which possess certain characteristics in common. We shall also keep to the traditional mode of designation.

1. From the 1st to the middle of the 3rd century: virgins, widows, and ascetics.—In primitive Christian society there were certain of the faithful who led a life more austere than that of their brethren and who formed a class apart. Among these ascetics there are even indications of an attempt at community life. They may be regarded as the earliest representatives of the religious life.¹

2. From the middle of the 3rd to the end of

¹ Cf. art. MONASTICISM.

the 12th century: the monks and the canons regular.—Under the title 'monk' are comprised the hermits and anchorites of all descriptions, the cenobites or monks living together in community, and those who combine both elements in a life partly eremitical and partly cenobitical. To the same period belong the canons regular, whose life has much in common with that of the monks, and who enjoy the same privileges.

For the different kinds of monks cf. art. MONASTICISM. The principal varieties of canons regular are: the Premonstratensians, Canons of St. Victor, Canons of the Lateran, Canons of St. Maurice (Agaune), Canons of the Holy Cross, Canons of St. Saviour, Canons of St. Rufus, Canons of the Holy Sepulchre, Canons of Verres, Canons of Marbach, Canons of Pampeluna, Canons of St. Antony, Canons of the Immaculate Conception, and the Gilbertines.¹

The Brothers of the Common Life, Beghards, and Beguines form a category of their own, but may be classified together with the monks and the canons, since their life is founded on the principles of the monastic and canonical state.

3. From the 11th to the 16th century: the military orders and the knights hospitaliers.—Strictly speaking, these orders might be classed with the monks, since they usually followed one of the monastic Rules (e.g., that of St. Benedict). But they possess so marked a character of their own that it is better to treat them separately. They are as follows: the Knights Hospitaliers of St. John of Jerusalem, Templars, Teutonic Knights, Knights of Evora or of Aviz, Knights of St. James of Compostella, Knights of Calatrava and of Alcantara, Knights of the Order of St. Lazarus.

4. From the 11th to the 20th century: the hospitaliers (non-military).²—These include the Order of Mercy, the Trinitarians, the Servites, the Paulinians, the Alexians, the Jesuati or Hieronymites, the Ambrosians, the Brothers of the Apostles, the Good Brethren, the Order of the Holy Ghost, the Brothers of St. John of God.³

5. From the 13th to the 16th century: the mendicant orders or friars (frati).—The friars adopted a mode of life differing in many respects from that of the monks or canons regular, viz. the absence of the element of stability in a particular monastery, and of perpetuity in the superior, the exercise of the sacred ministry, preaching and teaching, reduction of the solemnity of the choral office, suppression (at least originally) of all property and all power to possess lands or money even in the name of the community. They are called mendicants because, unlike the monks, having no possessions and no stable means of livelihood, they were obliged to live on alms.

The four principal mendicant orders are: the Dominicans, the Franciscans, the Carmelites, the Augustinians.⁴ There are, besides, other lesser mendicant orders in some of which the Rule of St. Augustine is observed, in others that of St. Francis. Among the former are the Order of

¹ For other examples cf. Heimbocher, *Die Orden und Kongregationen der katholischen Kirche*, II 24-29.

² It must be remarked that several of these orders follow the Rule of St. Augustine and have obtained both the title and the privileges of the mendicant orders. Hence they are sometimes classed under one, sometimes under the other, of these two categories. Since, however, both their special object and their manner of life are practically identical in all these orders, and since they possess many of the characteristics of the military hospitaliers treated above, it would seem to be as well to group them together under the rubric of hospitaliers.

³ Some of the hospitaliers are also among clerks regular, like the Camillians.

⁴ The Augustinians belong, by their Rule, to the canons regular rather than to the friars and, in some of their branches, have more affinity with the hermits or monks. They have been counted, however, among the mendicant orders since the day when they obtained a share in the privileges of the latter.

Mercy, the Trinitarians, the Servites, the Paulinians, the Alexians, the Hieronymites, the Jesuati, etc. These are already mentioned under the category of hospitaliers, to which they also belong. Among those that follow the Rule of St. Francis are the Minims, the Third Order of St. Francis, and the Scalzetti ('discalced Friars'), or Order of Penance.

Orders of women are the Brigittines, Annunziata, Ursulines, Angelicals, Salesian Sisters, Penitents, etc.

6. From the 16th to the 17th century: the clerks regular.—These 'religious,' while practising the religious life in community (as the title 'regular' indicates), belong essentially to the clerical order, as shown again by the title 'clerk' and by their dress, then external life, and their exercise of the sacred ministry. They possess solemn vows, like the monks and canons regular, but have not, like the latter, the choral office, nor do they practise stability. Generally speaking, they have, in addition to the exercise of the religious life, some special object or particular line of work. Most of these societies admit only priests to their ranks, and lay brothers are received as 'coadjutors.' Some—e.g. the Theatines and the Barnabites—possess, as already remarked, the privileges of the Canons of the Lateran. The clerks regular are: the Jesuits,¹ Theatines, Barnabites, Clerks Regular of Somascha, Clerks Regular of the Good Jesus, Clerks Regular of the Mother of God, Camillians, Minor Clerks Regular.

7. From the 17th to the 19th century: religious congregations.—These religious congregations resemble the clerks regular, and they are called in canon law 'quasi-regulars.' They have usually only simple vows and are distinguished from the clerks regular proper by this fact and also by the more recent date of their foundation.

The principal congregations are: the Passionists, Redemptorists, Lazarists, Eudists, Oblates, Marists, Assumptionists, Salesians, Paulists, Sulpicians, Oratorians.²

8. From the 18th to the 20th century: missionary societies or congregations.—These societies, founded specially for the foreign missions, may be considered, as regards their manner of life, as clerks regular or quasi-regulars; but, since they all have a common end in view, we have placed them together in a group apart.

They are: the Society of Foreign Missions, the Society of the Sacred Hearts of Jesus and Mary (or Fathers of Picpus), the Fathers of the Holy Ghost, the Fathers of Schent, the Fathers of Mill Hill, the White Fathers, the Society of the Divine Word, the Society of the Divine Saviour.

9. From the 17th to the 20th century: teaching brotherhoods and congregations of women.—These include the Piarists, Brothers of the Christian Schools of St. John Baptist de la Salle (Christian Brothers), Brothers of the Society of Mary (Marianists), Brothers of Lamennais, Brothers of St. Gabriel, etc.³ Sisters of Charity of St. Vincent de Paul, Sisters of Wisdom, Sisters of Evron, Sisters of Nevers, Sisters of the Good Shepherd, Sisters of Nazareth, Little Sisters of the Poor, Society of the Sacred Heart, Sisters of St. Joseph of Cluny,⁴ etc.

II. CANONS REGULAR, BROTHERS OF THE COMMON LIFE, BEGGARDS AND BEGUINES, MILITARY ORDERS AND HOSPITALIERS.—I. Canons regular.

1 The strictly chronological order is as follows: Theatines, 1524; Clerks Regular of the Good Jesus, 1526; Barnabites, 1580; Somascha, 1582; Society of Jesus (Jesuits), 1564.

2 We include the Sulpicians and Oratorians among these congregations, although canonically they are not considered as such, since they have no vows. They may, however, be assimilated to societies such as that of the Lazarists by their object, the training of the clergy.

3 For the detail cf. Heimbucher, iii. 356 ff.

4 Ib. iii. 364 f.

TARY ORDERS AND HOSPITALIERS.—I. Canons regular.—(a) *The name.*—The name 'canon' is of ancient origin. The Councils of Antioch (341), Chalcedon (451), and 'in Trullo' (692), speaking of the clerics attached to the service of certain churches, say that they are *ἐν τῇ κανόνι* or *ἐκ τοῦ κανόνος*, i.e. inscribed in the *kanón*, the *matricula*, *tabula*, or *album*.¹ According to du Cange,² a *canonicus* is one who is inscribed *sub canone frumentario*, i.e. is maintained by the revenues of the Church. St. Athanasius employs the term *τὸν τε κανὼνα τῆς ἐκκλησίας*.³

In the West the 2nd and 3rd Councils of Toledo and that of Friuli (791) speak of clerics 'sub canone ecclesiastico.'⁴ The 3rd Council of Orleans in 538 and Gregory of Tours make use of the term *canonici* to describe the clergy of a church.⁵ The Council of Clermont in 535 extends this title to all priests and even deacons attached to a church, whether in town or in country. These priests and deacons were obliged, at great feasts, to assemble in the cathedral church to celebrate divine service together with the bishop. In 538 the 3rd Council of Orleans deprived of the title of 'canon' all clerics who refused to obey their bishop.⁶ It may be gathered from these different texts that the term 'canon' was applied to two classes of people differing widely from one another. On the one hand were clerics, like those of the diocese of Hippo, who lived with their bishop in community and in the practice of monastic asceticism. On the other hand were those who lived in their own churches, practising neither the community life nor monastic poverty, and bound to their bishop by an obedience that did not press very heavily upon them. This vague use of the term lasted throughout the ages. In order to avoid confusion, the custom finally arose of distinguishing between the two classes of canons by calling the first 'canons regular' and the second 'secular canons' or 'canons' pure and simple. The latter cannot, of course, be regarded as in any sense belonging to the religious orders; it is with the canons regular alone that we are here concerned.⁷

(b) *Canons regular till the 10th century.*—In art. MONASTICISM we have shown that in the 4th cent. there was a tendency among many bishops to gather the clergy of their churches around them and to live with them in the exercise of asceticism according to the example of the monks. The attempts that have been made to find examples earlier than this date, in order thus to trace back the origin of the canonical order to the time of the Apostles, are entirely without value. St. Augustine, who was so well versed in the knowledge of the ecclesiastical institutions of the past, does not even mention the canonical life in his *de Moribus Ecclesiae Catholicae*, written in 388, although it would have afforded him an excellent and most natural opportunity for doing so, had any such institution existed before his time. Nor can any traces be found in the writings of St. Cyprian or any other writer of earlier times. St. Augustine was himself, in fact, one of the first to have the idea of gathering his clergy around him in order to live with them in common in the practice of poverty and religious discipline after the example of the cenobites. He made his first trial of this way of life at Tagaste, his second at Hippo (388

⁷ Cf. du Cange, s.v. 'Canonicus.'

and 391). We have accounts of the life led in his monasteries written by Possidius in his life of St. Augustine and also by St. Augustine himself.¹ It resembled to a great extent the life of the monks—life in common under a common discipline. The bishop was the head of this family of clerics, and obedience was doubly due to him—as bishop and as the quasi-abbot of the community. He was also the temporal administrator of the affairs of his ‘monastery,’ and the clergy were bound to abandon their personal property and to live in the practice of poverty and chastity. The chief difference between them and the monks lay, firstly, in the fact that these early ‘canons regular,’ instead of living apart from the world, had their dwelling in the midst of a town or city; secondly, in the fact that they were essentially the clergy of their churches and exercised the sacred ministry. Their régime and manner of dress were again different from those of the monks, and their practice of poverty and obedience was less severe. The example of St. Augustine was followed by other African bishops, at Carthage, Tagaste, and in other cities. We find the same custom in existence even beyond the confines of Africa, in the case of St. Paulinus of Nola, Hilary of Arles, and others.²

One of the most remarkable among these examples is that of St. Eusebius of Vercelli—an earlier case than that of St. Augustine—about whom we have a considerable amount of information.³ But the life led by St. Eusebius and his clergy resembled far more closely than that of St. Augustine and his ‘canons’ the life led by the monks proper. In St. Augustine’s case it was in fact a seminary for the clergy or a college of canons, rather than a monastery for monks as in Eusebius’s institution. The clergy of Eusebius observed the monastic enclosure, celebrated the day and night hours of prayer, and practised all the austerities of the monastic life. St. Fulgentius, in the midst of the Vandal persecutions, and, no doubt, other African bishops also, went farther still and obliged monks and clerics to live together. But this attempt to unite two incongruous elements should be regarded as a mere expedient demanded by the special needs of the time.⁴ This quasi-monastic form of life seems to have been practised only in certain exceptional cases by the clergy of the Eastern Church. St. Jerome, who was so well acquainted with all that concerned ecclesiastical life, does not mention any example of it. Cases have been quoted of monks living with their bishops, but these are not to be regarded as institutions distinct from that of the ordinary monastic life, and the only actual example is that of Rhinocorura quoted by Leclercq from Sozomen.⁵

In the West, however, at the end of the 5th cent. and during the 6th the canonical life became an official institution. The 4th Council of Toledo provides us with a picture of the bishop in his episcopal residence surrounded by his priests and deacons, while in a neighbouring dwelling the young clerics were educated under his supervision.⁶ In Gaul the 2nd Council of Tours also laid down that the bishop should live with his priests and deacons in the episcopal palace.⁷ Gregory of Tours

makes frequent allusion to those clerics who shared the dwelling and the table of their bishop—*mensa canonicorum, convivium mensae canonice*.¹

Other councils, as we have already seen, laid down new regulations for these clerics, now called *canonici*—e.g. the Councils of Clermont and Orleans.

With regard to England, St. Gregory the Great advised St. Augustine of Canterbury to live in common with his clergy. But the latter apparently wished to go even farther than the recommendation of the holy pontiff. At Canterbury and in the greater number of cathedral churches founded among the Anglo-Saxons the chapter was formed by a monastic community properly so called. The clergy of the cathedral were monks and carried out the full monastic régime, to which they also added the exercise of the sacred ministry. These monastic chapters remained in force in the greater number of English cathedrals up to the Reformation in the 16th century. Certain churches, however, founded after the first Christian mission in England, were served by secular canons.²

Finally, it may be said that, outside the church of Hippo and certain others that had followed the example of St. Augustine, the word ‘canon’ was applied to a class of clerics whose obligations and forms of life varied from place to place. But in the 8th cent. a bishop of Metz, St. Chrodegang, gave the canonical life a more definite character by means of the Rule that he drew up for canons. This bishop (742–766) played an important part in the religious and political history of his time. He wrote for the clergy of his own church a Rule, *Regula Canonicorum*, which obtained the support of Pepin and Charlemagne and was given the force of general ecclesiastical law in the *Capitulaires* of the latter monarch and by the Councils of Aix-la-Chapelle (802), Mayence, Tours, Rheims (813), Arles (813), and especially by that of Aix-la-Chapelle (817).³ This Rule is largely founded on that of St. Benedict. It subjects the canons to the common life, enclosure, and the ordinary exercises of Benedictine life, while at the same time leaving them a certain amount of liberty and the right of possessing property.⁴

(c) *Canons regular from the 9th to the 20th century.*—The period of St. Chrodegang and that which immediately followed were the most flourishing in the history of the canons regular. Charlemagne and Louis the Pious endeavoured to impose his Rule on the clergy of their empire, and the Councils of Aix-la-Chapelle in 802 and in 817 followed suit.⁵ Amalarius composed his *de Institutione Canonicorum* with the same intention. The Lateran Council in 1059⁶ renewed these decrees and obliged the clergy attached to a church to live together and share their property in common.

The Rule of St. Augustine, although it is taken from his works, was in reality only drawn up in the 8th–9th centuries. It was followed side by side with that of St. Chrodegang, which was far more complete and precise in details. It was adopted by certain groups of canons and became for them the expression of the *vita apostolica, vita communis perfecta*. These canons came to be known as ‘Canons of St. Augustine,’ ‘Augustinian

or Austin Canons.¹ Their houses were at first independent of one another, but were later united in a congregation which had its general chapters, its statutes, etc. The decrees of the 4th Lateran Council and those of Benedict XII. in 1339 are concerned with the Austin Canons. In spite of all these decrees, however, religious life among them had but a short period of brilliancy.

In the 14th cent. new efforts² at reform were attempted by Cardinal Branda de Castiglione, by John Bush, and by Nicholas of Cusa.

The Protestant Reformation struck a fatal blow at the Canons Regular of St. Augustine properly so called. Other societies, however, had been formed on the Augustinian model under a severer Rule, and these were better able to resist the shock of the great upheaval. Some of them are still in existence at the present day, such, e.g., as the Canons Regular of the Lateran, the Premonstratensians, and several other congregations. We can give here only an outline of some of the principal ones.³

Premonstratensians.—The Order of Prémontré is the most illustrious of all among the canons regular. Its founder was St. Norbert († 1134), a canon of Magdeburg, who established himself at Prémontré with a few companions in order to lead a retired and holy life and at the same time to give themselves to preaching and the sacred ministry. Their life was ordered according to the Rule of St. Augustine and guided by the example of the Canons Regular of St. Victor of Paris. This order developed rapidly, owing partly to the sanctity and personal influence of its holy founder, partly to its object and nature, which had a special appeal in an age in which the idea of clerical and monastic reform had given rise to institutions such as the Camaldolese, the Carthusians, and the Cistercians. St. Norbert founded, besides the canons regular, a second order for women, which also had great success, and a third order for lay people. At the present day the order possesses five provinces or circles (*circaria*), seventeen abbeys, five priories, eight convents of nuns of the second order and three of the third order, besides parishes, missions, and a few colleges. The members number 997 men and 258 women.

The Premonstratensians follow the Rule of St. Augustine along with special statutes of their own. At the head of the circle is the *circator*, whose rank and office correspond with those of the provincial in other orders. Their constitutions resemble those of Cîteaux. The abbot of Prémontré is abbot-general of the whole order and is assisted by the abbots of Floreffe, of Laon, and of Cuiassy, the first houses of the order. The general chapter is held at Prémontré. This constitution came to an end before the Revolution, and in 1883 a new constitution took its place. The habit is white and resembles the monastic habit except that in

¹ The Rule of St. Augustine is divided into twelve chapters and contains only general principles (of an extremely elevated character) on the love of God and our neighbour, humility, prayer, fasting, duties towards the sick, purity of soul and body, obedience, etc.

choir a rochet, the badge of canonical dignity, is worn, and in winter a mantle also.

This order has rendered signal services to Christianity by its missions on the banks of the Elbe and the Oder and in the Low Countries, by the institution of hospices for pilgrims, the making of roads and canals, the foundation of libraries and schools, but especially by its reform of the clergy and the foundation of parishes. It even had an influence on architecture. It has produced also a certain number of chroniclers, historians, and ecclesiastical writers.¹

Canons of St. Victor.²—From the point of view of theology and literature, the Canons of St. Victor hold the first place. Their founder, Guillaume de Champeaux, is known as one of the most illustrious doctors and professors of the 12th century. These canons take their name from a chapel erected in honour of St. Victor, the martyr of Marseilles, on Mt. Sainte Geneviève in Paris. They were, moreover, actually affiliated to the Canons of St. Victor of Marseilles. Their teaching reached its highest expression in the persons of Hugh and Richard of St. Victor, whose theological and mystical works may be counted among the most remarkable of the Middle Ages; while Adam of St. Victor, with his hymns, ranks foremost among the poets of his time. The Canons of St. Victor were established in a number of churches in France (notably in that of Ste. Geneviève in Paris, whence their name of 'Genovefains') and also outside France. St. Victor de Paris remained the centre of the institute. Unfortunately divisions soon arose within the order, and after the beginning of the 14th cent. it began to decline. On the eve of the Reformation it existed in a state of mere vegetation. The school of St. Victor is most important for the history of mediæval mysticism, and the works of its teachers are still of great value.

Like the greater number of canons regular, the Canons of St. Victor followed the Rule of St. Augustine, with their own special statutes composed by Gilduin, one of their abbots, and inspired to a great extent by the Rule of St. Benedict.

Canons of the Lateran.—The Augustinian Canons of the Lateran were founded shortly after the Lateran Council in 1059, and were attached to the celebrated basilica of St. Saviour in the Lateran. They possessed a considerable number of houses in Italy and Poland. They were obliged to leave the Lateran basilica for the first time in 1299, for the second and last time in 1471. They have to-day about 200 members and 24 houses and possess the Church of St. Peter ad Vincula in Rome.³

Canons Regular of St. Maurice.—The congregation of Canons Regular of St. Maurice of Agaune in Switzerland owes its fame to the martyrs of the Theban legion. An abbey existed at Agaune from the 6th cent., in close relation with that of Lérins and having, like the latter, the custom of the *laus perennis*. In 824 the monks were transformed into canons regular—an event of frequent occurrence at that time.¹

2. Brothers of the Common Life.—This religious society, like that of the Beguines and the Beghards, forms a class apart in the history of the religious orders. From some points of view, it would seem to belong to the monastic order, from others, again, to that of the canons regular. In any case it forms one of the most interesting pages in the history of mediæval religious life and mysticism. It is treated separately under the title BRETHREN OF THE COMMON LIFE.

3. Beguines and Beghards.—These congregations originated in the Low Countries. According to some, they go back to the time of St. Begga, daughter of Pepin de Landen, in the 7th century. But it seems that their founder was, in reality, a priest of Liège, Lambert Beghe (or 'le bégue,' † 1187).

The Beguines are not nuns or 'religious' in the strict sense, for they take no vows. They are simply pious women living in community. In certain towns a special quarter was given up to them. They lived there in little hermitages, sometimes singly, sometimes several together, under the direction of a superior (known nowadays as 'la grande dame'). They had a common chapel, in which they met for their religious exercises. Some followed the Rule for the tertiaries of St. Francis, others that for the tertiaries of St. Dominic. The Reformation in the 16th cent. and the French Revolution put an end to many *béguinages*. Some, however, still exist in Belgium, Holland, and Germany. This institution never had a very wide vogue, but it presents certain original characteristics worthy of note.²

The institution of the Beghards was founded for men on the analogy of the Beguines. They soon underwent the influence of the Lollards and other heretics, and were condemned by several popes and councils.³

4. Military orders and hospitalers.—In the 11th cent. sprang up a new class of religious orders which, from a certain point of view, are connected with the monastic order, while possessing their own marked characteristics. Some of these were purely military in character; others were concerned also with the care of the sick (hospitalers). The hospitalers pure and simple form a third category, which will be treated apart.⁴ The military orders were regarded by the Church as true religious orders. They had the three vows of poverty, chastity, and obedience, celebrated the divine office, were under the discipline of a Rule and an observance of fasts and abstinence, and enjoyed the same privileges as the monks, being exempt from episcopal jurisdiction and immediately subject to the Holy See. Some followed the Cistercian statutes, others the Rule of St. Augustine, and

others that of St. Benedict. It is for this reason that we regard them as belonging, in a sense, to the monastic order. Contemporary with the Crusades, their principal object was to fight against the Saracens and to protect the Christian pilgrims to the holy places. Their life may, in fact, be regarded as a permanent crusade against the Musalmān. In these orders, at their origin, we have united in one the ideal of the monastic life and of the life of chivalry of the Christian knight. This ideal stood them in good stead in an age when all institutions were so profoundly imbued with the spirit of religion. Unfortunately such an ideal proved to be too high, and elements so incongruous as the religious and the military could not long endure together.

Knights Hospitalers of St. John of Jerusalem.—This is the most ancient of all the military orders. In 1048 some Italian merchants built a hospice or hostelry for pilgrims and for the sick in Jerusalem. Certain French noblemen who served it formed themselves into a religious congregation. This was the cradle of the order. Gérard de Tenque (of Martignes in Provence) organized it into a military order, i.e. an order in which there were brethren attendant on the sick and members who were knights, and who had as their special object to defend pilgrims against malefactors and infidels. The order was approved by Pope Pascal II. in 1113 under the name of the Order of St. John of Jerusalem. Later its members were known as the Knights of Rhodes and, later still, Knights of Malta, from the fact that they defended both these islands against the Musalmān. Foundations were soon established along the shores of the Mediterranean, and at one period of their history they possessed houses to the number of 13,000.

The knights acquired a wide-spread influence and power and also considerable riches, which enabled them to serve as money-agents or bankers to princes and kings.¹ They rendered great services to the Christian religion, and their prowess in the wars against the Turks won them great renown. Their heroic defence of Rhodes and of Malta against an enemy six times their number forms a veritable epic. The most illustrious of their grand masters were Pierre d'Aubusson, Villiers de l'Isle Adam, and La Valette. Napoleon confiscated their property in France, and Nelson annexed Malta for the English Government. The title of Knights of Malta still exists as a title of honour. Those who bear it form a society and give themselves to works of charity.

Knights Templars.—Although of more recent date than the Knights Hospitalers, the Templars soon became of greater importance and greater power. Their founder was Hugues de Payens, a French noble, who in 1118 gathered together a number of companions for the defence of the pilgrims to the Holy Land against the Saracens. The name of Templars, or 'Order of the Temple,' was given to them because their house in Jerusalem was built on the site of the Temple of Solomon. St. Bernard, in 1128, drew up a Rule for them, adapted from the Rule of St. Benedict and the Statutes of Cîteaux. The order comprised the knights (all of whom had to be of noble birth), 'sergeants,' who were of the bourgeoisie and who acted as esquires, and then the chaplains. The first grand master was Hugues de Payens.

⁴ We shall say nothing here of the secular orders of knighthood that were founded more or less on the model of the military orders but were in reality purely civil and instituted by kings and princes as a reward for the services of their subjects. Such, e.g., are the Orders of the Garter, the Bath, the Thistle, etc.

The order was purely military. We need not here enlarge on the great part played in mediæval history by the Knights Templars, on the influence which they wielded far and wide (they had in the 12th cent. 9000 manors distributed through every land in Christendom), on the services which they rendered to Christianity against the Saracens in Palestine and in Egypt, the riches which they accumulated and which were the cause of their downfall, the abuses which crept into the order, or, finally, their lamentable end under Philip le Bel and Clement V. after the cruel execution of their grand master, Jacques de Molay, and his companions in 1307.¹

The Templars were succeeded in Portugal by the Order of Christ, and in Spain by the Order of Montesa.

Other orders were founded on the model of the Templars and the Hospitallers, but we shall speak only of the principal of these lesser orders—the Teutonic Knights, the Knights of St. James, and the Knights of Calatrava and Alcantara.

Teutonic Knights.—About 1128 or 1129 a rich merchant of Germany who had taken part in the siege of Jerusalem, struck with compassion at the sight of the sufferings of the pilgrims, built a hospital for them, in honour of the Blessed Virgin. He was soon joined by others, with whom he organized an order on the model of the Hospitallers of St. John, to care for the pilgrims and protect them against the Saracens. After the capture of Jerusalem by Saladin they were constituted one of the military orders (1190 or 1191) and changed their name from 'Hospitallers of the Blessed Virgin' to 'Teutonic Knights of the Hospitality of the Blessed Virgin.' They adopted a Rule similar to that of the Templars and the Knights of St. John. The order was composed of knights with their servants, esquires, and chaplains.² To the three vows of religion the Teutonic Knights added a fourth—to devote themselves to the care of the sick and of pilgrims, and to combat the enemies of the faith. They celebrated the divine office and other prayers, and were under a severe discipline. At the head of the order was the grand master, and under him the grand commander, the marshal, who was the lieutenant of the grand master in battle, and a grand hospitalier, who supervised the hospitals under the care of the knights. The members of the order were always of German nationality. The knights took part at first in the struggle against the Saracens, then joined forces with another military order, the Knights of the Order of Christ in Livonia, which had been founded to fight against the pagan nations of the Baltic. While thus devoting themselves specially to the war against these pagans, they did not cease to take a part in the Crusade against the Saracens in Palestine. The emperors of Germany, Frederick I. and Frederick II., gave the order their protection and endowed it with vast possessions.

When at the time of the Reformation the grand master became a Lutheran, the order was divided, one part following the grand master in his apostasy, the other taking up the cause against the Protestants. The order fell from its first fervour, and

Woodhouse, *The Military Religious Orders of the Middle Ages*, London, 1879; cf. full bibliography in Chevalier, s. v. 'Templiers.'

² It was the custom at that time for knights to be accompanied, when on horseback, by esquires to serve and assist them.

Napoleon took measures to abolish it in 1809. It still survives, however, as an order of hospitallers in Austria. There are 20 professed knights, who are bound to celibacy, and 30 knights of honour, not so bound. Both classes of knights must be of noble birth. The grand master is always one of the imperial archdukes. The order has charge of 50 parishes, 17 schools, 69 hospitals, for the service of which it supports two congregations of priests and four of sisters. Its members also do ambulance work in war-time. There is a Protestant branch of the order in Holland.¹

Other military orders were founded at the same time in Spain and in Portugal, on the model of the above, in order to fight against the Moors. That of Aviz in Portugal arose in 1147, in the reign, it is believed, of Alfonso I. The knights followed the Rule of St. Benedict in its Cistercian interpretation. They were known at first as the 'New Soldiers,' then as the Knights of Evora, and finally of Aviz. Their campaign against the Moors was conducted with success.

The Order of St. James of Compostella was founded to protect the pilgrims to the shrine of that saint against the brigands and the Moors. Those of Calatrava and Alcantara had also as their aim to make war against the Moors.

The Order of Calatrava owed its origin in 1158 to a Cistercian abbot who became its first grand master, his monks being transformed into knights. It remained in union with Cîteaux and was victorious against the Moors. Unfortunately its members took part in the civil and political contests in Spain and ended by falling completely into the power of the Spanish kings, ceasing to be a religious order and becoming an honorary order of knighthood. Meanwhile it became united with the Orders of Aviz and Alcantara. The latter, founded probably in 1153, also followed the Rule of St. Benedict and was affiliated to Cîteaux. The knights also made war on the Moors, but, like the Order of Calatrava, they took part in politics and ended, like them, in becoming a courtly order of knighthood.²

Among less celebrated orders are the Order of the Holy Sepulchre, which claimed to go back to the time of St. Helena; the Order of Christ or of the Sword, founded by Guy de Lusignan, king of Jerusalem, for the defence of Cyprus against the Turks; the Sword-bearers, founded in Livonia to fight against the heathen in that country; the Order of the Cross or Army of St. Dominic, against the Albigensians; the Order of St. Thomas of Canterbury, an offshoot of the Knights of St. John of Jerusalem, for the service of pilgrims in England, etc. The innumerable orders of knighthood founded by kings and princes in order to confer honour upon and to reward their dependents were not religious orders and do not belong to our subject.

The Order of St. Lazarus, of which St. Basil was the reputed founder, and which was united with that of St. Maurice de Savoy for the care of lepers, had several dependencies and annexes in Palestine and was also an order of military hospitallers. It acquired its military character after the first Crusade, and resembled closely the Templars and the Knights of St. John. This order constructed a vast number of leper-houses

² For Alcantara cf. *Bullarium ordinis militæ de Alcantara*, Madrid, 1759; Woodhouse, *op. cit.*; for Calatrava, *Bullarium ordinis militæ de Calatrava*, Madrid, 1761; M. de Guillemas, *De las órdenes militares de Calatrava, Santiago, Alcantara, y Montesa*, do. 1858; Woodhouse, *op. cit.*; cf. Chevalier, s. v. 'Alcantara,' 'Calatrava,' 'St. Jacques.'

(or 'lazar-houses') in France and in the other countries of Europe.¹

The Order of Mercy presents an analogous case. Founded in 1218 by James, king of Aragon, for the relief of Christian captives and their deliverance from the hands of the Moors, it also became a military order and ended by dividing into two bands—the knights joining the military order of Montesa and the clerics and lay brethren the Order of Trinitarians (see below, p. 706).

Hospitallers (non-military).—These orders were exclusively concerned with the care of the sick. We can name only the principal ones here.

The Hospitallers of the Order of the Holy Ghost were founded by a certain Guy at Montpellier and were approved by Innocent III. in 1198. They devoted themselves, from their foundation, to the care of the poor and the sick. The order was confined at first to Languedoc; then it spread to other provinces and founded hospices in Italy, Spain, Poland, Hungary, and Scandinavia. There were hospitals belonging to it in most of the larger towns in France. Dijon possessed one with 40 dependencies; Marseilles had 30, etc. The historian of the order, Brune, has discovered 28 hospitals of the Holy Ghost in Germany, 11 in Austria-Hungary, 6 in Poland, 8 in Belgium, 40 in Denmark, 35 in Sweden and Norway, 110 in Spain, 18 in Portugal, nearly 280 in Italy, nearly 400 in France—i.e. nearly 1000 for the whole order. The hospitals of the Holy Ghost at Montpellier and at Rome are souvenirs of these foundations.² There were, besides the hospitallers, sisters of the order who had the care of founding children, for whom they showed a solicitude that was truly maternal.³

The Jesuati offer certain curious characteristics. They were founded in 1360 by John Colombini, who showed so extraordinary an example of zeal and penance in Siena. He gave to the members of his society as their aim the practice of mortification and the love of their neighbour, especially by means of care shown to the sick and burial of the dead. At first its members were simple lay brethren. But Paul V. ordered them later to have a priest or two ordained for each house. Their name Jesuati came from the device of the society, 'Live Jesus.' They were also known as Hieronymites, and recognized St. Jerome as their patron.⁴ Their constitutions were at first based on the Rule of St. Benedict and later on that of St. Augustine. They were suppressed in 1668.

There were Jesuatesses also, or Sisters of the Visitation of Mary, who were founded at the same time as the Jesuati, and who were remarkable for their practice of penance.

One of the most curious among the orders of hospitallers is that of the Congregation of the Blind in Paris, Chartres, and other towns in France. St. Louis gave them a hospital in Paris for 300 blind—the Hospital for 'Quinze-vingt Aveugles' (15 × 20 = 300).

The Frères pontifes, founded at Avignon in 1177 by St. Bénézet, were also hospitallers, and took their name from their special work of

¹ Gautier de Sibert, *Hist. des ordres royaux, hospitaliers et militaires de Saint-Lazare de Jérusalem et de Notre Dame du Mont-Carmel*, Paris, 1772; cf. E. Vignat, *Les Lépreux et les chevaliers de Saint-Lazare de Jérusalem*, Orléans, 1884; L. Cibrario, *Dei Templari e della loro abolizione, degli ordini equestri di S. Lazaro, etc.*, Firenze-Torino, 1898.

³ L. Lallemant, *Hist. des enfants abandonnés et délaissés*, Paris, 1885, p. 411 ff. This writer refers also to a number of hospitals of the same class served by other orders.

⁴ The name 'Hieronymite' was borne also by an order of hermits in Spain in the 14th cent. which played an important part under Cardinal Ximenes. It was into one of the monasteries of these hermits at St. Just that Charles V. withdrew from the world. Philip II., who made use of them in the evangelization of the Indies, built the Escorial for them. The same name was also given to certain minor congregations in Italy.

building bridges over streams and rivers for the convenience of travellers. They also built hospices for pilgrims and for the sick near the bridges and ferries. The famous bridge of St. Bénézet on the Rhône at Avignon was constructed by them.¹

The Alexians, or Cellites, were founded in Flanders about the middle of the 14th cent., while the Black Death was raging, in order to care for those struck down by the plague. Originally they formed a society of simple laymen, but later they took solemn vows and were governed by the Rule of St. Augustine. They established houses in Flanders, in Brabant, and on the banks of the Rhine. In 1854 the order was restored at Aix-la-Chapelle and was given new statutes. There were also Cellitine nuns, or 'Black Sisters,' who are in existence at the present day.

The Brothers of St. John of God were founded at Granada in 1540 by the saint of that name. They adopted the Rule of St. Augustine and devoted themselves exclusively to hospital work. They had such success that in Spain, in the time of Urban VIII., they were in possession of 79 hospitals. They had others in Italy, France, and other countries. Divided at first into two sections—one under the general of Granada, the other under that of Rome—they were united in 1878. At the present day the order possesses 9 provinces and 103 hospitals with 14,562 beds. There are 1572 members.²

With the Brothers of St. John of God must not be confused similar congregations, some of them called by the same name, such as the Brothers of Montabaur, the Brothers of Mercy of St. John of God, the Brothers of St. John of God. These others were all local societies founded in the 19th cent., and have not the same importance as the Brothers of St. John of God strictly so called.

Two other congregations, the Brothers of St. Hippolytus, founded in the 16th cent. in Mexico, and the Bethlehemites, founded in Guatemala in 1655, were devoted, like the Brothers of St. John of God, to the care of the sick and also to educational work. The first of these societies still possessed 120 houses in 1885; the second was suppressed in 1820.

The Camillians, who were also occupied with the care of the sick, are treated below. There are, besides, a large number of other communities of hospitallers, mention of which will be found in Hélyot and Heimbucher.

III. THE MENDICANT ORDERS.—I. Dominicans.

—(a) *Origin*.—The founder of the Dominicans, St. Dominic, was born in 1170 at Calaroga in Old Castile. He was thus only twelve years in advance of St. Francis of Assisi. He made a thorough study of theology at the University of Palencia, and in 1195 became a canon of Osma and gave himself to the work of preaching. He associated himself later with the reform of those canons upon whom the bishop imposed the Rule of St. Augustine. We find him next in close relation with the papal legates sent against the Albigenses, in the south of France, and it was there that his future vocation was to be decided. He preached against the heretics, not only by word of mouth, but also by his example of evangelical poverty. It was then that St. Dominic conceived the idea of founding a religious order for the conversion of the Albigenses—an order consecrated to the work of prayer, preaching, and

the study of divine things. In 1215 he went to Rome and obtained from Pope Innocent III., during the 4th Lateran Council, the approbation of the new order. The saint returned several times to Rome at a later period, and obtained fresh approbation from Honorius III. and also numerous privileges for his order. The order developed rapidly, and convents were founded in France, Spain, and Italy. During one of his journeys in Italy St. Dominic had a meeting with St. Francis, in whom he recognized a true spiritual brother. He died at Bologna on 6th Aug. 1221.

(b) *Constitution.*—The Dominicans follow the Rule of St. Augustine, with which St. Dominic had become acquainted while a canon of Osma, and with which he combined the usages of the Premonstratensians, who hold a place in the first ranks of the canons regular. From this point of view, the Dominicans form an order that is essentially clerical and hence differs from the monastic order. Their principal object is preaching, with which, as a logical consequence, was soon united the exercise of the sacred ministry and teaching in the schools. Unlike the monks, the Dominicans have no bond of stability to unite them to any particular monastery; they may be sent from one house to another as necessity or utility may dictate. Like the Franciscans, they are mendicants, *i.e.* they are forbidden to possess property and depend for their maintenance upon Christian charity. They are governed by a master general and the general chapter—an institution borrowed by St. Dominic from the Premonstratensians. The constitution of the order already established at the general chapter of Bologna in 1220 was confirmed by Jordan of Saxony and his successors. At the head of each convent or priory is the prior, at the head of each province the provincial. The general chapter is held every three years. It is composed alternately of provincials and definitors or delegates from each province, and has very wide powers. The general is elected by both provincials and definitors united in chapter—originally for life, now only for twelve years. He resides at the Convent of the Minerva in Rome. The provincials are elected by the provincial chapters composed of the priors of the province and delegates from each convent. Each house must have at least twelve members, and the prior is elected by the community for a term of three years. He has under him a sub-prior. The priors are confirmed in office by the provincial, the provincial by the master general. The actual constitutions given to his order by St. Dominic were curtailed and rearranged in better order by St. Raymond of Pennafort, and they are added to and completed by the decisions of the general chapters.

(c) *Studies.*—The Dominican Order gave itself from an early date to the study of theology. The general chapter of 1248 instituted four provinces—those of Provence, Lombardy, Germany, and England—in order to found, in these regions, a *studium generale* at the four cities of Montpellier, Bologna, Cologne, and Oxford. Albert the Great and St. Thomas Aquinas greatly promoted the element of study by the brilliancy of their renown. Each province was obliged to send two students every year to the *studium generale*. The convent of the Jacobins in Paris (situated in the Rue St. Jacques) soon formed the chief centre of Dominican studies. In each convent there was also a *studium particulare*. In 1259 the general chapter of Valenciennes (of which Albert the Great and Thomas Aquinas were members) laid the foundations of a system of studies for novices and lectors to last eight years—two years of philosophy, two of fundamental theology, Church history and canon law, and four for the study of scholastic

theology. At the end of this course those who merited it received the title of *lector*. After seven years of lectorate the student became *magister studentium*, then bachelor, and finally *magister theologie*—a degree equivalent to that of Doctor of Theology. For merit in preaching the title *predicator generalis*, equivalent to that of Master of Theology, was bestowed.

The life of the Dominican is one of austerity, implying perpetual abstinence, fasting, and other practices of asceticism—silence, life in community, and the divine office in choir. His chief work is preaching and teaching.

In 1231 the Dominicans had a Chair of Theology at the University of Paris. They were the first of the mendicant orders to arrive at Oxford in 1221—the Franciscans did not come there till 1224, the Carmelites till 1254, the Austin Friars till 1268. They soon possessed chairs at Bologna, Padua, Salamanca, Cologne, Prague, and Vienna. Their activity as theologians and preachers was directed principally against the Jews, Moors, and Albigenses. They also played an important part in the tribunals of the Inquisition.

There are no fewer than 152 commentaries written by Dominicans on the *Sentences* of Peter Lombard and nearly 200 on St. Thomas. Under their influence colleges of Oriental languages were founded for the study of Hebrew and Rabbinic.¹

(d) *History.*—In 1214 St. Dominic founded in Rome the convent of Santa Sabina, which has remained a centre of Dominican life. In Paris he founded the monastery of St. Jacques—whence the name of Jacobins by which his sons were sometimes known. He founded other houses also at Bologna, Seville, and other places in Spain. After his death the order continued to make rapid progress, and soon reckoned eight provinces—Spain, Provence, France, Lombardy, the Roman Province, Germany, England, and Hungary. Later, foundations were established in Norway, Sweden, etc. Under the generalate of Jordan of Saxony († 1237) a great advance was made. This master general founded nearly 250 houses in Europe, Asia, and the north of Africa, and received more than 1000 members into the order. At the beginning of the 14th cent. the order had 562 houses in 21 provinces—in Germany alone there were 49 houses of men and 64 of women. In 1821 the pope granted to the mendicant orders the privilege of preaching and hearing confessions in any church without having to obtain the special permission of the bishop of the diocese.

During the course of the 14th cent. the era of decadence set in, brought about chiefly by the Great Schism, which divided the order into two 'obediences,' each with its rival general chapter and master general. Unity, however, was restored in 1409, and from the time of the schism efforts were made at reform. To one of these reforms belong Fra Angelico and St. Antoninus from the cloister of Fiesole, as well as Savonarola. Another reform was started in 1389 by Raymond of Capua, in which St. Catherine of Siena took part. This reform had success in Italy and Germany. In the 15th, 17th, and 18th centuries reformed congregations arose in different countries—in Holland, the province of Toulouse, Brittany, Provence, and Italy. The best known of these reforms was that established in France by Lacordaire (1850), who won for himself a special place in the history of the order.

To the Dominican Order belong a considerable number of saints, authors, theologians, preachers, and artists. To those already mentioned we may add here St. Hyacinth, Peter of Tarentaise (who

¹ On Dominican studies cf. P. Mandouret, in *Dict. de Théol. cath.*, s. v. 'Frères Prêcheurs (Les Etudes chez les)', vi. col. 863 ff.

became Innocent v.), John the Teuton, Humbert de Romans, St. Ceslaus, St. Vincent Feirer, etc. The order numbers among its members four popes, 80 cardinals, and a large number of archbishops and bishops.¹

(e) *The Second Order*.—This order, founded for women by St. Dominic at Prouille in 1206, also follows the Rule of St. Augustine together with special constitutions. The sisters devote themselves to a life of prayer, silence, and manual labour in the cloister. Some writers give as the real date of the foundation of the Dominican nuns that of the establishment of their first convent in Rome, the Convent of San Sisto (1219). The Second Order spread rapidly.

(f) *The Third Order*.—The Third Order of St. Dominic comprises a number of different societies of brethren and sisters, some of whom are 'regular,' i.e. live in community and follow the religious life, others 'secular,' i.e. live in the world. It is impossible to go into their history here.² The best known among these societies is the 'Third Teaching Order of St. Dominic,' which was founded by Lacordaire in 1852, and had the direction of the famous colleges of Arcueil, Oullins, Sorèze, etc.

2. **Franciscans**.—Under the general title of Franciscans, Order of St. Francis, or Friars Minor, may be reckoned all those 'religious' who recognize St. Francis of Assisi as their founder. They are divided into a number of different groups—the result of the divisions that took place among the sons of the saint almost as soon as he was dead, and even during his lifetime.

(a) *Origin*.—St. Francis, born at Assisi in 1182, is one of the saints who have exercised the most profound influence on the interior life of the Roman Catholic Church. The son of a rich draper, in his youth he lived a somewhat dissipated life, but, being converted and in consequence cast out by his father, he gave himself to a life of voluntary poverty, depending for his support upon alms. His beautiful and fertile nature, his wonderful gifts, his generosity and heroic sanctity attracted numerous followers. The society thus constituted received an unwritten approbation from Innocent III. in 1209; in a few years' time it numbered thousands, and was spread all over the world in order to carry on the work of preaching the gospel of poverty and the love of God. In 1212 Clare, a daughter of one of the noblest families of Assisi, associated herself with this apostolate and founded the Poor Clares, the Second Order of St. Francis. In 1219, according to tradition, was founded an order for lay folk, who were thus affiliated to the Franciscans, while remaining in the world. This was the Third Order of St. Francis, which soon also numbered its thousands and exercised a vast influence far and wide. Francis himself longed to go and preach the gospel to the Saracens and thus gain the crown of martyrdom, but the divisions that so soon arose in his religious family obliged him to give up the idea and to return to Italy. He received the stigmata in 1224 on Mt. Alverno and died on 3rd Oct. 1226.³ The name by

which the Franciscans are usually known, that of Friars Minor, was given to them by St. Francis himself from motives of humility and is based on the words of his Rule: 'et sint minores et subditi omnibus.'

(b) *Rule of St. Francis*.—The first Rule of St. Francis is very simple. It was approved by Pope Innocent III. in 1209, but underwent frequent modifications in the chapters or general councils of the order held by the saint every year. During his journey in the East the order underwent a grave crisis, in consequence of which St. Francis drew up in 1221 another Rule, more complete than the first. This is known under the very incorrect title of 'First Rule' of St. Francis. The saint twice modified or rewrote this Rule, and it was solemnly approved by Honorius III. in 1223. Its most striking characteristic is its insistence on the practice of poverty in its most absolute form, not only by each 'religious,' but by the community. The friars could possess no fixed revenues, but lived upon the voluntary offerings of the faithful.

In 1242 fresh difficulties arose concerning the Rule. An authorized interpretation was given by the four chief authorities of the order, at the head of whom was Alexander of Hales. This did not, however, prevent the formation of two parties in the order—the Rigorists and the Mitigated. St. Bonaventura, who was minister general from 1257 to 1274, belonged to the latter party. The Rigorists, who called themselves 'spirituals,' ended by denying to the Church the right of interpreting the Rule of St. Francis and so fell into schism. The friars of the Mitigated Observance took for their distinctive title that of 'Conventuals.' The popes, Nicholas III. (1279), Martin IV. (1283), Clement V., and John XXII. (1317), were obliged to interfere in order to regulate the question of the observance of poverty, the source of all the divisions in the order. A party among the spirituals formed themselves into an independent congregation under the name of 'Poor Celestine Hermits'—a tribute to Pope Celestine V., who favoured them. Angelo Clareno, chronicler of the order, and Ubertine da Casale, also famous among Franciscans, belonged to this party. Under John XXII. part of the order took up the cause of Louis of Bavaria, and were even on the point of forming a schism with an anti-pope at their head.

(c) *Foundation of 'the Observance'*.—In 1334 certain hermitages and convents were established in Umbria and the Marches, in which the observance practised in the lifetime of St. Francis himself was revived in all its austerity. These houses belonged to what was called 'the Observance,' and the friars were called 'Observants.' St. Bernardine of Siena, St. John Capistran, and St. James of the March belonged to this branch of the order. The Observants, kept in the background under Benedict XIII., Alexander V., and John XXIII., succeeded in gaining their cause at the Council of Constance in 1415.

The other branch of the order, in which the primitive austerity had been mitigated, and whose members were known as 'Conventuals,' strove to form a reaction against the Observant element. All attempts at reunion came to nothing, and the two parties continued the strife against each other, sometimes with great violence, by means of pamphlets, lampoons, etc. In 1517 Leo X. made a new effort to reunite the divided order at the *capitulum generalissimum* of the Ara Celi. The bull 'Ite et vos' only succeeded in accentuating the division vols. v.-vii., ed. C. Eubel, do. 1898-1904; *Monumenta Franciscana* (Rolls Series), ed. J. S. Brewer, 2 vols., London, 1863-82; *Analecta Franciscana*, Quaracchi, 1885-97; *Documenta antiqua Franciscana*, do. 1901 ff.; *Etudes franciscaines* (periodical), Paris, 1899 ff.; Heimbucher, ii. 303, 'Literatur über den Franziskanerorden'; de Smedt, p. 375 ff.; Chevalier, s.v. by creating two distinct branches of the order—the Observants, with whom were united all the other reformed congregations under the title of 'Friars Minor of the Regular Observance,' with a minister general of their own, and the Conventuals, or 'Friars Minor Conventual.'

(d) *Capuchins, Discalced, Reformati, Recollects.*—New divisions soon arose in one or other of the two branches. Among the Observants arose in Spain the Discalced under St. Peter of Alcantara, in Italy the Amadeans (Blessed Amadeus de Silva) and the Poor Hermits of Angelo Clareno. But the most important of all these reforms is that of the Capuchins under Clement VII. in 1530, to whom we shall return shortly. Besides these were the Recollects, so called from their convents named 'recollecion-houses,' where a stricter observance of the Rule was practised, and where the more fervent withdrew to renew their spiritual vigour.

The Conventuals also had their difficulties and their efforts at reform. Whole provinces broke off from them and attached themselves to the Observants. Nevertheless they continued to hold their own in Italy, France, Switzerland, and other countries. At Assisi it is the Conventuals who have the guardianship of the tomb of St. Francis and at Padua that of St. Antony.

The Capuchins, however, were destined to become the most prosperous of all the branches of the order. They were founded in 1525 by an Observant friar called Matteo di Bassi. In spite of the strong opposition directed against them from the first and the miserable end of their second founder, Louis of Fossombrone, who was turned out of the order, they continued to prosper and to spread abroad, in France, Africa, Spain, Switzerland, Germany, Austria, etc. Their constitutions were approved by Urban VIII. in 1643. The name Capuchin, derived from their long pointed hood, has remained their characteristic title. Pius X. restored closer relations between the three Franciscan families—the Friars Minor of the Leonine Union, the Conventuals, and the Capuchins.

(e) *Activity of the order.*—In spite of its divisions and internal strife, the Order of St. Francis has taken an important part in ecclesiastical history. A number of bishops, cardinals, and even popes, have come forth from its ranks. Many of its friars have filled confidential posts at the courts of kings and popes and have been directors of their consciences. St. Francis carried on the apostolate among the infidels by preaching and by his own example. In 1230 the Franciscans founded a house in Jerusalem. Later they evangelized the north of Africa, Egypt, Ethiopia, Russia, Scandinavia, and Lapland. The travels of John of Plano Carpini in 1247 in Mongolia, of William of Rubruck in Tartary and Tibet, of Odoric of Pordenone in China are well known. Not less known is the mission of John of Parma, sent by Innocent IV. to bring about reunion with the Eastern Churches. In India Thomas of Tolentino was martyred in 1321. The friars were the first to set out for the New World. In the 17th cent. the Capuchins were in the Congo, Brazil, Abyssinia, and the Levant. In the front ranks of the adversaries of the Albigenses, the Vauds, and the Patarins we find the Friars Minor. St. John Capistran is celebrated for his opposition to the Hussites in 1456; St. Fidelis of Sigmaringen and many others were martyred by the Protestants in Switzerland, England, Holland—in the latter country we have the martyrs of Gorkum. A considerable number of Friars Minor have gained renown as preachers and missionaries—e.g., St. Antony of Padua, St. Bernardine of Siena, St. James of the March, Joseph of Leonissa, St. Leonard of Port Maurice, Bernardine of Feltre, Ladislaus of

Gielnow, Angelo d'Acri, etc. There were also theologians and savants among them.

In the early days of the order there was a certain degree of hesitation regarding the question of study. The spirituals were entirely opposed to it, but St. Francis never showed himself hostile. As long as the interior spirit of his children was not thereby endangered, study might well find its place in their life. Hence we find at an early period Franciscans teaching in the universities of Bologna, Paris, and Oxford. Certain houses, called *studii*, were established, as among the Dominicans, for purposes of study. The various branches of the order have produced a large number of theologians and of mystical and ascetical writers, whose names will be found in the works cited in the literature below.¹

(f) *Minims.*—We may regard as belonging to the Franciscan order that of the Minims ('Fratres Minimi'), an order of mendicant friars founded in 1435 by St. Francis of Paula (Paola in Calabria) to whom he gave the name of Minims, or 'very little ones,' to teach them the spirit of humility and penance in which he wished them to live.² The Rule of the Minims does not differ in substance from that of St. Francis of Assisi, but is distinguished by greater severity. It was confirmed by Julius II. in 1506. Being called to France to assist at the last moments of Louis XI., Francis of Paula remained there till the day of his death, and his order took root in that country. It had a period of great prosperity, especially during the lifetime of the saint and the years immediately succeeding his death. At the beginning of the 16th cent. the order possessed 430 houses in France, Italy, Spain, Germany, and even India. St. Francis of Paula, like his namesake and patron of Assisi, founded a second order for women and a third order for people living in the world.

3. *Carmelites.*—(a) *Origin.*—Long and fierce discussion has raged on the origin of the Carmelite order. From the time of the prophet Samuel there existed in Palestine a society whose members were known as 'the sons of the prophets' and who lived a quasi-monastic life as cenobites or hermits on Mt. Carmel. Among these pre-Christian monks lived Elias and Eliseus. The sons of the prophets disappear from the history of Israel before the fall of its kingdom, but in the 4th cent. of the Christian era (perhaps even in the 3rd cent.) Mt. Carmel was a place of pilgrimage for Christians. St. Basil and St. John Chrysostom, the great masters of the monastic life, represent Elias and Eliseus as the models of monasticism and as the ancestors of the Christian monks. Christian anchorites, moreover, had settled on Mt. Carmel as in other places in Palestine hallowed by their connexion with Biblical times, and early writers on the Carmelite order connect it through these hermits with the sons of the prophets and see in Elias and Eliseus the founders of the order. The Carmelite constitutions, their chronicles, their liturgy, and innumerable other documents unite in maintaining this tradition. The evidence on which it reposes is, however, without historical value (see the criticism of Zimmerman), and the negative argument—the silence of all pilgrims on the subject up to the 12th cent.—is of the highest significance.³ It would appear that the Order of Mt. Carmel was in reality founded by St. Berthold about the year 1155. The pilgrim John Phocas (1185), Rabbi Benjamin of Tudela (1163), Jacques de Vitry, and others speak

¹ Cf. esp. U. d'Alençon, in *Dict. de Théol. cath.*, vi. col. 835 ff.

² Perhaps also in allusion to Mt 25:40

³ Cf. B. Zimmerman, 'Carmelite Order,' in *CE* iii. 354-370;

'Carmes (Ordre des),' in *Dict. de Théol. cath.*, ii. col. 1776 ff. On this discussion cf. D. Papebroch, *AS*, March, iii., and J. B. Pitra, *Études sur la collection des Actes des Saints*, Paris, 1850. It lasted thirty years and is not yet over, although the Holy See, in 1698, imposed silence on the rival parties.

of Berthold and the hermits who lived with him in Carmel under the patronage of Elias. The patriarch of Jerusalem, Albert de Vercelli, gave them a Rule which was a literal transcription of the Rule of St. Augustine. The hermits were to elect a prior, to live in separate cells, and give themselves to manual labour. They met together for the divine office in their oratory. Their life was, in fact, a blending of the cenobitical and eremitical elements, like that of the early monks and of the Camaldolese, Carthusians, and similar foundations of the 11th and 12th centuries.

Foundations were made from Carmel at St. Jean d'Acre, Tyre, Tripoli, and Jerusalem. They were, however, in part destroyed by the Saracens, some of the hermits suffering death at their hands. Other colonies were founded in Cyprus, in Sicily, at Marseilles, at Valenciennes, and in England. St. Louis of France paid a visit to Carmel in 1254 and brought thence with him some of the hermits whom he established at Charenton.

(b) *Migration to Europe.*—A new phase in the history of the Carmelite Order is marked by its migration to Europe. At the first chapter held at Aylesford in England St. Simon Stock, an Englishman, was elected general (1247-65). He modified the primitive Rule to a certain extent, and obtained for the order in 1247 an interim approbation of Innocent IV. The order was finally approved by the Council of Lyons in 1274, though not without some difficulty on account of the decree of the Lateran Council in 1215 which forbade the foundation of new orders. It now underwent a new development. Foundations were made in the towns; community life took the place of solitude; and various mitigations were introduced into the primitive Rule. The solitaries were transformed, in fact, into mendicant friars and obtained the privileges attached to the existing mendicant orders. The original title of 'Fratres Eremitæ de Monte Carmelo' or 'Eremitæ sanctæ Mariæ de Monte Carmelo' was changed into 'Fratres Ordinis B. M. de Monte Carmelo.' St. Simon Stock, the great partisan of the active life, founded houses in Oxford, Cambridge, London, York, Paris, Bologna, Naples, etc., choosing cities that possessed universities or schools, in order to secure instruction for his young 'religious' and also to obtain recruits for the order among the students. But this new and rapid development was not without its dangers; and, when St. Simon Stock died, he left to his successor a difficult situation to cope with. The latter, Nicholas Gallicus (1265-71), was opposed to the active life and wished to bring back the order to a more contemplative ideal, but was obliged to resign his office. In an unedited work entitled *Ignæ Sagitta* he denounces strongly the practice among the Carmelites of preaching and hearing confessions. The order continued, however, to develop in this direction. It met with great success in England, where the kings themselves founded houses. Many of its members were in their confidence and carried out important missions for their royal masters. Among these was Thomas Walden, who accompanied Henry VI. to France. The English Carmelites never accepted the reforms introduced into other provinces of the order, as they were always well and strongly organized. Under Henry VIII. the greater number submitted to the Act of Supremacy and separated themselves from the other branches of their order. Only two of the English friars remained faithful, and suffered martyrdom for their faith. The submission of the others, however, did not prevent the suppression of their order in England, the plunder of their possessions, and the dispersal of their libraries. At the time of the Reformation there were 39 Carmelite monasteries in England.

(c) *Constitutions and studies.*—The earliest constitutions of the Carmelite order are those of 1324, but it seems that an earlier redaction existed in 1236. The constitutions of 1324 divide the order into 15 provinces according to the different nations. At the head of all is the general, elected by the general chapter. At each of these chapters he was obliged to give an account of his administration, and was then either confirmed in or deposed from office. His ordinary place of residence was Rome, and he had two assistants chosen by himself. The general chapters were held at first every three years, then every six years, and even as rarely as once in sixteen years. In England the court usually contributed towards the expenses of the general chapter—the journey, horses, hostelries, etc. The provincial chapter chose the definitors for the general chapter. It was the business of those officials to receive reports on the administration of the provinces, to confirm or depose the provincials, to audit the accounts, to nominate the professors for the universities, to revise existing laws and add new ones, and to reward or punish members of the order according to their merits or demerits. The acts of the general chapters of the past exist only in a fragmentary condition and, such as they are, have been published. The provincial chapter, which was usually held once a year, was composed of all the priors or vicars of the province. Four definitors were chosen at the chapter. These officials exercised in the province the same duties as those exercised by the definitors general in the whole order. They had power to depose the priors, to choose those who were to be sent to the houses of study (*studia generalia* or *particularia*) or to the universities, and to decide on the foundation of new houses. Each house had its prior, assisted by a vicar. The administration of the prior was controlled by three guardians. He could be confirmed in office every year, indefinitely. Certain monasteries were set apart for the study of philosophy, others for that of theology. In 1324 there were eight *studia generalia*—Paris, Toulouse, Bologna, Florence, Montpellier, Cologne, London, and Avignon. Their number increased until at last every province had its house of studies. The number of Carmelite students in Paris averaged 300, in London more than 100. Some students went through a short course only, others remained as long as twelve years in the universities. It may be said that the order, from its approbation at the Council of Lyons up to the Great Schism, continued to develop steadily. There were certain abuses against which the general chapter itself continually raised its voice, such as the entrance into the order of poor students who came for the purpose of pursuing their studies gratis, the seeking of ecclesiastical benefices or posts of honour outside the order by certain of its members, the attempts of superiors to make their office perpetual or the fact that they showed favour to nephews or other relatives. Again, the professors in the universities dispensed themselves from choir, took their meals outside the monastery, caused the lay brethren to wait on them as their servants, etc.

A first attempt at reform was made at Mantua in 1413 and embraced 52 houses. Another took place under the general John Soreth (1351-71); another at Albi in 1499, which issued from that of Mantua. In 1514 we have the reform of Mt. Olivet near Genoa; in 1604 that of Rennes, modelled on St. Teresa's reform, the last by far the most important (see below). The reform of St. Elias, or the Italian congregation inaugurated at the instance of Clement VIII., established itself in Genoa, Rome, and Naples, and also in France, Germany, Austria, Poland, and Lithuania. In

1731 this reform numbered 4193 members. It gave greater scope for activity and the exercise of the sacred ministry than the Spanish reform.

(d) *St. Teresa's reform.*—St. Teresa (†1582), assisted by St. John of the Cross, founded at Avila a convent in which a more austere observance of the Rule was carried out in the practice of poverty, penance, and the contemplative life. The account of her subsequent foundations and of the reforms carried out by her in several Carmelite convents, both of nuns and of friars, will ever remain unique in the annals of the religious orders. This reform was introduced into France by Madame Acarie (Blessed Marie of the Incarnation) and by the celebrated Cardinal de Bérulle. It has always possessed in France a special character of its own and has always been very prosperous. Among its most celebrated members are Louise de la Miséricorde (Louise de la Vallière), Thérèse de St. Augustin (Madame Louise, daughter of Louis xv.), and Anne of Jesus.

(e) *Affiliated members.*—The Carmelite Order has also its affiliated members. Several communities of Beguines in the 15th cent.—notably those of Gueuldre and Dinant—were affiliated to the order and thus originated the Carmelite nuns. From these, foundations were made in France, Italy, and Spain. As among the Dominicans and Franciscans, there is a third order, of whose members some live in the world, while others live in community.

(f) *Missions.*—The Carmelites had some flourishing missions in America (Mexico, Peru, Florida, Rio de Janeiro, Guadeloupe, San Domingo). St. Teresa, although her great object was to bring back the contemplative life to her order, favoured missionary activity on behalf of heretics and pagans. In 1604 the reformed Carmelites sent a mission to Persia, which succeeded in establishing itself at Baghdad, at Basra, and in India. Flourishing missions were also founded at Bombay and at Goa; others in China, Turkey, Armenia, Syria, and North America. The Carmelite nuns of Spain founded convents in S. America—in the Argentine, Bolivia, Brazil, Chile, Colombia, Ecuador, and Peru. Among the Carmelite missionaries there were several martyrs. Colleges existed for the missionaries, which contributed towards the foundation of the famous Congregation of Propaganda at Rome.

(g) *Desert convents.*—An institution peculiar to the Carmelite order is that of the 'deserts,' or convents where the purely contemplative ideal was carried out. This institution owed its foundation to the memory of the eremitical life led by the early members of the order on Mt. Carmel and to the passages of the Rule and constitutions that encourage the contemplative life. In these and in other documents this form of life was recommended for certain convents to be founded apart from towns or cities, in forests or desert places. The idea of the 'desert convents' properly so called seems to have been originated by Thomas of Jesus, Discalced Carmelite of Spain. Certain of the brethren in these convents were destined to remain there always, but the greater number came only for a year and then returned to the houses whence they had come. The first 'desert' was founded in 1592 at Bolarque on the banks of the Tagus in New Castile, and soon after one was founded for every province. The total number was 22. These 'deserts' followed the plan of a charterhouse, and the life resembled that of the Carthusians, but was even more severe. The practice of strict silence, fasting, and other penitential exercises were held in honour. Attached to each 'desert' were separate hermitages, where the brethren could retire to lead a life more completely solitary even

than that of the 'desert' itself. There were also anchorites and recluses attached to some convents, among whom were Thomas Sciope of Norwich and the Blessed Jeanne de Toulouse.

(h) *Activity.*—We have seen that in many of their provinces the Carmelite friars gave themselves to the active ministry and to teaching in the universities. There, however, their influence was disputed by the Dominicans and Franciscans, who were already in the field—there was no room for a third school of thought. The Carmelites then, instead of creating a school of their own, followed the Dominicans and were rigorous Thomists. They have had among their numbers theologians of renown. St. Teresa and St. John of the Cross were founders of a school of mysticism which has produced some remarkable writers.¹

4. *Hermits of St. Augustine.*—We have already dealt with the Canons Regular of St. Augustine and other congregations of canons who follow the Rule of that saint. Here we are concerned only with the hermits of St. Augustine. These hermits, sometimes called simply Augustinians, date from the 12th–13th century. At that period there were certain communities of hermits who, either then or subsequently, followed the Rule of St. Augustine. Chief among these were the Williamites (Guillemites) (founded by William of Malval in 1155, near Pisa), who were spread abroad in Italy, Germany, Belgium, and France. Besides these there were the Bonites (so called from their founder, the Blessed Jean Buoni, †1249); the Brittinians (founded by St. Blasius de Brittinis in the Marches of Ancona in the 12th cent.); the Tuscan Hermits of the Blessed Trinity; the Brothers of the Sack (Fratres Saccati, Saccophori, Sacceti, Sachets), so called from the shape of their habit. The last were also known as the Brothers of Penance.

So many different congregations, leading what was practically the same life with the same object in view, needed to be brought together; and Alexander iv., on 4th May 1256, promulgated the bull 'Licet Ecclesie Catholice,' which united them all in a single order under the title 'Hermits of St. Augustine.' He exempted them from episcopal jurisdiction. A general chapter of all the superiors was held in Rome in 1256; the Rule of St. Augustine, together with special constitutions, was imposed upon the hermits; a superior general was elected; and the order was divided into four provinces—Italy, Spain, France, Germany. In 1567 Pius v. included it among the mendicant orders, giving it rank after the Carmelites. At the period of its greatest prosperity the order possessed 42 provinces and 2 vicariates, numbering 2000 monasteries and about 30,000 members. The title of 'Hermits' was not altogether appropriate, at least in the case of some of the now united congregations whose members practised the conventual life and had their convents in the midst of towns and cities.

In the 14th cent. efforts were made to reform certain abuses that had crept into some of the houses. New congregations also were founded—e.g., that of Ilceto in 1385, that of St. John ad Carbonariam (in the kingdom of Naples) in 1390,

the Congregation of Lombardy in 1430, that of Our Lady of Consolation, and others.¹ Two reforms of greater importance were effected in Spain: the first, in 1430, imposed on all the houses of Castile; the second, more austere, in 1588, that of the Discalced Augustinians or Recollects, extended to the Spanish colonies, the W. Indies, and the Philippines. There were reforms also in France, among which must be mentioned that of the 'Petits Augustins.' Some of these congregations had flourishing missions in the E. and W. Indies, in Mexico, Peru, China, Japan, and India. In Spain, where they were always more prosperous than in any of the other provinces, the reformed Augustinians were favoured by Philip II. Among celebrated Augustinians we may mention St. Thomas of Villanova, Panvini, Lupus, Lancelot, Noris, Luis de Leon, one of the greatest writers in Spain, and Florez.

From the 15th cent. onwards efforts were made by the Augustinians to bring about the reform of their order in Germany. One of these efforts at reform—that of Andreas Proles (†1503)—was extended under his successor Johann von Staupitz by the desire of the pope to all the Augustinian friars of N. Germany. Seven houses opposed the reform, among them the monastery of Erfurt, to which Martin Luther belonged. The apostasy of Luther brought about the ruin of the Augustinians in Germany. Many followed the arch-Reformer in his revolt against the Church. But some of these German Augustinians were, on the contrary, determined opponents of the Reformation. In 1526 the communities that had remained faithful to the Roman Catholic Church were united to the province of Lombardy.

In France the Revolution of 1789 struck another blow at the Augustinians and destroyed the greater part of the 157 monasteries, while in Spain the Revolution of 1835 closed 105 out of 153.

In recent years the Augustinians have begun to flourish once again. Leo XIII. endeavoured to bring about greater unity among them in 1896. New constitutions were drawn up, and the order was divided into 23 provinces, distributed among two congregations, and it numbers about 2300 members. In Rome the Augustinians possess the church of St. Agostino. The famous Angelica library formed by one of their friars, Angelo Rocca (†1620), is now a public library. They have also, at Genazzano, in the neighbourhood of Rome, a celebrated place of pilgrimage.

Other saints of the order worthy of mention are St. Nicholas of Tolentino (†1305) and St. John a. S. Facundo (†1479). Among its members must also be reckoned a certain number of theologians, dogmatic and moral, of erudites, and of missionaries.² The Assumptionists, who form a branch of the Augustinian order, are treated below, p. 708.³

The bull 'Licet Ecclesiae Catholicae' which in 1256 united the Hermits of St. Augustine in a single order was not enforced against the nuns. Each convent remained autonomous. To this congregation belonged St. Juliana of Mt. Cornillon at Liège (†1258). The reform known as the Recollects was one of its branches.

After the four great mendicant orders come a number of others known as the lesser mendicant orders. We have given a list of these above (I. 5) and can speak here only of the principal ones. The greater number of them follow the Rule of St. Augustine.

5. **Trinitarians.**—The Trinitarians (or Order of the Blessed Trinity for the Redemption of Captives) were founded by St. John de Mattha and St. Felix de Valois, at Cerfroid in the diocese of Meaux, in 1198. The object of this order was to ransom the numerous Christian captives taken by the Moors and Muhammadans. Its members follow the Rule of St. Augustine, and the observance prescribed by their constitutions is very severe. The members were obliged to be ready to offer themselves as slaves to the Moors in exchange for the captives whom they desired to ransom. The Trinitarians were approved by Innocent III., and soon took root in France, Italy, Germany, England, Ireland, Spain, and later in America. The order possessed 800 houses. The name of Mathurins, by which the Trinitarians are sometimes known, came from their monastery of St. Mathurin in Paris. A reform of the order was inaugurated in Spain, that of the Discalced Trinitarians. Members of this order delivered 900,000 captives from the clutches of the Moors. Their work received the praise even of Voltaire. Since the Revolution the order has greatly declined. It possesses the Convent of St. Chrysogonus in Rome. The Trinitarians offered themselves to Leo XIII. for the work of ransoming the slaves of Africa.¹

6. **Order of Mercy.**—Another order founded with the same object as the Trinitarians was that of Montjoie in Spain, but it had only a short existence (1180–1221) and was incorporated, after a term of 40 years, with the Order of Calatrava. In 1218, however, St. Peter Nolasco founded in Spain an order that was to become a rival of the Order of the Blessed Trinity. This was the Order of Our Lady of Mercy (de la Mercede), whence the name of Mercedarians, or Fathers of Mercy. Like the Trinitarians, the Mercedarians devoted themselves to the work of ransoming captives—those taken by the pirates of Barbary—and were occupied also in the service of the galley-slaves and in missions to the heathen. Their special field of operation lay in Morocco, whereas that of the Trinitarians was in Tunis and Algeria. The Order of Mercy was approved by Gregory IX. In origin it was a military order composed of knights, chaplains, and serving brethren. The name of St. Raymund Nonnatus is one that is quoted with pride by the order. The Rule of St. Augustine is followed, whence the Mercedarians have sometimes been reckoned among the Augustinians.²

7. **Servites.**—The Order of the Servants of Mary, or Servites, so called from their special devotion to the Blessed Virgin, was founded in 1233 on Monte Senario, near Florence, by seven members of seven patrician families of the city. The Rule is that of St. Augustine together with special constitutions which were approved in 1249. St. Philip Benizi was the fifth general of the order. It was on the point of being suppressed in 1274 in consequence of the edict of the 4th Lateran Council renewed by the 2nd Council of Lyons, but it was finally approved by Benedict XI. in 1304. It spread abroad in France, Spain, Hungary, Bohemia, Poland, and even as far as India. In 1910 the order numbered 700 members and 62 monasteries.³

Considered as belonging to the mendicant orders are also certain congregations of women which follow the Rule of St. Augustine. Chief among these are the following.¹

8. The Brigittine Order, founded by St. Brigit of Sweden († 1373), resembles in some respects that of Fontevault (see art. MONASTICISM, vol. viii p. 796). In each convent there were 60 nuns governed by an abbess, who had also under her jurisdiction, in a separate house, 13 priests, 4 deacons, and 8 lay brothers. There were houses of the order in Norway and Sweden, Flanders, Prussia, Poland, Russia, and England. There exist now only 9 convents, 8 in Germany, Holland, and Spain, and 1 in England—the last a pre-Reformation foundation.

9. The Ursulines, founded at Brescia in 1537 by St. Angela Merici, devote themselves to Christian education. St. Charles Borromeo gave them his protection. They were very successful. In France alone in 1789 there were 350 convents with 9000 members. At present there are about 7000 nuns in some 300 convents scattered throughout the world.

10. Order of the Annunciation, or Annunziata. —This order is divided into three branches: the Annunziata of Lombardy (or Sisters of St. Ambrose), founded at Pavia in 1408, the Annunziata of Italy (or Celestial Annunziata), founded in 1604 near Genoa, the Annunziata of France, founded by the Blessed Jeanne de Valois († 1505), daughter of Louis XI.

11. Order of the Visitation of the Blessed Virgin Mary. —These sisters, who also follow the Rule of St. Augustine, deserve a place to themselves in the history of the religious orders, both on account of their founders, St. Francis de Sales and St. Jane Frances de Chantal, and on account of the special spirit of the order and the wonderful fervour shown by its members during the early years of the foundation.

IV. *CLERKS REGULAR*. — 1. Jesuits. — In order of time the Theatines, Barnabites, and Somaschi rank before the Jesuits; but in number and importance in the history of the Church the Jesuits occupy without dispute the first place among the clerks regular. See art. JESUITS.

2. Theatines. — Founded at Rome in 1524 by St. Gaetano di Tiene († 1547) and the celebrated Cardinal Caraffa, afterwards Pope Paul IV. (1555), the Theatines are in order of time the first society of clerks regular. From his entry into the ranks of the clergy, Gaetano was possessed with the desire of forming a community of zealous priests for the service of God and the work of preaching. He founded first the Society of Divine Love, then that of the Theatines,² which closely resembled the former foundation, but had a stricter Rule. Its object was the renovation of the priestly and apostolic life by means of prayer, the practice of poverty, and study. All its members were to be priests. Poverty was to be observed to an extraordinary degree and in an altogether new manner. The society must possess no revenues, and must not ask alms like the mendicant orders, but simply accept whatever was offered to it. It was approved by Clement VII. in 1524, who gave to its members the privileges of the Lateran Canons. He decided, moreover, that the Theatines should take solemn vows, follow the Rule of St. Augustine, and elect their superiors every three years. Caraffa was the first superior elected. The sack of Rome by the soldiers of Charles V. obliged the Theatines to leave the city for a time and to establish them-

B. M. Mayr, 'Serviten,' in *Wetzer-Welte*³, xi. 204 ff.; Heimbucher, ii. 218 ff.

¹ For congregations of women occupied with the education of girls see below.

² The name 'Theatine' comes from Theate (Chieti), a city of the Abruzzi of which Caraffa was bishop.

selves at Venice and at Naples. Towards the end of the 16th cent. they had houses in many of the towns of Italy. In the 17th cent. they were very numerous in France and in other parts of Christendom. They exercised a salutary influence on the reform of the clergy and of Christian society in general, by means of their preaching, teaching in the confessional, and visitation of the sick, and by prayer and study. They had missions in Armenia, Mingrelia, Circassia, etc. Their constitutions, drawn up by Caraffa, eventually underwent certain modifications. In 1588, at the incentive of Pope Sixtus V., a general was elected for the whole order. The general chapter is held at Rome every six years. Among their distinguished members must be mentioned, besides the two founders, Verano, St. Andrew Avellino, Tomasi, Merati, etc.¹

3. Barnabites. — The Theatines served as a model for other congregations founded soon after and also having as their object the reformation of the clergy. Chief among these congregations are the Barnabites, founded in 1530 at Milan by St. Antonio Maria Zaccaria. Now days their mother house is at San Carlo in Catinari in Rome. To them were also conceded the privileges of the Lateran Canons Regular. The name Barnabite is derived from one of their principal houses at Milan, S. Barnabas.² See, further, art. BARNABITES.

4. Somaschi. — This order was founded in 1532 by St. Jerome Emiliani and devotes itself chiefly to the education of orphans and the care of the poor and the sick. Somascha was the hermitage where the founder wrote his Rule and whence the name is derived. The Somaschi endeavoured unsuccessfully to amalgamate with the Society of Jesus in 1547, and then with the Theatines; in the latter case they succeeded, but the union lasted only eight years. St. Charles Borromeo was one of their protectors.³

5. Camillians. — The Camillians were founded to care for the sick by St. Camillus de Lellis († 1614). They rendered the greatest service in the hospitals and became renowned for their courage and charity during the plague, cholera, and other epidemics that devastated Italy.⁴

6. Piarists, or Scolopes (a contraction of their full title 'Cleri regulares scholarum piarum'). — This order was founded by St. Joseph Calasanz († 1648). Its special work, as its name indicates, was the education of children and, in particular, of poor children. It was founded at Rome, whence it spread abroad in Italy and in other countries.⁵

V. *RELIGIOUS CONGREGATIONS FROM THE END OF THE 17TH CENTURY AND SOCIETIES OF SECULAR PRIESTS*. — I. RELIGIOUS CONGREGATIONS. — 1. Passionists. — The Passionists (Clerici Passionis D.N.J.C.) were founded to honour the Passion of Christ. Their founder, St. Paul of the

Cross (†1775), was known for his great austerities and his zeal for souls. Pope Clement XIV. gave them the famous Church of SS. John and Paul in Rome. The congregation is spread abroad in many lands of both the Old and the New World, and is divided into thirteen provinces with 1400 members. The Passionists gave themselves to preaching and mission work.¹

2. **Redemptorists.**—The Redemptorists (Congregatio SS. Redemptoris) have as their founder the celebrated St. Alfonso Liguori (*q.v.*; †1787), whose great theological knowledge has won for him the title of Doctor of the Church, and who exercised great influence on the Catholic doctrine and piety of his time. The members of his congregation devote themselves to the work of preaching in the towns and country districts. Like the Passionists, the Redemptorists are spread all over the world. They number at the present time 4000, possess 215 colleges or hospices, and are divided into 29 provinces.

3. **Oblates.**—The Oblates (of Mary Immaculate) were founded by Mgr. de Mazenod, bishop of Marseilles, at the beginning of the 19th century. Their work is preaching, the education of the clergy, and foreign missions. They have at the present day 301 houses and 3110 members.²

4. **Marists.**—This congregation was founded at Fourvières in 1816. The members follow the Rule of St. Augustine together with special constitutions. Like the Oblates, their work is preaching and foreign missions.³

5. **Assumptionists.**—The Assumptionists were founded in 1850 at Nîmes by P. d'Alzon (†1880). Their activity is employed in the direction of pilgrimages, the press, mission work, the education of children, etc. They form a branch of the Augustinian Order, and their official title is 'Augustinians of the Assumption.'⁴

ii. **SOCIETIES OF SECULAR PRIESTS.**—With these congregations may be compared, as regards date of foundation, manner of life, and special object, certain societies of priests, either with or without lay brothers (coadjutors), who usually take simple vows or are bound only by a promise. These societies, like the above religious congregations, are employed in the education of the clergy, the study of sacred science, preaching, and, some of them, in foreign missions. They have community life, but not the choral office, and they are under episcopal jurisdiction.

1. **Oratorians.**—This congregation has played an important part in the history of the Counter-Reformation of the last few centuries. It is divided into two branches—the French and the Italian. In the Italian Oratory (to which that of England owes its origin) each house is autonomous and independent, while in the French Oratory they are united under a superior-general. The former was founded by St. Philip Neri in Rome, about 1575, as a society of secular priests devoted to the exercise of the sacred ministry and to study, under the title of 'Patres Oratorii.' Most illustrious among its many well-known members is the historian Baronius. The names of Aringhi, Bianchini, and Gallandi also deserve mention, while, in England, those of Newman and Faber have given immortal lustre to the Oratories of Birmingham and London. Their centre in Rome is the house of La Vallicella with its magnificent library. The French Oratory, founded by Cardinal de Bérulle

⁴ *Missions des Augustins de l'Assomption*, Paris (periodical); Heimbucher, iii. 843.

in 1611, vied with that of Italy in carrying on the work of clerical reform, and presents us with names such as de Condien, Bourgoing, Lejeune, Jean Morin, Amelotte, Cabassut, Thomassin, Richard Simon, Guénin, Lamy, Malebranche, Lelong, Le Brun, Massillon, Houbigant, Quesnel, and Duguet. At the Revolution the French Oratory had 70 houses and 751 members. There were numerous colleges, seminaries, and parishes under its control. It was restored in 1852 and counts among its members Pétetot, Gratry, Perraud, Ingold, Largent, Baudrillart, Lecanuet, Laberthonnière, etc. It possessed houses also in Belgium and Spain. The Italian Oratory, besides its offshoot in England, has foundations in Spain, Austria, India, and America.¹

The Lazarists, Eudists, and Sulpicians worked along with the Oratorians for the education and sanctification of the clergy, and exercised themselves in the sacred ministry, preaching, and mission work.

2. **The Lazarists**, founded by St. Vincent de Paul in 1625, took their name from the priory of St. Lazare in Paris, which had been handed over to them. They form a congregation under a superior-general with assistants, a general chapter, and visitors. They have missions in Abyssinia, Persia, Mexico, Chile, Tibet, Constantinople, and Palestine. They possess 240 houses and 3000 members.

3. **The Sisters of St. Vincent de Paul**, or Sisters of Charity, were founded by that saint with the assistance of Mlle de Marillac (Madame Le Gras) in 1634. They are the largest of all the congregations of religious women and form an army of 35,000 members with more than 3600 houses. They are to be found in almost all the countries of Europe and America and in the greater number of the colonies. They nurse the sick and the poor in hospitals, orphanages, schools, etc.

4. **The Eudists**, founded by Jean Eudes at Caen in 1643, and dispersed at the Revolution, were afterwards brought together again and now number about 400 members.

5. **The Sulpicians** devote themselves exclusively to the training of the clergy. Their founder, M. Olier (†1657), belonged to that company of zealous priests who were the friends of St. Vincent de Paul and Père de Condren. In 1903 the Sulpicians possessed 24 seminaries in France and others in Canada and the United States. They number about 300.²

6. **The Salesians**, founded in 1859 at Turin by Don Bosco, are occupied with mission work and schools, especially for poor children in order to fit them for the different trades. They developed rapidly, and exercise a wide influence. At the death of Don Bosco 130,000 pupils had passed through the schools of the institute. In 1888 it had 956 members; to-day there are 4137. There are 34 provinces with 320 hospices, schools, oratories, orphanages, schools for the arts and crafts, seminaries, printing-presses, and mission-stations. The last are found principally in Patagonia, Tierra del Fuego, and other parts of S. America.

The Sisters of Mary, Help of Christians, or Salesian nuns, also founded by Don Bosco, are engaged in the education of girls, and number more than 2000. They have 250 foundations.³

¹ I. Marciano, *Memorie storiche della Congr. dell' Oratorio*, 5 vols., Naples, 1693-1702; Hélyot, viii. 12 ff.; Wetzer-Welte², ix. 2019 ff.; *Lincei Quartalschr. für kath. Theol.* liv. 965 ff.; A. Bengno, Cavanese, 1906; Heimbucher, iii. 491

7. **Paulists.**—In 1857-59 Thomas Hecker, with a number of companions, left the Redemptorists, to whose congregation he belonged, in order to found a new missionary society—that of the Paulists—whose principal object should be the conversion of Protestants in America by means of sermons, lectures and public discussions, the press, and social work. The number of converts made by the society from 1898 to 1904 was 1485; in the year 1905 alone it exceeded 1000. The society has to-day about 100 members.¹

There are many other less important societies of priests, formed on the above models. For a list of these see Heimbucher, iii. 519 ff.

VI. **MISSIONARY SOCIETIES.**—Many of the congregations enumerated in the preceding paragraphs possess, as we have seen, missions in infidel lands. Those with which we are now concerned, while closely resembling the above in their organization and manner of life, are dedicated either exclusively or at least principally to this foreign mission work.

1. **Society of the Foreign Missions.**—Most important among these is the Society of the Foreign Missions founded at Paris, Rue du Bac, in 1660-63, by Mgr. Pallu, Vicar Apostolic of Tongking, and Mgr. L. de la Motte, Vicar Apostolic of Cochin-China. During the Revolution the seminary was closed, but it was re-opened in 1820. At the present day the society possesses 34 missions, episcopal sees, vicariates, and prefectures apostolic, numbers among its members 34 bishops, 1700 European missionaries, 710 native priests, 6279 sisters, and has numerous colleges, schools, hospitals, and other establishments. It has, in all, 1700 European members. Before 1869, 26 of its members gained the crown of martyrdom. Its chief missions are in Manchuria, Tibet, Korea, China, and Japan.²

2. **The Society of the Sacred Hearts of Jesus and Mary** is better known as the **Fathers of Picpus** from the Rue de Picpus in Paris, where the mother house was opened in 1805 by the Abbé Coudrin (†1837). Its chief work was at first the education of poor children. It then became possessed of seminaries and finally took up mission work, and has missions in Oceania—the Marquesas Islands, New Guinea, the Marshall Islands, and Tahiti. The society numbers about 600, has 12,000 pupils in its schools, 350 mission stations, and 6 hospitals.³

3. **The Fathers of the Holy Ghost** were formed in 1848 by the amalgamation of the Society of the Holy Ghost (founded in 1707) with that of the Immaculate Heart of Mary, founded by François Libermann. They possess missions in Senegambia, French Guinea, Nigeria, Congo, Zanzibar, Mauritius, and Madagascar. They have also seminaries, of which the best known is the French Seminary in Rome. The statistics of the congregation give 1643 members, 9 missionary bishops, and 203 foundations.⁴

4. **The Congregation of the Immaculate Heart of Mary, or Fathers of Scheut**, was founded at the town of that name in Belgium in 1863. It is an exclusively missionary society. Destined principally for the mission in China and Mongolia, the society has nevertheless missions in a part of the Belgian Congo. In China more than ten of its members have already suffered martyrdom. The Fathers of Scheut take simple vows. Their number

³ Heimbucher, iii. 471 ff.

⁴ *Die Kongr. der Vater vom Heil. Geist*, Cologne, 1906; J. B. Pitra, *Ve du vénérable serviteur de Dieu François Marie Paul Libermann*, Paris, 1882; Heimbucher, iii. 477 ff.

at present nearly 600. In their different missions there are 66,000 Catholics, nearly 50,000 catechumens, 228 churches or chapels, and 291 schools with more than 8000 pupils.¹

5. **The Society of Saint Joseph for Foreign Missions.**—In England Roman Catholics have also seminaries for missionaries. In 1866 Father (later Cardinal) Vaughan founded the above society of priests and laymen at Mill Hill near London. The field of their labours lies chiefly among the negroes of Africa, America, and the Indies. They have novitiate houses in the United States, Holland (Rosendaal), and the Tyrol (Brixen), where missionaries from every nation receive their training. They have missions in Madras, Borneo, Uganda, the Congo, the Philippines, and New Zealand, where they have already met with great success.²

6. **The Society of Our Lady of Africa in Algeria** was founded by Cardinal Lavigerie. This title speedily gave place to the popular name **White Fathers**, given to the missionaries on account of the white burnous and cassock worn by them. Their object is the evangelization of the pagan population of Africa. They have had a rapid success. Soon after their foundation in 1868 they established Christian colonies of native orphans gathered together by Cardinal Lavigerie, which resembled, to a great extent, the famous 'reductions' of Paraguay. Their missionary activity embraces the Sahara, Morocco, the Sudan, Central Africa, and Tunisia, and has extended beyond the confines of Africa as far as Syria and Palestine, not to mention their seminaries and colleges at Jerusalem, Carthage, Mechlin, Antwerp, Rome, Paris, Lille, Marseilles, etc. According to the latest statistics, they possess in these different countries 158 establishments, 1706 schools with more than 70,000 children, 310 charitable foundations, such as orphanages, hospitals, leper-houses, etc., where more than 800,000 sick persons, abandoned children, and old people are cared for. They number 880 members, among whom are 9 bishops and 350 sisters. Travellers who have visited their missions speak with great praise of their zeal and the success of their methods. Several of their missionaries have published interesting works on the language and customs of the tribes evangelized by them.³

7. **The Society of the Divine Word** was founded in 1875 by Arnold Janssen at Steyl in Holland. From its very beginning this society has been in the front ranks of mission societies. For the training of its missionaries it possesses a course of studies extremely well organized at Vienna, Rome, and elsewhere. The scientific works produced by its members on the language and religion of savage tribes have a very high reputation. They publish reviews in German, Spanish, English, and Chinese, of which the best-known is *Anthropos*. They also possess printing-presses.

There is a congregation of sisters attached to the society known as **Servants of the Holy Ghost**.⁴

8. **The Society of the Divine Saviour.**—Similar to the above society, this institute (also, like it, of German origin) was founded in Rome in 1881. It has missions in India, the United States, and Brazil (with 35 stations). There are also Sisters of the Divine Saviour or Salvatorian Sisters. This society has a printing-press in Rome for the printing and spreading of Catholic literature.⁵

VII. *TEACHING BROTHERS AND CONGREGATIONS OF RELIGIOUS WOMEN.*—i. *TEACHING BROTHERS.*—Ever since the 17th cent. there has existed an apostolate for the education of the poorer classes. For this purpose new congregations have been formed whose members are simply 'brothers,' bound usually, and even by vow, to give up all idea of aspiring to the priesthood. These brothers take simple vows, sometimes only temporary, and their activity is consecrated to the work of teaching, and especially of educating the poorer classes of society.

The Brothers of the Christian Schools, or Christian Brothers (to give them the name by which they are commonly known), is the best known of these institutes. They were founded by St. John Baptist de la Salle (1681-84) and have since served as a model for many other societies of the same nature. Before the founder's time there had been several similar attempts, notably that of St. Joseph Calasanz, none of which was so successful. The success of the Christian Brothers is due, no doubt, in the first place to the sanctity of their founder, his wonderful power of initiative, the excellence of his educational methods, and the wisdom and solidity of the constitutions that he gave to his congregation. At his death in 1719, in spite of the opposition of the Jansenists, schoolmasters, and others, his institute numbered 274 brothers and possessed 27 houses and 122 schools with about 10,000 pupils. It spread rapidly beyond France and founded primary schools, schools for the arts and crafts, agricultural schools, orphanages, and young men's societies in England, Ireland, Italy, Spain, Austria, Africa, the United States, and S. America. In 1904 there were 15,472 brothers, 2019 schools, and 326,000 students. The superior-general and his twelve assistants are elected by the general chapter, which is composed (besides the above) of the procurator-general, the secretary-general, the procurator of Rome, the provincial visitors, deputies from each district chosen by the professed members, and sometimes former superiors or assistants. The twelve assistants form the ruling authority and are placed over the different nations.

It is unnecessary to do more than mention the names of the other institutes of teaching brothers, since all are formed on the model of the Christian Brothers of St. John Baptist de la Salle, pursue the same object, and make use of the same methods. Among the principal are the Irish Christian Brothers (an independent foundation), the Brothers of the Society of Mary, or Marianists, in France, the Brothers of Christian Doctrine in Lorraine, the Brothers of Christian Instruction founded by Father Jean-Marie-Robert de Lamennais, the Brothers of St. Gabriel, and those of St. Vincent de Paul in France, the Josephites in Belgium, etc. For those congregations and for their bibliography cf. Heimbucher, iii. 356 ff.

ii. *CONGREGATIONS OF RELIGIOUS WOMEN.*—The greater number of the older orders have seen arise side by side with them foundations for women subject to the same Rule and inspired by the same spirit. Thus we have the Benedictine nuns, the Cistercians and Trappistines, Franciscans, Carmelites, Augustinians, and Recollects, besides the various orders of canonesses. These foundations are usually in close connexion with and dependent on the orders to which they are affiliated and, as far as the Rule and constitutions are concerned, possess no original characteristics of their own.¹ But from the 16th cent. onwards we find that, apart from certain institutes already referred

to in treating of the Salesians, the White Fathers, and others, the greater number of sisterhoods or societies of religious women that have arisen since that period are entirely independent of any existing order of men. These institutes deserve a special place to themselves in the history of religious orders, since many of them owe their foundation to original ideas, and possess in their annals many an interesting page. But in an article like the present it is impossible to enter into a detailed history or even to give a complete list of these congregations; a few of the principal names must suffice.

1. The Sisters of Wisdom were founded in the year 1703 by Grignon de Montfort. Like the Sisters of Charity,¹ they devote themselves to the education of the poorer classes, to the service of hospitals, and to every work of mercy. In number about 5400, they are to be found in nearly every one of the Christian nations. The centre of their congregation is at St. Laurent-sur-Sèvres.

2. Sisters of Evron.—This institute was founded in the 17th cent. at Evron in the department of Mayenne, France. Their work is chiefly the education of children, but they also look after the sick.

3. The Sisters of Nevers were founded in the 17th cent. by a Benedictine monk, J. B. de Laveyne. They devote themselves to the care of the sick and to the education of poor children. The institute numbers about 2200 sisters.

4. The Sisters of the Good Shepherd were founded in the 17th century. The congregation was re-organized at Angers by Marie de Ste. Euphrasie Pelletier and possesses houses of refuge for women and young girls. In 1906 they had 248 houses and 7400 members.

The beginning of the 19th cent. witnessed a wonderful increase in new foundations of religious women. We give here some of the most important.

5. The Sisters of Nazareth were founded in 1820 by Madame de la Rochefoucauld. They are an institute of teaching and nursing sisters. They have houses in France, Palestine, and Syria.

6. The Little Sisters of the Poor were founded at St. Servan in Brittany for the care of the poor and of the aged. In 1906 they had 5400 members occupied with the care of more than 40,000 sick or old people, in 290 hospitals.

7. The Society of the Sacred Heart of Jesus was founded by Madame Barat († 1865) in Paris and has 142 schools and 6800 members.

8. The Sisters of St. Joseph of Cluny were founded for the education of young girls and poor children by Madame A. M. Javouhey. In 1886 they had more than 300 houses (several of which are situated in missionary countries) and 4000 members.

For all those congregations cf. Heimbucher, iii. 370 ff., 555 ff.

VIII. *ORGANIZATION.*—i. *Internal organization.*—The constitutional history of the religious orders may be divided into two periods: (1) the 3rd to the 13th cent., and (2) the 13th to the 20th century.

(1) In the first period religious life presents an aspect of great simplicity and appears in only two distinct forms or types—the hermits, who lived alone, and the cenobites, who lived in community. Somewhat later we find certain forms of religious life in which the eremitical and the cenobitical elements were combined—e.g., the Camaldolese, Carthusians, and Vallombrosians. The canons, especially in the earlier part of their history, are hardly to be distinguished from the monks (cenobites), at least as far as their constitution is concerned. The military orders form a

¹ We have drawn attention above (p. 707a) to certain exceptions—e.g., the nuns of Fontevault, the Brigittines, etc.

¹ For the Sisters of Charity see above, p. 708b.

class apart. They came into existence, moreover, only towards the end of this period, and may be regarded as an exceptional form of religious life. Hence it may be said that, during the first nine or ten centuries of its existence, the religious state was characterized by its uniformity. We find everywhere the same life either under the monastic (eremitical or cenobitical) or under the canonical rule. There are, as yet, no distinct 'orders' or congregations; each monastery forms, with its superior and various officials, a unit of its own, autonomous and independent of any higher monastic authority. The first attempt to unite monasteries together in a kind of federation was made in the 9th cent. by St. Benedict of Aniane.¹ But it was unsuccessful and can hardly be regarded as even the beginnings of a congregation. Cluny, in the 11th cent., had more success, and united those monasteries which accepted its reform in a very close union under the supreme authority of the abbot of Cluny as head of the 'order.' Under this authority the autonomy of the monasteries—of those, at least, that depended directly on the great abbey—almost completely disappeared. The reform of Cîteaux was inspired by a principle of centralization differing from that of Cluny, but tending towards the same result. The close union of monastery with monastery was assured by means of a hierarchical organization that submitted some houses to the authority of others, while the unity of the whole order was guaranteed by the institution of general chapters, visitors, and a superior-general. This tendency towards centralization continued and increased from the 13th to the 20th century.

(2) The second period presents certain new characteristics. In substance the religious life remains the same as in the earlier period, but new forms begin to arise. We have now the foundation of the mendicant orders, or friars, whose life is very different from that of the monks. The clerks regular, again, who came into being in the 16th cent., differ as much from the friars as the latter from the monks. Certain congregations founded during the period from the 16th to the 20th cent.—e.g., the Sulpicians, Oratorians, and the various missionary societies—form a new class distinct from the clerks regular. The congregations of religious women founded independently of any of the existing orders of men are a still more striking development of the religious state. The tendency to centralization is emphasized more and more during the course of this period of history. The friars have a superior-general, general chapters, visitors, provincials. The monastery, which in the preceding period represented the unit of monastic organization, loses all autonomy. The superior of each convent is elected, generally speaking, every three years. Often the nomination of the officials, or at least of some of them, is not in his hands. He is, in fact, but the representative (and that for only a short period) of an authority whose seat is elsewhere. The 'religious' themselves are not permanently attached to any one house, but can be sent from one to another of the houses of the order. These houses are united to form a province under the authority of a provincial. The various provinces united together form the order, which is governed by a superior-general and a general chapter, composed, in most cases, of the provincials and delegates elected by each province. The centralizing process reached its perfection in the 16th cent. with the Society of Jesus (see art. JESUITS), which

has served, at least in its general outlines, as a model for a great many religious orders and have even been adopted to a certain extent by some of the older orders.

At the same time, it must be remarked that this law of centralization was not absolute, and it must not be forgotten that at this time certain societies were founded—e.g., the Sulpicians or Oratorians—in which the bonds of union between the different communities were, as in earlier times, of a more or less elastic nature. Besides this, the general tendency towards centralization did not exclude another tendency which, at first sight, would seem to be opposed to it—namely, the tendency to develop new forms of religious life. This is, in fact, one of the most striking characteristics of the period with which we are concerned.

Down to the 13th cent., as we have already seen, all 'religious' were either monks or canons, the latter scarcely differing at all in their mode of life from the former. In each monastery a similar life was lived and practically the same Rule was followed, and yet, thanks to that autonomy which was the law of primitive monasticism, each monastery (especially before the new state of affairs introduced by Cluny and Cîteaux) possessed its own special physiognomy. The foundation of 'orders' like the Camaldolese, the Carthusians, the Vallombrosians, and the orders of Fontevault and of Cîteaux brought new ideas into the old conception of religious life. The hospitalers, military orders, and mendicant orders (Dominicans and Franciscans) accentuated still more the growing tendency to variety, so much so that a reaction took place, and councils and popes in the 13th cent. issued decrees forbidding all further foundations¹—a vain attempt. The movement was too strong; first one, then another new order—the Carmelites leading—forced the hand of authority and obtained recognition, in spite of the decrees of councils and of popes.

From the 16th cent. onwards the older forms of religious life seem to have sunk into the background, and hardly a quarter of a century goes by without the foundation of a new order corresponding to every separate need of society. There are orders whose object is to combat the attacks of heresy, orders for the education of youth, orders for the care of the sick, preaching orders, missionary orders, etc. In the 19th cent. it seems as though every sluice-gate had been opened to the flood, and the multiplication of orders attained to such a pitch that fresh attempts were made at the Vatican Council to set a limit to this love of novelty. At the same time efforts were made to amalgamate different religious families having the same object and to reunite those which had been divided into different branches. Hence we see that the tendency (perhaps excessive) towards centralization was counterbalanced by a tendency equally strong towards an excess of individualism.

2. **Laws.**—The laws of each religious order are to be found in a species of code known as the Rule. We have already discussed in art. MONASTICISM the origin of the monastic Rules. The chief Rules are those of St. Basil, St. Benedict, that attributed to St. Augustine, and that of St. Francis. These four may be regarded as the source from which all later Rules have been derived and the greater number of religious orders have adopted one or other of them. But, since they are usually somewhat general in character—e.g., the Rule of St. Augustine—or because it has become necessary to modify some of their prescriptions, each order or congregation possesses in addition to the Rule its own special usages called 'Constitutions,' which

¹ The 4th Lateran Council (1215) and the 2nd Council of Lyons (1274).

¹ For those attempts and for the origin of the congregations cf. U. Berlière, 'Les Chapitres généraux de l'Ordre St. Benoît avant le IV^e concile de Latran (1215),' 'Les Chapitres généraux O.S.B. du XIII^e au XV^e siècle,' in *Revue Bénédictine*, viii. [1891] 265-264, ix. [1892] 545-557, xviii. [1901] 384-393, xix. [1902] 38-75, 268-278, 374-411, xxii. [1905] 377 ff.

have the force of law. It is these constitutions, in reality, that give to each order its special characteristics; hence to attempt a classification according to Rules is not practical. The best-known constitutions are those of the Dominicans, the Carmelites, the Capuchins, the Theatines, and the Jesuits.

3. **Dress and costumes.**¹—It might be said with some justice that the existence of the various tendencies above referred to could be gathered from the history of the costume of the religious orders alone. From the earliest days a special dress was worn by those leading the religious life, and this soon became traditional. It consisted of a tunic, girdle, scapular with hood, and a cowl, stockings, and sandals; sometimes a kind of breeches were also worn. All these garments were of an inferior quality (see art. MONASTICISM). Naturally, considerable variety existed with regard to shape and colour. This costume was the rule for many centuries and remains so still for the older monastic orders, having undergone but slight changes and modifications in the course of time. The mendicant orders adopted the monastic dress in part—tunic, girdle, scapular, and hood, cowl, or mantle—but attached perhaps greater importance to the details of shape and colour than the early monks. It was the colour of their habit that often gave to these 'religious' the name by which they were popularly known. Thus the Carmelites were known as the White Friars, from the white mantle which they wore; while the Dominicans, who wore a black mantle, were called Black Friars. In our own day we have the White Fathers, as the missionary fathers of Algeria are called; while the Cellitines bear the name of Black Sisters, and the Beguines are called Grey Sisters or Blue Sisters, after the colour of their habit. Sometimes it is the shape of part of the habit that provides the distinctive title. Thus, as already mentioned, the Capuchins are so called from the special shape of the hood worn by them, the Friars of the Sack from the sack-like form and stuff of their dress.

Some orders attribute the special form and colour of their habit to a divine vision, as, e.g., the Order of Mercy. Again, the return to a more strict observance of the Rule outwardly symbolized by the practice of going barefoot has given the title of 'Discalced' to the reform in the Carmelite order for men and women, and to a number of other orders or divisions of orders.

The military orders adopted a costume that was more in keeping with their character and only distantly related to that worn by the monks, with whom, however, they were connected by their rule of life. It was quite an innovation when the clerks regular, in the 16th cent., forsook the monastic habit together with so many other monastic observances and adopted the costume of the secular clergy.

With regard to the nuns and sisters, those who belonged to the older orders adopted, as was but natural, a form of the habit worn by the monks or friars. The later and modern congregations have, on the other hand, too often allowed themselves to be guided by mere fancy, apart from all tradition. On this point, it is said, the Vatican Council had also intended to introduce a reform.

IX. **ACTIVITY: SCIENTIFIC, LITERARY, SOCIAL, ECONOMIC; SERVICES RENDERED BY THE RELIGIOUS ORDERS, DIFFERENT WORKS.**—We have already seen in art. MONASTICISM that the monks had no special object in entering that state of life beyond their desire to lead a life in closer

conformity with the spirit of the gospel. But by force of circumstances and from the fact that both manual and intellectual work had from the beginning a special place in monastic life, they were led to develop their external activity and thus to exercise considerable influence on society at large. The monastery became in most cases a centre of civilization as well as of religious life and often a flourishing city rose up around it. Many monasteries had their schools of literature, and of grammar, their song-schools, and their schools for the arts and crafts. Libraries that often became famous were formed in the cloister. It was in the monasteries that MSS. were copied and preserved. Thus they were for centuries a refuge for the sciences and the arts. The clearing of forests, the making of roads, bridges, and canals, the cultivation of the wide lands that belonged to them—all this was the work of the monks. It was in the cloister, too, that the great missionaries who went forth to conquer the pagan world for Christ were trained—Augustine, Boniface, Adalbert, Anshar, and many others.

In the 13th cent. the social influence of the monastic order, which had begun to decline, passed to the newly-founded mendicant orders. The latter came into being at a period when Christian society, disturbed and upset by the errors of the Albigenses and other heretics, had begun its process of disintegration. Their object was precisely to arrest this process—in the case of the Dominicans, by means of preaching, and teaching in the schools; in the case of the Franciscans, by means of a living example of evangelical poverty and by the exercise of the sacred ministry among the people. The Carmelites, the Augustinians, and the other orders that rose between the 13th and 15th centuries had their part also in this good work. Other orders founded about this time had a more special object in view: for the Order of Mercy and the Trinitarians this was the redemption of the Christian captives taken by the Moors; for the military orders, the protection of pilgrims to the Holy Land and the war to be waged against the forces of Islām; for the hospitalers, the care of travellers, the poor, the sick, and those stricken with leprosy. In the 16th cent., and onwards till the 19th, the activity of the religious orders was extended still further. The Jesuits set forth to fight the battles of the Church with all her foes, by means of their preaching, their schools, and their spiritual direction. The Oratorians, the Sulpicians, the Eudists, and the Lazarists devote themselves more especially to the education of the clergy. The Theatines, the Barnabites, the Passionists, and the Redemptorists show them the example of an austere and holy life, and assist them in the sacred ministry. The missionary societies are spread abroad in every quarter of the globe, to bear the teaching of the gospel to the heathen nations. The teaching brothers and sisters give themselves to the education of the poorer classes of society—each order or congregation has its part to fulfil in the carrying out of the Church's mission on earth.

We may give here a résumé of the services rendered to religion and society by the religious orders. The mission work and that of preaching and teaching, carried out in the earlier period almost exclusively by the monks, the canons, and the secular clergy, is from the 13th cent. in the hands of the mendicant orders—the Dominicans, Franciscans, and others founded at that time. From the 16th cent. the clerks regular, the religious congregations, and missionary societies—Jesuits, Lazarists, Assumptionists, the Fathers of the Holy Ghost, etc.—extended far and wide the domains of the Church. It was especially in the 19th cent.

¹ P. Hélyot and V. Philippon de la Madelaine, *Hist. complète et costumes des ordres monastiques, religieux et militaires*, 8 vols., Paris, 1839-42; cf. also Hélyot and Bonanni, *opp. cit.*

that the missionary movement began to spread. It is estimated that in 1792 of every 557 men 174 were Christians. At the present day for the same number the proportion is 186 Christians. This progress is due to the activity of the missionaries.¹ Out of 18,000 missionaries 15,000 belong to different religious orders. Besides these must be reckoned 120 congregations of women with 53,000 sisters, of whom 10,000 are natives.² During the period of their prosperity the monasteries served as schools for children and youths. The 12th cent. saw the foundation of the universities, which soon gathered round their chairs of learning students from every part of Christendom. In these universities, after a long and violent conflict, the Dominicans, Franciscans, and Carmelites succeeded in gaining a foothold and became renowned for the brilliancy of their teaching. In the 16th cent. the Jesuits, especially as regards teaching in the secondary schools, are found at the head of the movement, while the societies of teaching brothers take up the work of teaching the children of the poor the elements of learning and the various trades. Other societies, again, like the Sulpicians or Eudists, are founded for the education of the clergy, and the congregations of women that continually arise devote themselves to that of young girls.

Study, the copying of MSS, and literary work of every description remain, to a great extent, the prerogative of the monks, but, as time goes on, the new orders of mendicant friars, and, later still, the clerks regular dispute this prerogative with them. Dominicans, Franciscans, Carmelites, Augustinians, Jesuits, Oratorians, Sulpicians, Barnabites, and Redemptorists—all these can quote among their members the names of theologians, historians, critics, mystical writers, and savants of outstanding merit.

Special orders or congregations are founded to preach the Word of God to the country people, too long neglected, or to the poorer population of the cities and towns—the Lazarists of St. Vincent de Paul, the Oratorians of St. Philip Neri, the Piarists, the Barnabites, the Redemptorists, the Passionists, etc.

From the 11th cent. onwards it is chiefly works of charity that absorb the activity of the religious orders. Full justice has been done to the work of mercy carried on in early times by the monasteries and to the liberal hospitality shown to pilgrims and travellers in the guest-houses and hostleries that abounded along all the roads leading to the important places of pilgrimage, such as St. James of Compostella, Rocamadour, Rome, etc., and which marked out the various stages on the way and were to be found especially near bridges and ferries.³ Besides these there were houses of refuge, leper-houses, and other charitable establishments that depended on the monasteries, and abundant alms in money or in kind were regularly distributed at the monastery gates. To give one example alone: we find in the *Monasticon Anglicanum* and the *Notitia Monastica* a list of about 115 leper-houses in England and Scotland.⁴ The 11th cent. and the centuries that follow up to the 15th, with the foundation of the orders of hospitaliers already spoken of and of the 'Maisons-Dieu,' the 'Hôtels-Dieu,' the leper-houses, and other charitable institutions, form together a glorious chapter in the history of Christian charity.⁵ But it is especially from the 16th cent. onwards

that the activity of the religious orders in work of charity is seen at its greatest and is found ready to cope with almost every ill that human nature is heir to. Vincent de Paul, Camillus de Lellis, and John of God are counted among the greatest benefactors of the human race. As an example we may notice that the Brothers of St. John of God, popularly recognized in Italy as the 'Fate bene fratelli' or 'Benfratelli,' who, besides the ordinary vows of religion, bound themselves by a fourth vow to care for the sick throughout life, possessed from the 17th cent. and in the generalate of Granada alone 138 hospitals with 4140 beds, while in that of Rome they had 155 hospitals with 7210 beds.

In the province of charity the congregations of women exercise a more important office even than the orders of men. In 1904 the statistics give us 457,000 sisters throughout the world devoted to works of mercy—in charge of orphanages, homes, hospitals, houses of refuge for penitents and Magdalens, infant asylums, homes for the old, for consumptives, and for lepers, and many besides who are occupied with the service of prisons.¹

This is a very incomplete résumé of the manifold activity of the religious orders, but the subject, to be fully treated, would require volumes.²

F. CABROL.

RELIGIOUS ORDERS (Indian).—The religious orders in general are already partly treated in art. ASCETICISM (Hindu), HINDUISM, MONASTICISM (Hindu), and some of the different orders in art. AJIVIKAS, JAINISM, PATIMOKKHA, etc.; the doctrines which feed the religious life of the 'friars' are studied in such art. as BHAGAVAD-GITA, BHAKTI-MARGA, JÑANA-MARGA, ŚAIVISM, VAISNAVISM, while the art. AUSTERITIES, FASTING (Introductory and non-Christian), YOGI, DRAVIDIANS (N. India), vol. v. p. 16, etc., describe some of the outward features of this life.

The aim of the present article, therefore, is to draw up a general scheme. While avoiding the technicalities and especially the intricate and innumerable details of modern institutions, it is possible to state the most important features of asceticism as organized in the religious brotherhoods, and the most remarkable steps in this organization.

I. 'FAQIRISM.'—I. Crude asceticism.—The chief

⁵ Cf. *ib.*, where numerous proofs of this wonderful activity in works of charity are given. See also art. CHARITY, ALMSGIVING (Christian).

element—the raw material—of the Indian religious life is what we may conveniently style 'faqirism.' This word is of course modern and its technical meaning is precise,¹ but it seems an appropriate term to summarize the crude ascetic, mystical, and orgiastic beliefs and practices which, as far back as our information goes, have been characteristic of the Indian people. Such beliefs and practices may be traced in almost all primitive civilizations.² Outside of India they have been crushed or chastened to a large extent by the progress of social life or of a religion which found its leading motives in ideas more human and more truly religious than a bare asceticism.³ In India, on the contrary, the ascetic tendencies underwent an enormous development owing to certain climatic and racial circumstances, and, moreover, they were one of the chief factors of the religions and philosophies themselves. From time to time throughout history spiritual leaders succeeded in organizing and moralizing these tendencies, constructing 'theosophic' or devotional theories of no mean moral and spiritual value; but the starting-point of those theories is often to be found in raw asceticism. The Buddhist—the Jain or the Tridandī—is a philosopher, but he is also a chastened faqir. The morbid devotee who practises catalepsy on the cross-roads for a living is the prototype of the Vedāntist who sinks his soul into the universal Self, and of the Buddhist monk, the *arhat*, who enjoys the meditations leading to *nirvāṇa*. To put it otherwise, the sorcerer, the saint, and the god form a continuous chain; all saints are ascetics and thaumaturges: Śiva is a penitent; the androgynous Śiva embodies the most morbid form of asceticism. It is certain that the religious leaders were able to educate a large number of professional devotees; but many ascetics remained outside the great orders and formed only lax associations for begging or not much more. Nowadays, even when he is backed up by a Church and professes to be a member of an order endowed with a literature and with half-divine and infallible *gurus*, the ordinary 'friar' is too often a man of a low intellectual level. His literary or doctrinal knowledge is frequently confined to a few *mantras*, or formulas; his sectarian peculiarities (form of dress, amulets, etc.) are not much more than a pretence or a mark of distinction. It is safe to infer that this state of things is an old one.

The Indian orders are apt to split up and to degenerate. The old crude faqirism is eternal and really unmodifiable. When we compare the data to be found in the Buddhist *Pitakas*, in the Jain *Angas*, and in the Greek sources with mediæval and modern descriptions, we are struck by the constant recurrence of the (1) penitential (*tapas*), (2) mystical (*yoga*), and (3) orgiastic (*puṣṭimārga*, 'salvation through dalliance') practices.

The earliest references that we possess to ascetic mystical practices have been studied by A. Barth and H. Oldenberg. The long-haired ascetic, or *muni*, naked or dressed in rags of reddish colour, is 'possessed with the gods,' and, inversely, the god Śun is once celebrated under the aspect of a *muni*.⁴ Here we have a living picture of the orgiastic outbreaks of the old Vedic world, still confined as they are in the narrow limits of Shamanism, not yet purified by the aspiration to the final deliverance.⁵

¹ See art. DERVISH; H. Yule and A. C. Burnell, *Hobson-Jobson: a Glossary of Anglo-Indian Colloquial Words and Phrases*, London, 1886, s.v. 'Faker'. One of the earliest references (1653) describes the *faqirs* as 'une espèce de religieux indou qui foulent le monde aux pieds et ne s'habillent que de haillons qu'ils ramassent dans les rues'.

² See art. INITIATION (Introductory and Primitive).

³ See art. MONASTICISM, vol. viii p. 786 f.; the obligation of work, study, and active charity is fully recognized by the Western monk.

⁴ *Rigveda*, viii. 17, 59, x. 136.

⁵ See A. Barth, *Quarante Ans d'indianisme*, Paris, 1914, i.

(a) *Tapas*.—The 'religieux' of the old and of the new times is often a penitent (*tāpasa*) who indulges in extreme mortifications, or in morbid self-torture or mutilation—e.g., the Bahikathas, feeding on excrements (Aghois), holding the arms or the face upright until paralyzed;¹ imitating the cow, the horse, the dog, or the rook² (*govrata*,³ *asvavrata*, *kukkutavrata*, *kakavrata*).

Tapas culminates in suicide—a common practice in ancient times. While the Brāhmins forbid suicide as a religious act, they nevertheless admit it as an atonement for certain sins.⁴ With the non-Brāhmins suicide, by starvation, drowning, fire, or exposure, is a regular way of salvation.⁵ See also art. ASCETICISM (Hindu), AUSTERITIES, FASTING (Introductory and non-Christian).

(b) *Yoga*.⁶—Mystical devices, comprehended under the general name of *yoga*, are as a rule associated with *tapas* or, at least, with a semi-penitential life. There are a number of *āsanas*, 'modes of sitting,' attitudes of the lower part of the body, and of *mudrās*, attitudes of the upper part of the body. In the *khecharī mudrā* the ascetic inserts his reverted tongue into the gullet, while fixing the gaze between the eyebrows. There are many devices to induce trance—protracted rigidity of body, fixity of look, repetition of strange sets of formulas, counting the respiration or stopping it (*prāṇāyāma*).

(c) *Makāras*.—On the orgiastic side of faqirism, the use for 'religious' purposes of the five *makāras*—the five things the name of which begins with *m* (meat, fish, alcohol, copulation, and *mudrās*)—we are only too well enlightened as regards mediæval and modern times; but we are rather in the dark as to old Hinduism. With the Jains (*q.v.*), before their reformation by Nāṭaputta, and with the Ajīvikas (*q.v.*), continence was not one of the obligations of the ascetic. There are unmistakable signs that the unmorality of the modern Śāktas is not a new development. In the days of Patañjali (2nd cent. B.C.) the violence of the fanatical devotees was already a proverb; in the *Mychchhakāṭikā* 'nun,' or *religieuse* (*gosaviā*), is a synonym of 'harlot' (*veśyā*). The motto, 'Omnia sancta sanctis,' had many followers.⁷

By penance and trance a devotee obtains important advantages and is supposed to obtain some still more important ones.

(1) This mode of life, not always very uncomfortable, assures a living. No one will refuse alms to an ascetic mendicant. Further, the ascetic is able to render many services, either of white or of black magic. The mass of the ascetics practised the 'low arts' which are enumerated in the Buddhist *suttas* as unworthy of a monk.⁸ The list is a long one and is as valuable for modern times as it is for ancient.⁹

(2) A religious mendicant, especially when

qualified in penitential observances, in ecstatic devices, or in thaumaturgic formulas, is supposed to possess magical powers—the *rddhis* of the Buddhists or the *siddhis* of the classical *yoga*, elsewhere *bhūṭis*.¹ He was able to communicate with all sorts of supernatural beings, male and female. He was assured of a happy rebirth, as a god or a demon. But Śākyamuni states that by the 'practice of the cow' (*govrata*) a man is reborn, not as a god, but as a cow.

2. The task of the religious leaders.—This was in short (1) to group ascetics under a certain rule of life, and (2) to give a spiritual meaning to the ascetic, mystical, and orgiastic practices.

(1) We possess no information as to the earliest steps towards the organization of the orders. All the evidence points to the conclusion that religious non-Brahmanic bodies had been flourishing for a long time when Indian history begins with the Jina and the Buddha. The former was only the reformer of an existing brotherhood and the latter adopted from the non-Buddhists some of the most important rules of the cenobitic life (fortnightly meetings, etc.). A dogma of both Jains and Buddhists is that there have been in the past a number of Jinās and Buddhas; this dogma is historically true.

(2) While a mendicant, who was hitherto his own master, has to become a member of an organized body, to undergo a novitiate, to submit himself to the authority of a fixed rule or of the elders (*thera*, *thairā*), he is expected to become at the same time a 'philosopher' who strives towards a supernatural goal. Penance, trance, and even the *makāras* are turned by the spiritual leaders into means of spiritual progress.

Some leaders try to check the exaggeration of penance and ecstasy and prohibit the *makāras*; others systematically approve of the most morbid form of asceticism. Nevertheless, the general standpoint of the leaders may be illustrated by two instances: (i.) the gods were scared by the penances and the pious deeds of the future Buddha, fearing that he would dethrone them by the magical power which was the natural fruit of such penances and deeds. The future Buddha comforted them: a saint does not care for 'secular' advantages; his only aim is *nirvāṇa*. (ii.) The 'mystic' discipline is twofold—*rājayoga*, an intellectual theosophy, and *haṭhayoga*, a theurgy or mechanical theosophy in which medicine and trance are mixed. The former represents the loftier side of Indian mysticism, and is the work of the thinkers; the latter embodies the immemorial tradition of the ascetics.

A few topics may be mentioned. (a) Ancient Brāhmanism regarded penance as a method of atonement for sin, and Jainism strongly emphasized this view, which is a general one. With the Buddhists penance, either moderate or severe, is expected to crush desire. With the devotional sects one pleases the gods by self-torture.² (b) As concerns trance, a Brāhman employs in the *grand œuvre* of 'deliverance in this life'³ the very devices through which a *faqir* induces trance and obtains magical powers. Since the immanent Absolute dwells in the heart, an ascetic might 'draw the self from the non-self' and concentrate his individual soul in the real soul. With the Buddhists trance does not directly work out *nirvāṇa*, but it is none the less necessary; in order to be really efficacious, it must be 'without content.' With the devotional sects the devotee realizes during trance a transitory union (*yoga*) with his god, a foretaste of heavenly happiness. (c) As concerns the *makāras*, no moral distinction can be made between, on the one hand, the Tantric (*śākta*, left hand) ceremonies, whether Buddhist,⁴ Saivite,⁵ or

⁵ See, e.g., the *Śrīchakra* or *Pūrṇabhīṣeka*.

Vaiṣṇavite,¹ which aim at the identification of the ascetic (*yogin*) with the god—by intercourse with a *mudrā*, a female, who, through 'baptism' (*abhīṣeka*) or 'marks' (*nyāsa*), has been transformed into a Bhagavati (a female Buddha), into Bhairavi, into Rādhā, a Buddhist becomes the Buddha Vajrasattva, a Saivite becomes Bhairava, a Vaiṣṇavite becomes Kṛṣṇa—and, on the other hand, the gross rites which have as female protagonists the fanatical girls known as 'mothers,' *yoginis*, *dākinīs*, etc. But the Tantric ceremonies are looked upon as a 'path to deliverance': the orgy is a sacred orgy; moreover, we are told that some of the ascetics addicted to that 'worship' interpret even the most shocking obscenities of their books in an allegorical way.²

II. ANCIENT BRĀHMANIC ASCETICISM.³—The Brāhman asceticism was influenced by the established ideas on penance, but it remained foreign and hostile to faqirism. While it did not directly give birth to religious orders properly so called, it developed both the type of the Indian friar and, as far as the earlier period is concerned, the leading ideas of the religious life.

In short, the *brāhmachārīn* is the type of the Buddhist novice, *śāmaṇera*, and the *sannyāsīn* ('apostate') is the type of the *bhikkhu* (Kern). On the other hand, the goal aimed at by the Brāhman ascetics (*nirvāṇa*, liberation from the sufferings of individual existence, identification with the Absolute) became, *mutatis mutandis*, the goal of the Buddhists and of the earliest orders.

The Vedo-Brāhmanic religion inherited from an early date both the ceremony of initiation (*g.v.*)—preliminary to marriage and to the exercise of the rights of a member of the clan—and the rules stating the duties of the youth to be initiated. The young Ārya had to remain some years in the house of a preceptor (*guru*) as a servant and as a student in the sacred lore (hence his name *brāhmachārīn*); he begged his food, avoided certain articles of diet, and practised continence. The last feature is important, and the very term for novitiate or studentship (*brāhmacharya*) comes to mean continence and, in the time of Śākyamuni, religious life.⁴

When the speculations on rebirth and deliverance from rebirth were ripe, continence was regarded not only as the way to heaven, but as the best means of deliverance from death. While old men, after having paid their debts to the gods (by sacrifice) and to the dead (by the birth of a son), abandoned secular life (*sannyāsa*) in order to reach holiness before dying, young men agreed to spend their whole life as *brāhmachārīns* in the house of their *guru*.⁵ This house was a hermitage. There are in the *Mahābhārata*, in *Sakuntalā*, and in the *Harṣacharita*⁶ beautiful pictures of the quiet retreats of the *śāśis*.

In contrast with the settlements of hermits devoted to meditation together with moderate asceticism, and not averse to sacrifice, early Brāhmanism had 'penitent hermits' (*tāpasas*), the *munis* or *ṛsis* of the *Mahābhārata*, either of priestly or of kingly parentage. The *munis* have abandoned sacrifice; they feed strictly on roots and fruit;

¹ See, e.g., the *Rāmaṇḍalīs* of the Vallabhāchāryas (*Hist. of the Sect of Mahārājas or Vallabhāchāryas in Western India*, Calcutta, 1865, where the proceedings of a famous trial in 1861 are to be found).

they perform severe penances (the *tapas* properly so called, 'heat'), but they remain dignified and free from vulgar charlatanism.

There have been a number of Brāhmanical mendicants or wandering ascetics (*yati*, *bhikṣu*, *parivrājaka*), although we know only two associations of such men.¹ The law-books (in which is embodied the *smṛti*) regard this mode of life with little favour.

We possess a few details concerning the *jaṭilas*, *jaṭilakas*, or *dirghajata*, 'ascetics with matted hair,' who joined the Buddhist order when Śākya-muni proved his magical efficiency to them. Their Brāhmanical character is established inasmuch as they sacrificed to the fire.²

III. RELIGIOUS ORDERS: GENERAL REMARKS.
—1. Sects and orders.—Apart from pure Brāhmanism—i.e. Brāhmanism freed from any tinge of Saivism or Vaiṣṇavism, as it was at the beginning and as it has remained in certain circles—religious India is sectarian. On the whole (there are exceptions) each sect—a fluid group of the worshippers of a certain deity, or of a certain form of a deity—has its religious order, sometimes two or three religious orders. The *prima facie* view is that, in early times, the orders—e.g., the Buddhist brotherhood—stood by themselves and had no intimate connexion with the mass of the people: a number of ascetics followed a certain discipline, both practical and doctrinal, and the good people who fed them were left to their own religious beliefs, a mixture of paganism and old inherited family, tribal, and trade rules. Such a view is not complete. It is true that, in the case of Buddhism or Jainism, the order came first, and the sect afterwards; and the same process was repeated through history more than once. But the leaders, the Buddha or the Jina, gathered adherents who did not join the order and who formed a body of laymen, a sect, whether Buddhist or Jain.³ In contrast with the lax associations of wandering mendicants, like the modern Aghoris, no organized monasticism could develop without being backed by a sect. The saints, especially the Master and his predecessors, the relics, the holy places, the symbols (tree, etc.), were the focus of a popular Buddhist devotion. The title of Rhys Davids' book, *Buddhist India*,⁴ is somewhat misleading, for India, as a whole, has never been Buddhist, but the Buddhist sect has, for a long time, been one of the most important sects of India, and is really a Church.

If we are right on this point, we have to infer that the modern constitution of Indian sectarianism is really very old. There is a sect which finds its unity in the worship of a god, either a natural or mythological god (Siva, Viṣṇu) or an euhemerist god (Buddha, Jina). The sect is divided into two sections: (1) the laymen, more or less initiated into the theology of the sect (*sampradāya*, *darsana*, *matā*), and (2) the ascetics, or *vairāgis*; some are hermits (*vānaprastha*, *dvayāṣṇat*, *ēṇpūrat*); some lead a common life (*koṇvāśiot*, *mathulhāri*) in a convent (*viḥāra*, *matha*), in the neighbourhood of a temple or a holy place as a rule; some wander from one *matha* to another, from one *chaitya* to another, from one place of pilgrimage to another (the Circumcellions of the West).⁵

2. Evolution of the doctrines of the orders.—While emphasizing the permanent character of the Indian religious institutions—there is no great difference, from a certain standpoint, between the temple in the form of a *chaitya* and that in the form of a *linga*-shrine—it is necessary to avoid wild anachronism as well as pedantic chronology. The beliefs of the sects have not been completely modified; everywhere and always a certain monotheism, more or less devotional, kept asserting itself in spite of an overwhelming mythology and polylatry. It is quite unlikely that 'India fell asleep Vedic or atheist some centuries B.C. to awake devotional, Saivite or Vaiṣṇavite some centuries later.'¹ But there has been a revolution in the leading ideas of the 'intellectuals' of the sects, i.e. of the ascetics. The institutions which we study (below, IV.) as 'ancient religious orders' are, as a rule, atheist; the Buddhist monk, like the Brāhman *sannyāsin* of old, aims at *nirvāṇa*, and he does not expect any help from any god or saint. Buddhism and Jainism, if the doctrines of the brotherhood only are taken into account, are not 'religions'; they are atheist paths of salvation,² like Sāṅkhya or Vedānta. With the mediæval or modern orders (below, V.) *bhakti*, an ardent devotion to a 'deity of election' (*iṣṭadevatā*), goes hand in hand with the doctrine of grace (*anugraha*).³ The neo-Buddhism (see art. MAHĀYĀNA), contrasted with early Buddhism (see art. HINĀYĀNA), illustrates the change: it aims at a rebirth in *Sukhāvati*,⁴ not at *nirvāṇa*, just as the devotee of Viṣṇu aims at a rebirth in *Goloka*, not at *brahmanirvāṇa* (losing oneself in the Absolute). But the idea of *nirvāṇa* has not altogether disappeared in neo-Buddhism, although it is kept in the background; and, in the same way, the monism or semi-monism (*advaita*, *viśiṣṭādvaita*) of the *Upaniṣad*-Vedānta schools furnishes the sects of *bhakti* with an esoteric or 'superior' theology.

3. Religious vows.—Of all the Indian orders, the Buddhists seem to have understood the nature of the religious life best. The theory of the vows in the *Abhidharmakośa* reminds us of Western theology.

A Buddhist is a man (or a woman) who has taken the vows of the religious life (*samvara*, 'restraint,' 'discipline'), i.e. who, after taking refuge in the Three Jewels (Buddha, *dharma*, *saṅgha*), has solemnly undertaken to live his whole life under the rule of Śākyamuni. The vows are either (1) the vows of a *bhikṣu* (the vows of a novice and of a nun are different in practice, but the same in kind), or (2) the vows of a layman (*upāsaka*) or laywoman (*upāsikā*): an *upāsaka* is not, as generally understood, a worshipper, but a 'religieux'; he is actually a member of the third order, a tertiary.

The *bhikṣu* binds himself to avoid all occasions of sin (i.e. of desire), and practises a mortification which develops the humility and the energy necessary to salvation. The *upāsaka* avoids the occasion of many sins and plants roots of merit which will ripen in a future life.⁵ The difference between the two rules of life is characterized by the *samvara* on carnal desire: while the *bhikṣu* is absolutely continent and therefore remains untouched by the fire of passion, the *upāsaka* is to avoid only illicit love (*kāme mithyāchāra*), either intercourse with an *agamyā* (neighbour's wife, nun, etc.) or illicit intercourse with his own wife.⁶

¹ A remark often emphasized by A. Barth.

² See L. de la Vallée Poussin, *Way to Nirvāṇa*, Cambridge, p. 1917.

³ See *Vajracchedhikā*, § 2.

⁴ See *SBE* xlix. [1894], pt. ii. pp. 1, 161.

⁵ A *bhikṣu* follows the Ten Precepts (*ĀRE* vii. 820*). An *upāsaka* follows the first five of these precepts—the third, continence, being understood *mutatis mutandis*.

⁶ In *Paramatthajotikā*, i. (vol. i. p. 48), the *sādhārasantasana*, 'avoiding adultery,' is styled *brahmachārya*, 'continence.'

¹ Pāṇini, iv. 3, 10, Karmandinas, *Pārāśrinas*.

² *Vinaya Texts*, i. (*SBE* xiii. [1881] 124; *AMG* v. [1883] 128); *Āḡuttara*, iii. 276.

³ On the nature of the sect see Barth, *Quarante Ans*, p. 140; see also art. *Khāḡis*.

⁴ London, 1908. On Buddhist cult see Kern, tr. Huet, i. 136-243; J. P. Minayeff, *Recherches sur le bouddhisme*, tr. from Russian, Paris, 1894, pp. 115-138.

⁵ For description of the *matha* see *ĀRE* viii. 803; for contrast of the resident monks (*mathadhāri*) with the itinerant, cf. *Khāḡis*; for rules for the initiation of foreign monks, *ĀRE* 'iii. 74.

A point worthy of notice is that an *upāsaka* is expected to take the eight vows of an *upavāsastha* every fortnight, i.e. to live twenty-four hours as a monk (continence, not eating at a prohibited time, etc.).

The man who has taken the vows either of a *bhikkhu* or of an *upāsaka* is a 'disciplined one,' a 'restrained one' (*samvṛta*); he is not like other men, for the vows create the special sort of *karma* which is styled *avijñapti*.¹

In Mahāyāna Buddhism the old organization of the order remains, theoretically at least, as it was; but a new *saṃvara*—the 'discipline of a future Buddha'—comes to the front. *Bhikkhus* and *upāsakas* have to undertake the duties of a *bodhisattva*, i.e. to 'produce' the thought of becoming a Buddha and to practise the perfect virtues. Now, according to the dogma and the legends, a *bodhisattva* may be married; and it is a common fact that a man, after taking the vows of a *bhikkhu*, may 'exchange' these vows for the vows of a *bodhisattva* and marry. The consequence was that the Buddhist order in Nepal—and partly at least in old Kāśmīr—became an order of married *bhikkhus* (Banras, Gubharjūs, Vajrāchāryas).

4. The Church and the State.—An important point in the history of the orders is the intervention of the State. Buddhists, Jains, and Ājīvikas secured, through the zeal of Aśoka,⁴ important advantages. On the other hand, while the religious orders carefully respected the rights of the kings, nobles, and parents⁵ (no son, slave, or officer can be admitted into the Buddhist order without the permission of father, owner, or king), there are evidences that the civil power did not always respect the rights of the churches.⁶ The history of the so-called persecutions remains to be studied. Scholars now believe that the Buddhist narratives on this subject are on the whole inaccurate.⁷

IV. ANCIENT RELIGIOUS ORDERS.—From about the 8th to the 6th cent. B.C. a number of religious leaders gave a regular form to the wandering ascetic life. The best of them had a high moral standard and a high intellectual standpoint; they condemned in theory, even when they were forced to tolerate in practice, the less honourable devices which were popular among their followers (magical performances, etc.); they preached a path to salvation, and contrived to adapt to this lofty aim the penitential and ecstatic practices. They were great organizers and also great men; while the brotherhoods which they had established were living, robust organisms, they themselves became the gods of new religions.

1. Buddhist and Jain.—The rules of the Buddhist⁸

and Jain¹ brotherhoods are well known and may be easily studied both in the sources, the greater number of which have been translated, and in a number of summaries or essays.

It is often forgotten that the Sangha contains two classes of 'religieux': (a) the monks who follow the old rule of asceticism (the twelve or thirteen *dhutaṅgas* or *dhūtagaṇas*),² hermits, 'men of cemeteries'—they are often very holy men,³ although they have a bad reputation and are even forbidden to approach the village; and (b) the monks of lax observance, the *koṇḍhi*, who not only disregard the *dhutaṅgas*, but indulge in the 'extra-allowances' (*atireka-lābha*) authorized by the Vinaya—i.e., they are solemnly taught the four *nīśayas* (alms poured in the bowl as sole food, dress made of rags, a tree as a house, cow-urine as sole medicament), but they do not take any account of these rules.⁴

2. Other orders.—Side by side with the Buddhists, the Jains, and the Ājīvikas (q.v.), there were several religious orders or associations which are known only by name. We may mention the followers of the teachers named in the *Sāmaññaphalasutta*⁵ and the stereotyped list of *Āṅguttara*, iii. 276.⁶

While, in accordance with the rationalistic ideas which came into the foreground at that time (*Brāhmanas*, *Upaniṣads*), the earlier orders were mostly atheist 'disciplines of salvation' or 'paths to *nirvāṇa*,' there are evidences that many worshippers of some 'deity of election' (*istadevatā*) constituted themselves into congregations or orders. Such names as Devadhammika,⁷ Indavattika, Brahmavattika, Vāsudevavattika, etc.,⁸ point to that conclusion. Ascetics, to be sure, exerted themselves, both by penance and by ecstasy, to be reborn in some heaven. According to the Buddhists, Brāhmanas have only such a rebirth in view; and the Buddhist Scriptures, which do not approve of the Brāhman sacrificial method of obtaining this rebirth, have a theory on the meditations through which such a rebirth may be obtained. The mediæval and modern orders (below, V.) have certainly had a long history previous to any information now available.

Theology.—*Bhakti*,¹ i.e. devotion to God—a Heavenly Father, and often, like the Vaiṣṇavite *avatārs*, an incarnate Saviour—gave rise to a lofty mysticism,² a solid theology of divine grace. Meditation, when *bhakti* remains pure, has a reasonable object, and compares to advantage with the 'meditation without an object,' which is the highest stage in the 'disciplines of salvation.' Asceticism has a truly religious meaning. Religious orders have been the ornament and the focus of the powerful and intense sectarian worships which have been since the *Bhagavad-Gītā* (*g.v.*) the leading forces of Indian religious thought.³

Bhakti, whether Buddhist or Hindu, has its drawbacks and its failures.

'It was deemed the essential condition of salvation; it became the unique condition. A single act of faith, a single sincere invocation to God, cancels a life of sin. Finally, the exaggeration of *bhakti* destroys *bhakti*.'⁴

To pronounce the name of Avalokiteśvara or of Kṛṣṇa, even by chance, even in a blasphemy, is enough. Further, the devotion due to God is due (1) to the *guru*, who is often regarded as an incarnation of God Himself; Hinduism, in that direction, went almost as far as Lamaism (*g.v.*); and also (2) to specialized forms of God and to idols; hence all forms of superstition. Again (3) devotion is often paid to the *śakti*, or 'female energy,' of God; hence the 'religious' justification of the eroticism of the Śāktas (left-hand worship).

2. Classification.—The rôle of the religious orders has been sometimes to purify *bhakti* from its pagan features, sometimes to emphasize those features and to organize the *puṣṭimārga*, 'salvation by dalliance.' They may be described either as Vaiṣṇavite or as Śaivite, according to the name that they give to God.

(a) *Vaiṣṇavite*.⁵—(1) Rāmānuja (*g.v.*), and (2) Rāmānanda,⁶ who belonged to the school of Rāmānuja and was possibly the immediate *guru* of (3) Kabīr (*g.v.*); (4) Ānandatīrtha, who originated the Mādhyas (*g.v.*); (5) Chaitanya (*g.v.*), and (6) Vallabhāchārya (*g.v.*; 16th cent.), with the (5^a) Kartābhājas and the (6^a) Charan Dāsīs (18th cent.), with the (5^b) Rādhāvallabhīs, the Śakhībhāvas, etc.

RELIGIOUS ORDERS (Japanese).—In the native religion of Shintō there have been from early times certain hereditary religious corporations which may be regarded as a kind of religious brotherhoods. The Nakatomi, though hardly a priestly caste, were recognized as vicars of the Mikado, and they also largely composed the officials of the Jingikwan, or department of religion. Another hereditary corporation was the Imbe, descended from the god Futodama. Their duty was to prepare the offerings and to exercise the most careful avoidance of impurity in so doing. A third order was that of the Urabe, or diviners, mentioned already in A.D. 585, and later divided into four branches belonging to as many provinces.³

J. A. MACCULLOCH.

RELIGIOUS ORDERS (Mexican and Peruvian).—1. Mexican.—In the higher civilizations of America we find religious orders akin to the religious brotherhoods of higher faiths. In Mexico one of these orders was the Tlamacacayotl, an ascetic order attached to the service of the god Quetzalcoatl. The head of it was named after the god, and never issued from his seclusion except to speak to the king. The brothers dressed in black robes, lived on coarse fare, and worked hard. They kept a night watch, singing hymns to Quetzalcoatl. At times they retired to the desert for penance and in order to pray in seclusion. Children were dedicated to this order from birth, wearing a distinctive collar, called *yamati*, until the age of four, when they might be admitted to the brotherhood.⁴

Another outstanding order was that of Telpochtiliztli, the 'congregation of young men,' youths who lived at home, but met at sunset in a special house to dance and sing praises to the god.⁵ Each temple had also a monastery.

The Tlamacacayotl, 'deacons' or ministers, and the Quaquacuiltin, 'herb-eaters,' dedicated themselves for life to the service of the gods. Both were ascetic orders performing acts of penance in imitation of their patron, Quetzalcoatl. These orders had monasteries for both sexes, and their head was the high-priest of Quetzalcoatl.⁶ Female children were dedicated to the service of the gods when forty days old, by being presented to the priest in the temple, carrying a miniature broom and censet. At the required age they then

⁵ *Id.* iii. 436.

⁶ *Id.* ii. 203.

entered the monastery, either for a period of years or for life-long continence. Under the care of a matron they were employed in weaving and embroidering temple-tapestries, filling the incense braziers, and preparing bread for the priests.¹

The Totonacs had a strict order devoted to Centeotl. Its members were widowers over sixty, of irreproachable character, who lived a secluded and austere life. They dressed in skins and ate no meat. They were much respected by the people, who consulted them, and regarded their answers as oracles.²

2. *Peruvian*.—In Peru the most remarkable example of a religious order was that of the 'Virgins of the Sun,' girls who had been dedicated to the service of the god in infancy, and at the fitting age placed under the care of matrons in convents. Here they lived in absolute seclusion, for none but the Inca and his queen could enter. Their employment was to watch over the sacred fire and to weave and embroider temple-hangings as well as the dresses for the Inca and his household. They had to live a life of strictest continence, and any one who failed to do so was buried alive, while her lover was strangled and the village or town where he lived was razed to the ground. Yet from their numbers the most beautiful were selected as 'brides' or concubines of the Inca. The 'houses of the virgins of the sun,' or monasteries, were low ranges of buildings, surrounded by high walls, to exclude them from observation.³

3. Both in Mexico and in Peru there were orders of knights corresponding to the European religious orders of chivalry. The initiation to these orders was protracted and severe, testing both the bravery and the endurance of the candidates.⁴

RELIGIOUS ORDERS (Muslim).—In this article attention is confined mainly to the N. African orders. For the religious orders in other countries reference should be made to the series of articles on MUHAMMADANISM. See also artt. DERVISH, SUFIS.

I. *GENERAL CHARACTERISTICS*.—1. *Preliminary observations*.—In the East the religious orders of Islām are not numerous, but their members are subject to religious obligations of the most precise kind, to a most rigorous discipline alike in spiritual and in temporal things, and to a strictly defined procedure in political matters, so that they are at once initiates (in the exact sense of the term) and agents of their official head. In N. Africa, and especially in the Maghrib, on the other hand, the orders are found in large numbers, but their organization is lax. Thus, as we proceed from Morocco to the Far East, we notice that the orders gradually decrease in number and importance; while, in passing from East to West, we find an unmistakable ebb in the current of Pan-Islāmism. It would seem, in fact, that the ideal of the religious order is incompatible with that of Pan-Islāmism; each tends to exclude the other. In the East and the Far East the breath of Pan-Islāmism has sometimes excited, or threatened to excite, the Muslim populace to revolt; while in N. Africa, where the Pan-Islāmic idea is but little diffused, it is the orders that have now and again disturbed the public peace or provoked conflicts in the colonial or protected countries.

It should also be noted that in the Maghrib the fact that the Sharifs, i.e. the real or supposed descendants of Muḥammad, are found in great

numbers tends to diminish the importance of the orders. The Sharifs form a highly-esteemed religious class, their descent itself providing a sufficient basis for their authority. As it is not to their interest that religious associations which may divert to their own uses some portion of the religious offerings should be making headway alongside of them, the Sharifian families are essentially hostile to the orders, except those which they have founded and in a sense absorbed, thus appropriating the advantages and emoluments of both the Sharfiate and the order.

The orders are very numerous in N. Africa, and the majority of them have a large, some even an enormous, membership. Definite, or even approximate, enumerations of their adherents are altogether out of the question. In countries subject to European Powers, as Algeria, statistics have been compiled and published, but they have only a relative value. In independent Muslim countries, such as Morocco, the numerical estimates are purely fanciful. Questions put to native members of one and the same order or community will elicit the most remarkable diversity of estimates; thus, as regards a particular confraternity, one will speak of hundreds of members, another of thousands, while a personal investigation will perhaps reduce the total to a few dozens or even units. Still, after making all allowances, we are safe to say that the membership of the orders in N. Africa is very large; the present writer is of opinion that in Morocco about three-quarters of the male population belong to these communities.

Another noteworthy fact of a general character is that some orders are specially connected with particular districts or particular tribes. Thus the order of the Naṣiriyyah and that of the Mbuonin recruit their ranks almost exclusively among the inhabitants of the Wādī Drā'a (S. Morocco); while, as an instance of a group wholly confined to a certain ethnological stratum, and affiliated with a religious order, we may refer to the Bukhārā (plur. of Bukhārī), descendants of the famous Black Guard instituted by the sultans of Morocco, whose privileges were ratified by an imperial decree in 1697; this negro aristocracy belongs in the main to the Isāwiyyah (below, II. 1).

Finally, from the category of religious orders properly so called we exclude certain associations possessing a religious character (all associations in Islām may be said to have a religious character—corporations, trade guilds, shooting clubs, etc.), but having nothing else in common with the orders (of which religion is the sole *raison d'être*, and which have an essentially religious purpose). Thus we do not regard the acrobatic society of Sūs called the Ulād Sidi Ḥammad u Mūsā as a religious order; still less the Ghnāwa, the negro jugglers of the public grounds and market-places. Their open-air performances and their manner of taking the collection do not suggest a religious fraternity.

2. *Organization*.—At the head of the order (called *triga*, 'way,' or *taifa*, 'band') stands the *shaiḥ*, who exercises absolute authority. Under the *shaiḥ* is the *khalīfah*, or *nāib*, who acts as his vicegerent or deputy, and, in more remote parts, represents him and his authority. Next come the *muqaddams*, heads of the various groups into which the order is divided, and engaged in the work of propaganda and management; they enrol new members, and initiate them, collect the offerings, and convey the instructions of the *shaiḥ* to members within their jurisdiction; in short, they are pre-eminently the agents of the order. The members, again, are styled *khawān*, *ikhwān*, 'brothers' (Algeria, etc.), *fugara'* (plur. of *fagir*, 'poor') (Morocco), or, more rarely, *darwishes*, which is rather an Oriental term; one also hears

¹ NR II. 204 f.

² *Ib.* II. 214, III. 487.

³ W. H. Prescott, *Hist. of the Conquest of Peru*, London, 1880, p. 52 f.

⁴ NR II. 194 f.; Prescott, p. 10.

the word *aṣḥāb*, 'companions.' The several chiefs of an order are kept in touch with one another by foot-messengers (*raqqāb*); the *naḡīb* is a kind of master of ceremonies; the *shāuṣh* is charged with temporal affairs.

The members of an order hold regular meetings, called *ḥadrahs*, at stated times, and at these they engage in their devotional practices—prayer, singing, dancing, etc.—and hear the instructions and counsels of their *mugaddams*. The order has also an establishment called the *zāwiyah*. This word is rather vague in its denotation, but in a general way it signifies an abode of *murābīṭ*, or monks, and is thus often rendered 'convent,' 'monastery,' or even (quite wrongly) 'hospital.' The *zāwiyah*, in fact, may be a group of buildings—sometimes a very extensive group—comprising a mosque, a school, apartments for disciples (*ṭalabāh*), pilgrims (if it has a saint's tomb), dependents, travellers, the poor, etc., or it may be no more than a place of meeting and instruction.

3. Initiation and the chains.—The rite of initiation is called *wird*, lit. 'going down,' and so 'descent to the watering-place,' 'act of drinking,' and is administered to the novice (*murīd*) by the *mugaddam*. The *mugaddam* receives his investiture from the *shāikh*, who delivers to him a diploma styled *ijāzah*. The prerogative of the *shāikh* rests upon tradition and derives its sanction from the 'chains' in which the tradition is embodied. There are two kinds of chains: (1) the chain of initiation (*silsilat al-wird*), i.e. the series of 'saints' from whom the founder of the order received his instruction, and (2) the chain of benediction (*silsilat al-baraka*), or series of *shāikhs* who successively held the headship of the order, and so transmitted the divine benediction. The former goes back from the founder to Muḥammad through a complete series of real or supposed personages directly linked with one another, and then ascends, with the archangel Gabriel as intermediary, to Allāh himself.

4. Mysticism in the orders.¹—Mysticism (*q.v.*), which is one of the fundamental elements of religion, if not indeed its very essence, was, in Islām, the needed, and in a sense the inevitable, recoil from the intellectualism of the Qur'ān. Mysticism is highly developed in the orders, and in some of them reaches its zenith. It takes various forms. It appears in the 'saints' chains' mentioned above, connecting the founders of the orders with Muḥammad, and through him with Gabriel and Allāh, thus securing for them their divine authority. The significance attached to these chains rests wholly upon the mystical element. It manifests itself strikingly in the religious language—formulae of initiation (*wird*) and of prayer (*dhikr*, etc.), instructions and counsels of the *shāikhs*, speculations regarding the stages, and descriptions of the psychic states, through which the votary passes in order to attain to ecstasy and union with God—speculations and descriptions that recall in striking fashion the analogous theories and delineations of Christian mysticism and Buddhist asceticism.

5. Ritual and ceremonial.²—Mysticism, though in origin and principle a reaction against the systematizing and the abuse of rites and formulae, has given rise in the orders to a ceremonialism of its own. This finds expression, first of all, in litanies—the manifold repetitions (extending to 50, 100, 1000, 10,000, and even 100,000 times) of the same religious affirmations or invocations. In some orders the members devote all their energies to the recitation of the *dhikr*, spending the day and sometimes the whole night in repeating the same forms of prayer. Ritualism and religious

formalism, one would think, could hardly go any farther.

Ritualism appears also in the strange ceremonies and practices characteristic of special orders (see below, II. 1)—forms of ritual which secure for such orders an extraordinary influence over the mass of believers.

6. Political aspects.—The orders differ greatly from one another in their political aspects. We shall confine ourselves here to a single country, Morocco, where these communities, in contrast to the important political rôle which they formerly played, have now all but ceased to manifest any activity whatever in this respect—a fact well worthy of note. From the end of the 15th cent. till 1830—the beginning of the French conquest of Algeria—N. Africa was dominated by two rival authorities, viz. the Sharifs of Morocco and the Turks of Algiers. These two powers had sprung into being almost simultaneously as the result of a religious movement against the Christian conquest of Muslim Spain and against the active designs of Portugal and Spain upon Morocco. This twofold activity on the part of Christian Powers aroused the fanaticism of the Berbers and the Arabs, and kindled a revolution which, directed by the orders, resulted in the overthrow of all the Maghribene dynasties, these being replaced by sovereignties established through the influence of the orders and the *murābīṭ*. In Morocco the first of the new dynasty, that of the Sa'adian Sharifs, was Abū 'Abdallāh al-Qaim bi Amrillāh, who, after an understanding with the *murābīṭ* of Sūs, advanced a claim to the sovereignty c. 915 A.H. (A.D. 1509–10). In the eyes of the people this dynasty stood for a government constituted according to the purest traditions of Islām.

To-day, from a variety of causes,¹ these orders, in spite of the anarchy prevailing in Morocco, have all but ceased to exercise any influence whatever in political affairs. In essence the causes are two: (1) the divisions and rivalries existing among the orders, these being particularly rife in Morocco; and (2) the prerogative of the Makhzen, i.e. the Moroccan government, which is now able to have the highest positions in the leading orders conferred upon its foremost representatives—ministers, the imperial family, and even the sultan himself.

7. Place in social life.—As in Muslim countries religion is even more decidedly a social concern than it is among Christian peoples, the social rôle of the orders is closely connected with their religious aspect. Mysticism, which is cultivated more or less in all the orders, has a strong fascination for the African peoples, both those which labour under the violent and arbitrary administration of native governments (Morocco) and those which have been forcibly subjected to the rule of infidel Powers, such as France and Britain; and, by enabling its votaries to become absorbed in God, or at least to engage without restriction or hindrance in religious practices to which the authorities take no objection, mysticism offers to the oppressed not only an open gateway towards heaven, but also a means of deliverance from all the trammels and miseries of earth. Now, to this powerful attraction of mysticism in the orders is added the no less inviting aspect of their social function. The religious order is a form of association peculiarly congenial to the Muslim mind. Among the Muslims of Africa in particular the spirit of combination and co-operation is remarkably well developed. Every active form of social life tends to embody itself in associations—trade guilds, shooting clubs (which are very numerous), charitable societies, etc. This intense need of

¹ For full discussion of Muslim mysticism see art. *Sūfīs*.

² Cf. art. *PRAYER* (Muhammadan), *PIR*.

¹ See E. Montet, *Les Confréries religieuses de l'Islam marocain*, Paris, 1902.

acting everywhere and in all things in conjunction and communion with one's fellows is then invested with a sacred character by religion. Thus, on the one hand, the mysticism of the orders acts as a social force in bringing individuals together under the ægis of religion, while, on the other, the orders, as religious associations, form one of the most active and most potent phases of the social entity known as Islām.

II. *THE SEVERAL ORDERS*.—I. 'Isāwīyyah. — This order, one of the most important in Africa, was founded by Muhammad b. 'Isā, who was born of a Sharīfian family in Mekinez (Morocco), where he also died (c. 1523-24) and was buried. Having become a member of the Shādhiliyyah Jazūliyyah (below, § 30), he performed the pilgrimage to Mecca, and either in Arabia or in Egypt was in touch with certain dervishes who instructed him in the observances of the Oriental orders Haidiriyyah and Sa'adiyyah. Returning to Morocco with the reputation of being thoroughly proficient in mystical theology and capable of performing the most wonderful miracles, he became so popular that the sultan himself took umbrage and gave orders that 'Isā and his disciples should quit Mekinez.

It was during his exile that, when on one occasion his disciples were in the last straits of hunger and crying out for food, the master bade them eat what was to be found upon the road. There was nothing but stones, snakes, and scorpions; yet such was their confidence in their leader that they devoured these without hesitation, and his miraculous powers ward off any ill effects of the unnatural meal. This incident was probably the origin of those singular practices of a similar kind in which the 'Isāwīyyah still engage. Legend ascribes a great number of miracles to 'Isā, and the report of these led the sultan to recall him to Mekinez.

The chief convent of the order is in Mekinez, and the supreme council of forty members is housed in it. The order has a loose organization, and appears to lack cohesion, though in Morocco, where it is strong in numbers and influence, it is more compact and better organized. As regards doctrine the 'Isāwīyyah are fundamentally at one with the Shādhiliyyah; and indeed their founder used to say that the life he lived was 'that of the Sūfis, that of the Shādhiliyyah.' A Muslim savant has thus summarized their teachings:

'In religious things—continuous progress towards the deity, sobriety, fasting, absorption in God carried to such heights that bodily sufferings and physical mortifications are unable to affect the now impassable senses; in moral things—to fear nothing, to acknowledge no authority but that of God and the Saints, and to submit only to such as permit the principles of the Sacred Book to be carried into practice.'

In doctrine, accordingly, the 'Isāwīyyah are mystics.

The remarkable ritual practices for which the 'Isāwīyyah are noted have often been described. The German traveller, H. von Maltzan,¹ who had an opportunity of witnessing them at Mekinez, has given an account of an 'Isāwīyyah meeting, and this, being little known, we may give here, more especially because the present writer regards it as the most accurate and authentic of its kind, and because, having been present at similar functions in Morocco and Algeria, he is able to confirm the circumstantial character of its details.

The religious ceremony opens with the nasal intoning of the formula expressing the Muslim confession of faith, *Lā Ilāha il 'Allāh* ('There is no god but God'), repeated over and over again. The sacred words are chanted in all tones to the point of satiety, yet always in measure. Then all at once, when the chanting and the outcry, accompanied by the regular beating of tom-toms and drums, are at their loudest, one of the brothers of the order rises up and begins the religious dance (*ishdeb*). The *ishdeb* is not in the strict sense a dance, but we

have no better word by which to render the Arabic term. It consists in regular movements of the body—slow to begin with, then more and more rapid, and at length convulsive. At the outset there are rhythmic oscillations of the head and the upper part of the body, and deep and rapid bowing. The dancer having continued to perform these motions for some minutes, a second rises, then a third, until at last six of the 'Isāwīyyah are vying with one another in vehement swaying and bending. This preliminary scene lasts for about half an hour. Each of the actors in the strange performance carries on till he comes to the paroxysm of the *ishdeb*. The movements become more and more rapid, the bending deeper and deeper, the turnings of the head and the body more and more violent, until at length the exhausted 'Isāwīyyah are seized with vertigo, froth gathers on their lips, their eyes stand out of their sockets and roll with the shifting gaze of the insane, and the fanatical dancers fall staggering to the ground; they have attained the state of blissful ecstasy.

The state of physical prostration signifies that the spirit of the founder of the order has gained control over the disciple, so making him capable of swallowing with impunity the most virulent poisons and all things that lacerate or cut. Soon the six 'Isāwīyyah are wallowing upon the ground in wild disorder, giving vent to frightful yells of an altogether unhuman character, and resembling now the snorting of the wild boar, now the roaring of the lion. Some of them, like wild beasts, grind their teeth, from which drips a whitish foam. In their disordered and threatening movements, it would seem as if they were about to rend the onlookers in pieces.

A large dish is then brought forward, and is uncovered by the *muqaddam* who presides over the ceremony. It contains serpents, scorpions, toads, lizards—a jumble of loathsome and venomous creatures. Hardly has the *muqaddam* removed the cover when the six frenzied maniacs fall upon the foul mass of living things with the voracity of famished beasts of prey, and in a moment the whole is torn in pieces and devoured. No trickery here! I see the reptiles torn in pieces by the powerful teeth, while the blood of the serpents and the slimy secretion of the scorpions tinge the saliva at the corners of the mouth. This revolting meal is followed by another, possibly even more dangerous. A dish of broken glass, needles, and cactus leaves is brought forward, and its contents are immediately snapped up and swallowed. I hear the glass cracking between the teeth, and the sap of the cactus leaves trickles over the cheeks; the blood of the injured mouth mingles with the juice of the plant. Finally, a red-hot iron is brought in, and a negro, even more fanatical in appearance than the six Moroccans who have just played their part, takes it in his mouth and licks it on all sides. This ceremonial is followed by the reception of a new brother into the order. The neophyte is brought in by two members, and prostrates himself before the *muqaddam*. The latter exhorts the candidate and then performs the sacred rite which is an essential condition of joining the 'Isāwīyyah. The rite is as follows: the neophyte opens his mouth wide, and the *muqaddam* spits three times into his gullet. The miraculous saliva suffices of itself to endow the neophyte with the power of consuming poisons, glass, or cactus spines, without injury to himself.

These curious and extraordinary performances are to be explained less as the tricks and devices of conjuring than as phenomena of a psychical kind—phenomena of which the ecstatic state has yielded countless examples in all ages, among all peoples, and in all religions. In 1900, at Rabat (Morocco), in the house of M. D—, formerly French consular agent in that town, the present writer saw a most interesting collection of instruments of torture used by the 'Isāwīyyah in their exhibitions—huge and heavy clubs studded with large nails, flagellants' rods formed of short supple sticks strung together in a ring, etc. It would, in fact, be quite wrong to speak of the 'Isāwīyyah as mere jugglers and tricksters. It is certainly the case that, e.g., in Algiers and elsewhere they are ready enough to exhibit their performances for money, and at Kairwan the present writer was offered—on terms—a view of their frenzies; but the aberrations of a group should not throw discredit on the members generally, who (in Morocco, at least, where the present writer has studied their mode of life) are in the main honest and peaceable tradesmen and tillers of the soil.

The 'Isāwīyyah are very numerous in Morocco, being found in all parts of that vast country. They draw their members from all ranks of society. At Marrakesh, in 1900-01, certain exalted personages of the Sharīfian court were mentioned by name to the present writer as belonging to the order; the former sultan, Mūlāi Hasan, was a member (cf. also the reference to the Bukhārā above, I. 1). The order is also well represented through-

¹ *Drei Jahre im Nordwesten von Afrika*, Leipzig, 1868, iv. 276 ff.

out Algeria, where, in 1900, they numbered at least 3500. The most important of their *zāwiyahs* (of which they have about a dozen in this country) is that of 'Alī b. Muhammad in the Duar Uzara, where the panther's skin on which the founder of the order is said to have slept is preserved as a relic; a skin with the identical claim is preserved at Mekinez. The 'Isāwīyyah maintain a footing likewise in Tunis, and are found in almost all important localities; they are met with also in Tripoli, at Benghazi (Barka), in Egypt, Syria, and the Hedjaz.

2. *Ḥamadsha*.—The *Ḥamadsha* or *Ḥamadushia*, a Moroccan order, though far behind the 'Isāwīyyah in influence and expansion, are closely akin to them in their peculiar usages, and are noted for their practices of striking the head with an axe and of throwing cannon-balls into the air and catching them on their skulls. They are often met with in company with the 'Isāwīyyah. Their name comes from that of their founder, 'Alī b. Ḥamdush, who lived in the 16th cent., and is interred near Mekinez.

M. Quedenfeldt¹ mentions religious orders or sub-orders related to the *Ḥamadsha*, but we have little information regarding them. The following four, more or less connected with the *Ḥamadsha* in origin or religious practice, have but a small membership:

3. *Daghughiyyin*.—The patron saint of this group, Ḥamid Daghughī, who was near of kin to the founder of the *Ḥamadsha*, was born near Mekinez (Jebel Zerhun). A characteristic practice of his community is that of throwing cannon-balls and clubs into the air and catching them on their heads.

4. *Ṣādiqiyyin*.—Muhammad al-Ṣādiq, the patron saint of this order, came from S. Morocco (Taflalt, Drā'a, Tuāt). The members in their dances butt their heads violently against one another.

5. *Riāhin*.—Their patron saint is al-'Amir Riāhī, who belonged to Mekinez. His followers stick the points of knives or forks into the lower front of the body without drawing blood.

6. *Meliāiyyin*.—Mūlāi Meliāna, the founder, was a native of Mekinez; his votaries are fire-eaters, and swallow live coals.

Of the following three communities, related to the foregoing in origin and tendency, scarcely anything is known to us but their names and the fact that their membership is exceedingly small:

7. *'Alamīn*.—Founded by Qaddur al-'Alamī, of Mekinez.

8. *Sejīnīn*.—Founded by Ḥamid Sejīnī, also of Mekinez.

9. *Qāsmīn*.—Founded by Qāsim Bū-Asria, who belonged to the neighbourhood of Mekinez.

10. *'Ammāriyyah*.—This Algerian order, whose religious practices are like those of the 'Isāwīyyah, is found in Algeria and Tunis, and in those countries has over 6000 members and 26 *zāwiyahs*. It was founded by 'Ammār Bū-Senna, born c. 1712 at Smala ben Merād in the Wādī Zenati (Alg.), and was reorganized c. 1815 by al-Ḥājī Embārek al-Maghribī al-Bukhārī († 1897), a Moroccan who belonged to the famous negro aristocracy referred to above (I. 1). It is reported that a dissenting branch exists in the district of Guelma (Alg.) under the leadership of a certain b. Nahal.

11. *Tuhāmiyyin*, or *Tayyibiyyah*.—This Moroccan order, which in Morocco itself bears the former name and in Algeria the latter, was instituted in 1678-79 by Mūlāi 'Abdallāh b. Ibrāhīm, a member of the *Jazūliyyah* (below, § 30), and the founder of the *zāwiyah* of Wazzān, which subsequently gained such fame. The great political rôle once played by this order was due to the noble lineage of its

founder and of his successors in the hierarchy. For the Sharifs of Wazzān—such is the title given them—belong by blood to the house of Mūlāi Idris, a descendant of Muḥammad, who founded the first Moroccan dynasty in 788, and this lineage ranks in Morocco as, if not more genuine, yet purer and better established, than that of the sultans themselves.

The name *Tayyibiyyah* is derived from that of Mūlāi Tayyib, the successor of Mūlāi 'Abdallāh in the government of the order, and a contemporary of Sultan Mūlāi Ismā'īl (17th century). The order powerfully assisted the latter in his efforts to gain the throne. The name *Tuhāmiyyin*, again, comes from that of Mūlāi al-'Tuhāmi b. Muḥammad († 1715), who won distinction by his reorganization of the order.

From the time when Mūlāi 'Abd al-Salām b. al-Khajj al-'Arbi 'l Wazzānī, a former head of the confraternity († 1894), became a *protégé* of France,¹ it has in a manner been at the service of that country—a circumstance to which, it seems, it owes its subsequent decadence. Its influence in Morocco is nowadays quite inconsiderable, as was evident in 1904, when M. Perdicaris was a captive in the hands of Rausuli, and the intervention of the Sharifs of Wazzān utterly failed to secure his liberation. 'Abd al-Salām had strong leanings towards European culture; he renounced his native wives in order to marry an Englishwoman; he liked to wear the uniform of a French general of artillery. His successor in command was his eldest son, Mūlāi al-'Arbi.

The *Tuhāmiyyin* are found principally at Wazzān, where their parent institution is, and in N. Morocco; in the rest of that country the present writer has scarcely heard a word about them. In Algeria the *Tayyibiyyah* are represented mainly in Oran; in the whole country their membership has been computed at over 22,000, while they have only eight *zāwiyahs*—a fact that speaks well of their organization and cohesion. The order has a numerous following also in Tuāt.

12. *Tijāniyyah*.—This Algerian order was founded by Almad b. Muḥammad b. al-Mukhtār al-Tijānī, who was born at 'Ain Mādhi, near Laghuat (Alg.), in 1737 and died at Fez in 1815. He was a descendant of a devout Moroccan Sharif who built the *zāwiyah* of 'Ain Mādhi. The order has spread far and wide; in Africa the majority of its members are found in Algeria, Morocco, Tunis, Tripoli, the Sūdān, the Congo, and in Adamawa, Adrār, and Tuāt, with some even in Egypt, and it has *zāwiyahs* also in Constantinople, Beirut, Medina, Mecca, and Yambo. In Algeria, where its membership was found recently to be over 25,000, with 32 *zāwiyahs*, it has been split since 1875 into two branches—that of 'Ain Mādhi and that of Temasin (Wādī Ghir). The direct descendants of the founder reside in the *zāwiyah* of 'Ain Mādhi. The two rival divisions stand quite apart from the rest of the Algerian and foreign orders, and are crippled by their dissensions and (in the Temasin branch) by the personal conduct of some of their chiefs. The Algerian *Tijāniyyah*, however, have all along supported the French ascendancy, and have rendered great service to the Government, while, as an aristocratic society of liberal outlook, they have shown themselves markedly accessible to European influence.

The case is very different in Morocco, where the order, while certainly aristocratic, has assumed a narrow national character. Here, indeed, it is to be regarded as standing quite by itself. Its central convent is in Fez. *Tijāniyyah* resident in Taflalt, Gūrara, Tuāt, the French Western Sūdān, and Senegal are under its control, and apparently

¹ ZF xviii. [1898].

¹ On the law of protection of. the Treaty of Madrid, art. 16.

acknowledge its spiritual authority. In Morocco it recruits its ranks from the Arab (*i.e.* the Andalusian-Moorish) element, which forms the best educated and most intelligent, though the most fanatical, stratum of the population; and it has adherents also in the higher commercial class and even in court circles. It manifests considerably more internal cohesion than the other Moroccan orders, and, in virtue of its aristocratic character and its wealth, exercises a considerable social influence—an influence which, as the present writer can testify, is hostile to European civilization.

The Tijāniyyah of Adrār seem to have made notable progress, and their *zāwiyyah* at Shingeti is said to have established branches at Walata and Kaarta, as also farther West, among the Moors of the right bank of the Senegal and in Toro. The founder of the order was a man of liberal mind. While taking his stand upon the rule of the Khalwātiyyah (below, § 34)—a ceremonial and ascetic mysticism—he drew his inspiration chiefly from the Shādhiliyyah (below, § 21). His teachings and principles are set forth in a work which he composed at Fez between 1798 and 1800, and which is commonly called *Kunash*, a corruption of its real title *Min kulli nashin*, 'Gathered from Everything,' *i.e.* a chrestomathy. The prevailing spirit of the book is a liberalism seldom met with in other orders; it counsels no macerations, no harsh penances, no prolonged retreats, and favours a simple ritual; and it presents generally a synthesis of temporal and spiritual interests that is conducive to broad-mindedness. We quote two characteristic sayings from the work.

'The law follows the law' all that comes from God is to be held in respect, *i.e.* the law before all things, and tolerance. 'All that exists is loved by God, and in that love the unbeliever (*kāfir*) has a place as well as the believer.'

13. *Derqāwā*.—This is a Moroccan order of great importance. It was founded by Mūlāi 'I-'Arbi al-Derqāwī, who died in 1823 in his own *zāwiyyah* of Bū Barīh (territory of the Banū Zarwāl, north of Fez, in the Jibāl). The chief convent of the order is situated there. The Derqāwā, who adhere to the traditions of the Shādhiliyyah, are found in great numbers throughout Morocco. The Sekhalliyyin, a Sharīfian gild at Fez, are connected with the order, which is largely represented also in Algeria (about 9500 members, with 10 *zāwiyyahs*, nearly all in Oran), in Tuāt, in Gūrara, and in the Sahāra as far south as Timbuctu, while adherents are met with in Tunis, Tripoli (cf. Madaniyyah, below, § 14), Egypt, and Arabia. The Derqāwā are a mendicant order, and are noted for their ascetic practices and for the absolute submission which by oath they yield to their *shaiikh*. Of all the Muslim fraternities the Derqāwā perhaps come nearest to the monastic orders of Roman Catholicism. The founder's final counsels to his disciples are as follows:

'The duties of my brothers shall consist in overcoming their passions, and, in performing these duties, they shall seek to imitate—

Our Lord Mūsā (Moses), in always travelling with a staff;
Our Lord Abū Bakr, and our Lord 'Umar b. al-Khaṭṭāb, in wearing patched clothes;

J'afar b. 'Abī Ṭālib, in celebrating God's praises by dances (*rags*);

Bū Harro (Abū Huraira), the Prophet's secretary, in wearing a rosary round the neck;

Our Lord 'Isā (Jesus), in living in solitude and in the desert. They shall travel with bare feet, endure hunger, and associate only with holy men. They shall avoid the society of men occupying places of power. They shall keep themselves from falsehood. They shall sleep little, spend their nights in prayer, and give alms. They shall tell their *shaiikh* of their more serious as well as of their more trivial thoughts, of their important actions as well as of the most insignificant. To their *shaiikh* they shall tender unresisting submission, and shall at all times be in his hands as the corpse in the hands of those who wash the dead.¹

This final exhortation has been aptly compared with Loyola's 'peinde ac cadaver.' In Algeria and Morocco the Derqāwā have on the whole remained loyal to the spirit of their founder, renouncing all earthly ambition, and maintaining an absolute detachment from the goods of this world. Still, this attitude has at times shown itself capable of developing into fanaticism, and in both Morocco and Algeria they have now and again taken an active part in revolts against governmental authority.

The outward appearance of the Derqāwā is most characteristic: a stick or rod in the hand, chaplets of huge beads round the neck, the body covered with rags, and frequently—as a mark of pre-eminent devotion—the green turban upon the head. The tattered and offensively foul garb which they affect has in Morocco earned them the nickname of Derbalhiyyah ('wearers of rags'), and explains the sarcastic saying of the *talabah* (students) of the Jibāl—'The dog and the Derqāwī are one and the same.' In Morocco the order seems to have lost ground because of its divisions; it has three distinct branches there.

Its adherents are regarded as extreme devotees of monotheism. Their founder is said to have been so convinced of the divine unity and of the unconditional duty of giving glory to God alone that he commanded his followers to repeat aloud only the first part of the creed ('No god but Allāh') and to rest satisfied with a merely mental affirmation of the second ('Muḥammad is His Prophet').

14. *Madaniyyah*.—This is a Tripolitan order which, though an off-shoot from the Derqāwā, has come to exhibit a spirit diametrically opposed to the teachings of al-'Arbi. It was instituted by a Derqāwī named Muḥammad b. Hamzah Zāfir al-Madani, who began to preach c. 1820; about that time, too, he founded the *zāwiyyah* of Mezrata, which is still the central convent of the new order. The development of Sanūsism (cf. below, § 38) about the beginning of the latter half of the 19th cent. arrested that of the Madaniyyah, which would have remained stationary but for the fact that in 1875 the turn of events brought the head of the order, Muḥammad Zāfir, son and successor of b. Hamzah, into touch with 'Abd al-Ḥamid, the future sultan of Turkey. From that point the order became one of the most vigorous in the East, and one of the most hostile to European influence. With the support of Turkey, it has intermeddled on a vast scale with questions of Muslim politics. Its sphere of activity has gravitated towards the East, and it is now represented mainly in Turkey (Constantinople), Syria, and the Hedjāz, while, as regards Africa, its members are found in Egypt, Tripoli, and Algeria (where it has 1700 adherents and two *zāwiyyahs*).

The doctrine of the order, as formulated by Muḥammad Zāfir, classes its members with the ecstatic mystics; they manifest an unusual intensity of religious exaltation. In the statement of their regulations¹ drawn up by Muḥammad Zāfir for his disciples he asserts that war upon the infidel is a no less imperative duty than the ordinary practice of religion.

15. *Qādiriyyah*.—This order is the most widely spread and most popular in all Islām; its domain extends from Morocco to Malaysia; or, to speak more precisely, the order has found its way into every region into which Islām itself has penetrated. It was founded by 'Abd al-Qādir al-Jilānī ([*q.v.*] † 1166), born in Persia, and buried at Baghdād, where also is situated the central convent of the order. The Qādiriyyah are noted alike for their philanthropic principles and their mystical exalta-

¹ From a text published by L. Rinn, *Marabouts et Khouan*

¹ *Nūr al-Saṭā* ('The Sparkling Light'), Constantinople, 1885.

tion. 'Abd al-Qādir practised a boundless charity; he accorded a peculiar veneration to Sidna 'Isā ('our Lord Jesus'), and admired his measureless benevolence, though at the same time he preached and practised a doctrine of mystical ecstasy and the extinction of the human personality by absorption in God.

In Africa, except as regards Egypt, the order shows little homogeneity. In general, its members have remained faithful to the benevolent and tolerant spirit of the founder, but fanatics and irreconcilable enemies of European civilization are found among them. As regards the Egyptian Sūdān, the Mahdī of Khartum and his troops belonged to the Qādiriyyah, while in the immense region of the Western Sūdān the supreme head of the order there, the famous Shaikh Ma-al-'Ainīn-al-Shungetī—a spiritual potentate of most extensive sway—who sometimes resides at Shingeti in Adrār, and sometimes to the south of Sagiat al-Hamra, and has at present great influence in Morocco, is a determined antagonist of French activity in these various countries. The Qādiriyyah are specially numerous in Tunis and Morocco; in the whole of Africa, according to a recent return, they numbered 24,000 (of whom 2800 were women), with 33 *zāwiya*hs.

16. Bū 'Alīyyah.—This Tunisian order, an offshoot from the Qādiriyyah, and found only in Tunis and the province of Constantine (Alg.), was instituted by Bū 'Alī, whose tomb, as also the chief monastery of the order, is at Nefta (Tunis). The members engage in practices similar to those of the 'Isāwiyyah.

17. Bakkāiyyah.—This order, belonging to the Western Sūdān, and related to the Qādiriyyah, was founded by 'Umar b. Sīdī Aḥmad al-Bakkāi, c. 1552-53. Its central monastery is in Timbuctu, and it is represented also in Tuāt, in Adrār, and among the Tuāregs.

18. Arūsīyyah, or Salāmiyyah.—This is a Tunisian order, founded by Abū 'l-'Abbās Aḥmad b. al-'Arūs, who died in Tunis in 1460. The name Salāmiyyah comes from the celebrated 'Abd al-Salām al-Aṣmar, who reorganized the order c. 1796, and gave it the thaumaturgic character that it bears to-day. It is connected with the Qādiriyyah, and its typical features are a highly emotional mysticism and performances similar to those of the 'Isāwiyyah—frantic dancing, walking through flames, swallowing fire, etc. The order is well represented in Tunis, and especially in Tripoli, while in Algeria it can hardly claim 100 members (all in the extreme east of Constantine); a few are found also in Mecca and Medina.

19. Sa'adiyyah.—This is an Asiatic order, founded in the 13th cent. by Sa'ad al-Dīn al-Jabānī of Damascus, and now represented both in Asia and in Africa. Its Egyptian branch was at the zenith of its prestige in the 17th cent., and at the present day that group, together with a body of adherents in the Sūdān, forms the leading ramification of the order. Another section is found in Syria, while members are also met with in the Hedjāz. The Sa'adiyyah are an ecstatic order; they are allied with the Rifā'iyyah, which have a regular, as well as a dissident, branch in Egypt, and which sprang from the Qādiriyyah in the 12th century.

20. Badawiyyah Ahmadiyyah.—This Egyptian order is connected both with the Qādiriyyah and with the Rifā'iyyah, and was founded by Aḥmad al-Badawī, who died in 1276 at Tantah in Egypt. He was a scion of a Sharīfian family belonging originally to the Hedjāz, but afterwards resident at Fez. Aḥmad had gone from Morocco to Egypt, and settled at Tantah, where the chief convent of the order still is. The order is now split into

three independent branches, found chiefly in Egypt and the Sūdān, while it has also members in the Hedjāz and in Syria. Legend ascribes to its founder the gift of working miracles, and in particular the power of making barren women bear children—hence the licentious orgies which take place round the saint's tomb on his festival day.

21. Shādhiliyyah.—This African order—or theological school, rather—was founded by Abū 'l-Ḥasan b. 'Abd al-Jabbār al-Shādhilī, who was born, as some report, in Morocco, or, according to others, in Tunis, in 1196-97. He was a pupil of the renowned 'Abd al-Salām b. Mashīsh († 1227-28), a Moroccan disciple of Sha'ib Abū Mādiān al-Andalusī, a native of Seville, who died at Tlemsen in 1197-98. This Abū Mādiān had travelled in the East, where he had become one of the personal followers of the famous 'Abd al-Qādir al-Jilānī (cf. above, § 15). Al-Shādhilī settled at length in Egypt. At the outset he engaged in ascetic practices, but afterwards devoted himself entirely to teaching. He gained an extraordinary reputation and was highly venerated. The university of al-Azhar drew its inspiration exclusively from his teaching, which it disseminated throughout the Muslim world.

Al-Shādhilī imposed no distinctive rule or ritual upon his disciples, so that, having had no other bond of union than the dominating influence of his teaching, they found themselves at his death (1258) without a leader. This resulted in the formation of various groups among his disciples, and of a considerable number of orders animated by his spirit. Of a proper organization there is but little in the order, which is above all a mystical fellowship, its main characteristics being a pure spiritualism, an ideal elevation of thought and feeling, absolute consecration to God, the voluntary merging of one's being in God, moral purification, prayer at all times, in all places, and under all conditions, and an ecstatic mysticism springing out of fervid love to God. This high-wrought mysticism, impelling the disciple to lose himself in the divine, was regarded by al-Shādhilī as inconsistent with all fanaticism and intolerance, and it certainly bears the stamp of a genuine spiritual catholicity.

At the present day the Shādhiliyyah form not so much an organized order as a school of doctrine maintained by numerous orders and taught in numerous *zāwiya*hs. The most genuine representatives of al-Shādhilī's teaching are now those religious associations which, while untrammelled by any proper constitution, make a watchword of the master's name, and it is these—independent *zāwiya*hs—which most faithfully reflect the primitive community. We find them scattered throughout the whole of N. Africa, more particularly in Algeria (where there are over 14,000 adherents), Tunis, and Tripoli; also in the Hedjāz, Syria, and Turkey—countries in which they play an important rôle.

The following twelve orders (22-33) are of Shādhiliyyan origin.

22. Habibiyyah.—This Moroccan order, mentioned by L. Rinn, was founded by Aḥmad b. al-Ḥabīb al-Lamīt († 1752-53), a native of Tafilalet. We have little definite information regarding it. Its membership, confined to Tafilalet (in which stands the chief monastery) and the province of Oran (Alg.), is very small, and the order is said to be animated by a tolerant and unworldly spirit.

23. Wafaiyyah (Ufaiyyah).—The Wafaiyyah, an Egyptian order, was founded in the 14th cent. by the Wafa, a Sharīfian family belonging to Egypt; its first chief was Muḥammad Wafa, and it has survived to the present day under the control of the same family.

24. *Nāṣiriyyah*.—This Moroccan order, now of diminished importance, was founded in the 17th cent. by Muḥammad b. Nāṣir al-Drā'i († 1669), who claimed Aḥmad b. Yūsuf († 1524–25) as his spiritual master. The chief convent of the order and the founder's tomb are at Tamagrut (Wādī Drā'a), the headquarters of the brotherhood. The members are found mainly in the south of Morocco; outside that country a very few are met with in Algeria and Tunis.

25. *Shaikhīyyah*.—The Shaikhīyyah, or Ulād Sīdī al-Shaikh, belonging to the Sahāra, and holding to the doctrinal standpoint of the Shādhiliyyah, are not so much a religious order as an aristocratic caste of a political and religious character. Their founder was 'Abd al-Qādir b. Muḥammad, afterwards styled Sīdī Shaikh († 1615), a great feudal lord who had once been a *muqaddam* among the Shādhiliyyah. He erected at al-Abiod the first of the *qṣūr* (citadels) now found in the Sahāra, and exercised a strong moral and religious authority in that region.

The Shaikhīyyah are located principally in the south of Oran, in Tuāt, Tidikalt, and Gūrara. In Morocco, where a few are met with at Tafilalt and round the oasis of Figig, their influence is inconsiderable; they are here regarded as hostile to Europeans. In the main, feudal, family, and marabout influences prevail so largely among them that the bond of connexion between them and the Shādhiliyyah is now very loose.

26. *Karzāziyyah*.—This Saharan order, found in S. Morocco and S. Oran, was instituted by Sharīf Aḥmad b. Nusa († 1608), who belonged to Karzāz, an oasis to the south-east of the Figig, and taught the doctrines of the Shādhiliyyah. The members are noted for works of benevolence, and the *zāwiyyah* of the founder at Karzāz is still a refuge for the poor, and, in times of adversity or oppression, for residents of the neighbouring *qṣūr*.

27. *Ziyāniyyah*.—This also is a Saharan order noted for philanthropy; it was founded by Mūlai b. Bū Ziyān († 1733), who belonged to a Sharīfian family resident in the Wādī Drā'a. The saint's tomb is at Kenatsa, between Tafilalt and the oasis of Figig, and there too is situated the central convent of the order. The Ziyāniyyah are found mainly in S. Morocco, Tafilalt, Figig, Tuāt, Gūrara, and the province of Oran; in Algeria, according to a recent computation, they numbered over 3000. They adhere to the doctrines of the Shādhiliyyah. They act as conductors of caravans, and in the Sahāra protect them against robbers and brigands. The order has always shown itself well-disposed towards French people and the colonial administration.

28. *Hansaliyyah*.—This Moroccan order was founded by b. Yūsuf al-Hansali († 1702), who, as his name indicates, belonged to the Hansala, a section of the Banī Mṭir, a tribe living in a district to the south of Fez. Formerly the order held a position of great influence in Morocco, but it is now almost extinct there; in Algeria it numbers more than 4000 members, belonging to the province of Constantine (the *zāwiyyah* of Shettaba); and it is represented also in Tunis. Its adherents are noted for works of charity.

29. *Zarrūqiyyah*.—The Zarrūqiyyah, a Moroccan order, was founded by Abū'l-'Abbās Aḥmad al-Zarrūqī († 1494), who belonged to the Beranes, a tribe settled near Fez. In Morocco the order is dying out, but in Algeria it has about 2700 members, with a *zāwiyyah* at Berruaghia.

30. *Jazūliyyah*.—This Moroccan order has almost ceased to exist as an organized community in Morocco, although the doctrines of its founder are still taught at Fez. Its founder was Abū 'Abd-

allāh Muḥammad al-Jazūlī († c. 1465), a native of Jazūla in Sūs, and the author of a famous work entitled *Dalā'il al-Ḥaṣrat* ('The Best Arguments'), on which are based the teachings of the Jazūliyyah.

31. *Yūsufiyyah*.—This is an Algerian order, founded by Aḥmad b. Yūsuf, a native of Morocco or—more probably, as some hold—of Oran. This celebrated visionary (*maǧzūb*), to whom are ascribed numerous proverbs and epigrams, died in 1524–25 and was buried in Miliana (Algiers). There are few traces of the order in Morocco, but in Algeria there is at Tūit, in the extreme south of Oran, a *zāwiyyah* founded by Muḥammad b. Milūd († 1877), a descendant of b. Yūsuf, which can still claim some 1500 members. The order has little influence in Algeria, but has all along maintained excellent relations with the French authorities.

32. *Ghāziyyah*.—The Ghāziyyah, a Moroccan order, founded c. 1526 by Abū'l-Ḥasan al-Qāsim al-Ghāzī, is of feeble growth, has a very limited expansion in the Wādī Drā'a, and possesses a *zāwiyyah* at Fez.

33. *Shabbiyyah*.—The Shabbiyyah is a Tunisian order, founded in the 17th cent. by Aḥmad b. Makhluf, a descendant of Muḥammad b. Nāṣir al-Drā'i, the founder of the Nāṣiriyyah (above, § 24). This b. Makhluf had been sent to Tunis to extend the operations of the latter order, and had settled at Shabba, between Sfax and Sūs; hence the name borne by his followers. The actual organizer of the order was Muḥammad b. 'Abd al-Hatīf. It is found in Tunis, and also in Algiers (Aurès), where it has about 1500 members.

34. *Khalwātiyyah*.—This Asiatic group, the name of which is ultimately derived from the term *khalwa*, 'retreat,' 'solitude,' is a school rather than an order, and goes back to the philosophical school founded by the Persian thinker Abū'l-Qāsim al-Junaidī († 910–11), but its actual (or at least its eponymous) founder was 'Umar al-Khalwātī († 1397–98), also a Persian. At the outset the order had no graded organization, and in Asia, where its expansion was on a great scale, it soon broke up into various groups—independent and local branches. In Africa, about the end of the 17th cent., they formed for a time a religious association in the true sense; but there too, though the order made less rapid progress, it soon fell apart into divergent and independent branches or groups. The teaching of the Khalwātiyyah began to take root in Egypt as early as the 15th century. At the end of the 17th a Syrian Khalwātī called Mustafa al-Baqri, a professor in the university of al-Azhar in Cairo, endeavoured to incorporate the members of the order in Egypt, and the united body, having grown considerably in numbers, assumed the name Baqriyyah, to distinguish them from other Khalwātiyyah. This new organization, however, did not last long, for at the death of al-Baqri (1709) three fresh groups detached themselves from it, viz. the Khaṭnawīyyah, the Sharqawīyyah, and the Sammaniyyah. Further disruptions took place, giving rise to other independent branches and *zāwiyyahs*, so that, as indicated above, the Khalwātiyyah do not so much form an order as represent a type of doctrine. They nevertheless exercise great influence in social life. They are ascetics, and mystics of a most fervid stamp; they have recourse to the retreat and the austerities which it involves; they engage in iterative prayers—repetitions of formulae, names of God, etc.—sometimes continued for five or six consecutive hours. This intense religious fervour has often excited the members to fanatical outbreaks and, as in Egypt, the Egyptian Sūdān, etc.,

brought them into conflict with the authorities, both Muslim and Christian. Like some other orders (cf. §§ 15, 35, and 39), they admit women as members.

35. *Rahmāniyyah*.—The *Rahmāniyyah* is an Algerian order, found chiefly in Constantine, and elsewhere only in Tunis. It sprang from the *Khalwātiyyah*, and resembles them in doctrine, practice, and lack of cohesion. It was instituted by Muhammad b. 'Abdarrāhmān Bū Qubrain († 1793-94), who belonged to the Kabyle tribe of the Ait Smail; his surname, Bū Qubrain ('with the two tombs'), goes back to the legend according to which his body was divided into two parts, buried respectively in Kabylia and at Hamma near Algiers. It is a most popular and influential order in Algeria, where it played the leading part in the great insurrection of 1871; its membership here is 156,000 (including 13,000 women), with 177 *zāwiya*s, and comprises several independent groups. Like all other offshoots of the *Khalwātiyyah*, it is marked by a want of cohesion, of discipline, and of centralized control.

36. *Emirghaniyyah*.—This is an Oriental order, known also as the *Mirghaniyyah* or *Marghaniya*, founded by Muhammad 'Uthmān al-Emir Ghani, who was born in 1793 at Salamat near Taif in the Hedjaz, and died at Taif in 1853. He joined the then brilliant school of Ahmad b. Idris, a native of Fez, who taught at Mecca from 1797 till 1833. At the death of the latter, in 1837, Emir Ghani's standing among the *Idrisiyyah* enabled him to compete successfully with Shaikh Sanūsī for the leadership of that body. Presently, however, he began to modify the rule of Ahmad, and then founded the order that bears his own name. When he died, dissensions and rivalries divided his followers into isolated sections and local branches. The order has a considerable expansion in Arabia, throughout the basin of the Red Sea, and in the Egyptian Sūdān.

By the founder himself the order was named al-Khatemia, 'the sealing'; hence the title Serr al-Khāttem, 'the secret of the seal,' given to his son Muhammad, who became the head of the confraternity. It is a mystical and ecstatic order, and from the first—even in its very origin—it assumed a political attitude hostile to the *Sanūsīyyah* (§ 38). It was closely involved in the Mahdist movement. In the Sūdān it has shown itself distinctly favourable to the Anglo-Egyptian government. The French traveller Bonnel de Mézières, when on a mission to the Sūdān in 1905-06, spoke of the order as entirely in the hands of the English, and this connexion has lowered its prestige both in the Sūdān and in the Hedjaz. A religious order that allies itself too openly with Europeans inevitably diminishes its influence among Muslims (cf. above, §§ 11 and 12).

37. *Naqshbandiyyah*.—An Oriental order, one of the most important in Islam, the *Naqshbandiyyah* has the largest membership of any in Central Asia. Its characteristics are contemplative mysticism and ecstatic ritualism; and, by reason of the varied and flexible forms of the mysticism which it inculcates, the purity of life for which its votaries are noted, and the supernatural powers ascribed to them, its influence is indeed great. It was founded at Bukhārā by al-Khwājah Muhammad Bahā al-Dīn¹ († 1390), an eclectic reformer (combining Sunnite orthodoxy, Shi'ism, and Ismā'īlian teachings). Etymologically the name *Naqshband* refers to the mystical delineations of the celestial life taken by Bahā al-Dīn from the philosophical theories of the Ismā'īliyyah *Bathaniyyah* ('interior Ismā'īthans,' i.e. those practising internal meditation both ecstatic and contemplative). In Africa

the order has only one *zāwiya*, which draws its members exclusively from the Turkish element of the population.

38. *Sanūsīyyah*.—The *Sanūsīyyah*, an Algerian order, was founded in 1835 by Shaikh Si Muḥammad b. Si 'Alī 'l-Sanūsī († 1859), who belonged to the vicinity of Mostaganem, and claimed to be the Mahdi. The chief monastery was for a long time at Jarabūb (Jaghbūb) in Tripoli, but has been removed to the oasis of Kuira in the Libyan Desert. The order has a great influence in Tripoli and in part of the Eastern Sūdān; it has a firm footing also in Egypt and especially in Arabia; but its following is very small in Algeria (under 1000 members), Morocco, and the districts to the south of these countries. The founder claimed to be a reformer of Islam, one who would restore the primitive purity of morals according to the Qur'ān; he also maintained that he formed the synthesis of all the other orders, especially in their mystical aspects. The order of the *Sanūsīyyah* has nothing like the vast influence and the fanatically anti-Christian and anti-European character that have been ascribed to it. Its attitude to Europeans is friendly or hostile according to locality and circumstances; but it should be noted that al-Mahdi, the eldest son of Sanūsī, and his successor as head of the order, took up a position of direct antagonism as the Mahdi of Khartum.

39. *Heddāwa*.—This Moroccan order was first made known to Europeans by Auguste Moulières.¹ Its founder was Sidi Heddi, who lived in the 13th cent., and was a contemporary and an admirer of Mūlāi 'Abd al-Salam b. Meshīsh, the great saint of the Jibāl; his tomb is at Tagzirih, among the Beni 'Arūs in the Jibāl, and there too stands the chief monastery of the order. The district in which he settled and had a *zāwiya* built is now called Uta ('plain') Sidi Heddi, and the fish of the stream that traverses the district have since ranked as sacred. The *Heddāwa* (pl. of *Heddāwi*) are a mendicant order of the lowest type, and have a most repulsive appearance. They are clothed in rags and go bare-headed, with the staff in their hand and the chaplet round their neck; they are a byword for filthiness, and are said to live in promiscuity; they admit women into their membership. They like to have animals, especially cats, about them; and they are great smokers of *kif* (shredded hemp). Though few in number, they are spread over an extensive district. All our information regarding them tends to show that they form an antinomian order.

40. *Mbuoniin*.—The *Mbuoniin*, a little known Moroccan order, first noted by Jules Erckmann,² was founded by a devout man named 'Abdallah 'Alī, also called Mbuono (Bū Nūh), a native of the Wādī Drā'a, in which (at Tamagrut) his tomb is also situated. The central convent of the order is in Tafilalet, and there was recently at Marrakesh a community of *Mbuoniin* numbering about 200. The members—they seem to be relatively few—wear as a badge a white cap of knitted wool.

LITERATURE.—Of works dealing with the subject as a whole there are few, but monographs devoted to particular orders are constantly appearing. Of the former class we cite here only those that may claim to be of scientific or documentary value: L. Rinn, *Marabouts et Khouan: Etude sur l'Islam en Algérie* (with a chart indicating the boundaries, the locality, and the importance of the orders), Algiers, 1885; O. Depont and X. Coppolani, *Les Confréries religieuses musulmanes* (with a map showing the geographical sphere of the orders—Algeria, Africa, Asia, and European Turkey), do. 1897; A. Le Chatelier, *L'Islam dans l'Afrique occidentale*, Paris, 1899; E. Doutté, *L'Islam algérien en l'an 1900*, Algiers, 1900; valuable information is supplied by A. Le Chatelier, *Les Confréries musulmanes du Hedjaz*, Paris, 1887, which gives a detailed bibliography of the subject down to 1887.

REMORSE.—In its most general sense remorse denotes poignant sorrow for the miserable condition of oneself or of another, whether that involves personal responsibility or is merely due to circumstances. Writers of the 16th and 17th centuries often use it for 'pity' or 'compassion,' and this meaning survives in the negative form 'remorseless.' But in modern usage remorse means exclusively the intense feeling of grief or compunction for one's own acts and their consequences, as they affect oneself and others. It therefore implies responsibility and guilt and culminates in despair over acts that are irretrievable and a condition that is irremediable.

1. As a psychological phenomenon.—Remorse is an emotion. Although predominantly a very acute feeling of pain, it is also a complex mental state that can emerge only at the conceptual and self-conscious stage of mental development.

William James propounded a theory that, if we abstract from any emotion 'all feelings of its bodily symptoms,' nothing would be left, which is an exaggeration of the fact that bodily states are a necessary element in all emotion, though not the whole of any emotion. Moreover, they do not enter so largely into remorse as into emotions like anger and fear, which James analyzed, and that because it is a calm and deep, but none the less intense, rather than a violent, emotion.

It is described as having 'a certain positive colouring, in which organic sensations, notably in the throat and digestive tracts, are prominent. There is also a certain setting of the muscles of throat and brow. The "gnawing" of remorse, by which it occupies consciousness and torments, seems to arise from these sensations.'¹

As a persistent mood it would undoubtedly change the entire tone of the visceral organs as well as the facial expression.

Remorse is to be distinguished from a general emotional mood, because it has a unique character of its own and involves some idea of the self and a judgment upon the self. It is a feeling of strife within the self, or of an irreparable breach between the ideal self that might have been and the actual self whose act has produced the conflict. But the feeling arises partly from a judgment of the difference between the two and of the inferiority of the actual self, but still more from a repression and a paralysis of the active side of consciousness. G. F. Stout traces the feeling quality in all emotions to 'occurrences which powerfully thwart or further pre-existing conative tendencies.'² Remorse is an apt illustration of this principle, because, while it is 'perhaps the very worst quality that can belong to suffering,'³ it is the emotion that exercises the most deadening influence upon life.

¹ In it there is a collision between what we have actually done and what we now desire that we should have done. Thus in reflection on our past self, the free course of our present ideal activity is crushed and repressed by the memory of our actual behaviour.⁴

But, as the developed self is conditioned by other selves, so are its emotions. There may be remorse for wrong done which apparently affects only ourselves, but it is more general and intense in respect of wrongs done to others, because the free intercourse of ourselves with other selves, whether God or men, is thereby restricted or stopped. Yet it always includes the utter misery and hopelessness of our own condition. Despair is always an element in it.

2. As an ethical quality.—It is obvious therefore that remorse is a moral feeling. It involves free agency and responsibility. One feels grief for misfortunes, regret for mistakes, remorse for sins, for acts which one has freely caused and ought to

have prevented. It is a painful conflict between the ideal and the actual self, and it has been held to be the most original element of our moral nature. It is the most elementary form of that which differentiates between moral and non-moral nature. It is the root and beginning of the moral faculty.

Darwin, in his account of the rise of morality, almost identifies remorse with conscience.

'When past and weaker impressions are judged by the ever-enduring social instincts . . . [man] will then feel remorse, repentance, regret or shame. . . . He will consequently resolve more or less firmly to act differently for the future; and this is conscience.'¹

This is not a very accurate use of terms, and Darwin has omitted the peculiar, unanalyzable, moral quality which pertains both to remorse and to conscience. But our view of the ultimate nature and source of remorse, whether it be the reproach of neglected self-interest, or of injured society, or of some transcendental authority insulted, will depend upon our theory of the moral criterion, whether that be self-interest, or social welfare, or some transcendental ideal.

Yet it is not strictly accurate to identify remorse with conscience. It is rather the result of conscience judging and condemning. While it is inseparable from moral judgment, it is peculiarly the feeling element that accompanies the reproach of conscience. On the other hand, it cannot be reckoned among the virtues or the vices, for it is too intimately bound up with the essence of moral nature, and with that which constitutes and defines right and wrong, virtue and vice. Its value therefore as a factor in moral life and in relation to the absolute moral ideal depends entirely upon the degree of enlightenment in conscience. One man may feel remorse for that which would afford the happiness of an approving conscience to another.

Darwin quotes the case of a savage who felt prolonged remorse until he went 'to a distant tribe to spear a woman to satisfy his sense of duty to his wife' who had died of disease.²

3. Theological significance.—Remorse assumes its acutest form and acquires religious significance when it is a sense of having violated the laws of God or of having outraged His love, thus in either case incurring His wrath. Its specific nature is then relative to the idea of God involved. Remorse was a frequent theme of the Greek drama, and the element of despair is here especially prominent because the Greek mind was apt to identify the divine in the last resort with inexorable fate. In the OT Cain and Saul are two notable examples of unavailing sorrow for sin. In each case there is a sense of guilt, a burden of penalty, a consciousness of complete and final alienation from God, and a paralysis of the spiritual life (Gn 4⁸⁻¹⁵, 1 S 28¹⁵⁻²⁵). A NT writer also represents Esau as 'rejected (for he found no place of repentance) though he sought it diligently with tears' (He 12¹⁷); and the first evangelist represents Judas Iscariot as having 'repented himself,' and, when he found repentance useless, 'he went away and hanged himself' (Mt 27^{3, 5}).

But in the OT and NT sorrow for sin more usually appears as repentance (*g.v.*), because God is merciful and forgiving, able and willing to reconcile the sinner to Himself, to blot out his guilt, and to open before him a new door of hope. Remorse differs from repentance in that, while both are sorrow for sin, the former is unavailing and irremediable, but the latter is a first step to a new life wherein the mistakes and failures of the old may be retrieved. In Protestant theology remorse may be either (1) the first stage of conviction for sin, a work of the law unrelieved by the

hope of the gospel, but followed at length by repentance, faith, and justification—

'But the law doth rather shew sin, accuse and terrify the conscience, declare the wrath of God, and drive to desperation';¹ or (2) a legal conviction of sin associated with permanent unbelief.

'Remorse for sin does certainly prove that the soul is not dead. . . . But remorse is not a sanctifying principle; on the contrary, it is an exceedingly dangerous one; and the soul may die of it, as truly as the body of acute pain. It often drives men to despair, to frenzied iniquity, and thus to final hardness of heart.'²

Such would be the condition of one who felt that he had committed the sin against the Holy Ghost or who had fallen from grace beyond recovery (He 6⁴⁻⁸).

Almost parallel to the difference between remorse and repentance is the better-defined distinction in Roman Catholic theology between attrition and contrition.

Contrition, the first act in the sacrament of penance, is 'a sorrow of the soul and a detestation of sin committed, with the determination not to sin again'. When it is motivated by love, and when it reconciles man to God, it is perfect contrition, and is to be distinguished from attrition or imperfect contrition, 'which arises from the consideration of the heinousness of sin or from the fear of hell or of punishment.' This also is 'a gift of God and an impulse of the Holy Ghost, who does not as yet dwell in the penitent, but only moves him, whereby the penitent being aided, prepares his way unto righteousness.'³

Attrition is not quite the same as remorse, but it seems to occupy the same position in the progress of the soul from sin to salvation as remorse may do when the fear of God and the condemnation of the law hold a man under the conviction of sin and still in its bondage for a season, though at last he may emerge into repentance and faith. But Protestant theology would not ascribe to remorse such independent efficacy for salvation as Catholic theology does to attrition. Yet remorse does in many cases lead to conviction when the revelation of the grace of God supervenes.⁴

T. REES.

RENUNCIATION.—In a sense the entire history of ethics might be said to turn on the question of renunciation. Every system has been forced to admit it as an element; it is the amount admitted that varies, and this varies enormously. Some reduce it to a minimum; there are others that have made it cover the whole ground. At the one extreme we have the thoroughgoing forms of Hedonism, such as Cyrenaicism and Epicureanism, which, taking the maximum of pleasure for the mere individual as the goal, are yet compelled to recognize that some pleasures must be renounced. And this because not only do desires conflict in the individual himself, but even those that are harmonious cannot be satisfied to the full in this world. At the other end we have the systems of self-denial, of which perhaps Buddhism might be taken as the type. Here renunciation seems pushed to its utmost limits, since the annihilation of all passion and desire is the supreme aim.

It may be a question as to whether this *nirvāṇa* of calm goes so far as to imply the death of all consciousness. If so, it would raise in an acute form the problem as to how it can be good for man to renounce everything, since by the very terms of the renunciation there is no longer anything living to possess

a good. This might perhaps be answered by holding that conscious existence was intrinsically so miserable that the only 'good' that could be hoped for was the absence of 'bad.' And thus, it would appear, would be the answer of Schopenhauer and of von Hartmann, the modern preachers of asceticism based on pessimism.

Between these two extremes lie the systems of the world. Greek ethics kept always in view the conception of a fundamental harmony as at least conceivable. Socrates and Plato demanded renunciation only of those illusory pleasures which an enlightened man would recognize as not what he really wanted. Aristotle, in admitting the possibility of utter self-sacrifice—say, death in battle without the hope of immortality—practically admits that a man may willingly give up what is most worth having from a purely individual point of view for the sake of serving others. This clash between the happiness of self and the happiness of others was to be felt more keenly as time went on. Meanwhile Aristotle was at one with Plato and Socrates in conceiving that the vast majority of our desires were reasonable, and in part at least to be satisfied. The work of renunciation lay not in killing them out, but in taming them and putting them to use, since use could be found for them in no way at variance with the highest good.

In Stoicism—developed under combined Greek, Roman, and Hebrew influences—renunciation becomes far more prominent. The mere consciousness of duty done was held to be enough to support man and give him happiness. What came to him from without was to be neither desired nor shunned; he must surrender once for all every clinging to the goods of circumstance. A modern parallel may be found in the view of Kant that there is nothing 'in the world or out of it' absolutely good 'except a Good Will' (*Grundlegung zur Metaphysik der Sitten*, sect. 1, *init.*), and that moral action consists in following the Imperative of Duty without regard to personal wishes.

With Christianity and Christian ethics the question enters on a new phase, and becomes extremely intricate. The definite recognition of the principle of love foreshadowed in Stoicism makes it impossible ever again to dissociate entirely an individual's highest good from that of his fellows; on the other hand, the hope of belief in an ultimate heaven of individual blessedness prevents renunciation from being the final word. Merely selfish pleasures have doubtless to be surrendered, but the compensation will be abundant. It is a further question, and one keenly debated, what these selfish pleasures include. Some have banished all the pleasures of the body and many of the mind. This was undoubtedly the view of the mediæval ascetics (see the writings of Bonaventura, published by the Fathers of Quaracchi), and it was to a certain extent repeated by Tolstoi in modern times, though it was the doctrine of non-resistance rather than of renunciation pure and simple that he made the keynote. All asceticism, however, seems at variance with the childlike spirit beloved of Christ—for no child is ever an ascetic—and indeed with the general impression which He made on His contemporaries as a man who 'came eating and drinking' (Mt 11¹⁹).

The pressure and complexity of modern life have brought out further aspects in the problem. Many a philanthropist, *e.g.*, must give up pleasures which in themselves he admits to be high and desirable. Is this from his point of view reasonable? The difficulty of this question does not seem to have been fully realized by the older utilitarians, such as Bentham and Mill, but the sense of it has led the latest exponent of the system in England, Henry Sidgwick, to suggest that a heaven where such sacrifices will be compensated supplies the only means of reconciling

the divergences between the good of the one and the good of the many, and so completely rationalizing ethics (see *The Methods of Ethics*, bk. iv. ch. vi.). Others—e.g., the followers of Auguste Comte and Herbert Spencer—are content to renounce the hope of permanent individual happiness altogether, if only the perfection of the race can be attained. Others, again, have developed what may be called a kind of Neo-Stoicism. Unalloyed good is impossible both for race and for individual, but sufficient compensation is to be found in the glory of an heroic struggle. This view has been common in England, finding distinct expression, for instance, in the writings of Huxley (e.g., *Evolution and Ethics*). But the German Nietzsche, by virtue of his genius, might be regarded as the leader of the school. He is, however, distinguished not only by the exultant turn he gives to the creed, but by the intense hatred he feels for any subordination of the one to the many. The best good of life as yet known to him lies in the free development of the most splendid and forceful individuals, at whatever cost to the masses. In general it may be said that the modern attitude is one of ferment over the questions: How much is man bound to renounce for himself and for the race? How much should he insist on claiming for himself or for the race, as a worthy prize for life? See also artt. HEDONISM, CYRENAICS, EPICUREANS, ETHICS AND MORALITY (Buddhist), (Christian), and (Greek), STOICS, UTILITARIANISM, POSITIVISM.

F. MELIAN STAWELL.

RENUNCIATION (Hindu).—I. The ideal and the motive.—To the Hindu the term 'renunciation' (Skr. *sannyāsa*, *sannyas*, 'lay down,' 'resign,' esp. to resign the world, become a *sannyāsin*, or ascetic)¹ conveys a meaning and carries with it an obligation very different from the Western idea. To the latter renunciation admits of degrees, and consists essentially in the surrender of a coveted aim or object, the abandonment of a cherished wish, or the suppression of a more or less definitely formed ideal of life. It is virtually equivalent to self-renunciation, and is conceived in terms of selfish purposes or desires which are to be set aside; it is the opposite of altruism, and implies no cessation of activities, but their diversion into new channels. Seldom if ever does it connote to the Western mind the abandonment of all for a life reduced to its simplest terms. The Hindu conception of renunciation is in almost every respect contrasted with this. *Sannyāsa* is the casting off, the abandonment, not of self but of all that is other than self; and the *sannyāsin* renounces home and friends together with all that to Western thought makes existence desirable, and engages himself to a life of absolute destitution of all possessions, that, undisturbed by worldly conditions or claims, he may cultivate communion with God. To break all the ties that bind to this world, to withdraw as far as possible from all worldly association and intercourse, to be dependent for daily support upon the charity of others—a charity in India never withheld—that no interruption may be offered by worldly cares or interests to meditation and the concentration of all thought and desire upon God, is the avowed

ideal and purpose of the Hindu who adopts the life of renunciation and poverty.

To a greater degree also than in the West this renunciation is dictated by religious motives. The mixed motives which among Western peoples lead to the renouncing more or less completely of cherished aims or convictions, often on trivial or even selfish grounds, have no place among the forces which in this particular urge the Hindu to action. Theoretically his sole purpose is to secure freedom for himself so that, untrammelled by worldly ties, he may pursue the one aim of union with God. The world with its attractions and its cares is an obstacle in the way which must be cast aside (*sannyas*). This duty is laid upon him by his religious faith and profession. Renunciation of the world is not a matter of choice, but a religious obligation and command incumbent upon all. It would appear, however, so obviously impracticable for an entire community to render literal obedience to an injunction of this nature that probably the author or authors of the codes of law did not conceive or intend that the rule should be universally observed.

2. Renunciation in practice.—This ideal of the renunciation of the world as a supreme religious obligation is of very ancient date and origin in India. In the oldest literature the figure of the hermit or ascetic who has broken through the fetters that bind to this world and has adopted a solitary and contemplative life is familiar. The motives that prompted the withdrawal from ordinary life were no doubt various, and in many instances not unmixed. The mere desire for a life of ease and irresponsibility actuated many, as it does at the present day, to seek release from burdens and duties that were rightly or wrongly felt to be intolerable. In ancient times probably the religious motive was for the most part at least predominant, and the longing for undisturbed communion with the divine; but it is perhaps more than doubtful whether so much can be claimed to-day for the great host of devotees and ascetics who cross the traveller's path in every part of India. A craving for notoriety and for the influence which a reputation for self-denial and the practice of the ascetic life gives in India prompts some; with many others it is sheer idleness and a disinclination to take the trouble involved in self-support or the support of kindred and relatives. The hardships and sufferings, however, that are voluntarily undergone, the laborious and dangerous journeyings to distant shrines, and the self-denial involved in the assignment of wealth and property to others often prove how sincerely, if mistakenly, truth and holiness are sought in a life of renunciation of all worldly ties and claims. In India such a life is and always has been facilitated by the generous fertility of the soil and the kindly climate, conditions under which bodily needs are few, and the simple requirements of a contemplative and unemployed mode of existence are easily met and satisfied. Moreover, the religious obligation to give alms to the wandering ascetic is never disowned by the Hindu housekeeper; and the *sannyāsin* is always sure of his daily food in whatever village he may present himself in the course of his wide and varied wanderings.

The numerous descendants and offshoots of Hinduism in later times adopted the ascetic motive and ideal. Buddhism in particular enforced the duty of renunciation, and extended the practice, carrying its doctrine and the enthusiasm for its ideal to Egypt and Western lands, where, according to some authorities, it was taken over into Christian usage and became a recognized feature of the Christian ecclesiastical order. If so, the genealogical descent that traces Western monastic

¹ E.g., *Law of Manu*, vi. 94.

observance to an Eastern origin is of great interest. Too little, however, is known of the details of the history for a secure verdict to be pronounced on the extent of the indebtedness of the West to the East for teaching and example in this respect. Room must certainly be left for a not inconsiderable measure of spontaneity and initiative.

3. Conditions and obligations. — Accordingly, in theory at least, there is in the Hindu conception and practice no middle term or way between an unrestricted use and enjoyment of the things of the world and complete abstinence. Renunciation is of all or of none. Nor is the theory modified to any considerable extent in practice, as in many Christian monasteries of the Middle Ages, and as in a few instances in some Buddhist countries at the present day. Resignation of this or that pleasure or distraction, or severance of the one connexion with retention of others, has presented no attraction to the religious-minded Hindu; while, on the other hand, the ease with which a minimum of bodily wants was satisfied has always, and perhaps increasingly, drawn to the ranks of the ascetics many who were actuated by no higher motive than the craving for an indolent life free from anxiety and care. Of such there are not a few in India, of whom the better-class Hindus themselves are ashamed.

The Indian theory of renunciation, moreover, is closely connected with the doctrine and obligation of the four *āśramas* (q.v.; see also art. ASCETICISM [Hindu], vol. ii. p. 91 f.), the successive stages or periods of life through which, theoretically at least, every Hindu must pass from his early years to death. Here again the theoretical conditions and demands were greatly modified in practice; and in particular no restriction was placed upon the adoption of a life of abstinence and renunciation at any age, even the most youthful. The order of the *āśramas* was essential and invariable, that of the *sannyāsīn* closing the series as the most exalted and refined. It was not necessary, however, to have reached an advanced age before renouncing the world. At any period it was admissible at will to withdraw from worldly pursuits, abbreviating or omitting altogether the preceding stages, and assuming even in early youth vows of unworldliness and poverty. Instances of return to a worldly life appear always to have been rare. On the other hand, recent history affords many examples of men of eminent piety and sincerity, who at the close of an honourable career have renounced the world, and, abandoning house and home, have given over their remaining years to a life of severe and self-imposed restrictions, to meditation and solitary communion with God. To a high-minded and devoted Indian gentleman of this class, Swāmi Śrī Sacchidananda-Sarasvatī, formerly prime minister of the Native State of Bhaunagar, Monier-Williams makes reference in the preface to his *Brāhmanism and Hindūism*⁴ (p. xxi; see also frontispiece); and the late Debendra Nāth Tāgore might be cited as an example of the same gentle and self-denying spirit. Those, however, who adopt the ascetic life from mere idleness and a shrinking from responsibility and work are an undoubted loss and burden and even a source of danger to their country.

4. Effect of European teaching and example. — In this respect as in so many others the Hindu conception has been profoundly modified by the impact of Western and European teaching and example. It is perhaps not true that to any important extent the ancient ideal has been lowered or changed. In theory at least it is still recognized as best that a man should abandon the world, and seek his own salvation and the satisfaction of his spiritual cravings in a life of meditation, severed from his people and the pursuits of the

busy crowd. An increasing number, however, endeavour to find that satisfaction in altruistic service in the world rather than in selfish aloofness. More or less consciously they have been influenced by Christian example and propaganda, by scientific and medical doctrines taught in the schools of the importance and interests of the body, by the emphasis laid upon hygiene and the obligations of social service. The example and initiative also of British officers and civil servants, and of professors in the colleges and schools, have counted for much. For the most part it is the members of the higher classes and castes whose conceptions of duty and of life have been thus transformed. The modes of living and the ideals of good of the middle and lower classes have undergone little change, and the convictions of the great majority of the Indian peoples with regard to the duty and efficacy of entire renunciation of the world remain the same; these, however, have neither time nor inclination to put into practice what is for the most part a dimly realized obligation of their religious faith. It is among the leaders of the people, present and future, the intellectual and leisured classes, that a new ideal has been created, and to many of them renunciation has come to mean renunciation of self and evil, that the good may be pursued not out of but in the world and for its benefit.

The motives that under these changed circumstances urge to a new renunciation and to real altruistic service are not always unmixed. In some instances at least, perhaps in many, rivalry with Christian methods and institutions, distrust of the intentions or disinterestedness of Christian activities, or emulation of British achievements and success in the amelioration of the lot of the common people has aroused a spirit of antagonism which has found expression in opposition. Moreover, it is by no means Christian converts alone or those who have avowedly submitted themselves to Christian influence that have proved thus capable of the highest forms of self-renunciation. It may be that in all instances there has been the inspiration, indirect and unacknowledged, of Christian example. Notably, however, the members of the Brāhma Samāj, of the Ārya Samāj, and of other native sects and Churches have not confined themselves to mere doctrinal propaganda, but frequently with a self-sacrifice and devotion worthy of all praise have turned aside from positions of worldly ease and emolument to serve their fellow-men, and that for the sake of definite religious and communistic aims which were not selfish. In the future, therefore, there can be little doubt that the ancient Hindu ideal of renunciation will give place slowly to one which appears thus to be more practical and in its present and general issues more helpful and beneficent. The earlier conception, however, is far from having lost its hold upon the imagination and affection of the people in general, nor, as far as judgment and comparison are possible, is the number of those who take upon themselves the vows of abandonment of the world less than in former years. But the practical spirit of the age is against them; and that will ultimately prevail, even in India, not without regret at the loss of an ideal which, self-seeking and unutilitarian as it might be, was not seldom productive of saintly character, and at least set the example of disregard of mere worldly good.

RENUNCIATION AT BAPTISM.—See ABRENTATIO.

REPENTANCE.—In its broadest sense repentance describes the act of the soul in breaking away from its past as a preliminary step to the work of ethical reform. In this wide signification it is not peculiar to the Jewish or the Christian religion; on the contrary, it is implied in all the higher religions and in all systems of morality. Man's capacity for repentance is grounded in his nature as a moral being.

'We have a capacity,' says Bishop Butler, 'of reflecting upon actions and characters, and making them an object to our thought: and on doing this, we naturally and unavoidably approve some actions, under the peculiar view of their being virtuous and of good desert; and disapprove others, as vicious and of ill desert.'¹

It is because man has this power of self-judgment that he is also capable of the act of repenting. All moral advance takes the form of a breach with the past. Hence Socrates, in identifying virtue and knowledge, vice and ignorance, taught that only by a preceding conviction of ignorance could a man attain to knowledge. Plato held that in every man there is a potential faculty by which he can distinguish the lesser from the higher good, and renounce the former for the sake of the latter. He compares this change in the attitude of the soul to the turning of the eye from darkness to light. Just as the light of the sun evokes and strengthens the power of bodily vision, so spiritual truth has the power to educate man's faculty of knowledge. This is the meaning of the famous allegory of the cave.² A similar line of thought is also found in Buddhism as well as in pre-Buddhist systems.

1. The idea and the term.—It is only in Judaism and in Christianity that the idea of repentance is developed, and is treated not as a merely preliminary step to the higher life but as a permanent condition of all spiritual achievement. Only within these religions, too, are the presuppositions of repentance in the deepest sense of the term made possible. Belief in a personal God, in the reality of sin, and in the freedom of the will—in the light of such principles repentance becomes a fundamental virtue and is seen to be at once ethical and religious. It has been recently stated that 'the idea is peculiarly Jewish, so much so that its ethical force is lost in the dogma of the atoning Christ.'³ To this it may be replied that, as a matter of historical fact, one of the great motives to repentance has been and is a realization of the righteousness and the love of God revealed in the death of Christ. That death has proved itself to be a means of atonement by the very fact that it works repentance in him who understands its meaning and feels its power; and thus it removes the subjective hindrance to peace and forgiveness.

The noun *tēshūbāh* ('repentance') occurs only in post-Biblical Hebrew, but the verbal form *shūb* is common in the OT. The latter word means literally 'to turn' or 'to return' in a physical sense. Running parallel with this use is the use of the word in a spiritual or ethical sense, 'to return from sin and evil to God or to righteousness.' In this usage the word means not merely to change the direction, but to turn right round and face in the opposite way (cf. the refrain in Am 4^{6a}—'yet have ye not returned unto me, saith Jehovah'; for other examples cf. Hos 6¹, Is 1²⁷ 55⁷, Jer 31²² 36⁷, Ezk 13²²; the LXX translates *nīkham* by *metanoiein*; cf. Jer 18³, which should be rendered 'I will change my mind or my purpose' rather than 'I will repent').

The Syr. Bible has for *metanoie* (Vulg. *penitentiam agite*) in Mt 3² *tūbū*=Heb *shūbū*. For the noun *metanoia* (Mt 311) the Syr. Bible used *tēyābūlā*=*tēshūbāh*. In the NT 'repent' translates *metanoieō*, and 'repentance' translates *metanoia*, but, as will be shown below, these renderings are far from adequate. The RV seeks to differentiate between *metanoieō*, 'to repent,' and *metamelēsbai*, 'to regret,' by rendering the latter as a reflexive—e.g., 'Judas repented himself' (Mt 27³), which should rather be rendered, 'Judas was smitten with remorse.' The RV makes an exception to this rule in 2 Co 7⁸, where *metamelōmai* is translated by 'regret.' Cf. Ro 11²⁸, where *ametamelōtos* is translated 'without repentance.' The Amer. RV translates it by 'not repented of.' The RV would have done well to call attention in a marginal note to the difference in meaning between the word 'repentance' as commonly used and the Greek word *metanoia*. A satisfactory version of the NT must include a new translation of a word that expresses the initial and prevailing idea of Christianity.¹

2. Repentance in the OT.—Two strains of thought run throughout the OT religion—the one priestly and legalistic, the other prophetic and ethical. Modern Judaism inherits the double tendency. The priestly conception of the relations between God and man is embodied in a Levitical sacrificial system which, in germ, existed from the earliest times in Israel. The expiatory element in sacrifice was developed into an elaborate system, but it laboured under one serious defect—the ritualistic and the ethical were not clearly distinguished. Unintentional transgressions and various impurities of a ceremonial character, such as leprosy or the touching of a dead body, needed an expression of repentance in the prescribed sacrifices. The main function subserved by the sacrificial system was to gain for the sufferer the divine favour or to avert from him the divine wrath (cf. Lv 4^{25t} 31³⁵, 2 S 14²⁵). Hence the notion of repentance suffered through the defects of the prevailing notion of sin. Much that later Judaism, as well as Christianity, condemned as sin was not deemed to be sin in early Israel; and *vice versa*, a deeper spiritual view disregards as without moral significance many acts which were deemed to be offences against the holiness of God—i.e. against His character as One infinitely remote from contact with the human and the physical. On the other hand, it must be allowed that the systematizers of the post-Exilic worship believed it to be 'a very important means towards the great end of keeping the people of Israel faithful in heart and life to God.'²

The prophetic preaching marks a great advance in the conception of sin with a corresponding advance in the conception of repentance. For the prophets sacrifices were secondary to moral obedience. They cared little about the details of ritual, and insisted on the paramount claims of justice, truth, and social righteousness (Jer 7²²). In a word, they were the preachers of ethical and social reform, and they proclaimed the necessity of repentance as a necessary prerequisite to a new order of things. Still further, the call to repentance was made in close connexion with the idea of judgment. One of their most passionate convictions was belief in the day of Jahweh, on which an overwhelming retribution should strike a sinful people (Am 5²⁰⁻²⁷ 9⁸⁻¹⁰, Is 21²⁻²¹ 13⁹). The call to repentance was addressed primarily not to the individual but to the nation as a whole. The covenant of Jahweh was with Israel conceived as a personality with a continuous moral life, and therefore responsible alike for its sin and for its amendment. The sins charged against Israel were in the main social—cruelty to the poor, bribery of judges, immorality connected with idolatrous worship. On these the prophet invoked divine judgment, but the judgment can be turned aside by repentance, i.e. by a change of mind leading to a

change of conduct. 'Seek good, and not evil,' cries Amos, 'that ye may live: and so the Lord, the God of hosts, shall be with you, as ye say. Hate the evil, and love the good, and establish judgment in the gate: it may be that the Lord, the God of hosts, will be gracious unto the remnant of Joseph' (5¹⁴). Hosea through a bitter domestic experience had learned the need of repentance on the part of Israel. The root sin of Israel was disloyalty to God. She had gone after other gods and had broken the marriage covenant with Jahweh. But, just as the prophet would not let go the woman that he loved, but cared for her and through sorrow redeemed her, so he felt that Jahweh, who had chosen Israel as His bride, would not give her up, but would win her back by the greatness of His grief and His compassion (2¹⁹). Repentance will lead to restoration, and repentance comes through a deeper knowledge of God.

'It is because Hosea's doctrine of God is so rich, so fair and so tender, that his doctrine of repentance is so full and gracious. Here we see the difference between him and Amos. Amos had also used the phrase with frequency; again and again he had appealed to the people to seek God and to return to God. But from Amos it went forth only as a pursuing voice, a voice crying in the wilderness. Hosea lets loose behind it a heart, plies the people with gracious thoughts of God, and brings about them, not the voices only, but the atmosphere, of love. "I will be as the dew unto Israel," promises the Most High; but He is before His promise. The chapters of Hosea are drenched with the dew of God's mercy, of which no drop falls on those of Amos, but there God is rather the roar as of a lion, the flash as of lightning.'¹

Jeremiah and Ezekiel repeat to their contemporaries the warnings of judgment and the call to repentance. Idolatry, unbelief, and formalism in religion are the evils that they most frequently denounce. They threaten the people with exile, but the impending doom may be turned aside if they repent: 'Amend your ways and your doings, and I will cause you to dwell in this place' (Jer 7³). Moved by a profound intuition Jeremiah breaks through the bonds of the moral solidarity of the nation, and glimpses the truth of individualism (31²⁰). But the realization of this truth belongs to the future age. Ezekiel takes up the message of personal responsibility from his earlier contemporary, yet his message is addressed to the nation: 'Turn ye, turn ye from your evil ways; for why will ye die, O house of Israel?' (33¹¹). He makes an advance upon earlier teachings by announcing that God Himself will take the initiative and give repentance to Israel (36²⁵⁻²⁷); but this is an idea alien to the genius of Judaism, which emphasizes the thought that in repentance man takes the initiative and God grants forgiveness because of man's changed attitude towards Him.

In Psalms and Job the feeling about sin is deepened. It is something in itself evil, breaking the bonds that bind the soul to God. Moreover, sin is now seen to be a universal experience of man. In such Psalms as the 32nd and 51st this deepened consciousness finds expression, even though we should accept the view of some critics that the primary reference is to the sin and repentance of the Church-nation. Still it is impossible to avoid the conviction that the Psalmists were thinking of themselves as sharers by personal experience in the spiritual acts described.

3. Later Jewish teaching.—The idea and practice of repentance receive a rich development in later Jewish thought. Repentance now becomes the fundamental feature of Jewish piety, and the penitential prayer is frequent in the literature of the time. The high value set upon this virtue is illustrated in the Prayer of Manasses. Even for the most wicked of Jewish kings the gateway to life is opened by penitence. Other examples of penitential prayers are found in Dn 9, To 3¹⁻⁶,

3 Mac 2²⁻²⁰ 6²⁻¹⁰. In the book of Wisdom, which was written under the influence of Greek philosophy, we have the thought brought out that the forbearance of God is meant to give the sinner opportunity to repent. 'Thou overlookest the sins of men to the end that they may repent' (11²³). We get a prelude to the teaching of Paul (Ro 2⁴) in another passage: 'Thou hast made thy children to be of good hope that thou givest repentance for sins' (12¹⁹). Throughout later Judaism the idea of suffering played an important rôle in developing penitential feeling. The old idea that suffering was a sign of divine displeasure still held its ground, and, the more keenly men felt suffering, the deeper was their consciousness of sin and their desire for reconciliation. Distress and pain were proofs that sin had been committed, whether it was possible or not to say what the sin actually was.

In the later rabbis the word *tēshūbāh* ('repentance') has become a technical theological term. Sin, it is taught, is removed by good works, repentance, and confession. A consistent doctrine of repentance from a purely ethical standpoint is not to be looked for in the rabbis. A deep spiritual conception is found side by side with external legalistic views. As an example of the latter may be cited the Talmudic teaching that three books are opened on New Year's Day; the righteous are inscribed for life, the wicked for death, while the 'intermediate' remain in suspense till the Day of Atonement. By good works and repentance they can make the swaying balance incline in their favour. Of similar character is the interpretation of the words, 'Seek ye the Lord while he may be found, call ye upon him while he is near' (Is 55⁶), which are taken to mean 'Seek him especially between the New Year and the Day of Atonement when he dwells among you.' On the other hand, it is to the rabbis that we owe some of the most beautiful sayings about repentance to be found outside the Bible. C. G. Montefiore has collected much material of this kind in his article 'Rabbinic Conceptions of Repentance.'¹ The following are quoted:

"God's hand is stretched out under the wings of the heavenly chariot to snatch the penitent from the grasp of justice." "Open for me," says God, "a gateway of repentance as big as a needle's eye, and I will open for you gates wide enough for horses and chariots." "If your sins are as high as heaven, even unto the seventh heaven and even to the throne of glory, and you repent, I will receive you."²

The main differences between the rabbinical and the modern teaching about repentance are, according to this writer: (1) the rabbinical doctrine is on the whole particularist, while the modern teaching is pronouncedly universalist; (2) the rabbis are more stern towards the sinner, especially the religious sinner, the heretic, the apostate, the unbeliever; (3) whereas, according to the modern teaching, punishment after death can be only remedial and temporary, the rabbis held that for some sinners there was no share whatever in the blessedness of the world to come.

4. Repentance in Christianity.—Jesus, though opposed to the prevailing tendencies of the Judaism of His time, took over and developed the deeper motives of the OT prophetic teaching. Among these was the demand for righteousness which can be satisfied only by repentance. The Baptist had already echoed the cry of an Isaiah or a Jeremiah, 'Repent ye; for the kingdom of heaven is at hand' (Mt 3²). He was a preacher of the judgment to come and of repentance unto the remission of sins in view of this judgment. Thus the eschatological movement, which was destined to affect powerfully the history of Christianity, was begun by the Baptist's summons to amendment of life. Because

² P. 230, quoting *Pesahim*, 119 a; *Shir R.* on v. 2; *Pesqta* R., 185a.

of the approaching end of the age, which was to be signaled by the appearance of the Messiah, John called on men to renounce their worldly every-day life in order to fit themselves for entrance into the Kingdom. They were to bring forth fruits worthy of repentance. Jesus, on His first public appearance in Galilee after John's imprisonment, takes up the same message: 'The time is fulfilled, and the kingdom of God is at hand: repent ye, and believe in the gospel' (Mk 1¹⁵). The whole ministry of Jesus may be described as a ministry of repentance. With grave irony He sums up the purport of His mission: 'I am not come to call the righteous, but sinners to repentance' (Lk 5³²; cf. Mk 2¹⁷, Mt 9¹³). What Jonah was to the Ninevites that Jesus was to His generation—a preacher of repentance (Mt 12⁴¹, Lk 11³²).

More specifically it is clear that His preaching of repentance stands in closest connexion with His preaching of the Kingdom and with His healing ministry. The ethical requirements for admission to the Kingdom as expounded in the Sermon on the Mount imply the profound change in mind and life which we try to express by the term 'repentance.' The mission of the Twelve had for one of its main purposes that of proclaiming the duty of repentance (Mk 6¹²). The parables of the lost sheep, the lost coin, and the lost son are motivated by the thought that there is 'joy in heaven over one sinner that repenteth' (Lk 15^{7, 10}). The events of contemporary life, the calamities and tragedies that befell the world, bore a spiritual message and a solemn warning: 'Except ye repent, ye shall all likewise perish' (Lk 13⁵; cf. 13³).

Now, with this emphasis on the repentant attitude of mind, Jesus is in line with what we have already seen to be the prophetic doctrine. Like that of the prophets, His moral teaching is conditioned as a whole by the coming Kingdom; like them He sees that repentance is necessary as a preparation for the Judgment that in turn ushers in the Kingdom. Hence many NT students argue that the ethics of Jesus is conditional, an *Interimethik*, and was proclaimed in indissoluble connexion with the eschatological expectation of a state of perfect blessedness to be supernaturally brought about. But, while the call to repentance was clothed with a terrible impressiveness and intensity, from the fact that the Kingdom was believed to be at the door, that call is permanently valid for man's life throughout all time. Instead of the idea of the Kingdom to be achieved by a cosmic catastrophe, Christians have been led to cherish the hope of immortal blessedness. With a view to the realization of that hope, repentance is as much as ever a demand of the spiritual life. Not only our Lord's preaching but also His healing ministry—itsself the evidence that the Kingdom was in a sense already present—was designed to awaken in the hearts of men desires for a better life. It was the tragedy of His life that this design was frustrated by the dullness and indifference of those who witnessed His gracious activity in lifting the burdens of disease from body and soul: 'Then began he to upbraid the cities wherein most of his mighty works were done, because they repented not' (Mt 11²⁰). But behind His preaching and His healing activity was His personality. Wherever He went, He awakened a consciousness of sin and a longing after a better life. It is to the third evangelist that we are especially indebted for the record of the effect which Christ's personal presence had upon the individuals by way of arousing in them a feeling of guilt and a desire for amendment. It is he who tells us of the saying of Simon Peter, 'Depart from me; for I am a sinful man, O Lord' (Lk 5⁸), of the 'woman that was a sinner,' of Zacchæus, and of the dying thief.

If the substance of Christ's message and mission may be described therefore as a gospel of repentance, it is obvious that the word 'repentance' is not used here in its etymological and popular sense. The truth is that the term needs to be transfigured before it can render the meaning of Christ's idea which the evangelists express by the word *μετάνοια*. Owing to its Latin origin and its ecclesiastical associations through the Old Latin and Vulgate versions, it is totally inadequate to carry the wealth of meaning implied in the Greek word. 'Repentance' has an emotional tone; *μετάνοια* is ethical and intellectual; the former is negative—a turning away from sin; the latter is positive—an enthusiasm for righteousness. But above all, the Latin word is retrospective—it looks back in revulsion of feeling to past sinful acts; whereas the Greek word is prospective—it speaks of a moral renewal with a view to the transformation of the entire man. As Matthew Arnold says,

'We translate it (*metanoia*) "repentance," the mourning and lamenting for our sins; and we translate it wrong. Of *metanoia*, as Jesus used the word, the lamenting one's sins was a small part; the main part was something far more active and fruitful, the setting up an immense new inward movement for obtaining the rule of life. And *metanoia* accordingly is a change of the inner man.'¹

Jesus regards the piety of this age as fundamentally perverted and moving on false lines. A far-reaching reconstruction of the spiritual life is imperative. His word, 'Repent ye,' is a summons to build on new foundations, to develop a new consciousness out of which would come a new nature. In truth what Christ demands is what Paul describes in mystical language as a crucifixion and a coming to life again (Gal 2²⁰), as the putting off of the old man as one would put off a soiled garment, and the putting on of the new man (Col 3⁹). Nothing less than this will satisfy the NT concept of repentance.²

The primitive apostolic preaching once more proclaims the call to repentance sent forth by the Baptist and by Christ. 'Repent, therefore, and be converted, that your sins may be blotted out' (Ac 3¹⁹). This announcement received new emphasis and urgency from the fact that the Messiah had been crucified (Ac 2²³); He would come again, if only Israel would repent of this the greatest of all crimes in history. In the Pauline Epistles the idea of repentance is merged in that of faith as a renouncement of one's merit and as surrender to Christ, or to God in Christ, which ends in mystical union with Him. Yet repentance occupied a conspicuous place in Paul's missionary preaching, as we may infer from his speech at Miletus in which he reminds his hearers that he testified 'both to Jews and to Greeks repentance toward God, and faith toward our Lord Jesus Christ' (Ac 20²¹). In the Fourth Gospel there is no mention of repentance, but the thought is expressed under the profound metaphor of a new or a second birth. 'Except a man be born again [or from above], he cannot see the kingdom of God' (Jn 3³). But generally throughout the Gospel the emphasis is laid on faith (3^{15, 18} 6⁴⁷ 14¹). Faith and repentance are two sides of one and the same spiritual process. If faith be the act of the soul in turning to God in Christ, repentance is the same act viewed as the soul turning away from sin. But the process is one and indissoluble, and may be described in terms of the one act or the other.

'Without faith,' says Coleridge, 'there is no power of repentance: without a commencing repentance no power to faith.'³

5. Theological signification.—Latin theology was incapable of rising to the full compass of the NT idea. It made the emotional element

¹ *Literature and Dogma*, ch. vii. sect. 3.

² See T. Walden, *The Great Meaning of the Word Metanoia*.

³ *Aids to Reflection*, aphorism cxvii.

in repentance primary, whereas in reality it is secondary. Tertullian marks the beginning of the process. He defines repentance as an 'emotion of disgust' at some previously cherished offence.¹ In the course of time it became involved with questions of Church discipline and with the ecclesiastical doctrine of penance. This doctrine is that repentance is only part of the sacrament of penance, the two other elements being confession and satisfaction.² The Reformers went back to the NT idea. Luther's doctrine was that repentance consisted in sorrow for sin and faith in Christ. He maintained that the whole life should be a penitential act. The Reformation started as a protest against false or inadequate conceptions of repentance.

Luther, it will be remembered, first saw the practical value of philological study, when he was puzzling over the expression *penitentiam agite*, "do penance," which the Vulgate uses for the Greek word that in the English translation is rendered "repent." Was it possible, he said to himself, that Christ and the Apostles could really bid men do penance? Did the New Testament really stand on the side of his opponents, and of all the gross corruptions which the doctrine of penance had introduced? Melancthon solved this difficulty by showing to Luther that the Greek word *μετανοεῖν*, which Jerome had translated "do penance," really and etymologically meant "change your mind." From that moment the Reformation entered into a conscious alliance with the new learning, to which it was already akin in its independent love of truth, its rebellion against human authority, and its interest in the Bible as a real living book.³

The Evangelical revival of the 18th cent. emphasized the need of repentance, sometimes with undue stress on the emotional side of the experience, and with consequent injury to the interests of the spiritual life. On the other hand, philosophical moralists like Spinoza, Kant, and Fichte maintain that all emotion of sorrow for the past is wasted energy. And Oliver Lodge has recently remarked:

'The higher man of to-day is not worrying about his sins at all, still less about their punishment.'⁴ Instead of brooding over past sins, he recommends 'the safer and more efficacious and altogether more profitable way, of putting in so many hours' work per day, and of excluding weeds from the garden by energetic cultivation of healthy plants.'⁵

This view is also advocated by the 'healthy-minded' schools of thought as represented by such cults as Theosophy, Christian Science, and New or Higher Thought. The words of Virgil to Dante are held to express the true attitude of the sinner to his sins. 'One glance at them and then pass on.'⁶ Begin to think what is good and do what is good, and thereby change yourselves. Do not waste time in futile regrets, but employ it in the performance of right actions.

There is an element of truth in this contention, and a true conception of repentance will do justice to this modern feeling as well as to the testimony of the normal Christian consciousness. Sin, as interpreted in the teaching of Christ, is not only a blow at the moral order of the universe; it is also an offence against love. It is a wrong done to the Father of our spirits, who is ever pouring forth upon us the steady stream of His unbounded goodness and mercy. When we awake to the shame of our ingratitude, of our failure to live in harmony with His will, a feeling of sorrow must seize the soul analogous to the keen regret with which we contemplate the wrong that we may have done a kind and loyal friend. But this natural distress of mind may darken down into excessive remorse, which is barren pain robbed of all moral value, and which plunges the sufferer into the darkness of phantasmal fears and morbid imaginings. The sorrow of repentance reacts on the soul, strengthening it to meet the new task of moral reformation; the sorrow of despair paralyzes the moral energies, and hurries its victim, as in the case of a Lady Macbeth or a Richard III., into

irreparable disaster. Paul, in his fine analysis in 2 Co 7⁸⁻¹⁰, distinguishes carefully between a sorrow of the world that ends in death and a godly sorrow that issues in a repentance never to be regretted.

A few words may be added on the relation of repentance to forgiveness. Sin is opposition to the divine will. Thus opposition inhibits the action of divine grace in the soul of the sinner and prevents that communion with God which is the source of spiritual life. In repenting the sinner tears down the barriers which his sin erects between him and the inflow of divine life and power. Thus the divine forgiveness, which is never a mere remission of penalty but always and essentially the restoration to the normal and filial relation of man to God, follows naturally and spontaneously on repentance. And, if it be asked what is the proof of forgiveness in any given case, the answer is: the fact of repentance itself is the proof. It is the 'goodness of God that leads us to repentance' (Ro 11⁴), but this very goodness implies that already God has forgiven us. Without repentance forgiveness would be immoral, and without the possibility of forgiveness the burden of sin would become intolerable, sinking the soul into a hell of despair and madness. It is not that repentance wins or merits forgiveness; such a thought is repugnant to a truly spiritual view. It is that repentance affords the necessary and natural condition on which the will to pardon can energize.

6. The ethical value of repentance.—From the point of view of ethics, it has been objected: Of what avail is repentance, seeing that the law of continuity holds good in all worlds, the spiritual as well as the physical? How can a man be freed from the burden of his past sins, since this burden is itself the creation of his own free spiritual activity? Must not a man reap as he has sown? Is not the consequence of an act really a part of the act and indissolubly bound up with it? The answer is that the law of continuity is not the only law that obtains in the spiritual realm. There is also a law of recovery or redemption. If the law of moral sequence alone held good, the very purpose of its existence would be frustrated, for it would paralyze all efforts to achieve a life of virtue and righteousness. Moreover, the very fact that man is capable of self-condemnation is proof that evil-doing is not an adequate expression of his personality. How could he condemn himself, if there was not in him the consciousness of an ideal to which he owes allegiance? In the very constitution of the soul it would seem that room is made for fresh starts, new beginnings. In condemning himself the penitent has already risen above the self that he condemns. The publican who said, 'God be merciful to me a sinner,' was already on his way to sainthood. For in repentance what does the penitent man really do? By an inward act he dissociates himself from his sin; he takes the side of God and of all good men in judging it unworthy of his nature and at war with the real order of life. He finds in his sin no expression of his real self—only a false show which he repudiates in language that sounds paradoxical but that in reality shadows forth a profound truth: 'It is no more I that do it, but sin that dwelleth in me.'

Our chief concern with the past, that which truly remains and forms part of us, is not what we have done, or the adventures that we have met with, but the moral reactions bygone events are producing within us at this very moment, the inward being they have helped to form; and these reactions, that give birth to our sovereign, intimate being, are wholly governed by the manner in which we regard past events, and vary as the moral substance varies that they encounter within us.¹

Thus repentance, or revulsion against the past and a longing desire for a higher ethical experience,

⁴ *IJ* ii. [1904] 466. ⁵ *Id.* iii. [1904] 7.

⁶ *Inferno*, iii. 51.

may be originated by impressions received from contact with more highly developed personalities or through a bitter experience of pain and disillusionment. A new conception of duty, a revelation of the real meaning of evil as reflected in the pain of those who have suffered through our actions, the impress of a noble spirit that rebukes our weakness and that acts as a spur to all that is not dead within us, above all, the vision of the love of God incarnate in the life and work of Jesus Christ—any or all of these may enter as new factors into the stream of our experience and may set up there new causal connexions involving far-reaching consequences. The law of continuity still holds good, for these factors, once they have entered into experience, bring about their results in accordance with the laws that govern the psychic world.

There is in repentance a certain quality of infinitude. With the penitent mood comes new insight, fresh illumination leading to an almost painful anxiety to make atonement to the person or persons wronged, to society, to the spiritual order which has been violated. The repentant man stands ready for any task however great, for any service however distasteful. Repentance is thus transformed into a moral dynamic. It reinforces the will with boundless energy; its eye is ever uplifted to new visions and greater ethical achievement. Hence the marks of genuine, as distinguished from spurious, repentance are the presence of ever new and deeper insight into duty and of a passion for atonement, which is itself part of the redemptive process. Thus the virtue of repentance is at once a gift and a task, an inspiration and a deliberate movement of the will, a present possession and a future attainment.

SAMUEL MCCOMB.

REPENTANCE (Muhammadan).—There are two words used to denote repentance in the theological vocabulary of Islām—*nadam* and *taubah*. The former denotes merely remorse, regret, or vexation at having done something or at having left something undone. It is used especially in the poets. The 'repentance' of the satirical poet Farazdaq (A.D. 659-729), after he had divorced his wife Nawār, is proverbial.¹ The word is used also in the Qur'ān. After Cain had killed his brother, and a raven had showed him how to hide his crime, he became 'of those who repent' (v. 34; so frequently), i.e. he felt remorse (*nadam*), but it would not be said of him that he showed repentance (*taubah*) in the religious sense. The latter word, which etymologically means 'returning'—it is, in fact, the Heb. *tššūbāh*, Aram. *tethābah*—in point of law and religion is explained as synonymous with *nadam*.

It is defined as 'remorse for an act of disobedience (in respect of its being an act of disobedience), accompanied by a determination not to return to it, even if one has the power.'² It must be for 'an act of disobedience,' because

regret felt for doing something that is right or, at least, not wrong is not repentance. The phrase 'in respect of its being an act of disobedience' is added because regret for having drunk wine on account of its causing headache or loss of money or self-respect is not repentance. Mention of the 'determination not to return to it' is by some regarded as superfluous, seeing that that is always an element in remorse—whence they explain the traditional saying of Muhammad, 'Remorse (*nadam*) is repentance (*taubah*).' The majority of the most ancient authorities do not admit the condition that ability to commit the sin again must be there. They think, e.g., that the remorse of the sinner at the point of death may be repentance. In this they are in conflict with the Qur'ān.

In accordance with its etymology, *taubah* means in the first instance 'turning' to God. Hence the complete phrase is 'repentance unto God.' Moses regretted his request to be allowed to look upon God and said, 'I repent unto Thee' (Qur'ān, vii. 141, and frequently). In the case of those who have been brought up in idolatry or polytheism this turning to God is synonymous with 'conversion' to Islām. The convert is represented as saying, 'I repent unto Thee and am of the Muslims' (xvi. 14; cf. xi. 3, 114, and elsewhere). In this connexion, holding the doctrine of the Trinity—or, as the Qur'ān puts it, saying that 'God is the third of three'—is a form of polytheism (v. 77 f.). But, as perfection is unattainable by a mortal, penitence is a mark of the pious Muslim, not only at the beginning of his religious career, but all his life long (ix. 113, lxvi. 5). Repentance is necessary and will be accepted from all Muslims who have sinned in such ways as the following: hypocrisy, i.e. strictly the hypocrisy of the citizens of Medina who pretended to acquiesce in Muhammad's authority there, whilst secretly working to undermine it (iv. 145); opposing Islām by force of arms, provided that repentance is made of free will, and not as a result of defeat in battle (v. 38); scepticism (ix. 127); idolatry (ix. 3, ii. 51); perverting or persecuting Muslims (lxxxv. 10); slandering honest women (xxiv. 5); taking interest (ii. 270); and other offences (vii. 153, iv. 20). The one sin after which there is no repentance (cf. He 6⁸) is that of apostasy (iii. 83), but this verse the commentators refer to the Jews,¹ and in any case the preceding verse appears to leave a loophole of escape even here. In the latest chapter of the Qur'ān, composed at a time when Muhammad could afford to be lenient, a door is opened even to the apostate (ix. 75). Apostasy is, of course, allowed under persecution. But those who die in unbelief, i.e. all non-Muslims, are lost.

'The world full of gold shall in no wise be accepted of any of them, even though he should give it for his ransom' (iii. 84).

Repentance must be sincere for sins committed through ignorance (vi. 54, xvi. 120). It should be preceded by intercession. 'Ask forgiveness, thereafter repent' (xi. 3, 54, 64, 92). The converse order, which one would expect, is also found (v. 78). True repentance is followed by faith and good works.

'Those who repent and believe and do good works (xix. 61, xx. 84, xxv. 70, xxviii. 67) repent unto God with (true) repentance' (xxv. 71).

Repentance has its counterpart in the forgiving nature of God. Man's repentance is always met by repentance on the part of God.

'Whoever repents after wrongdoing and does right, God repents over him. Truly God is forgiving and compassionate' (v. 43, and so regularly).

Man repents unto God; God repents over man. The latter phrase is equivalent to 'is sorry for

² Muhammad Tahānawī, *Kitāb Kashshāf Iṣṭilāḥāt Funūn*, Calcutta, 1862, s.v.

him' (lviii. 14, lxxiii. 20). Al-Tawwāb ('the much-repenting') is one of the ninety-nine 'beautiful names' of God (ii. 35, and frequently; cf. J1 2¹⁸, etc.), though it is also used of men (ii. 222). It is also explained, however, as merely denoting 'much inclined to forgive,' or, transitively, as 'turning man to repentance'; but it is no doubt used in the same sense in both references. If God did not feel sorry for man in this way, He would always punish him. Hence the opposite of to repent (on God's part) is to punish.

'It is no business of thine whether God repent over or punish them' (ii. 123, and so elsewhere).

Fortunately God wishes to repent over men (iv. 32), but His repentance is voluntary. He repents over whom He will (ix. 15), so that it is folly in man to count upon His repenting (ix. 103).

The chief advantage following upon sincere and timely repentance is forgiveness—not as a matter of course, but as a result of the divine repentance or sorrow (ii. 51, etc.). The angels intercede with God on behalf of those who repent (xl. 7), and the Muslims are bound to treat them as brothers (ix. 11). The whole teaching of the Qur'an on this matter is well summed up in the following verses:

'Repentance is incumbent upon God only towards those who do evil in ignorance and then repent without delay. Over such God repents, and God is knowing and wise. And repentance (on God's part) is not due to those who do evil until, when death comes to one of them, he says "Now I repent," nor to those who die in unbelief. For such we have prepared a painful punishment' (v. 21 f.).

It is worth noting that it is never said in the Qur'an of any one that he actually did 'repent unto God.'

The orthodox Muslim tradition takes little or no account of repentance. The more liberal Mu'tazilites and the Sūfis, or mystics, have more to say about it. The Mu'tazilites distinguish three elements in repentance: (1) making restitution, (2) not returning to the offence, and (3) continuance of the feeling of remorse. The orthodox (Sunnis) do not regard these as essential. They say that repentance consists of three things: (1) leaving off disobedience in the present, (2) intending to leave it off in the future, and (3) regret at having done it in the past. They hold that a Muslim may go on repenting and sinning, that (and in this the Sūfis agree with them) he may repent of one sin and go on doing others, and that his repentance of the one will count. The Mu'tazilites, on the other hand, hold that the penitent must keep himself aloof from *all* deadly sins. The Muslim who does not do so is neither a believer nor an unbeliever, but simply a reprobate, and, if he does not change, he will suffer eternal punishment.¹

With the mystics repentance occupies an important place. It is the first 'station' on the 'mystic path.' They recognize three degrees of repentance. The first is called simply repentance (*tawbah*). It is an attribute of all Muslims (Qur'an, lxvi. 8). It consists in turning from sins actually committed. Its motive is fear of divine punishment. The second degree of repentance is called *inābah* ('returning'). It is an attribute of the saints and 'those brought near' to God (l. 32). Its motive is the desire for the reward. The third and highest form of repentance is *awbah* (which also means 'returning'). It is an attribute of the apostles and 'sent ones' (xxxviii. 44). Its motive is neither fear of punishment nor desire for the reward, but the love of obedience. In it, for the mystic, everything ceases to exist except God. Otherwise repentance is said to be that of the many, that of the few, and that of the very few

(*amm*, *khāss*, and *khāss khāss*). The mystics, however, are very loose in their use of terms.

Inābah is elsewhere defined to be 'turning from the all to Him whose is the all,' or 'turning from negligence of God to its opposite and from estrangement to friendship'.²

In regard to its quality, repentance is either (1) sound, when one sins, repents sincerely, and yet falls again into sin; (2) clear or sincere (*nasūh*), when the heart becomes estranged from sin and finds it hateful, so as to be no further attracted by it (Qur'an, lxvi. 8); and (3) corrupt, when one repents with the tongue and all the while the love of sin is in the mind.

Muhammad's cousin Ibn 'Abbās defined 'sincere' repentance as 'remorse in the heart, asking forgiveness with the tongue, leaving off with the body, and resolve not to sin again.'²

Repentance is a favourite subject of homilies and theme of religious poems, such as those of Ghazālī, Bahā al-Dīn al-'Amīlī, Zamakhsharī, and others. Stories in which repentance is inculcated are frequently told in connexion with Jesus.³ The idea of repentance bringing its reward in the present life does not seem to have occurred to the pious Muslim.

RESISTANCE AND NON-RESISTANCE.

—I. The teaching of the NT.—The term 'non-resistance' is applied to the refusal to use force sometimes only in war, sometimes under any circumstances. As we shall see, the two positions, though often confused, are by no means identical. The origin both of the term and of the idea is to be found in Christ's command not to resist evil, and the main object of this article will be to examine the teaching of the NT on the subject, together with the ethical principles involved.⁴

The chief arguments in favour of the view that it is wrong to appeal to force under any circumstances are derived (a) from the recorded teaching of Christ, (b) from the general principle of the supremacy of love involved in Christianity. Though in many cases, particularly in recent times, it is argued that the position does not depend so much on the interpretation of isolated texts as on the general tenor of Christ's teaching, there is no doubt that His actual words have in fact been the starting point. In any case we need the reminder, which is useful in many connexions, that it is impossible to arrive at the true meaning of any passage in the Bible so long as it is taken in isolation. The Sermon on the Mount itself is not the whole of Christianity, and it can be rightly understood only if interpreted in the light of the practice and teaching of Christ and His immediate followers, taken as a whole. A primary fault of Tolstoi and many of his followers is to confine themselves to a handful of arbitrarily selected sayings. Such a limitation involves not merely a lack of proportion, but also a failure to understand rightly even the passages to which attention is directed.

The central passage is:

'Resist not him that is evil [or 'evil']: but whosoever smiteth thee on thy right cheek, turn to him the other also. And if any man would go to law with thee, and take away thy coat, let him have thy cloke also. And whosoever shall compel thee to go one mile, go with him twain. Give to him that asketh thee, and from him that would borrow of thee turn not

² *Id.* p. 74.

³ *Id.* al-Farīd, Cairo, A.H. 1305 (A.D. 1887), pt. i. p. 299.

⁴ An interesting example of non-resistance on quite different grounds is to be found in the refusal of the Jews to fight on the Sabbath (1 Mac 2:22-24, 2 Mac 6:1). The logic of facts compelled the abrogation of the scruple (1 Mac 2:41-43).

¹ Shahrastānī, *Kitāb al-Milāl wa-n-Nihāl*, 2 vols., ed. W. Jureton, London, 1846, i. 55; Germ. tr. T. Haarbrücker, Halle, 1850-51, i. 82.

thou away. Ye have heard that it was said, Thou shalt love thy neighbour, and hate thine enemy: but I say unto you, Love your enemies, and pray for them that persecute you,' etc. (Mt 5^{43ff.}; cf. Lk 6²⁹ and the Beatitudes).

With this may be compared the recurring stress on forgiveness, in the Lord's Prayer and elsewhere, even 'unto seventy times seven.' Similar teaching, though in a milder form, meets us in the Epistles—e.g., Ro 12^{14ff.} ('Render to no man evil for evil . . . Avenge not yourselves,' etc.), Eph 4^{26, 32}, Col 3¹³, 1 Th 5¹⁵, 1 P 2^{20ff.}. These passages, taken in combination with Christ's own example of meekness and non-resistance, and the general insistence on the principles of love and brotherhood, do constitute a *prima facie* case against the appeal to force, and pre-eminently against war. We should note, however, that among the passages of this type that from the Sermon on the Mount stands alone as the most extreme and uncompromising.

We ask what indications are afforded by the rest of the NT as to a different and complementary type of teaching. Too much stress need not be laid on Christ's employment of the scourge to cleanse the Temple. It is recorded in St. John alone (Jn 2¹⁵), and the force was apparently used only against the animals. But the whole incident shows that, when Christ found Himself confronted with an abuse, He was prepared to take active measures to remedy it. More important is His attitude and that of the NT in general towards soldiers (Mt 8²³, Ac 10, etc.). As is well known, they nearly always appear in a favourable light; there is no hint that when converted they are expected to abandon their profession, or that that profession is regarded as in itself wrong and un-Christian. Once more, the general attitude towards life adopted in the parables is significant as interpreting the hard sayings of the Sermon on the Mount. There is in fact no parable which turns on the virtue of non-resistance; the ordinary discipline and penalties of life are assumed throughout. The slothful servant or dishonest steward is dismissed; even forgiveness is not unlimited to the slave who cannot forgive others.

Finally, it is clear from the NT that force or coercion of some kind forms an important element in God's dealings with men. Without adopting the belief in a hopeless and never-ending 'hell,' penalties and discipline after death are undoubtedly contemplated for the sinner. We may believe that these will be remedial; if so, they become part of the armoury of love and forgiveness themselves. They further follow from the very gift of independence and free will. God respects man's personality and does not compel him to do right. This implies that, when he obstinately refuses to yield to the promptings of love and higher motives, force must step in, at least for the time, in order to prevent him from using his independence indefinitely to the injury of his fellow-man. And, if man is made in the image of God and is called to imitate his Father's perfection (Mt 5⁴⁸), what is right and consistent with love in God must also, with due qualifications, be right for man. If God under any circumstances can use force and compulsion, so may man; when he may do it, and whether he does not appeal to it too readily and lightly, are questions which do not affect the main principle.

It is therefore clear on the evidence of the NT itself, without appeal to any difficulties of interpretation or application, that the more extreme sayings about forgiveness and non-resistance cannot be understood quite literally as forbidding recourse to any form of force or penalty under any circumstances. We are free to ask what these sayings mean in the light of the general teaching of the NT, and are justified in applying to them

those canons of interpretation which are recognized as valid in the case of other 'hard sayings.' Orientals are wont to speak in proverbs which isolate one side of a truth. Christ constantly used the method of startling sayings worded in such a way as to force men to think. His teaching had not the precision of legal formularies; it was never His purpose to lay down a new code of fixed law or external rules. We recall sayings such as 'If any man cometh unto me, and hateth not his own father, and mother, and wife . . . he cannot be my disciple'; 'When thou makest a dinner or a supper, call not thy friends, nor thy brethren, nor thy kinsmen'; 'Call no man your father upon the earth.' None of these sayings can be, nor were they meant to be, applied literally; and the same principle holds good of the non-resistance sayings. We may note that in the quotation given above from Mt 5 the apparent absolute prohibition of force occurs in the same context as equally absolute commands to unlimited giving of goods and service which have never been consistently applied *au pied de la lettre*, even by those who have attempted to follow out the one saying about non-resistance quite literally.

These considerations hold good even of the sphere of private relationships, which our Lord evidently had primarily in mind.¹ Much more are they true of those international relationships which He did not and could not have directly before Him. (a) Without adopting the extreme eschatological view, according to which Christ's whole teaching and career were dominated by the belief in an immediate end of the world's history, it is clear that He did not deliberately contemplate or provide for a long period of historical development, nor did He legislate with a view to the relationships of independent Christian or semi-Christian communities. (b) The historical conditions of the day excluded international problems and the claims of patriotism in our modern sense. The Jews had no independent existence as a nation, and the last thing that Christ or His followers desired was rebellion in order to regain it. The Gentile was a member of the Roman Empire, and war between its constituent elements did not come into purview. It is idle to seek for a direct answer to the modern difficulties connected with war from a period in which the conditions were so completely different.

2. Ethical application.—We may hold, then, that, in spite of the *prima facie* impression made by single texts of the NT, the question of the legitimacy of the use of force, whether in war or in other forms, is really an open one, and must be decided on the general principles of Christian ethics. It will be useful to distinguish three stages:

(1) The degree to which non-resistance may rightly be carried when one's own personal interests and safety alone are directly involved must be a matter for the individual conscience to decide according to the circumstances of each case. The moral effect of a refusal to resent a blow or to resist injustice is often very great, both in dealing with those who may be treated as Christians and therefore as immediately open to the appeal of higher motives and also in dealing with the outcast or criminal, on whom the very strangeness and unexpectedness of the attitude adopted may have a startling effect. There are, however, two caveats to be borne in mind: (a) it must be clear that the meekness is really due to the higher motive of love and not to cowardice or cynical

¹ That He was not, as is sometimes maintained, thinking only of the relation of Christian to Christian is shown by the command to go two miles with the representative of the heathen government.

indifference; in other words, it must be in keeping with the general character; (b) it must be remembered that ultimately nothing that we do has a purely private bearing, since every action has its indirect effect upon society as a whole. If an act of non-resistance, instead of converting, merely encourages the wrong-doer, obvious harm is done. To yield to blackmail in any form or, it may be, to refuse to prosecute a criminal will involve a mischief to society at large which will outweigh the good done.

(2) A further set of considerations arises when the interests of others are directly involved. It may be right in this connexion that a man should require some degree of sacrifice from his wife and family, but he is not justified in carrying it to the point where their whole welfare or even their lives are involved. Still less can he impose such sacrifice upon others on whom his claim is more remote. What would have been the duty of the Samaritan in the parable if he had come upon the scene at the moment when the robbers were about to attack their victim? It is hard to believe that Christ intended the principle of non-resistance to be applied in such a case as this. He certainly cannot have intended that a man should not use force to save his wife or family, or women and children in general, from gross outrage. And, with regard to questions of property and rights, while a man may do what he will with his own, he cannot practise an unlimited generosity when he acts as a trustee for others.

(3) The case of war, where national interests are involved, follows naturally on this principle. The responsible rulers of the State are trustees, not only for the nation as a whole, but also for future generations. If, as we have argued, the use of force is sometimes legitimate, the community cannot be debarred from using it to protect its own members, to secure their fair interests, and to defend weaker nations. Primarily this principle covers the operations of the police and criminal law, but it also extends to war. The fundamental difficulties with regard to war do not really lie in its being an appeal to force, but are due to the facts that there is no guarantee that force will be always used to uphold the right, or that it will succeed in doing so, and that the coercion is applied not merely to the actual offenders and transgressors, but to comparatively innocent members of the nation drawn into the net of war.

3. The case of war.—It is considerations such as these that have driven some who do not adopt the extreme Tolstoeian attitude of refusing to use force under any circumstances to regard its use in war as always wrong. And it will be generally agreed that the efforts of Christianity and of civilized society in general must be far more definitely directed in the future than they have been in the past to the elimination of this method of settling disputes. The various suggestions for a League of Nations are really attempts to apply to the relations between peoples the principles which civilization has developed within the State as controlling the relations between individuals. In other words, the object is to substitute for the appeal to the might of the stronger the appeal to impartial justice, ascertained as completely as may be among fallible men. But it must be clearly realized, in connexion with the particular problem before us, that such schemes do not adopt the principle of non-resistance in place of force. The ultimate sanction of a League of Nations against a recalcitrant member or outsider would still be force, whether applied by economic boycott or by war, but it would be force directed as nearly as possible by the principles of law and justice. Nations will not be applying the principles of the

Sermon on the Mount in any literal sense any more than does the private individual who invokes the aid of the policeman or magistrate instead of attempting to defend or avenge himself by his own physical strength.
